Newburgh, N. Y., Box 298,

MINING GEOLOGISTS and IRON EXPERTS, offer to Capitalists an opportunity to invest in SOUTHERN IRON AND COAL LANDS, of which they have personal knowledge. Would prefer to take commission in an undivided interest.

A General Index to the Nation,

From July, 1865, to September, 1880.

Net price (no trade discount), $2 50. Purchasers will please remit with order. Address Publisher of the *Nation*, Box 794, New York, or Q. P. INDEX, Bangor, Maine.

IMPORTANT ANNOUNCEMENT

JUST READY:

NEW EDITION OF

BROWN'S ENGLISH GRAMMARS

Thoroughly Revised by HENRY KIDDLE, A.M.,

Late Supt. of Schools of New York City.

As the Publishers of BROWN'S GRAMMARS, we take pleasure in announcing that these Popular Standard Text-Books have been thoroughly revised and adapted to the present educational demands.

While we have constantly endeavored to add to these books all the improvements which the latest experience and study have devised or suggested, we have also striven to retain the grammatical system of Goold Brown, in all essential particulars, virtually intact. This we believe will still be found to be the case in this new edition, although very decided changes have been made in certain important respects, besides the addition of matter to carry out the plan of the reviser.

With these alterations, we hope that these works will be found more useful to the public, and will prove a more valuable aid to teachers in imparting instruction in this really important branch of education.

Copies of the new edition of the "First Lines" will be sent by mail to those who desire to examine it on receipt of [illegible] and of the "Institutes" on receipt of 50 cents.

Circular mailed free on application. Correspondence so[illegible]

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 7, 1882.

The Week.

MR. RUSSELL, of Massachusetts, a member of Hubbell's Congressional Committee, has had to come out and protest against the "demanding" money from officeholders for party purposes, as "wrong in principle and vicious in its effects." He defends or excuses the first circular sent out by Hubbell as a copy of harmless ones issued in other campaigns; but the second, reinforcing the first, he admits to be to all intents and purposes a threat, and disapproves of it, and has sent his disapproval to Hubbell's Executive Committee. It is curious that no suggestion comes from any quarter that Hubbell should address his circulars to known Republicans of all classes. Why are they not sent to Republican ministers, doctors, and lawyers, and also to Republican mechanics and merchants? All these classes would, according to Hubbell, suffer enormously by the expulsion of the Republican party from power, and would doubtless deem it a "pleasure and privilege" to make a "voluntary contribution" of "not less than two per cent. on their annual compensation." The question, What does Hubbell do with the money? of course occurs to every one, and especially to those who send him voluntary contributions; for one of his peculiarities as a collector is that he renders no accounts, or at least none that ever see the light—an important difference, by the way, which Judge Folger has overlooked, between the Congressional Committee and a church or Bible society. Anybody who went about getting money from poor men for a church or a charitable institution, and refused ever after to let the donors know in what manner it had been expended, would be treated as a knave wherever he showed his face. Of course any one is at liberty to give money to a person in whose judgment and character he has confidence, to expend without rendering an account. But this is confidence which has to be offered, and which none but the remarkably impudent ask for. People select those in whom they intend to repose such confidence; it is very seldom indeed that anybody but professional swindlers propose themselves as the objects of it.

We believe Hubbell declares when pressed that he lays the money out on "documents" and their distribution. In support of this explanation he has sent out a list of documents which he says in a prefatory note he is prepared to supply, in order to "advise the country of the objects and aims of the Democratic party." About that far more important matter, "the objects and aims" of the party in power, he apparently undertakes to supply no information whatever. But he does not supply these documents gratuitously, or at the cost of distribution. On the contrary, he charges from thirty cents to two dollars per hundred for them, which he says is "exceedingly low, taking into account the cost of printing and the labor and material used in folding and handling the documents." This price undoubtedly covers the cost, so that we are still left in the dark as to what he does with his "assessments." The list contains twenty-six documents. Nine of these are speeches in defence of the tariff, so that the expenditure on them of money contributed by a Republican revenue reformer would be, and is, a contemptible fraud, which is not relieved, but darkened, by the fact that one of them is a profound treatise by Hubbell himself, entitled "Encouragement of American Industry: its History and Results," for which he charges only fifty-five cents the hundred. One is a speech by Mr. Eugene Hale on "Political Assessments." We have not seen it, but if, as is probable, it is a defence of these assessments, its circulation must be considered, in view of the condition of opinion in the party on this subject, a very gross breach of trust, to which Mr. Hale ought to know better than be a party. Another document contains "Extracts from General Garfield's Speeches" "in Support of Law, Order, and Justice, the Constitutional Powers of the Government, and the Maintenance of the Honor and Interests of the People of the Nation." None of General Garfield's utterances on these topics was so weighty as his denunciation of assessments on officeholders, and of the spoils system generally. If Hubbell has included none of them in the collection, he has again been guilty of very discreditable garbling and imposition, and of malversation of funds, if he is spending any assessment money on the pamphlet. No *aperçu* of General Garfield's views on "the honor and interests of the people of the nation" is complete or fair which does not contain some of his eloquent denunciations of the abuse which breeds the Hubbells, and without which they could not live.

Judge Field, of the Supreme Court, has rendered a decision as to the Chinese immigration law which is of some interest to the Chinese who are in this country. Ah Sing, a Chinese seaman, came to California six years since, and for some months has been employed as a seaman on board the *City of Sydney*. He left San Francisco in her on the 8th of May last, the law having been passed two days before. The act provided that after the expiration of ninety days no "Chinese laborers" should come to this country; and made it a criminal offence for the master of any vessel to bring them. When the *City of Sydney* returned to San Francisco her captain refused to allow Ah Sing to land, and he accordingly brought a petition for habeas corpus. Judge Field has decided that the law does not apply to a "laborer" already "on board a vessel when it touches at a foreign port," and used the following language with regard to the intention of the act: "The object of the act of Congress was to prevent the further immigration of Chinese to the United States—not to expel those already here—producing the antagonism and disturbance which conflicts of race always engender. It was not thought that the few thousands now here, scattered, as they must soon be, over the whole country, would seriously disturb the peace or affect the civilization of fifty-two millions of people." This suggests the interesting question, which was not satisfactorily disposed of during the discussion in Congress—how many thousand Chinese it would take to ruin us. The few thousands now here will, it seems, not do us any harm; but if any more were to come, our future would be horrid to contemplate. The next time the matter comes up we hope to have the precise figures. How many Chinamen will spoil a nation of 52,000,000 people? We are safe now; but how near the brink of the precipice did we come?

Another decision of Judge Field, in the San Francisco laundry ordinance case, will, it is to be hoped, do something to remind the anti-Chinese party in California that they cannot make outlaws of the Chinamen who are permitted to remain in this country. The San Francisco Supervisors have authority, as similar boards have in other cities, to prohibit or regulate occupations which are "against good morals, contrary to public order and decency, or dangerous to public safety." Under this, they undertook to regulate laundries, and enacted an ordinance forbidding any person to establish a laundry within certain portions of the city without obtaining a license, and further providing that no license should be granted without a written recommendation from a certain number of residents in the immediate vicinity. The plan was to drive the Chinese out of the laundry business, whether because they do washing cheaper than their Caucasian rivals or not does not appear. At any rate, Judge Field has decided that the business of washing clothes is not against good morals, or contrary to public order and decency, or dangerous to public safety. Quong Woo, who was refused a license, has won his case, and the Chinese will continue to compete with Caucasians in the business of washing clothes. The Supervisors are, it is said, much puzzled by the decision, and very apprehensive of its results on the civilization of the Pacific Coast.

The address to the Mormons just issued by John Taylor, George Q. Cannon, and Joseph F. Smith, who constitute the "first Presidency" of the Church, calls the attention of the Church to the measures being taken for the enforcement of the Edmunds Act, and says that the condition of affairs in the Territory makes it necessary to give some "plain and pointed counsel." The signers are altogether too shrewd to call upon their people in so many words to resist the law, and the only counsel of any kind that they actually give is contained in the following appeal: "Let us guard well our franchise, and in one unbroken phalanx maintain and sustain our political status, and as patri-

ots and freemen operate together in defence of what few liberties are left us." The language of the address is not unlike what monogamists would probably use to meet an attack by a stern polygamic legislature on the institution of single marriage. "As a church," they say, "we have repeatedly testified, in the most solemn manner, that the institution of marriage, at which the law is aimed, has been revealed to us by the Almighty, and that it is a part of our religion"; and again, it is "interwoven with our dearest and holiest hopes," and "we believe we should incur the eternal displeasure of our Heavenly Father if we did not comply with its requirements." This protest has been brought out by the new oath prescribed by the Commissioners, which no one living in polygamy can take without committing perjury. The Commissioners are now engaged in appointing registrars of election, and there is reported to be great dissatisfaction among the Gentiles in the Territory because among these eight Mormons have been appointed. They are, of course, monogamists, and as the act was directed against polygamy, and not against the other features of the Mormon religion, the Commissioners probably think fairness requires that a Mormon who can qualify under it should be allowed to do so. But to the anti-Mormon mind in Utah the idea of fairness to Mormons is sickening.

Before the Tariff Commission sitting at Buffalo, on Wednesday, members of the American Association of Dealers in Pottery made a thorough exposition of the pottery trade, and urged a reduction of duties. By the calculations of Mr. Wright, the President of the Association, the present duty, avowedly imposed as a war duty and designed to be temporary, amounts upon the whole—all charges, breakage, etc., considered—to an advance of 116 per cent. upon the price charged the importer by the English manufacturer under the twenty-four per cent. duty. The foreign manufacturers have advanced their prices from eighteen to twenty-four per cent. under our present tariff. Mr. Wright says that the high cost greatly restricts consumption, and makes luxuries of necessary articles. He says: "The dealers in pottery have more capital invested than the manufacturers, and deserve at least equal consideration, to say nothing of the consumers. The present tariff discriminates against lower qualities of goods which are used by the poorer classes. The proposed duty will be abundant protection, and will increase consumption, and give more steady employment to the potters at home." It now appears that the workmen in the Trenton potteries have petitioned Congress for a reduction of the duty, being "convinced by experience that a high rate of duty on crockery-ware yields no benefit financially to the workingman, and is inimical to his interests in its effects in increasing the price of living generally."

The painful readiness of the public to give credit to stories damaging to private character has again been illustrated in the case of Major Ellis P. Phipps, of Philadelphia, ex-Superintendent of the Almshouse. The Major was arrested on Thursday on a charge of embezzling money, and, as soon as he had given bail, left Philadelphia, and has not been heard of since. His rooms have been searched, and the case against him seems to consist of goods found on the premises, bought for, but missing, from the Almshouse. There were found, indeed, goods enough to furnish a large store, which had all come to the Major's quarters, *via* the Almshouse. There were, among other things, 200 jars of preserved fruits, two gallons of French brandy, two gallons of Holland gin, twenty-two bottles of wine, one case of champagne, one barrel of sugar, one barrel of lard, and a miscellaneous collection of articles, such as five-dozen scrubbing brushes, fifty pounds of coffee, and nine pounds of tea. The goods were hidden away or locked up in dark places or closets. This evidence, taken in connection with the Major's flight, seems to be regarded as sufficient in Philadelphia to justify the inference that he is guilty. But then what becomes of the presumption of innocence of which we hear so much? We thought it had long been settled that nothing short of a conviction was of any consequence in cases like this.

It is to be hoped that it is not true that Pratt, the cashier, who planned and executed the robbery of his own bank at Kewanee, Ill., was an active church member and Sunday-school teacher, because it appears he was planning his robbery for about two years, in company with two confederates, to whom he had proposed it. The sudden surrender of good men—whether church members or not—to strong temptation is common enough, but it is not alarming or disgusting. It simply shows that human nature can never be made wholly impregnable against sudden assault, by any process of fortification or training. But the frequency during the past twenty years of cases in which connection with churches and religious professions, and the resulting respectability, have been used to cover prolonged and deliberate crime, and preparation for crime, is both alarming and disgusting, because there are signs of social rottenness in it. If it ends in completely destroying the presumption of moral soundness which religious profession now raises, it will probably, even if unfairly destroying it, do the cause of religion much good. The best days of Christianity have been those in which it did not "pay" to be a Christian; its worst have been those when nothing paid so well. Probably we shall not see the long-promised revival until it has ceased, from a worldly point of view, to profit a man anything.

During the week the money market became decidedly more active, and the call-loan rate on stocks advanced to 6@7 per cent. The New York banks lost $1,287,050 in reserve, and held on the average for the week $156,025 less than 25 per cent. reserve; the State banks number fourteen out of a total Clearing-house membership of sixty-one, and they are not obliged to keep 25 per cent. reserve. The Treasury has been weakening the banks by its large receipts, but it has heavy payments to make during the month. The principal part of these, however, is not yet due, and the Treasury on several days of late has still been creditor at the Clearing-house. There has been no change of importance in the foreign money markets, but sterling exchange here has grown weaker, partly because of the advance in the rate for money here, and partly because of an increased supply of commercial bills. The general trade of the country has been active during the week. Railroad tonnage and money receipts for it are increasing largely, and the main crops of the country promise to justify the most sanguine of reasonable expectations. At the Stock Exchange, although prices for railroad stocks declined late in the week, all of the early advance was not lost. The new 3 per cent. bonds of the Government have begun to appear in the market.

If Westminster Abbey is to be made the shrine not only of English but of American worthies—in short, a Pan-Anglo-Saxon Valhalla—a beginning could not be better made than with Longfellow. His admirers are at least as numerous, and his estimation as great, in England as in his native land. The movement across the water to place the poet's bust in the Abbey can excite only feelings of gratification among his countrymen. Nor will those who hope that the world's progress has made another war between the mother country and the United States impossible, criticise the proposal to add even a sentimental tie to those which already exist between the two nations. From the English point of view the argument from inconvenience will be likely to have most weight on the adverse side. The practice once begun—and spontaneously begun, we have no doubt—may some time be invoked by private influence rather than by public acclamation, and under circumstances which may make refusal awkward. Suppose an artist having a bust of Garfield to dispose of, or another a statue of Lincoln—"the first American"—presents himself, with a respectable English backing (and how easy it would be to procure names for such a purpose); or suppose the clique of British Poe worshippers urge that room be made for the author of 'The Raven'; or let the claims of Washington or Franklin be pressed, and we can see how delicate would be the Dean's task of accepting or rejecting the proffered memorial. Even our Central Park Commissioners have found it necessary to fix a term after the death of a public character during which his effigy cannot be received or erected in that pleasure-ground. The effect on the American imagination of the chance to win the posthumous distinction afforded by the Abbey, will depend partly on the line that may be drawn between the past and the present, and partly on the character of the first receptions or applications. That for the moment the "literary fellers" have an advantage over our statesmen as candidates, even Simon Cameron would probably admit.

There was a disgraceful exhibition on Sunday in New Haven, at the funeral of "Chip" Smith, the murderer, who was hanged on Friday. "A solemn requiem mass" was celebrated in the Church of the Assumption, after which the murderer's body was exposed to the

view of thousands. At three o'clock the funeral services took place, the church and the whole neighborhood being thronged. In Father Brady's address he said that, "when in full possession of his faculties," Smith was "kind and agreeable." The funeral was a mile and a half long, the streets being lined with people in number estimated at not less than 10,000. It would be hard to imagine anything more hurtful to morals than this public exhibition and kind of apotheosis of a murderer. Nothing like it would be tolerated in other countries, where the bodies of criminals are either interred in the jail-yard or given to relatives on condition of most private and quiet burial. The injury from scenes like the New Haven display is limitless. To thousands of unformed minds mere notoriety of any sort is a kind of glory—a thing to be desired, and, if possible, achieved. The effect of punishment is thus completely overlaid and obscured. Moreover, the working of the strange law by which crime becomes epidemic greatly depends upon the degree of public familiarity with crime. Contagion, in fact, requires contact. All this is so well understood that it is with something like despair that we see a community like New Haven so little regardful at once of its own reputation and of the public good.

The Newport fox-hunt on Monday was a great success. The excitement was increased, according to the *Herald* correspondent, by the appearance in a corn-field of an "armed garrison of farmers," who forbade the hunters to cross their property, and one of whom discharged the contents of his fowling-piece at the dogs, and came very near hitting one of the hunters. The farmers had provided themselves with stones, and threatened to offer such a formidable resistance that the hunt made a détour and left them in peace. After this escape they had no further trouble till the fox had been killed and the dogs found a roadside water-trough out of which they drank. On this a local Quaker named Hathaway made his appearance, and insisted that the dogs should be taken away, and refused to allow either riders or horses to have any water, declaring finally that the sport was "inhuman," and that he would not countenance it in any way. One of the great charms of fox-hunting has always been the danger attending it; but in England this has been confined to the risk of death or broken limbs through falls. The incidents of Monday's hunt, and those of a year or so ago, when the farmers made trouble with pitchforks, make it look as if hunters might in this country expect much more in the way of excitement. "Garrisons of farmers" holding corn-fields against the hunt, to say nothing of Quakers refusing them water, are dangers seldom encountered in England, and ought to lend great zest to the sport.

The trustees of the Irish "Skirmishing Fund" have absolutely refused to render an account to the committee of inquiry appointed by the "subscribers'" meeting, partly on the ground that few, if any, subscribers were there, and partly that the behavior of those who were there was marked by "blackguardism." The thing for O'Donovan to do now is to raise another fund to "skirmish" with the trustees until they produce the money or tell where it is. They are clearly traitors to the cause, and deserve the punishment prescribed for that class of offenders in the Irish National Code. We regret to learn from the trustees that there were "British spies" at the subscribers' meeting, but they ought not to attach too much importance to this circumstance, because, we believe, there has been no meeting of Irish Nationalists for centuries which was not attended by a greater or less number of this description of persons. There is no more devoted frequenter of all gatherings of men of the Celtic race than the spy. In troublous times in France he misses no meeting of importance, and sometimes, as in Ireland, addresses the crowd himself, urging them to the commission of deeds of unusual atrocity.

The police trouble in Ireland is, on the whole, the most serious one with which the Government has had to contend, because it is absolutely novel. "Outrages" and disturbances are a long-established feature of Irish life with which it has had much experience in dealing, but it has never before had to meet a revolt of Irish police or soldiers. The fidelity of the police during the last fifty years has, in fact, been very remarkable, considering the condition of the popular mind during nearly the whole of that period; but the spell has been broken by the events of the last week. The force can never be counted on again with the old certainty. The mutiny of the Constabulary has apparently been tided over or postponed, but the spirit of the men has undoubtedly undergone a change which will make them untrustworthy hereafter. The strike of the city police was more serious because it left Dublin at the mercy of the mob, and it was a mob prepared for mischief by all the political agitation of the last few years. In both cases the crisis seems to have been brought on, not so much by the unwillingness of the Government to redress undoubted grievances, as by the overbearing demeanor of the authorities, which in fact aggravates nearly all Irish troubles. In Ireland the manners of men in power from top to bottom, including landlord manners to tenantry, are a reflection or imitation of the historic attitude of the English mind toward all things Irish. Even Mr. Forster, good-natured Quaker though he was, caught the Irish official tone during his Secretaryship, and on one occasion gave the Dublin Corporation a "dressing" such as would have been due to impudent meddlers with what did not concern them.

The affair is unfortunate for the Ministry, because it will furnish both the Tories and the Whigs with support for their old theory that Irish demands are, for all practicable purposes, insatiable, and that Mr. Gladstone, in trying to satisfy some of them, has simply bred new ones, and is completing the disorganization of the never very well knit framework of Irish society. On the other hand, we cannot help believing that it will do something toward preparing the Liberal party in England for the inevitable concession of some sort of Home Rule, which will deliver Englishmen from the task, for which they have shown themselves ten times over unfit, of keeping order in Ireland. The spectacle of an English Peer, lodged in a "Castle" in Dublin, riding about with an escort of cavalry, and at his wits' end to provide police for the streets, the inhabitants of which jeer at him and want him to go home, is one which before many years will seem ludicrous even to English Tories.

Sir Garnet Wolseley's delay in advancing begins to give dissatisfaction to our esteemed contemporaries the *Herald* and *Sun*, and it will be advisable for him not to try their patience too much, as they may in that case transfer their countenance and advice to Arabi Pasha, who, since the capture of Fehmy Pasha, is evidently rather hard up for strategy. The *Sun* "feels misgivings" about Sir Garnet's "demand for reinforcements" (which he denies that he made), and about the withdrawal of the Highlanders from Alexandria, and is apparently preparing to "hurl a large force," on Arabi's account, "from Salihiyeh, upon Kantara," and "impede, if not cut off," the wretched Wolseley's "communications with Port Saïd." All we can say is that we trust the *Sun* will remain in this contest where it belongs, on the Christian side, and will do no "hurling" against Wolseley till he has had another week. In the meantime "hurling large forces" is apparently the last thing Arabi is thinking of, because, poor fellow, he has no large force. What he is doing is intrenching himself vigorously on the road to Cairo, by the use of peasant-labor, and he is apparently raising raw levies in the belief that they will fight well enough behind parapets. His artillery, too, is evidently improving, and he is at last beginning to use the Bedouin horsemen both to mask his movements and to scout and harass. Better cavalry for these purposes does not exist.

The Turks and Greeks have made peace, it is reported, on the Thessalian frontier, but not until they had managed between them to kill and maim over 400 men. The quarrel has been about a piece of territory where the International Commission had failed to make the boundary line distinct, a part of which the Turks now offer to cede or else make the whole neutral. Austria has rebuked the Greeks for disturbing the peace of Europe, which seems to indicate that neither she nor Germany is ready for another row. The Porte has at last got leave to land 2,000 or 3,000 men at Port Saïd, but in what manner they are to affect the fortunes of the campaign it would be hard to say, except to give the natives a vague idea that the British are not engaged in an anti-Mussulman crusade. If Wolseley should meet with a reverse, there is little question that their activity would go rather to impede than to help him. It is a thousand pities that Lord Dufferin cannot write an account of the negotiations by which the despatch of these troops was brought about, for one of the magazines. It would probably be as diverting a bit of comic literature as has appeared for many years.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, August 30, to TUESDAY, Sept. 5, 1882, inclusive.]

DOMESTIC.

PRESIDENT ARTHUR'S vacation has been a continuous round of entertainments and receptions in his honor. On Wednesday he visited the training-ship *New Hampshire*, at Newport; and West Island, as the guest of the Fishery Club, at that place, on Thursday, in the steamer *Dispatch*. He attended a clam-bake at Squantum on Friday, and on the return trip, while in a dense fog, the *Dispatch* ran aground on Gould Island, opposite Newport. The President remained on board all night. The ship floated about 10 o'clock on Saturday morning. He will remain at Newport until Wednesday morning.

New York politics were the subject of much discussion by the metropolitan and provincial press during the week. There has been, to a certain degree, an expression of favor for Governor Cornell in the rural districts, as has been shown by the election of a number of delegates to the State Convention instructed to support him. The independent press of the State have been supporting Wadsworth with increasing vigor, while the Stalwart newspapers, which at first seemed to show a preference for him, are gradually revealing their real choice to be Secretary Folger, who, of course, represents the Arthur Administration. On Wednesday it was announced by his authority that if he is nominated for the Governorship, and there is a fair concurrence of popular sentiment, he will accept. The tally of delegates to the State Convention elected up to Saturday was as follows: Cornell 39, Folger 28, Wadsworth 12, Wood 5, doubtful 5. The appearances are that Wadsworth will hold the balance of power between Cornell and the Administration candidate.

An election took place in Arkansas on Monday. The success of the Democrats is conceded. A Republican Governor and two Congressmen were elected in Vermont, on Tuesday, by large majorities.

The Republican State Convention of California on Thursday adopted a platform which favors civil-service reform and economy of administration; demands the regulation of railroads by the State, and inter-State traffic by Congress; and condemns the railroad contract system. M. M. Estee was nominated for Governor, with a full State ticket.

At a meeting on Thursday the Texas Greenbackers agreed to support the Independent candidates in the coming election.

A platform favoring the resubmission of the prohibition amendment to the Constitution to the voters of the State in 1884 was passed by the Kansas Democratic State Convention on Thursday. George W. Glick, of Atchison, was nominated for Governor, with a full State ticket and three Congressmen-at-large.

The Michigan Republicans on Wednesday nominated Henry A. Conant for Secretary of State, and a full State ticket.

A great many Congressional nominations have been made by both parties throughout the United States, among them John R. Lynch, a colored Republican, in the Sixth Mississippi District.

Senator Mahone's troubles in Virginia politics are increasing. The Straight-out Republicans are joining with the Funder Democrats in supporting Independent candidates for Congress. In order to help the "boss," it is said that the Congressional Republican Committee has decided to give him $50,000 for a campaign fund. Great efforts are making to prevent Jorgensen, a present Republican Congressman, from running as an Independent candidate. John W. Woltz, a former Readjuster, has been dismissed from a position in the Interior Department, at Mahone's dictation, because of his anti-Mahone sentiments. On Thursday he was nominated by the Republicans of the First Virginia District to oppose the Mahone candidate for Congress.

Republican clerks in Washington from Louisiana have been assessed five per cent. of their salaries by the Republican Campaign Committee of the Third Louisiana Congressional District.

Senator Harrison, of Indiana, in a campaign speech on Wednesday night in Indianapolis, declared himself in favor of civil-service reform.

The Utah Commission have made the appointment of twenty-four registers under the Edmunds anti-polygamy law. Seven of these are Gentiles, nine apostate Mormons, and eight Mormons. Their duty is to exclude polygamists from the registration lists of voters. The Commission have prescribed an oath which asserts: "I do solemnly swear that I am not a bigamist or polygamist; that I am not a violator of the laws of the United States prohibiting bigamy or polygamy." This has called forth an address to the Latter-Day Saints, signed by John Taylor, G. Q. Cannon, and Joseph F. Smith, calling on them to "guard sacredly our covenants," and "guard well our franchise," and "sustain our political status."

By direction of the President, the Military Department of West Point was discontinued on September 1, from which date the Military Academy has been and will be under the supervision of the General of the Army. Col. Wesley Merritt, of the Fifth Cavalry, assumed the duties of Superintendent on that day, releaving Gen. O. O. Howard, who went to Omaha to take charge of the Department of the Platte. General Cook has gone from that department to Arizona.

Secretary of the Navy Chandler has been continuing his tour of inspection of the Navy-yards along the coast, in the *Tallapoosa*. Daily meetings are held on board ship, at which the Secretary and the heads of bureaus compare their observations and decide to a certain extent on the disposition of the business for which the trip was undertaken.

Secretary Lincoln, of the War Department, has submitted to the Attorney-General, for an opinion, the question whether the work of improving the Potomac River opposite Washington, and reclaiming the flats, for which there is an appropriation of $400,000, can be begun before settling all pending questions affecting the title to the land to be improved. The Attorney-General has decided that the work can be begun immediately.

On Friday the Secretary of War issued an order revoking his previous order relieving Col. Samuel D. Sturgis from the Governorship of the Soldiers' Home, near Washington. This was done in conformity with an opinion from the Attorney-General.

During the month of August the public debt of the United States was decreased more than $16,000,000.

The harvest reports from the West continue to be unusually good. The winter-wheat crop of Illinois is estimated to be the largest ever harvested, except that of 1880, in that State. It exceeds 50,000,000 bushels. Spring wheat aggregates more than 52,000,000 bushels. The oat crop of the State is estimated at 99,000,000 bushels. The prospects for corn in the Western States continue to be rather discouraging. The amount of wheat available for export in Oregon is estimated at 285,000 tons.

The Tariff Commission has been holding its sessions in various cities during the week. On Wednesday it met in Buffalo. B. B. Glenny, of that city, an importer of earthenware, urged the reduction of duty on such goods. The Commission held a meeting at Cleveland on Thursday, at which the hoop-iron manufacturers presented a plea for specific instead of *ad valorem* duties. A session was held at Detroit on Friday.

The American Social Science Association opened its session at Saratoga on Monday evening. The Educational Department held a meeting on Tuesday, and addresses were made in commemoration of Charles Darwin.

The American Science Association concluded its session at Montreal on Wednesday, the Rev. Dr. Houghton, of Dublin, delivering the closing address. Prof. C. A. Young, the Astronomer of Princeton College, was elected President for the ensuing year. A committee was appointed to prosecute the movement for international standard time.

In the Star-route trial at Washington on Wednesday Mr. Wilson concluded his argument for the defence. He devoted a great deal of his time to an analysis of Walsh's testimony, pointing out its seeming deficiencies. Mr. Henkle began his speech for the defence on the same day and continued throughout Thursday and Friday. The Court on that day adjourned over until Monday. Mr. Henkle did not conclude until Monday evening. On Tuesday morning Col. Ingersoll began the closing argument for the defence.

Captain Payne has been again arrested for trespassing on the Indian Territory.

Apache Indians have been creating a great deal of excitement in Sonora, Mexico, and in Arizona, by a series of outrages. Travelling miners have been killed and ranches raided. In the valley of Calabasa twenty men, women, and children have been massacred.

Reports that the Crow Indians of Montana have been committing depredations are denied by a post-trader, who asserts that they never were more peaceable than now. He thinks that the next generation will be practical farmers.

The yellow-fever epidemic has attacked one-tenth of the population of Brownsville, Texas. It is spreading at Pensacola, Florida. In Matamoras, Mexico, it is slowly decreasing. There are about 200 cases in the town.

At Old Orchard Beach, Me., on Thursday, the Hotel Brunswick, the Pleasant House, and other adjoining property were burned. The guests narrowly escaped, and lost all their personal effects.

A child, Lizzie Selden, who was stolen from in front of her parents' residence, in Brooklyn, on August 21, was found by a detective with a woman named Maggie Kappel, supposed to be her abductor, at 122 Park Avenue, Brooklyn, on Thursday morning. The woman has been declared insane by physicians.

Charles E. Courtney, of Union Springs, N. Y., on Friday afternoon defeated Lee, of Newark, N. J., in a single-scull race, on Canaderaga Lake, N. Y., by a length and a half. The distance was three miles, with a turn, and the time 19:31¼, the fastest on record.

The British rifle team have arrived in this country and have begun practising at Creedmoor for the coming match with the American team.

The Irish "skirmishers" of this city, who are trying to find out what became of about $90,000 entrusted to a few of their leaders, held a meeting on Sunday and received a report to the effect that the persons who had received the money declined to explain what had become of it. The meeting adjourned without taking any decisive action.

The will of the late Dr. Musgrave, of Philadelphia, leaves the bulk of his large property to Princeton College and Seminary.

Chief-Engineer William W. Wood, United States Navy, was drowned on Thursday morning, while sailing near Point Lookout, Md., by the upsetting of his boat.

FOREIGN.

General Wolseley's campaign in Egypt during the week has been one of careful preparation. After the brilliant victory at Kasassin Lock, in which the Household Cavalry especially distinguished themselves by a charge at a critical moment, the entire army under General Wolseley began the march to the front. The railway along the route almost to Tel-el-Kebir was completed by Wednesday. Three

engines arrived later in the week, and, with plenty of cars on hand, the forwarding of supplies from the Canal to the front was made easy. A correspondent, writing on Wednesday of the Kasassin battle-field, said: "I found two acres thickly strewn with corpses of the enemy." Another said: "An officer who was present says the cavalry charge was ordered for the purpose of saving the position, as the ammunition had run short. The bodies of Egyptian soldiers were hacked and slashed almost out of semblance to humanity by the long broad-swords of the Guards."

It was rumored at Port Saïd on Thursday that Arabi Pasha had asked for an eight days' armistice, but that General Wolesley would only agree to one day. The rumor was not confirmed. Major-General Lowe began on that day to concentrate the entire cavalry at Maxema. Two reconnoissances were made, and sketches made of Arabi's position, which was found to be weaker than expected in certain parts, but Tel-el-Kebir is strongly intrenched. Arabi withdrew, on Friday, most of his troops from Kafr-el-Dwar to Tel-el-Kebir.

At 5 o'clock on Monday evening the English heavy guns near the Cairo railway, in the neighborhood of Alexandria, began shelling Arabi Pasha's camp. The enemy replied, and a lively cannonade ensued. On Tuesday there was considerable movement in the Egyptian camp, apparently caused by the arrival of reinforcements. On that day Mahmud Fehmy wrote a report, addressed to the Khedive, with plans revealing the positions and strength of the enemy. From internal evidence it is believed that his statements are correct. He accuses many of those composing the entourage of the Khedive, including the Prime Minister, of having communicated with Arabi.

It was asserted in London that General Wolseley had telegraphed to the British authorities that it was unnecessary to prepare a third army corps, as he only required a few reinforcements to fill up gaps. The Government, however, determined on Monday to send him three battalions of infantry, so that General Wood might be set free without leaving a garrison of less than 5,000 men at Alexandria. The general result of these measures will be that General Wolseley will have 22,000 men on the main line of operations. Arabi has, it is said, an excellent position near Kasassin. He is in direct communication by rail with Zagazig and Salihiyeh.

Orders have been received at Woolwich, England, to despatch 4,000 troops to Egypt.

Gen. Sir Evelyn Wood assumed the chief command of the troops at Alexandria and vicinity on Wednesday. Sherif Pasha, the new President of the Egyptian Ministry, issued a circular on that day drawing the attention of the foreign Consuls to the immense influx of low-class population. He ordered that persons having no fixed occupation or visible means of support should not be allowed to land. On Thursday the enemy retired 1,000 yards further from Mihalla Junction, apparently in the direction of Damanhur, but they continued to intrench opposite Meks. Five signallers, who had been flashing lights from the front of the British position to Arabi's camp, were captured. The situation in Alexandria was somewhat relieved on Thursday by the discovery of a large supply of fresh water in some old forgotten wells. In the evening seamen from the *Minotaur* and a company of the Fifty-third regiment blew up a house on the Canal, near Ramleh, which had long been a point of vantage to the enemy's sharp-shooters. Mahmud Fehmy, Arabi's chief engineer and military adviser, recently captured, was taken to Alexandria on Friday, and handed over to the Egyptian authorities, the Khedive guaranteeing that he should not be put to death without the consent of the British. The British man-of-war *Minotaur* shelled the enemy's lines between Ramleh and Abukir early on Saturday morniu

There was considerable uneasiness at Alexandria on Monday, caused by the arrest of a Greek who, it was rumored, was implicated in a conspiracy to massacre the Europeans in Alexandria, in the event of the British troops being seriously engaged at Ramleh.

A meeting of Notables was held at Cairo on August 29, at which the Governor of Ismaïlia was present. Speeches were made recognizing Arabi Pasha as sole ruler of Egypt. The Prefect of Police, on hearing this, declared against Arabi, and ordered the arrest of all persons present at the meeting.

Evidence abounds in Constantinople that the Turkish population sympathizes with Arabi Pasha. The native newspapers print reports of Egyptian victories over the British, and other false rumors. The Porte began on Thursday to make fresh objections to the military convention, which it was supposed had been practically agreed upon. Lord Dufferin refused to insert a clause giving the right to land Turkish troops at Alexandria, but consented to a proviso that the English and Turkish staffs might have power to modify the military programme. On Sunday he informed the Sultan that he had been authorized to assent to the landing of two or three thousand Turkish troops at Port Saïd. It is understood that Dervish Pasha will command the expedition. On Tuesday an irade was issued authorizing the signing of the Anglo-French military convention. The Sultan's proclamation against Arabi, proclaiming him a rebel for disobeying the Khedive and Dervish Pasha, was issued on Tuesday. It exhorts all Egyptians to obey the Khedive.

Additional troops were ordered by the Grecian Government to the Thessalian frontier on Wednesday to resist the Turks. The Greek Minister at Constantinople held a conference with the Turkish Minister of Foreign Affairs, and it was reported that the Porte had decided to order a cessation of hostilities. It seems to be generally believed in Europe that the Greeks have been the aggressors in the affair. The Turkish commander on Thursday demanded an armistice, which was refused by the Greeks, because he would not withdraw from the points which he had recently occupied. Hostilities then began again. The Powers advised an armistice, and the Porte proposed that the Greek Government should establish a neutral zone around the disputed territory until the definitive settlement of the question. This proposition, however, was not accepted. The Greeks on Friday drove the Turks out of the forest between Zorbos and the coast.

It was announced on Sunday that in consequence of diplomatic communications between Constantinople and Athens, the *status quo ante* had been reëstablished, and all hostilities on the Turco-Greek frontier had consequently ceased. The disputed points of the territory are to be settled by an agreement between Saïd Pasha and the Greek Minister to Turkey.

At a meeting of 300 policemen in Dublin on Thursday night, resolutions were passed expressing dissatisfaction at not receiving a grant similar to that received by the Constabulary, and asking Earl Spencer to consider their case. On Friday 234 of these were summarily dismissed. Great excitement ensued in Dublin. All the police, except the officers and members of the detective force, immediately struck. Four hundred men were sworn in as special constables, and the Lord Mayor issued a proclamation calling on the citizens to join in the efforts to maintain peace in the city. Great crowds gathered in the streets. Rioting broke out in College Street at 9 o'clock in the evening, and the mob took possession of the city. At 10:30 o'clock a mob threw stones at some troops. The Riot Act was read, the troops charged, and the mob fled. Large bodies of infantry and cavalry paraded the streets during the entire night. On Saturday the police offered, if the dismissed men were reinstated, to waive all other claims, pending a meeting of the Commission to consider their grievances.

The Dublin police who had resigned sent a memorial to the Castle on Saturday evening, expressing deep regret at their action, and asking Earl Spencer to consider their case. He replied that if they returned to duty that evening, their case would receive the fullest consideration. A number of the men then returned to their posts. About 700 special constables were sworn in during the day. Disorder, however, broke out afresh in the evening. The military were obliged to charge a mob around the O'Connell statue. There was much stone-throwing, and several persons were wounded. On Sunday the dismissed men followed the example of those who had resigned, and sent a memorial to the Castle acknowledging that they had committed a breach of discipline and asking to be reinstated. The mob became very violent Sunday night, and was charged several times by the troops. By midnight, quiet had been restored. Eighty persons, injured since the rioting began, were in the Dublin hospitals on Monday.

Earl Spencer, the Lord-Lieutenant of Ireland, replying on Tuesday to the memorial from the dismissed policemen, said he had directed that a careful inquiry be held into the recent conduct and previous character of the memorialists. He promised that those men who appeared deserving should be reinstated. This answer, it is said, has given great satisfaction.

Mr. Mountague Bernard, D.C.L., one of the British High Commissioners who signed the treaty of Washington of 1871, died on Saturday at his residence in England. He was sixty-two years of age. For many years he was Professor of International Law at Oxford University.

Prince Leopold of England, the Duke of Albany, has been ill for several weeks, but is now slightly better.

The Archbishop of Canterbury, Archibald Campbell Tait, is very ill.

The movement in London in favor of placing a bust of Longfellow in Westminster Abbey is meeting with earnest support from the leading literary men in England.

Sarah Bernhardt, after performing in a theatre at Bradford, England, on Wednesday evening, began spitting blood, and was for two hours unconscious. On Friday she set out for Paris.

The British steamer, *Lake Nepigon*, from Liverpool for Montreal, went ashore on Ark low Bank, off the eastern coast of Ireland, on Friday. She carried twenty-three saloon and seventy-nine steerage passengers, and a crew of fifty-three. All were safely landed on the coast by the ship's boats. The ship floated at high tide and was taken up the Mersey. She is very slightly damaged.

Cetewayo has sailed from England for his Zulu kingdom. John Dunn has advised the Zulu chiefs to give him a friendly welcome.

The *Popolo Romano*, semi-official Italian organ, announces authoritatively that specie payments will not be resumed in Italy until April, 1883.

Johann Halbig, a celebrated German sculptor, died in Berlin on Thursday, at the age of sixty-eight. It is estimated that his works number one thousand.

About one hundred persons were killed and many injured by a railway accident on Monday in Germany near Hugstetten. The train jumped the rails.

A hail-storm occurred near Pesth, Hungary, early last week, which partly demolished fifty houses and destroyed many vineyards. A number of workmen were killed.

Anti-religious disturbances have broken out in the department of Allier, France.

A syndicate of London capitalists have contracted for the construction of an electric railway in Switzerland, on the Edison system,

THE ORIGIN OF THE BOSS SYSTEM.

THE new volume of the 'Diplomatic Correspondence,' issued by the State Department, contains a despatch of April 4, 1881, addressed by Mr. Blaine to Mr. Angell, our Minister in China, in which he directs him to disabuse the mind of the Japanese Minister at Pekin touching the position of ex-President Grant. This Japanese Minister had made a communication to Mr. Angell, the excuse for which was that certain negotiations to which it referred, between Japan and China, had been opened on the suggestion of General Grant when on his travels, from which it was supposed there resulted some obligation on the part of the United States Government to see them to a successful issue. Mr. Blaine corrects this impression about General Grant's position by informing the Japanese that he travelled simply as a private citizen, "without representative character or official responsibility," and that any advice he gave was that of a private citizen. The mistake of the Japanese was, however, more excusable than it seems on the surface. General Grant undoubtedly did not believe that he travelled simply as a private citizen. He felt that he was taking a vacation between two terms of the Presidency, and that he was suggesting to the Chinese and Japanese a line of conduct which he would himself probably be called on officially to endorse shortly afterward. The idea of some sort of permanent connection with the Executive—perhaps a vague and shadowy protectorate—had undoubtedly taken possession of his mind, and was not banished from it until Garfield had obtained the Presidency and had disregarded his recommendations to office.

Nor was this at all surprising. He came to the Presidency a simple soldier, without many political ideas, or anything that could be called a political philosophy, and continued in this condition until he fell into the hands of Mr. Roscoe Conkling, who at once undertook his political education. In giving it, Conkling undoubtedly founded the boss system, and originated the idea of that subtle but very serious change in our political machinery which Don Cameron had in mind when he said, at the beginning of the third-term struggle, before the Chicago Convention, that "the people were tired of the uncertainties of Government." The "uncertainties" to which he referred were the "uncertainties" about the action of nominating conventions, through their exposure to the influence of public opinion—a disturbing force which managers cannot control, and the direction of which they cannot always foresee, and which if allowed to act freely on the nominating machinery would be constantly producing unexpected results. What he and his confederates sought, therefore, was a system under which conventions could be summoned whose action could be foretold accurately, and for which programmes could be prepared in the inner councils of the party, and management be thus made a branch of high strategy instead of an affair of newspaper palaver.

For the perfect working of this new régime three things were necessary: a party with so permanent a hold on the Government that it should seem to be the Government itself, and that its overthrow should have the air of a revolution; a permanent President with such claims on popular confidence and gratitude that hostility to his perpetuity in office should have the air of treason to the cause he had served, and who in Washington, as the fountain of the patronage, would play the part of a head boss; and as many State bosses as could be set up with the aid of the patronage. There were many marks of enormous and corrupt ambition about the scheme, but none of genius, for genius discovers unerringly what is practicable. How it miscarried every one knows. There were not enough State bosses to carry it out, and those in existence were not up to their work. Bosses, after all, cannot be altogether made at Washington. They need to have native talent for the business, and some favoring antecedents. The only Grant bosses who amounted to anything were Cameron and Conkling. Logan tried the part gallantly, but made a wretched failure, and the whole boss fabric went to pieces on Garfield's election, after ten years' labor had been expended on it.

It would be a great mistake, however, to suppose that its promoters have abandoned the scheme or lost faith in it. It is, in their minds, the coming change, or, as they would probably say, the next stage of development in the American Government. They regard it as an eminently practical thing, and no word has such charms for them as the word "practical." Their system is the one which they think absolutely necessary to adapt the Government to the enormous industrial growth of the country, with the accompanying vast accumulations of capital and delicate and complicated financial interests. They believe the great moneyed men of the railroads, and the manufactories, and the banks, need to have the Government controlled either by their own agents and partners, or by men of their own kind, who are in sympathy with them, and can exchange assistance with them, so that united they can disregard popular clamor as expressed through the newspapers. They are accordingly eagerly engaged since General Garfield's death in trying to repair their broken fortunes and rebuild their waste places. If they can win New York again for their system, and suppress the revolt in Pennsylvania, they will have every reason to feel hopeful. They have already added one more State boss to their list in the person of Mahone, in Virginia, who is playing the boss's part with less disguise than any of the others. A letter of his has been published within a day or two, which has not been equalled in cool insolence in the history of the Government, in which he explains to a dismissed Federal officeholder that his dismissal was due to his insubordinate criticism of the Mahone policy in Virginia.

CONGRESS AND REFORM.

MR. GAMALIEL BRADFORD, of Boston, has been laboring for years, with great ability as well as persistence, to convince the American public that the national salvation is to be found only, or mainly, in giving seats in Congress to members of the Cabinet, who could thus frame legislation, push or defend it, and answer questions concerning matters of administration. He wishes, in short, to tack one feature of the English Parliamentary system on to our Presidential system, and maintains, with a great variety of very effective illustration, that without some change which will enable the Executive to produce, expound, and carry out a policy, our Government will be reduced to a condition of complete paralysis. In fact, he says, it has reached that stage already, for it is no longer capable of devising and enacting any well-considered measure of reform, or, in fact, of doing more than quarrel and pass slovenly and often corrupt appropriation bills.

He has an article on this theme in the last number of the *International Review*, in which he applies his test to the civil-service reform agitation, and informs those who are engaged in it that they are giving themselves needless trouble, because there is not the smallest chance of their scheme being carried out until it can be produced, as it was in England, by a powerful Executive, capable of forcing it on an unwilling Congress by the aid of public opinion. The President, he says, cannot now give up the use of the patronage in purchasing the support of members of Congress, because this is the only way he has of saving himself from complete impotence. Without offices to bribe Senators and Representatives with, he would be an object of contempt, if not of derision, to the majority in both Houses, and he has at present no means of appealing to the people for support against them. Give him the power of initiating legislation in Congress, through the heads of departments, and he would, Mr. Bradford thinks, have this power of appeal. He could state his case in a way that would command attention. The Opposition would have to give its reasons for objecting; there would be real debate; the public would be interested, and its judgment would be informed. Members of the Cabinet would become men of mark, famed either for their administrative talent or for their legislative talent, and the people would know at last whom to trust, and whom to look to, if they wanted anything done. Therefore the thing for civil-service reformers to do is to go to work to get members of the Cabinet admitted to Congress. Until they accomplish this they are simply beating the air.

Unfortunately for Mr. Bradford, an actual trial of his theory is now going on in France under our very eyes, and with results that ought to be fatal to it as a panacea. The French have done the very thing by which, he says, we must be saved. Their Ministers have seats in both houses of Parliament, and have unlimited liberty of talk and of legislative initiative. They make all the speeches they please, and are listened to for the most part attentively. They can be interpellated or asked questions about anything within their respective departments. They are, in fact, in their relations to the Legislature and the public, exactly what Mr. Bradford would like to see our Cabinet become. What is the result of four years' working of the system since the overthrow of the Empire?

The result is that Cabinets have lost all stability whatever. There have been twenty-three Ministers of the Interior since 1870, each

of whom has on an average filled his place six months. The changes, too, are increasing rapidly. Within the past year, there have been four Cabinets in France, and each successive Cabinet has less influence with the Chambers. Moreover, with each change the quality of the Ministers declines, and more obscure men come to the front. In fact, since 1870 a very prominent feature of the work of the French Legislature has been the relegation of distinguished politicians to private life. Beginning with M. Thiers, nearly every contemporary French statesman of note has been contemptuously dismissed by the Chamber. Their eloquence, their experience, and their patriotism have availed them nothing. One by one they have passed from the stage, until we now have what is called a "business Ministry," or, in other words, a Ministry of nobodies, who are willing to play the part of clerks of the Chamber. The Chamber has in fact taken the whole machinery of Government, administrative as well as legislative, into its own hands, and has left the French Executive, which all the traditions and habits of the country tended to exalt, the weakest in the civilized world, the most impotent either for good or evil.

Now, what is the cause of all this? Why is it that Mr. Bradford's scheme has proved such a lamentable failure in the very country of all in which it might be expected, *à priori*, to succeed most brilliantly? The cause seems simple enough, and it is one which would produce a precisely similar result under like conditions in this country or even in England—namely, the want on the part of the Executive of the power of dissolving the Legislature, in which lies the only mode in which the Executive can effectively appeal to the people against a hostile or recalcitrant majority. In France the Chambers cannot be dissolved without the consent of the Senate, and this leaves the Cabinet at the mercy of both of them. If the English Ministry were deprived of this power, the disappearance from influence and prominence of all the great political notables, beginning with Mr. Gladstone, would be very rapid—perhaps as rapid as in France. Curiously enough, too — and this throws a somewhat comic light on Mr. Bradford's remedy as regards civil-service reform—this triumph of the Chambers over the Executive in France is marked by a vigorous attack on the stability of the tenure of office in the civil service. A swarm of Conklings, Dorseys, Bradys, Hubbells, Camerons, Platts, begin to show themselves, who are clamorous for offices to be used in promoting their own reëlection, and are too busy with officeseekers to pay much attention to legislation or foreign policy.

THE AUTHOR'S BEST FRIEND.

The apparent breakdown of the copyright negotiations between England and this country again calls attention to the singular condition of authors' rights in both countries, as the absence of any international protection for them has produced a condition of affairs which no one ever anticipated, and which bids fair in time to work its own cure.

The interest which always opposed international copyright down to within a very few years, was that of the respectable publishers, and it was evident that until it could in some way be proved to them that piracy in the long run would injure, not improve, their business, no international copyright law could ever be passed. Now, what half a century of argument and entreaty never accomplished, the agency of cheap piracy is rapidly and thoroughly effecting all over the world. The new race of pirates are actually doing what the respectable publishers always promised to do in supplying the world with really cheap literature, and in doing it they are ruining the once profitable business of respectable piracy. A publisher who reprints in this country a popular English book, which he secures by paying the author for the sheets, has now, we believe, only about a week's sales from which to derive his profit. At the end of that time the pirate has caught up with him, published the book in a cheap form, and made the authorized edition unprofitable. The pirate carries on his business in perfect security and without the slightest risk. He waits for the appearance of a popular book, and the moment he sees that it is likely to be profitable to the regular publisher, he takes it away from him and pockets whatever it brings. The week's start which the publisher has, is in fact a distinct advantage to the pirate, for it furnishes a test as to the popularity of the book.

It must be confessed that as a system of piracy this far surpasses anything the world has ever seen. Marine piracy, even in its most flourishing period, was always attended with great risks. The pirate might at any time have to give battle and fight for his life, and if he was caught he was immediately hung. But a literary pirate is not only not an outlaw, he is protected by the law; he is the product of law. After two generations of discussion of protection of literary property, the cheap pirate is what we have to show as our contribution to the progress of the world; and the curious part of the matter is that we know him to be a pirate, and call him a pirate, and denounce him as a pirate, and yet do nothing to suppress him.

The trouble is, moreover, by no means confined to the United States. Precisely the same causes which have been at work here have been also at work in Canada, and similar effects have been the result. The passionate longing for "cheap books," which displayed itself so early in the United States, developed itself about a generation ago in Canada, and has produced a chaos of legislation, in the midst of which the pirate has made his appearance, astounding the publishers who had been fostering the demand for cheap literature, by making it cheap at their expense. It must not be forgotten—it is a fact which the pirate himself never forgets—that such legal rights of authors and publishers as exist, are involved all over the English-speaking world in profound confusion, owing to conflicting legislation and judicial decisions. An enormous amount of legal ingenuity is spent all the time now in devising means of getting international copyright by some trick or device which will render the pirate helpless. As yet, however, in the struggle the pirate is far ahead. Mark Twain's recent attempt to get the better of him by means of a trip to Canada only showed how strongly intrenched was his position there.

A very slight consideration of such facts as these will convince any one that the pirate is doing a great work—a work which no one else could do. He is teaching the publishers all over the world that to protect themselves they must protect authors. It is easy to see that authors by themselves would never have accomplished this without the aid of the pirate. Legislation with us is controlled to a great extent by capital, and authors have no capital, except their brains, which count for little in such matters. What was needed was that the owners of the capital connected with literature, and by means of which it is carried on, should be made to feel that they were being preyed upon. That they now feel it, and feel it acutely, is evident from the attempt to get a treaty, and the amusing disclosures as to the working of the Canadian laws. The treaty has broken down because the publishers of each country want it arranged in such a way as to benefit themselves to the exclusion of their rivals in business. The failure of the treaty, however, brings them face to face with the startling fact that there is no alternative between universal piracy and an alteration of the law which will put literary property on the same ground with all other kinds. The author's best friend, therefore, is at present the pirate. With every volume he steals he is doing more to help on the cause of reform than all the "royalties" and "honorariums" paid to foreign authors from the beginning of time.

Nor should the fact be overlooked that, in all the recent discussion with regard to international copyright, the new pirates have refrained from taking any part in it. The authors have explained their views, the respectable publishers have explained theirs, but the pirate has said nothing. No interviews with him are reported; he writes no magazine articles; he has nobody in Washington to represent him; he simply goes on plundering, and allows the discussion of his occupation to be carried on by those whom he plunders.

It should not be supposed that he is silent from having nothing to say. If the new pirate desired to defend himself against the abuse which is heaped upon him, he would find plenty of materials without much difficulty. The magazines and newspapers of a generation ago, and the files of the *Congressional Globe*, are full of arguments to show that piracy of foreign books is one of the main bulwarks of national progress. See, it used to be said, what a multitude of beneficial results flow from it! In England the public, for some reason, wants dear books. Here the public wants and must have cheap books. If there were an international copyright law, the public here would have to buy the copyright edition, or, in other words, it would have to pay twice as much for the book. Now, much of our most valuable literature comes from England. Macaulay, Scott, Dickens, Thackeray, and innumerable other authors are needed by us; and if we do not steal them, the result will be that the spread of knowledge will be restricted, and literature, instead of being open to the public at large, will be restricted to a class—an idea of which no great and free people will endure

the thought. It was by arguments of this sort, in and out of Congress, that piracy was for a long time defended in this country, and it was not wholly abandoned by the publishers even after they began to give "honorariums" to foreign authors.

Now, the new pirate never resorts to this argument at all, though he has a far better reason for using it. The publishers whose place in the affections of the people he wishes to take, never did produce, even by piracy, a really cheap literature. They, and the statesmen who helped forward the discussion of the copyright question in Congress, were always saying that literature should be cheap, but all they actually did was to sell English books for the same price that American books of a corresponding class brought. But the pirate has in a twinkling made the entire body of English literature dirt cheap. All the stores of history, science, criticism, fiction, and humor possessed by the race have been suddenly brought by him within the reach of the humblest citizen. Books after all, even in this country, were before the day of the pirate a luxury. He has brought them within the reach of the elevator-boy and the bootblack.

Yet the pirate never says a word about it. He never calls upon the public to notice what a noble work he is doing. He never writes to the newspapers to point out what a blight would fall upon "culture" in the United States if piracy were to be stopped. He does not "claim" to steal for the public good. He simply steals and publishes, and publishes and steals. His business is a new one, and the type of man that carries it on is new also. He appears to have many of the qualities which Carlyle used to admire so much and to call upon others to admire with him. He is strong, stern, and silent; a foe to shams of all kinds, not wasting any time in foolish talk, but seeing the thing that is to be done and straightway doing it with all his might; not trying, either, to mawkishly "suffer and be strong," but being strong and letting others suffer. No windbag this, surely, the philosopher might have said, with weak pretence of benevolent motive; rather a Man, scornful of such pretence, with keen insight, as far as he sees, into the Veracities—mainly bent on taking and keeping.

The fact that publishers and authors have a dislike for the pirate, and abuse him roundly, should not blind us to these qualities. The pirate himself probably entertains a profound secret contempt for both publishers and authors. He knows very well that if they could agree to give international protection to literary property, they could bring his business to an end at once. But they do not agree, and it is their disagreement that enables him to prey upon them. In doing this work he is indirectly giving us what we have always demanded—"cheap books." This has been the way with strong men from the beginning of the world. Cromwell, Frederick the Great, Cæsar, Tweed, Jay Gould—all have produced indirect benefits to society that they never intended or dreamt of. So does the pirate. When the strong man comes, somebody has to be sacrificed. That is the way the world is governed. Authors and publishers might have gone on with their silly squabbles about "right" and "law" and "property" for a hundred years. The pirate settled the matter for them in a month.

COTTAGERS AND BOARDERS.

The summer season closed last week for the great body of the Boarders at summer resorts. The "Cottagers," or persons who when they go to the country live in their own houses, will stay nearly three months longer. In fact, every year sees the yearly sojourn of this class in the country lengthened, until now it has begun to get very near Christmas. This is partly due to the fact that the Cottager fathers and husbands are apt to be persons who are not tied closely to business, and can stay with their families all or a considerable portion of the summer half-year. It is due, also, to the fact that the country is really more attractive in our climate in the fall than at any other season. The American spring is so short as to be scarcely noticeable. The summer is too hot and fly-bitten for much exercise for all but the very young; while the three months of autumn are the perfection of weather out of doors, and have the additional merit of making an open fire pleasant in the evenings. The Cottager, too, is apt to be a person whose children are either grown up, or who can afford tutors and governesses, and is thus indifferent to the beginning of school terms in the city.

But recently he has been reinforced by men who enjoy neither the advantage of freedom from business, nor of grown-up children, nor even of easy circumstances, but whose wives and daughters enjoy being Cottagers as a matter of social distinction. In fact, there has of late years sprung up at all the great watering-places, except, perhaps, the medicinal resorts like Saratoga, a conflict between the Cottager and the Boarder, which has assumed the proportions and the bitterness of a Darwinian struggle for existence. There is nothing in the history of animal life on our globe more interesting and in some ways more pathetic than the efforts of the Boarder to survive, as a Cottager, in regions where as a Boarder he is threatened with extinction. He is planting himself all along the coast in small houses attached to hotels, where he gets his meals, and sometimes in curious little shanties with kitchens, in which all the housework except the cooking is done by his own family, and in which his difficulties about his offal and his drainage are often painful to witness. The shore of Frenchman's Bay, opposite Bar Harbor, begins to be dotted with these attempts at "cottage life," and in fact one meets with them the whole way from New London to St. John, New Brunswick, wherever there is an attractive beach or rocky promontory.

There would be nothing wonderful in this even if one's own home was not really to the majority of human beings the most attractive place of abode. But the American summer Boarder who wishes to frequent the most popular summer resorts has had ample warning, by what has occurred at Newport, of the fate that awaits him if he is content to sit down supinely as a Boarder. At Newport, not many years ago, he held his head as high and enjoyed himself as much at his hotel or boarding-house as any Cottager in the place, but his expulsion or degradation of late years has been complete. If the Cottager has not dealt with him as remorselessly as the Saxons with the Britons, he at least occupies at Newport the inferior tolerated position of the foreigner in ancient Athens, and, if he complains, he is met with the unuttered but distinctly understood inquiry why he does not betake himself to places peopled by his own kind. He has struggled gallantly against his fate, but he has been vanquished, and forced to submit to the great law which gives the good soil and good climate and pleasant places of the world to the strongest races. He has retreated to hotels up and down the coast, where he enjoys himself as a private, unabashed Boarder among Boarders.

Mount Desert Island was long the Boarders' Paradise. The badness of the hotels, and the simplicity of the manners and costume, even five short years ago, seemed to make it impossible that the Cottager would ever become "a prominent feature" in the place, much less that the Boarder would ever have anything to fear from him in the way of banishment or extirpation. But there too the old Newport struggle has now been renewed, and with every prospect of its terminating in the Newport way. The hotels are large and numerous, and are peopled by Boarders most of whom are in the first flush of vigorous youth, and with apparently nothing to fear from any quarter. But the Cottager has slowly and steadily, without haste, without rest, followed them up the coast with Roman steadiness and persistence, and is now settling all over the island. Cottages are rising on all the favorite sites in the neighborhood of Bar Harbor. The Cottagers are forming a large and powerful body, united by sympathy and by common traditions and manners, by social ambition and by the magic of property—in short, by all the motives which make men determined and remorseless in asserting their rights or gratifying their desires. They have already formed a sort of caste apart, which looks down on the Boarder with a certain hauteur, and begins to make up parties without him, to be bored by his visits and unwilling to return them, and undisguisedly anxious that he shall quit the soil endeared to him by some of the most touching associations of human existence. The name "Tourist" begins to be applied to him as a depreciatory epithet, like the name "Welshman" given by the victorious Saxons to the expelled Briton who had taken refuge in the mountains. His ordinary mode of conveyance, the once esteemed "buckboard wagon," is now spoken of in cottages with undisguised contempt. In fact, there is every sign that the Boarder will have, before many years, to yield his footing at Bar Harbor as he has done at Newport. Already one meets along the Maine coast, up as far as Campobello, fugitive Bar Harbor Boarders who were too old or too nervous to support even the beginnings of the struggle. They will doubtless be reinforced, as the years roll on, by crowds of others driven out by the victorious Cottagers.

The worst of it is that the Cottager apparently sets no bounds to his pretensions as to territory. His policy, apparently the old policy of the conqueror everywhere, is to let

the Boarder go up the coast and discover the most attractive resorts, and allow him to report on them in the newspapers, write poetry about them, lay the scene of novels and plays in them, and then pursue him and eradicate him from the soil as a burden if not a nuisance. That he makes a resort far more beautiful to the eye than the Boarder, there is no denying. He covers it with beautiful houses; he converts the scraggy, yellow pastures into smooth, green lawns; he fills the rock crevices with flowers; he introduces better food, and neater clothing, and the latest dodges in plumbing. But these things are only for the few—in fact, the very few. An area which supports a hundred happy Boarders will only bring one Cottager to perfection. Moreover, it is impossible, no matter how much the country may flourish, that all Americans who leave the city in summer should by any effort become Cottagers. The mass of them must always be Boarders and remain Boarders, and we would warn the Cottagers that it may become dangerous to push them too hard and too far. Much further east or north on the coast they will not go without turning on their persecutors. They will not put up with the shores of Labrador or Greenland, no matter how hot the season may be. The survival of the fittest is a great law, and has worked wonders in the animal world, but it must be remembered that it has to work in our day in subordination to that greater law of morality, which makes weakness itself a strong tower of defence.

THE SESSION AND THE GOVERNMENT.

LONDON, August 18.

THE Parliamentary session which is now practically ending has been one of the most strange and exciting, and at the same time useless and unprofitable, that England has seen for many years. It has been full of dramatic scenes and odd turns of chance; full of mistakes made by the Government, mistakes made by the Opposition, yet neither set of mistakes producing their natural and usual result, but twisted to unforeseen issues by a Fortune which seemed to make sport of men's plans and expectations. It is a history in itself.

It began, after the accustomed preliminary wrangle with the Parnellite members over the Address to the Crown, with the introduction of Mr. Gladstone's new rules of procedure, intended to reform the mode of doing business in the House of Commons. He declared that none of the measures promised in the Queen's speech could be taken up till this vital and indispensable reform of Parliament itself had been accomplished. The Opposition received the proposal to enable a debate to be closed by the vote of the majority with bitter hostility, while a good many Ministerialists hardly concealed their dislike for it. It would, however, have been carried after a few nights' debate had not the appointment by the House of Lords of a committee to inquire into the working of the Irish Land Act brought on a contest between the Houses, Mr. Gladstone resenting this step as a blow aimed at the operation of the Act, and thinking himself (perhaps erroneously) bound to obtain a vote from the House of Commons condemning the conduct of the Peers. The discussion of the first rule of procedure, thus interrupted and further delayed by the necessity of taking some money votes, was not completed when the Easter vacation arrived. Meantime, the condition of Ireland, where agrarian outrages continued to increase while their perpetrators were seldom or never discovered, had goaded the upper class in England, who naturally sympathize with the landlords in Ireland, into keen impatience and irritation. From all quarters cries were heard that some fresh step must be taken in Ireland; for those who disapproved of the Coercion Act and Mr. Forster's administration generally missed no opportunity of pointing out that this kind of severity, at any rate, had failed to succeed.

The first sign of change was given by the retirement of Lord Cowper, the Lord Lieutenant. Then, quite suddenly, the Government released Mr. Parnell and the two other members who had been imprisoned under the Coercion Act. The resignation of Mr. Forster, who was known to disapprove that step, was at the same time announced—on the 2d of May. On the 4th he stated—not without some heavy side-strokes at his late colleagues—his view of the situation; while the Government, which now found itself in favor with the Parnellites, was threatened with the defection of the more moderate, or so-called "Whig," section of its own supporters, who thought that severity, and not leniency, was what Ireland needed. The Phœnix Park murders on Saturday, the 6th of May, changed the situation in a moment. The Government undertook to bring forward immediately a new measure of repression; the wavering Whigs returned to their allegiance; the Parnellites became again the assailants of the Ministry. The whole story of the communications which had passed between some of the Government and Mr. Parnell before his liberation was brought out, and used unsparingly by the Tories to damage the Cabinet. It would doubtless have been better if Mr. Gladstone had either taken no notice of these negotiations, and put the release upon other grounds—there were ample grounds—or had himself told the tale, instead of letting it be wrung out by degrees from the intermediary. Here, according to the judgment of dispassionate observers, was a second mistake on the part of the Government, and one which probably damaged them with the country, for although there does not seem to have been really any compact, the insistance of the Tories has made it pass for a fact. Shaken already by these struggles, the Government now found itself embarked in the tedious task of carrying its Prevention of Crime Bill in the teeth of the persistent opposition of the Irish Nationalists—an opposition which ended in the "scene" when, at the instance of the Chairman of Committees, sixteen of them were suspended. The remaining weeks of the session were consumed in passing the Irish Arrears Bill, a measure which the Tory party denounced as wrong in principle and likely to form a dangerous precedent, which the Parnellite members received contemptuously as an inadequate and almost useless concession, and which hardly any Ministerialist, however obediently he may have voted for it, really liked, or could have defended except as a painful necessity.

So when the end of July came—the time when wearied members begin by pairing to anticipate the close of their labors—no one of the important measures promised in the Queen's speech had been passed. Not even the rules of procedure, not a single one of them, had been passed: the debate adjourned during the Irish crisis of May had never been resumed. The session proved barren, as far as those greater measures of legislation are concerned which a Government undertakes, while private members had done nothing, because their days had been seized by Government for the discussion of the two Irish bills. Here was a painful confession for those to make who had been always reproaching Lord Beaconsfield's Government with its failure to carry useful domestic legislation. Last session spent on the Irish Coercion Bill and the Irish Land Bill; this session spent on the Irish Prevention of Crime Bill and the Irish Arrears Bill; nothing done for England and Scotland—even the rearrangement of Parliamentary procedure, which Mr. Gladstone had declared to be the needful preliminary to all legislation, left unexecuted. Here was a theme for Opposition orators to declaim upon during the recess! Of course, explanations could be offered; but explanations are apt to be treated as excuses. The English people, like most peoples, look chiefly to results, and are not satisfied with a failure, even when the best possible reasons have been given for it. Thus the prospect for Ministerialists was far from pleasant. The ardor with which they came up from their constituencies in 1880 had considerably cooled. Their loyalty to the Government was less fervent. They had experienced many disappointments, some rebuffs; they were sensible of seeds of disunion among themselves which might at any moment spring up; they felt as if their time, and the efforts which many of them had honestly made to improve the law and administration of the country, had been wasted. Ireland—though two previous sessions had been given to her—Ireland was still discontented, full of agrarian crime, possibly hatching other plots of assassination like that which horrified the world on the 6th of May. And another source of disquietude had arisen in the East. The state of Egypt, menacing ever since last September, became acute in May. The Government was first accused of weakness, because it did not at once punish the massacre of June 11; then of violence, because it bombarded the Alexandrian forts on July 11. We find ourselves with a war on our hands which must cost a good round sum, and may involve complications no one can see the end of. However prudent English diplomacy may have been, the fact remains that the hopes which the Government held out of avoiding the use of force in Egypt have not been realized. We are undertaking the serious task of restoring order there, and yet we are to gain no special advantage for ourselves, but act solely on behalf of Europe and civilization. Putting all these sources of anxiety, of distrust, of disappointment together, it was not unnatural that there should be some demoralization in the Liberal ranks. They were dispirited, restless, uneasy, fearing the results of a dissolution, yet likely by this very want of confidence in themselves and their leaders to bring it on. Only one thing held them together, the attachment which most of them still have to Mr. Gladstone, and the knowledge which they all have that he is the one man in whom the Liberal party throughout the country implicitly believes.

Such being their temper, the prospect of a contest with the House of Lords which might bring about a dissolution was by no means welcome to the Liberal party—much less welcome than a battle with the other House usually is to a body jealous of the superior power of its own chamber. Certainly no one expected that the result of this contest would be to rehabilitate the Ministry and reinvigorate the party. Yet so it has turned out. Lord Salisbury, as you know, began by denouncing the Arrears Bill with more than his accustomed force of language, and declared that, so far as he was concerned, it should not pass in the shape the Government had given it. His party in the House of Lords, with few exceptions, supported him by their votes, and used language scarcely less decided than his own. The Tory press bade

him stand firm, and assured him that the country was with him. A good many Peers, it is said, came to him declaring that they had regretted his yielding on the Land Bill last year, and that if he yielded now again, they should lose faith in his leadership. Everything, in fact, was done to rouse the House of Lords and the country, and to make preparations for a heroic resistance. Then suddenly the courage of the Conservative Peers gave way, or, which is perhaps the better way of putting it, their soberer reason told them that they had more to lose than to gain by a conflict. Lord Salisbury was forced to own in the House of Lords that he found he could carry very few with him—seventeen or thirteen only, it is said. The Opposition collapsed; the bill passed, with some nominal concessions intended to soothe the susceptibilities of the Upper House. Such a defeat has told on the opinion of the nation in two ways. It has given the Government the prestige of victory; has gone far to justify their bill, and the firmness with which they pressed it; has made them seem the stronger force in the state. And it has also brought into strong relief the unwisdom of the Opposition leaders. To have blown the trumpet so loudly, and then to be deserted by one's own troops; to denounce a measure as robbery, and be compelled to see it pass without even challenging a division in your own chamber—these are serious humiliations for a party leader. Such a catastrophe makes the country reflect that, whatever faults it may impute to its present governors, it is not likely to mend matters by substituting Lord Salisbury for Mr. Gladstone, who, in this last crisis, has steered his ship with consummate skill. Every Tory says: If Lord Beaconsfield had been alive, we should have had no such rout. Either he would not have fought at all, or he would have so fought as to damage his adversary. Meantime, that adversary is as strong as ever; and this strangely-checkered session, which saw Mr. Gladstone's Ministry more than once among shoals and quicksands, ends by watching it sail triumphantly away before a favoring breeze.

Y.

FROM STOKE POGIS TO CAMBRIDGE.

CAMBRIDGE, ENG., Aug. 18.

IT pleased me to find at Stoke Pogis at least one stone upon which Gray himself might have read the words, "spelt by the unletter'd muse." Of the very few stones scattered about the older part of the churchyard, the others bear dates too late, or else the inscriptions are illegible. The one in question stands not far from the east corner of the church, opposite the altar tomb of the Grays. At top is a rude outline of skull and crossbones; the name below is "Martha, wife of Mr. John Davis," her age 45, and the date 1734. Beneath is "the holy text" that taught "the rustic moralist to die":

> "O cruell death thou art Severe
> To take away my wife so dear
> But since God has gave him Leave
> Christ her Soul he will Receive."

The eastern end of the churchyard is crowded with stones of recent date, but nearer the church the mouldering heaps still lie so close as to seem almost like furrows. It was curious that there were no daisies upon them. The turf was all starred with them just before, at Grasmere and at Hursley-All-Saints, around the Keble graves. But here thick and fine was

> "the clover sod
> "That takes the sunshine and the rains."

It is a link of the purest fancy, but the homely little flower will seem henceforth to give our New England country graveyards something of common right to the traditions of the "Elegy."

The sexton was finishing a new-made grave in the east corner, and dropped his spade to unlock the church door. On the reading-desk the book lay open at the burial service. The church is dark and crowded, and, it must be owned, awkward and out of date with anything old or new, in its last-century dress; but remembering the jarring effect of much of to-day's freshness in the renovated churches, and the newness, I had almost said smartness, of the modern end of this very churchyard, I am ready to love the ugliness of the old. The trees must have changed much since Gray's time. The yew is no longer conspicuous among the tall pines and elms which fairly wall in the churchyard, leaving only one opening toward the east. The lowing herd is no longer in sight across the lea, for the bit of park visible is quite shut in by the trees beyond the monument to Gray. Erected by one of the Penns, the owner of Stoke Pogis Manor in 1799, after the classic model of the sarcophagus upon a massive pedestal, it is altogether out of fashion now, but I find in it, standing in its green-turfed hollow, and sheltered rather than shaded by fine old trees, a simple dignity well suited to the name of a scholar of the last century. The inscriptions upon it include the four stanzas beginning "Beneath those rugged elms," "The boast of heraldry," "Hard by yon wood," and "One morn I missed him." Upon the third side are six lines from the Eton College "Ah, happy hills! ah, pleasing shade!" On the fourth is recorded the fact that the remains of Gray rest beneath the slab which he has so "piously and pathetically" inscribed to the memory of his mother. The vivid phrases of the "Elegy" have made the whole scene a place in which to listen; but in the glory of a midsummer afternoon the long shadows lay sleeping across the graves, and no sound broke "the solemn stillness" but the low, sweet, incessant coo of the turtle-doves.

From Stoke Pogis and Gray to Cambridge, where I am now writing, is a natural transition. It is seldom that a stranger, coming to Cambridge in the midst of the Long Vacation, would see or hear anything of which the account would be other than a twice-told tale, but the sad event of this July will long be remembered in the annals of the University. The particulars of the death of Mr. F. M. Balfour will have far outstripped this letter in reaching America. The first reports of the accident were both inaccurate and unjust, but from the later accounts given by friends who went at once to the spot, it is evident that, though the exact secret of the catastrophe is buried in the rocks and ice of the *couloir*, below the upper basin of the Glacier de Fresney, the expedition was possibly venturesome, but not reckless. The story of Balfour's making his will beforehand was an entire fabrication. The provision for the guide or his family in case of accident is not at all an uncommon thing, and was but a natural precaution to a man of his forethought and kindliness. Only a person well versed in the sciences of physiology and biology could do justice to Mr. Balfour's remarkable career. Barely thirty years of age, he had already, as it were, created a new branch of science. The University had just founded a Professorship of Morphological Anatomy on purpose to make a suitable place for him, but, alas! he never delivered a single lecture. Widely connected and universally beloved, his death is a terrible private grief, while there is no measure to the terms in which men, both old and young, speak of the irreparableness of the loss to the University and to the world. In the first strength of youth he had gained a point which most men take a lifetime to reach, and there seemed a wonderful possibility of future attainment in the long life apparently before him.

The funeral took place in Scotland at noon last Saturday. At the same hour the members of the University gathered in the chapel of Trinity College to join in the service for the burial of the dead. It was, of course, choral, and in any other connection it would be natural to dwell upon the merit of the music at Trinity, where organ and choir seem to have been brought to do all that is possible for either of them; but at such a time they can be thought of only as lending their perfection and beauty to aid in the fit expression of the all-absorbing grief. Every seat in the great chapel was filled; the few ladies present were in mourning. All faces were set and sad, all hearts heavy, as more than once before in this very place, for the loss of "the hope of unaccomplished years." All the service except the Lesson, the "ashes to ashes," the Thanksgiving, and the Collect, was chanted or sung, and after the Collect came the anthem by Handel, "When the ear heard him, then it blessed him." When the benediction was pronounced, each stood in his own place with bowed head, while the organ played the "Dead March in Saul." It was a scene of such impressive and melancholy solemnity as can never be forgotten. Alma Mater had offered what she had most august and most beautiful to the honor of her dead son.

M.

THE MEXICAN ELECTIONS.

MEXICO, August 15, 1882.

THE Congressional and Senatorial elections which took place in the past month were of a sort to make one doubt their very existence, if he had been accustomed to the noise and excitement of the American method. A faithful reader of the newspapers scarcely would have been able to find out when the elections were to be verified, or that there was any great public concern about them. Along in the latter part of May we began to be served with vague and inflated editorials on the dignity of the electoral act which the great Mexican people was again solemnly about to perform. Then, toward the middle of June, there used to appear indefinite rumors to the effect that this man or the other was desirous of representing such a district, or that the month's leave of absence of a certain Cabinet Minister meant that he was going to try for the Senatorship of his State. Finally, in the latter part of July, the elections were reported as past, and the names of the successful candidates were printed. Not a single public political meeting did I hear of, no campaign documents, no processions, no speeches, no tumult.

What all this signifies, either of public indifference or political scheming, one cannot well say without close scrutiny, and even then there is no great certainty. The state of the press is such as to present the greatest difficulties in the way of getting accurate information in such matters. In the first place, the press of Mexico as a purveyor of news, domestic or foreign, is a most remarkable failure. There is no associated press, or shadow of it. An attempt was recently made by some of the city papers to combine in paying for daily cable despatches from New York, but the enterprise fell through, from mere Mexican indifference, as it would seem. We have to depend on the mails for foreign news, with the exception of a stray telegram overland from Matamoras, from six to eight days old at that. The usual time consumed by a telegram coming from Matamoras to Mexico is three days. Thus there was no report of the execution of Guiteau before the 5th of July. In the field of home news there is an even greater and less pardonable inefficiency. All gleanings are by mail, or from the reports of occasional pilgrims coming from distant parts of the republic.

Beyond this, and constituting a greater difficulty, is the fact that nine-tenths of the in-

fluential papers are in the pay of the Government, National or State, and are simply not to be trusted in anything bearing upon the Administration. The other one-tenth is made up of papers which have made themselves independent financially of Government subsidies, as the *Monitor Republicano* of this city, or of struggling sheets which attack the Government most ferociously in the hope of getting a bribe to keep still. For instance, a publication called the *Oposicion Radical* has been running along for a month filled with the most violent abuse of the Government and all its works, and it is a common remark here that it will either soon get its hush-money and become a thick-and-thin supporter of the Government, or else suspend altogether. I have it on the authority of a gentleman long resident in this city, an intimate friend of Juarez, and well acquainted with the members of the present Administration, that not a single paper of any pretensions in this city, save the *Monitor*, fails to receive a monthly stipend from the public treasury. This anomalous state of things causes great perplexity to one who has been accustomed to a general honesty in reporting facts, no matter what interpretation the political bias of a paper would lead it to put upon them. In this matter of the elections the Government papers give quite too rose-colored accounts, beyond all doubt, speaking of the general participation of the people and the absolute freedom of the expression of the public will, while the Opposition papers, just as certainly, are extreme in their denunciation of the whole affair as a cumbrous farce, and solely the enforcement of the Executive's will, which will not tolerate difference of view.

Where, then, is the truth? In the first place, a study of the Mexican electoral system will show how great is the opportunity for unduly influencing, or obscuring, or even forcing the popular will. The States are divided into electoral districts of 40,000 inhabitants each. These districts are subdivided into sections of 500 inhabitants, and each one of these sections is entitled to choose one "elector." The elections in the sections take place every alternate June. A list of voters is made out by the municipality, and a ticket issued to each voting citizen. Seven voters are enough to constitute the "electoral table" of the section, at which presides an officer appointed by the municipality. The electors chosen by the sections, at their assembling in July, vote for Congressmen (one for each district), for two Senators (for each State), and for President of the Republic every fourth year. The votes for Congressmen and President are canvassed and declared by Congress; for Senators, by the Legislatures of their respective States.

Now, it is clear that this system is wide open to arbitrary influence. An opponent of the Government has to run the gauntlet of three bodies —the section, the district, the Congress or the Legislature. And the great number of limitations—many of them vague and subject to abuse —which are laid by the organic electoral law upon the right to vote, put an effective weapon in the hands of unscrupulous officials. For instance, in addition to the usual precautions against the exercise of the suffrage by aliens and criminals, the Mexican law empowers the registrar to exclude from the polls those "who have been condemned by judicial sentence to suffer any infamous punishment; those who have gone through a fraudulent bankruptcy proceeding; vagrants, professional gamblers, and habitual drunkards" (*Ley organica electoral*, Cap. II. Art. 8). Here certainly is abundant opportunity to shape the outcome of the sectional elections. With all these means of excluding opponents, and a requirement of only seven voters to form a legal "table," it would be a poor manager who could not keep a party in power. The truth is, that since the French intervention, up to this time, the Congress has been little more than a tool of the President. His will shapes its decisions. The votes of the creature are the property of the creator. Lerdo in 1876, in the face of an intense popular opposition, and in spite of a declaration by the Chief Justice of the Supreme Court that his reëlection would be unconstitutional, pushed his pretensions through Congress by a vote of 123 against 49. General Diaz's first business, when he had overridden this decision by force of arms, was to make over Congress into a body that would do his will, a thing which he did most effectually, in 1878, by the use of his soldiery in a scandalous manner, as is admitted on all hands. President Gonzalez has inherited or achieved a similar state of things, as is witnessed by the solution of the Jalisco imbroglio at which the Senate arrived in the late session. The committee's report contained the following argument: Governor Riestra was legally elected; the revolution was wholly illegal; yet Riestra, by his flight before the revolutionary troops, had abdicated his office, and therefore the Governorship was vacant and must be filled by Presidential appointment. It must have been rather mortifying to President Gonzalez, however, to be obliged thus to dismiss the revolutionary leader whom he had recognized. No doubt the approaching elections will make all right.

A few words will suffice to show how admirably the system of filling local offices fits in with the methods of election, to bend everything before the Executive will. The States are divided into districts (not the Congressional districts), and the districts into municipalities. All the principal offices of these two divisions are in the gift of the President. These officials, military, civil, judicial, have such a degree of arbitrary power that they can easily determine the political representation of their localities.

I add an incident to illustrate the way the sectional elections were conducted in this city. An American friend of mine was sitting in his office, when a stranger stepped in and asked him if he would not walk round the corner to vote. My friend asked what the voting was for, and was told it was for choice of an elector to represent the section. He then asked if Americans and all were to join in, when the stranger begged his pardon and retreated, saying he was anxious to find some one to make up the legal number of seven voters.

Conversing, a few weeks since, with a prominent Liberal in Toluca, a former Congressman, well known as a member of the radical wing of his party which is now under the ban of the Administration, he told me that his friends were urging him to "run" for Congress, but that he would not, since, though he felt confident of carrying his district, he knew that Congress would never give him his seat. He assured me that enough of his former political colleagues had tried the experiment to make it sure that the very best credentials from men of their opinions would never get through the Committee on Elections.

I bring these election notes to a close with adding one curious fact in connection with the list of returned Congressmen. Large numbers of Lerdists appear. Men who have been in retirement for six years—whose political hopes were thought to be dead—are again coming to the front. They are not turncoats: it is too late for that to be the explanation; the renegades had their reward long since. They have not beaten the Government; on all sides that is deemed improbable. The only theory accepted here is that of an alliance with the Government —for how long and for what purposes it is a secret. Add to this the thickening rumors that Lerdo himself has made his peace with the Administration, and is coming back from New York to accept a Cabinet position, and the puzzle of it all is increased. "What does it mean?" said I to a gentleman who has lived in Mexico since the first Republic. "I can't say," was his reply; "but my experience argues that the most improbable thing you can think of is the one most likely to happen." O.

Correspondence.

ERRORS OF THE CENSUS.—III.

To the Editor of The Nation:

Sir: I ask your attention to further errors in the Population volume of the Tenth Census.

On page lii, Table XXX, among other things, purports to show the population below each curve of elevation above the level of the sea. According to it, that part of the country which is less than 1,000 feet above sea-level had, in 1870, 21,014,380 inhabitants, and in 1880, 38,952,900. The increase in the ten years was apparently 17,938,520. The total population of the country in 1870 was 38,558,371 (see Table I *b*, p. 4), and in 1880, 50,155,783 (see Table I *b*, p. 4), the increase in the decade being 11,597,412. Thus the increase in the country as a whole appears to have been 6,341,108 less than the increase in that portion of it below 1,000 feet in elevation. If such were the case, the number of inhabitants in those portions of the country above 1,000 feet must have decreased to that extent. Those parts of the country are the mountain districts in the Eastern States, the great plains of the West and Northwest, and the region lying between the eastern spurs of the Rockies and the Pacific Coast Range. The maps showing the extent and density of settlement indicate that there was a marked increase of population in these sections between 1870 and 1880. The very table under consideration (XXX) shows that in 1870 80.43 per cent. of the total population lived below 1,000 feet, and in 1880 only 77.66 per cent., indicating that the region above 1,000 feet had gained in population more rapidly than that below. According to the same table (XXX), in 1870 the population below 100 feet was 7,233,550; between 100 and 500 feet, 8,653,603; and between 500 and 1,000 feet, 15,127,227. From this it appears that the total population below 1,000 feet was 31,014,380—exactly ten millions more than is given in the table. Where 2 was printed, 3 should have been: instead of 21,014,380, the table should read 31,014,380. This latter figure is 80.43 per cent. of the total population of the country in 1870—an additional test of its correctness. It is fair to add that this table purports to be "*only approximate.*"

It is, of course, understood, as is explained on page lii, that in the present state of our information as to the contour of the country, the hypsometric sketch and the table (I *i*, p. 13) giving the population at each grade of elevation can be "only approximate." But it is not unreasonable to expect that they should agree with each other. Indeed, from the care with which the population of a small corner of Delaware having 7,774 inhabitants, and that of a strip of Kentucky having but 4,446, are entered in the table, it is not doubted that it was intended to correspond to the sketch.

On the sketch, a portion of Ohio is marked as having an elevation of from 1,500 to 2,000 feet. This tract extends from the Pennsylvania line westward through Trumbull, Mahoning, Portage, Medina, Stark, Summit, and other counties, and is about 80 miles long and from 10 to

30 miles wide. If it be measured, and the measurements compared with a township map of the State, it will be found to contain townships whose aggregate population, according to the volume under consideration (pp. 285–298), is over 100,000. According to the table (I *i*, p. 13), all the population of Ohio lives below 1,500 feet of elevation.

A former letter spoke of certain contradictions between the table (I *m*, p. 17) showing the distribution of population according to mean annual temperature, and the map showing the curves of mean temperature; but the subject was not then exhausted. The table (I *m*, p. 17) assigns the entire population of Connecticut to the belts of country having a mean annual temperature of 45°–50° and 50°–55°. On the map, the curve corresponding to a mean temperature of 45° crosses the northern boundary of Connecticut at the 73d meridian and the western boundary at a point about due east from Poughkeepsie, N. Y. The map represents that the portion of the State north and west of this curve has a mean temperature of 40°–45°. Part of Litchfield County—containing the towns of Canaan, North Canaan, Norfolk, Sharon, Salisbury, and Cornwall, besides parts of others—is in this corner of the State. The population in 1880 of the towns named was 11,990 (see pp. 113, 114). There are entries much smaller than 11,990 in this table, such as in Kentucky, where the 45°–50° belt is credited with a population of 6,186.

One of the most striking features of the map showing the distribution of the lines of mean January temperature, is the great deflection of those lines to the south in the Appalachian region. The western part of North Carolina and the eastern part of Tennessee, apparently, have a mean January temperature of 30°–35°, or the same as that of Long Island. Indeed, there is a small tract in each of these States whose January temperature is represented to be 25°–30°, or as low as that of eastern Massachusetts. The strip of North Carolina which, according to the map, has a January temperature less than 35°, comprises the counties of Surry, Alleghany, Ashe, Wilkes, Watauga, Mitchell, Yancey, Madison, Swain, and parts of several others. The counties named contained in 1880 a population of 96,289 (see pp. 73, 74). The section of Tennessee having the same temperature includes the counties of Sullivan, Washington, Carter, Johnson, Unicoi, Greene, Cocke, and parts of others. The population in 1880 of the seven counties named was 94,745 (see pp. 77, 78). From the table (I *u*, p. 25), however, it would appear that no inhabited portion of either of these States had a mean temperature in January of less than 35°. Either the map or the table badly misrepresents the climate of this belt of country.

The map showing the distribution of the lines of maximum temperature places two distinct portions of South Carolina under a maximum temperature of 95°–100°. One of these parts comprises the entire coast of the State. Charleston City, with a population in 1880 of 49,984 (see p. 327), is in this strip. The other part is at the opposite extremity of the State, and includes the northwest corner of its territory. It is made up of parts of Oconee, Pickens, and Greenville Counties, whose population in 1880 was 68,141 (see p. 77). According to the table (I *y*, p. 29), the population in 1880 of the section of South Carolina having a maximum temperature of 95°–100° was only 15,323. The map is made the basis of a discussion of the effect of the sea in reducing maximum temperature. On page lvi it is said: "We see a belt running along the sea coast from Maine to Texas, where the thermometer never rises above 100°, thus illustrating in the clearest manner the effect of the sea in averaging the temperature." Again, on page lx it is stated that the "whole Atlantic coast, from Penobscot Bay to the mouth of the Rio Grande," is "found in the class of 95° to 100°." Are these assertions correct? Are the deductions from them well founded? If they are, it necessarily follows that the table is wrong. It is probable that the 15,323 was intended to represent the population of those parts of Oconee, Pickens, and Greenville Counties which are in the 95°–100° belt, the compiler of the table apparently not taking any notice of the larger and more populous sections on the coast whose maximum temperature was also 95°–100°.

The map showing the distribution of the lines of minimum temperature indicates that the curve corresponding to a minimum temperature of 20° below zero crosses Kansas in a southwestwardly direction. It intersects the northern boundary of the State at or about the ninety-seventh meridian, and the western boundary about twenty-five miles north of the thirty-seventh parallel. The course of this curve corroborates the remark made on page lvi, that "there is a marked deflection toward the southwest as we pass westward from the Mississippi Valley." The tract of territory to the north and west of the line described is represented as having a minimum temperature of 20°–30° below zero. The portion of Kansas included in this tract is made up of the counties of Cheyenne, Rawlins, Decatur, Norton, Phillips, Smith, Sheridan, Thomas, Sherman, Wallace, Scott, Greeley, Wichita, Hamilton, and parts of many others. The population in 1880 of the counties named was 41,390 (see pp. 60, 61). According to the table (I *cc*, pp. 34, 35), in the inhabited portions of Kansas the thermometer never falls lower than 20° below zero.

In my next letter I hope to speak of the rainfall maps and tables, of interesting contradictions as to the temperature and rainfall of Colorado, and of certain other errors. JOHN C. ROSE.

BALTIMORE MD., Aug. 29.

A NAVY INDEX.

TO THE EDITOR OF THE NATION:

SIR: So much good work has been done in many directions by the younger officers of our Navy, that I am sure my motives will not be impugned for calling attention to a very poor piece of work indeed.

I have before me, as I write, what purports to be an 'Alphabetical Index to General Orders, Circulars, etc., issued by the Navy Department from January 10, 1863, to June 30, 1881, compiled by Passed Assistant-Engineer H. Webster, U.S.N., by authority of the Secretary of the Navy.' The book bears the imprint of the Government Printing-office, which proves it to have been published, as well as compiled, "by authority." Now, I look in vain for any explanation why an odd date like that of the 10th of January, 1863 (nearly two years after the beginning, and more than two years before the ending, of the last war in which the Navy was engaged), should have been selected as the starting point of such a book of reference. The alphabetizing of this "alphabetical index" stops at the first letter of each entry, so that I cannot find, under a single entry, "Act of Congress," references to all the orders and circulars publishing the statutes relating to the Navy, but must search the whole string of entries under A and pick out "Act of Congress" wherever I find it. The entry, "Act of Congress, approved July 17, 1862, for the better government of the Navy," which is the first in the book, has no cross-references under any other letter that I can find, while the date of the order mentioned in connection with it, December 21, 1863, leaves me in doubt as to what the *subject* of the order really is, and there is nothing to do but to go to the file of orders to see what the index entry means. "Ales and wines on board ship" has no entry under "Wines," or "Spirits," or "Liquors," and hence, as to the important subject of intoxicating drinks, the index is only useful to those who happen to remember that "ales" is the first descriptive word used in G. O. No. 29 of 1864. The entry, "Allowance of 20 per cent. to mates," does not reappear under "Mates"; and, after that, further illustration of the character of this "index" does not seem called for.

I submit that, on grounds of credit and utility, the copies of this index should be called in, and the whole edition suppressed. It is useless to suggest that the Government should be "made whole" in respect of it. SOLICITOR.

WASHINGTON, August 30, 1882.

MR. VERNON-HARCOURT'S 'RIVERS AND CANALS.'

TO THE EDITOR OF THE NATION:

SIR: A copy of the review of my book on 'Rivers and Canals,' in your issue of the 6th inst., has been sent to me from the Clarendon Press. I am much obliged to your reviewer for his correction with regard to the Mississippi passes. Doubtless *contracted*, not "closed," should have been applied to the action of the mattresses sunk at the heads of the passes.

To his remarks, however, about the Aubois Lock I must take absolute exception. The statement as to saving of water, which he pleases to consider absurd and inaccurate, was taken from the report of a commission on M. de Caligny's invention ('Comptes Rendus de l'Académie des Sciences,' vol. lxviii., pp. 124 and 126); it was quoted about ten years later by M. Debauve ('Manuel de l'Ingénieur des Ponts et Chaussées,' 1878, part 19, p. 259), and was repeated by M. de Caligny in the 'Annales des Ponts et Chaussées,' 1880, vol. xx., p. 236. A reference to these will amply disprove the inaccuracy of my statement. The percentage of saving on the whole volume of water expended appears to me large, but it has been obtained from a careful series of experiments, the results of which were examined by independent persons; and it is due to the utilization of the power of the downward flow of water in filling or emptying. The percentage of saving, however, would be quite immaterial from your reviewer's aspect of the question, as, if merely ten per cent. of the total volume expended was saved in one operation, it could be all regained, according to your reviewer's principle, by repeating the operation of filling and emptying ten times. To take, however, an illustration with which your reviewer may be more familiar than with hydraulic science—if he expended £100 in a business transaction, and only got back £80, by repeating the same transaction, he ought, according to his view, to be a gainer of £60, instead of losing, as most people would admit, a sum altogether of £40. He appears, from his remarks, to suppose that two losses make a gain—a train of reasoning in which I cannot concur. I trust that, in justice to M. de Caligny, if not to myself, you will publish this letter in defence of facts which your reviewer has so thoughtlessly attacked.

Your obedient servant,

L. F. VERNON-HARCOURT.

6 QUEEN ANNE'S GATE, WESTMINSTER, S. W., July 20, 1882.

[As to the mattress sills in the passes of the Mississippi River, they do not *contract* the large passes, they simply prevent a threatened enlargement, and the proportional discharge of these large passes has not been changed.

As regards the Aubois Lock, our criticism

was not directed against the lock itself, nor did we mean to question the great saving of water effected; but Mr. Vernon-Harcourt's description of the lock is another thing, and his manner of stating the saving is simply absurd. The train of reasoning which makes percentages accumulative was his, not ours, and it was against this train of reasoning that our criticism was directed. It is certainly possible to design a lock in which the loss of water would be but a small percentage of the whole capacity of the lock; the Aubois Lock may be so devised that in filling it forty per cent. of the required water is obtained from the lower level, while in emptying forty per cent. of the water is restored to the upper level, so that the actual amount of water lost from the upper level is but twenty per cent. of the capacity of the lock. There is nothing, however, in Mr. Vernon-Harcourt's description which shows this to be the case, his results being apparently nothing but the absurd conclusion of an accumulation of percentages.—Ed. Nation.]

EFFECT OF THE INDIANA NORMAL-SCHOOL SYSTEM.

To the Editor of The Nation:

Sir: Some ideas on the public schools of Indiana, based upon an observation of them during ten years, may be of interest to readers of the *Nation's* summary (August 17) of the lecture of Dr. Hartwig Gercke on "The Public-School System of the City of New York." I hasten at the start to disavow any intention of discussing certain questions upon which Indiana is extremely sensitive — whether her munificent school fund, her well-paid school-teachers, her numerous and expensive school-houses are of themselves any indication of the quality of the education she is giving her children; whether our "Centennial exhibit" was a bona-fide representation of the actual, average work of the schools; whether Charles Francis Adams, jr., "stole" all his ideas for the Quincy schools from the Indianapolis schools. Nor do I mean to make any comparison between our schools and those of other States; my suggestions relate to other matters.

Whatever the normal school may be in theory or in New York, I can but think it has been a misfortune to us. In numbers the teachers educated in normal schools are in a minority; but the normal-school spirit, ideas, and methods have, in one way and another, become thoroughly bedded in our school system, and have, directly and indirectly, had a controlling influence upon the teaching in the public schools of the State. A deep-seated pedantry, a complacent confidence in cut-and-dried methods, an inability to understand the spontaneous and creative in teaching, a spreading out of their little knowledge into exceeding thinness, a ridiculous attempt to see everything from "the philosophic point of view," an utter incapability of appreciating the fact that a Harvard graduate with abundant things to teach, but with no set methods of teaching them, can possibly be the equal, as a teacher, of the holder of a normal-school diploma — are our normal-school characteristics, and have given a radically wrong tendency to the schools of the State, the primary grades possibly excepted. The candid observer must feel a disappointment in the results of our schools as shown when the children are tested out of their school routine. They do a little good and much harm. The children learn to read, write, and spell fairly, a little geography and arithmetic—all of which ought to be learned easily in the first four or five years of an average graded course. The remaining school years, measured by the time spent, the steady attendance, the early promise of brightness, are comparatively barren. But this is not the worst. The training has produced a certain mental sterility and helplessness and an intellectual apathy that are disheartening. All that early brightness not only comes to no useful end, but is itself entirely blotted out. School-children in all times have kicked against school routine and tasks, but we have been used to see all the while a keen desire for knowledge, and strong, inquiring minds. But here, especially in Indianapolis, I have seen this reversed. There is a passive endurance of school routine; there is in the school-room a species of bodily excitement, but it is not enthusiasm. The average have not a keen desire for knowledge nor strong, inquiring minds.

When children are like this, it is the machine system that has made them so; and our schools are machines. There are schools in Indiana (and they have received the approbation of a State Superintendent of Education) that would proudly own to being machines. There are others, as, for instance, in Indianapolis, that do not acknowledge any machine in use. In these, indeed, one almost wearies of those good things, "originality," "fertility," "individuality," "teaching to think"—so much does he hear them talked of. Nor in them does the machine always appear to any one who thinks to discover it by school-room inspection. That genial gentleman, Mr. Bronson Alcott, himself a school reformer, visited our schools a couple of winters ago. He had no suspicion of our skeleton in the closet, and was generous of praise. I have come to believe that the Indiana school officials are honest in their declarations that in the essentials our schools are highly efficient. They are themselves deceived by the external appearances of the work done. They have become so infatuated with their educational methods, quite in the style of the constitutions always ready in the pockets of the Abbé Sieyès, that they are unfitted for a candid study of the results of their work. They are more fortunate than the Abbé, for they can force their plans into practice on helpless, long-suffering children, with whom they form an artificial world, in which they practise artificial methods, and produce artificial results.

As I have already indicated, I believe the normal school is at the bottom of the evil. I think, also, it could be shown that in Indiana the system much in vogue here, of having the examination questions made by others than those who do the teaching, is despotic and deadening. But I have already occupied too much space.

E. L. S.

Indianapolis, August 25, 1882.

Notes.

Roberts Bros. announce for the present season the following new publications: 'Our Liberal Movement in Theology,' being recollections of the history of Unitarianism in New England, by the Rev. Joseph H. Allen; 'Sermons and Addresses,' by the late Rev. Henry W. Bellows; 'The Wisdom of the Brahmin,' a metrical translation from Friedrich Rückert, by the Rev. Charles T. Brooks; 'The Great Epics of Mediæval Germany,' described in outline by Prof. George T. Dippold; 'Norse Stories Retold from the Eddas,' by Hamilton W. Mabie; 'Wit and Wisdom of Don Quixote'; 'My Household of Pets,' translated from Gautier's 'Ménagerie Intime' by Susan Coolidge, and illustrated by Frank Rogers and others; 'Art and Nature in Italy,' by Eugene Benson; 'Under the Sun,' by Phil. Robinson; 'Rare Poems of the Sixteenth and Seventeenth Centuries,' collected and edited by W. J. Linton; and the 'Jean Ingelow Birthday-Book.' In their juvenile list the Rev. E. E. Hale reappears with 'Stories of Discovery, Told by Discoverers,' and Miss Alcott with 'Proverb Stories' and 'An Old-Fashioned Thanksgiving.' Mrs. Harriet Prescott Spofford makes her first experiment in this line with 'Hester Stanley at St. Mark's,' and Lieutenant-Colonel Butler, author of 'The Great Lone Land,' tells of 'Red Cloud, the Solitary Sioux.'

Jansen, McClurg & Co., Chicago, announce for early publication Rudolf Schmidt's 'The Darwinian Theories, and their Relation to Religion, Philosophy, and Morality,' translated, under the author's supervision, by Dr. G. A. Zimmermann, of Chicago, with a special introductory preface by the Duke of Argyll; Nohl's 'Haydn,' translated by Geo. P. Upton; 'The Time of Gustav Adolf,' from the Swedish of Zachary Topelius (being the first volume of his famous "Surgeon's Stories"); 'Frontier Army Sketches,' by James A. Steele, of Topeka, Kansas; 'The Essentials of Vaccination,' by Dr. W. A. Hardaway, of St. Louis; and 'The Nonpareil Cook-book,' by Mrs. E. A. Matthiessen.

Dr. D. G. Brinton, whose address is No. 115 South Seventh Street, Philadelphia, is about to commence publication of a "Library of Aboriginal Literature," consisting of works printed in the original tongue, with an English translation and notes. Most of them will be from unpublished MSS. The form will be octavo, and the edition but little in excess of the number of copies subscribed for. Subscription to the first volume will not bind one to take the remainder. No. 1, the Maya Chronicles, edited by Dr. Brinton himself, will be ready before the close of the present year. The list at present includes also the Central American Calendars, the Annals of Quauhtitlan, The National Legend of the Creeks (edited by Albert S. Gatschet), and the Chronicles of the Cakchiquels. Its ultimate length will depend upon the support extended to the enterprise.

A 'Young Folks' History of Ireland,' by the Rev. H. Bernard Carpenter, is announced by Estes & Lauriat, Boston.

The last of Mr. Geo. M. Towle's "Young Folks' Heroes of History" will be 'Drake, the Sea-King of Devon' (Boston: Lee & Shepard).

Fords, Howard & Hulbert are about to resume the weekly pamphlet issue of the Rev. H. W. Beecher's sermons, under the style of the *Plymouth Pulpit*. It is understood that Mr. Beecher intends to present during the coming year a more complete and systematic view of his religious teachings than he has heretofore done. The price of this serial will be reduced.

N. Tibbals & Son have in press 'The City Temple Pulpit Sermons,' by the Rev. Joseph Parker, of London.

W. W. Williams, Cleveland, O., will shortly publish a brief biography of Joshua R. Giddings, by Walter Buell, formerly on the staff of the Cleveland *Herald;* and 'Famous Funny Fellows,' by Will M. Clemens, of the Cleveland *Sunday Ledger*.

It is agreeable news that the *Californian* will hereafter take the name of a promising venture, the *Overland* (*Magazine*), which lapsed some years ago for want of the necessary support on the Pacific Coast. The old grizzly will reappear upon the cover. The change of title will not be complete until the January issue.

The topics of the August *Monthly Reference Lists* of the Providence Public Library are the National Banks, and the Tendencies of Local Self-Government in the United States.

The Boston Public Library has been undergoing examination by experts in order to discover what it needs in the various departments. The recent annual report of the Trustees prints Mr. Horace Howard Furness's conclusions. He not only summarizes well the strong and weak points of the Shakspere collection, but contrives to impart much information concerning the tools and treasures of the Shakspere student and collector.

When the Memorial History of Boston was projected, it was suggested that this plan of a series of monographs by specially qualified writers might prove to be the method of the future for historical composition. A work on somewhat the same plan has begun its appearance in Vienna, entitled 'Die Völker Oesterreich-Ungarns: Ethnographische und Kulturhistorische Schilderungen.' It is to be in twelve volumes, of which four are to treat of the Germans of the Austrian Empire, three of the Slavs, and one each of the Magyars, Rumanians, Gipsies, and Semites. The account from which we copy omits the twelfth, but it is probably the Dalmatians. Each volume is to be by a different author, generally belonging to the race described. The sixth volume, 'The Rumanians,' has already appeared, by Joan Slavici.

Volume i. of the Proceedings of the Biological Society gives a full history of the origin and doings of this young but active and already useful organization, and recounts the steps taken to form a Washington Academy of Sciences out of a federation of itself with the Philosophical and Anthropological Societies. But the bulk of the volume is taken up with memorial tributes to Darwin by members of the Biological Society. Collectively these are very impressive, Dr. C. V. Riley's being perhaps the best; Colonel Powell's had least claim to be printed. Mr. Frederick W. True, librarian of the United States National Museum, appends a Darwinian Bibliography—*i. e.*, a list of Darwin's own publications—confessedly incomplete, but strikingly full. Dr. Riley, by the way, remarks of the great naturalist that on meeting him he was "at once struck with his stature (which was much above the average, and I should say fully six feet)."

A forgotten method of autographic art production is revived by Benjamin Hartley in a little volume published by the New York Industrial Publication Company, called 'A Guide to Collodio-Etching.' It is, in simple terms, drawing with a needle on a common photographic negative rendered opaque, and plays, or has played, some part, we believe, in the preparation of the New York *Graphic's* daily cartoons. Mr. Hartley gives all necessary instruction about it, even to the preparing of the plates, sensitizing the paper, and fixing the prints. The process can also be tried, as he shows, with almost no apparatus and at trivial expense. It will never rival the effects of copper etching and printers' ink, but it is capable of a good deal of artistic expression.

Mr. R. H. Shepherd, who has compiled useful but dogmatic bibliographies of Ruskin, Carlyle, Dickens, and Thackeray, and who has acted as a literary resurrectionist in reviving juvenile poems of Longfellow, Tennyson, Mrs. Browning, and Dickens, has announced as in preparation the 'Life, Letters, and Uncollected Writings of W. M. Thackeray.' In consequence of this, Messrs. Smith, Elder & Co., the holders of the Thackeray copyrights, announce that they will shortly publish with proper editing the hitherto unprinted writings of Thackeray now in their possession.

Excessive modesty has never been the failing of the Austrian novelist Sacher-Masoch, a gifted but eccentric and often lascivious writer, whom the *Revue des Deux Mondes* has seen fit to procure a wide public. In a late number of his periodical, *Auf der Höhe*, Sacher-Masoch, however, reaches the climax of self-glorification by accompanying the announcement that he offers a prize of 500 marks for the best new novel with the remark: "The novels sent in must not follow well-worn tracks, but rather the new direction given to prose fiction by Ivan Tourguénieff, Bret Harte, and—Sacher-Masoch."

Students and teachers of German who do not venture beyond the "natural method" will find Mr. E. F. Bacon's 'Leitfaden zum Erlernen der deutschen Sprache' (Hoboken: E. F. Bacon) a useful guide. It is an attractive little book, combining a modicum of grammar with sensible exercises and good selections. We notice, however, some anglicisms, such as "die *grössten* Feiertage" (p. 112) for *höchsten*, "meine Brüder und ich standen *gegen* die Nachbarskinder" (p. 132), and the reprehensible "Sie sind nicht einen Thaler werth" (You are not worth a dollar, p. 204). An odd innovation is the "*Der*wort, *Die*wort, *Das*wort," designating masculine, feminine, and neuter nouns.

The *Zeitschrift* of the Berlin Geographical Society only by accident concerns itself with "actualities" in political geography, and it is pure chance that No. 99 (New York: L. W. Schmidt) gives in two maps the Greco-Turkish frontier which has suddenly become the scene of active hostilities. The district of Karalik Derbend, which is the bone of contention, is clearly mapped as wholly within Greek territory. It is situated at the base of the Olympian foothills in the deltoid region to the north of the present mouth of the Salamvria (Peneios). The map is reduced from that made by the military commissioners appointed by the eight Powers to fix the line, the work having been concluded in October, 1881. It is accompanied by a learned historical retrospect by Dr. H. Kiepert, who in several side maps shows the faulty delineations of previous travellers and savants.

—Two years ago, in honor of Mr. Thomas Hughes, then visiting this country in connection with the founding of the Rugby (Tenn.) settlement, the publishers of Boston, New York, and Philadelphia contributed several thousand volumes of their publications to form a "Hughes Public Library" at Rugby. The enterprise was subsequently aided from many quarters, notably from Chicago, through the influence of Mr. W. F. Poole, and a fund raised to meet the expense of a library building. Before the subscriptions had reached the desired amount, troubles in the settlement arose which were magnified without, and, in view of what seemed the moribund condition of Rugby, there was soon an entire end of giving. It was consequently resolved to proceed on a basis of outlay one-half that contemplated, and the building was completed in June last, with a deficit of but $600. It is desired to open the library on October 5, the second anniversary of the founding of the settlement. Dr. Edward Bertz, a new-comer, has volunteered to catalogue and arrange the books, and to serve as secretary and librarian during the first year. Subscriptions may be sent to C. H. Wilson, Treasurer, Rugby, Morgan County, Tennessee, or to Mr. Dana Estes, in Boston, or Mr. Alexander Hill, of Robert Clarke & Co., Cincinnati. So small a sum can hardly fail to be forthcoming.

—Our school-children are taught that the island of Guanahani, upon which Columbus first landed, and which he called San Salvador, was that now known as Cat Island, near the northern extremity of the Bahama group. This is the view adopted by Irving and by Humboldt. English opinion, on the other hand, inclines to identify it with Watling's Island, a small island southeast of Cat Island. Others choose the other extremity of the group, and identify it with Grand Turk, or Mariguana. It is remarkable that not one of the names given by Columbus to the four islands upon which he landed—San Salvador, Santa Maria de la Concepcion, Fernandina, and Isabella—has survived. There is, to be sure, nearly south of Cat Island, the little island of Conception, the identity of which name is one of the principal arguments for Irving's view; but in size and shape it does not correspond at all with Columbus's description of the second island visited by him. The name Guanahani has vanished as well; but it is found on maps of the sixteenth and seventeenth centuries as midway between Guanima (Cat) and Mariguana. The map of La Cosa, a companion of Columbus upon his first voyage, "fixed the position of Guanahani about the middle of the northeast side of the Bahamas." This would point to Samana or Atwood Cay, and to prove that this was the San Salvador of Columbus is the object of a monograph by Capt. G. V. Fox, formerly Assistant Secretary of the Navy, published, under the authority of the Coast Survey, under the title, "An attempt to solve the problem of the first landing-place of Columbus in the New World" (Appendix No. 18, Report of 1880). Captain Fox has shown conclusively that this theory meets the requirements of the problem in respect to the log of the voyage far better than any of the others. Starting from the island of Samana, and identifying Santa Maria de la Concepcion with Crooked and Acklin (then forming one island), Fernandina with Long Island, and Isabella with Fortune, we have every distance and direction as exact as possible, except that one distance of two leagues has to be corrected to two miles. The point of most difficulty is in regard to the description of Guanahani itself. Columbus twice calls it a small island, and once says of it that it is "very large and very level and has very green trees and abundance of water and a very large lagoon in the middle, without any mountain." Samana is certainly not "very large" (this was written, however, before he visited the other islands), but appears to have been diminished in size by abrasion. Neither is it entirely level, although it has no mountain, and, what is of more importance, it has no lagoon. To this, however, Captain Fox shows in reply, that at the rainy season, at which time the landing of Columbus took place, ponds and lagoons collect in the islands, and adds, "The lagoon which Columbus found at Guanahani had certainly undrinkable water, or he would have gotten some for his vessels, instead of putting it off until he reached the third island. There is nothing in the journal to indicate that the lagoon at Guanahani was aught but the flooding of the low grounds by excessive rains; and even if it was one communicating with the ocean, its absence now may be referred to the effect of those agencies which are working incessantly to reshape the soft structure of the Bahamas" (p. 44). It may be observed that Cat Island also has no lagoons, but these are found in Watling's and Grand Turk. We must say that Captain Fox has made out a very strong case for his theory.

—Mr. S. E. Dawson, of the well-known Montreal publishing firm of Dawson Brothers, has republished an interesting lecture on copyright in books, especially with reference to the present state of the law in Canada, delivered by him before the Law School of Bishop's College at Sherbrooke. It is chiefly of interest to Americans in connection with Mark Twain's trip to Canada in search of copyright. The Canadian act, unlike the Imperial statute, requires actual domicile in Canada. Mark Twain was, it seems, advised by a "distinguished Boston lawyer" that he could acquire a domicile in Canada by a mere temporary residence there. Mr. Dawson shows, how-

ever, that the word "domicile" used in the act was intended for the express purpose of preventing this very thing. Under the Imperial act, as interpreted by the English courts, a residence by the author, no matter how temporary, anywhere in the British Dominions is enough to give an English copyright, and under its provisions, before Mark Twain's visit to Canada, Dr. Holmes, Henry Ward Beecher, Jefferson Davis, Bayard Taylor, and other American authors had obtained it. The Canadians disliked Imperial copyright because it produced "dear books," and so their act of 1875 was passed, under which a local system was established. But Mark Twain, having failed to secure a Canadian copyright for his book, owing to want of domicile, found that he could copyright it under the English act by means of the very trip to Canada which had failed to secure him any Canadian rights. This he accordingly did. And now we come to the strangest part of the whole. In their anxiety to get "cheap books," the Canadians had, in 1847, got the English Government to make an Order in Council, authorizing the importation into Canada of foreign reprints, on the condition that a duty should be levied in the Canadian Custom-house for the author's benefit. This duty is 12½ per cent., so that the operation of Mark Twain's copyright would be that American reprints of his book could be imported into Canada and sold there, although he had been refused a Canadian copyright. It appears from the report of the Royal Commission, though Mr. Dawson does not call attention to this, that this duty is not collected; in other words, reprints do not go through the Custom-house, as a rule, but are smuggled. In Mark Twain's case, according to Mr. Dawson, the duty was paid, and the sheets (printed, we suppose, in the United States) were imported into Canada on payment of the 12½ per cent. duty. To meet this the Toronto publishers, who are apparently not affected by the Imperial act, pirated the book, brought out a cheap edition, and now undertake to supply the market in this country by mail. This is one of the results of the absence of an international copyright treaty, and Canadian piracy may be regarded by the American author as one of the new risks to which our persistent refusal to recognize the rights of foreign authors has exposed him. The law is now in a state of complete chaos, and nothing short of a full recognition of authors' rights will bring order out of it.

—Professor Paul Fredericq of Liége (formerly of Ghent) has prepared for the *Revue de l'Instruction Publique en Belgique* a report upon higher instruction in history in Germany, which has been published by itself in pamphlet form. It contains an interesting account of instruction in history in the leading German universities, from which one obtains a good notion of the method and personality of such distinguished men as Treitschke, Sybel, Droysen, etc. M. Fredericq, in his visit to the German universities, was especially impressed by the practical courses in history in the historical seminaries attached to most of these institutions. He describes them in considerable detail, and discusses the arguments against the system recently advanced by M. Seignobos of Dijon. He admits, and quotes the testimony of Germans themselves to the fact, that the study of history at present in Germany "is passing through a crisis," and that, in the excess of detail, general views are too often lost out of sight; nevertheless, he holds that the method is in the main right, and possesses more advantages than defects. As to this, if it is true, as he appears to admit, that the working of the method is at present unfavorable, this is a serious condemnation; for it has been in operation long enough to show its true tendencies, and to be relieved of any unessential defects. It was impossible, no doubt, in so brief a discussion, to go to the bottom of the subject, and it seems to us that the decisive point of the controversy is as to the nature of the practical work done. To study history at first hand, by the direct use of the original authorities, is as plainly advantageous as to do sums in arithmetic, or perform analysis in a laboratory. Practical application of theoretical principles—the laboratory method, as we may call it—is a fundamental principle of education. But it must never be forgotten that the object to be aimed at is *education*, not discovery, whether in chemistry or in history. In American colleges, for example, how shall our poorly equipped students, who have a smattering of American, English, and ancient history, and hardly anything more, best enlarge and deepen their acquaintance with events? The German gymnasia afford so complete and thorough a training in universal history that it is possible for the students of the universities to do what is really new and original work, of a character which would be entirely beyond that of our students, and we suppose of those of France and Belgium as well. For students who are well prepared for it, it would seem that the method of original research described by M. Fredericq would be invaluable; if it is so conducted as to sacrifice ideas to petty detail, that is a fault that can be corrected. But for students less thoroughly equipped, the German method would be hardly more rational than to set a boy to calculate an eclipse before he had learned the multiplication table. Two or three American colleges are in a condition to do this work; and the training at the Johns Hopkins, for example, will, we think, compare fairly with the German model; for most of our colleges the work must be of a lower grade.

—In the *Revue des Deux Mondes* for Aug. 15, M. du Camp continues his reminiscences. He has something to say about Alfred de Musset and George Sand, and the celebrated episode between them, but nothing that is new. Musset he only met twice, and on one of these occasions it was plainly to be seen that the great poet had been drowning his sorrows in the flowing bowl—a species of consolation to which he was only too much addicted. With George Sand M. du Camp also had but a moderate acquaintance. Dining with her when she was sixty-four years old, he was startled to hear her say that her whole ambition was to have a yearly income of 3,000 livres. He quotes a letter in which she advises him to get married, so as to have children, as that is the only happy state. The only happiness is to love some one more than yourself, and the only being whom you can love more than yourself is your own child. M. du Camp remarks that these views are in striking contrast to those propagated in her books; but he might have added that when she wrote this letter she had grown old, and, having lost her teeth, was proverbially averse to cracking nuts. He gives a different explanation of the apparent contradiction. George Sand, he says, was always sincere. She might contradict herself, but for the moment she was always convinced of the truth of what she said. When the Crusaders set out for the Holy Land, at every city the little children asked, "Is this Jerusalem?" It was just so with George Sand in the crusade of life. She worshipped at many shrines, but never found an object worthy of her devotions. M. du Camp comes back to familiar ground when he discourses of the *Revue* itself, to which he has been a regular contributor since 1858. He is warm in his praises of François Buloz, who was a natural-born editor. He divined error by a sort of second-sight, and would point out inaccuracies in articles the subjects of which were new to him. M. du Camp calculates that an article in the *Revue* is read and corrected fifteen times before publication. Buloz opened his pages to all the best writers, but was not at all afraid of them. Speaking of Mérimée, he said: "None of you know grammar." Another time, rehearsing his past struggles, he said: "When I had writers, I had no subscribers; and now, when I have subscribers, I have no writers." In the midst of all the eulogy there is, however, an indirect "little dig" when M. du Camp, with great apparent innocence, remarks of Buloz that "the writers made the fortune of his magazine; in return, he gave them fame, and made them known wherever French is understood. They had the best of the bargain." Some of the writers, it would seem, to judge by what Edmond About said when Buloz died, would have preferred a little more cash, even at the sacrifice of some of the fame.

—While contributing to the *Revue*, M. du Camp was also attached to the *Journal des Débats*. Its managing editor was Édouard Bertin, the painter, who, at the age of fifty-seven, assumed the control of the paper which his father had established. He was a well-read, thoroughly-instructed man, sceptical, tolerant of difference of opinion; and, accordingly, both sides of a question were often presented in the *Journal*. This, however, involved no inconsistency, as every article was signed, and only its writer was responsible for its sentiments. A co-proprietor of the paper was Normant. During the Hundred Days, he was detected in a conspiracy against Napoleon, who directed that an example should be made of him. He was put on his trial, and it seemed that he could not possibly escape with his life; but while the judge was charging the jury, the news of Waterloo arrived, and Normant was unanimously acquitted—a capital scene for a melodrama. The editor-in-chief of the *Débats* was Silvestre de Sacy, who for more than twenty years wrote two-thirds of its political articles, and was only deposed from his position when he allowed Napoleon III. to make him a Senator. He remained as literary editor. He was a gentleman of a delightful temper, whose placidity nothing could disturb except an irreverent remark concerning Madame de Sévigné, whom he devotedly admired, and of whose letters he published an edition in eleven volumes. He actually pitied Victor Cousin, who had set up as champion of Madame de Longueville. "Poor Cousin," he said, shrugging his shoulders, "he does not even know that, according to Tallemant des Réaux, his Dulcinea had dirty hands." Sacy lived in the age of Louis XIV., with his beloved Marquise, La Bruyère, and Racine. When Mommsen's history was mentioned, he said: "In Roman history, I stick to Rollin." He said to Renan, when his 'Life of Jesus' was published, "What is the use of a fifth Gospel? The other four sufficed." It was to him that the *Journal des Débats* owed its literary savor. There was, however, no lack of accomplished literary men among its staff—*e. g.*, Philarète Chasles, who began his career as a printer in Paris, and followed his trade for seven years in London. He was familiar with the Italian, German, and English languages and literatures, and did more than any other writer to make the modern productions of England and Germany accessible to France. His translation of Jean-Paul's 'Titan' is in itself a title to the public gratitude. He had a great gift for extracting the substance of five or six foreign books and converting it into an instructive and entertaining volume. He was the stand-by of all periodicals short of copy. He was always at work on something of

which he sent in the first part, which was published, after which it was sometimes impossible to get the continuation. One of the younger contributors was Prévost-Paradol, whose connection with the paper began at the age of twenty-seven. He was a man of brilliant gifts for literature, and might have achieved the highest distinction if ambition had not led him into politics. How unfortunate this proved for him is but too well known. His appointment as Minister Plenipotentiary at Washington, and his suicide when the war between France and Germany broke out, are well-remembered incidents. He foresaw the result, for immediately after Sadowa he had predicted it.

JAMES MILL.

James Mill: A Biography. By Alexander Bain, LL.D., Emeritus Professor of Logic in the University of Aberdeen. London: Longmans, Green & Co.; New York: Henry Holt & Co. 1882.

JAMES MILL'S greatest achievement was, it has been said, to have produced John Mill. This dictum has a certain amount of epigrammatic force, but it contains at least as much falsehood as truth. For no error would be greater than to suppose that James Mill was nothing but the father of his better-known son. If the word "noteworthy" could be used in a strictly neutral sense, as meaning, without any implication either of praise or of blame, "worthy to be noticed," a fair critic would, without much hesitation, pronounce James Mill a more noteworthy person than the writer who, to the generation who have grown up within the last thirty or forty years, will always be emphatically known as "Mill." The truth is, that James Mill was a man who, for bad or good, possessed a strength, energy, and individuality of character far exceeding that of the author whose somewhat morbid passion for liberty, or even eccentricity, is, we take it, an unconscious reaction against the overpowering sway exercised over his mind and will by the unconquerable volition of his father. The one word which James Mill's whole character and career suggests is "force." He was not a lovable man; he was not a man of genius; he was not, with all his talent and capacity, a man of original conceptions, but he was a man of strength. As you read through the dry biography in which Mr. Bain has raised a really appropriate monument to one of the hardest and dryest teachers who ever benefited or instructed the world, you feel that you might easily have detested James Mill, but that you could never have despised him. He stands as a typical Scotchman somewhere between John Lord Campbell and Thomas Carlyle.

In each of these three men you have characters fundamentally Scotch. They are each more remarkable in character than in rareness of genius; they are each men of determined energy; they are each consumed by the Scotch passion for "getting on"; they are each, though in different ways, as narrow as they are energetic; they are each utterly wanting (we regret to say it of Carlyle) in all those virtues which are summed up under the vague term, generosity. They each represent, with curious accuracy, different aspects of national character. The Lord Chancellor is the respectable Scotch adventurer. Life to John Campbell was the sphere in which a sensible man was bound to display his talent for "getting on." To succeed in the battle of life without openly violating the rules of the game (at least in their letter) was to him the end of existence, and this end he manfully struggled for and successfully attained. Thomas Carlyle was the Scotchman of genius. In him we see set forth, curiously enough, for the instruction of a sceptical generation, the virtues and the defects of a Scotch prophet. To read Carlyle's works, and to study his life, is the best way of understanding the spirit of the Scotch reformers. James Mill might have been the Scotch adventurer. Indeed, it is allowable to suspect that he had to the end of his life a strong dash of the adventurer about him. A newspaper controversy has been carried on on the question whether James Mill was or was not guilty of somewhat unfairly tripping up a friend or a rival at the India Office. Of the merits of the dispute we know nothing; but it may confidently be said that if James Mill be accused of elbowing a competitor out of his path, there is nothing whatever in the records of the philosopher's life, or in the admitted traits of his character, which makes the accusation on the face of it incredible. But what gives James Mill a claim to permanent respect is, that while he might have been a mere adventurer—a man bent only on getting to himself by legitimate, and therefore safe, means the greatest share possible of the good things of the world—he was actuated by an ambition too high to be satisfied by pensions, by offices, by chief-justiceships or by chancellorships, and set his heart on the prizes to be obtained in the field of thought and philosophy. He was the precise and exact type of the Scotch thinker. He was one of those men who seem born to illustrate Mr. Buckle's theory that the Scotch intellect has a natural affinity for deduction. Whatever be the worth of a somewhat doubtful piece of speculation, it certainly gives us an admirable formula for describing the intellectual merits and defects of thinkers such as James Mill.

We may also go further than this, and assert with some confidence that what Mr. Buckle holds to have been true of a class was certainly true of the particular individual with whose intellectual peculiarities we are concerned. Mill's sceptical philosophy was the direct offspring of his theolcgical training. He was educated as a preacher; he appears (though, characteristically enough, he seems almost to have suppressed the knowledge of a part of his life in which he felt no pride) to have delivered a considerable number of sermons. He gained from his training the habit of acute logical argument from given premises. He was the logical defender of sensational philosophy and Utilitarian morality, just as under different circumstances he might have been the logical apologist for the verbal inspiration of the Bible, or for the whole scheme of dogmatic Calvinism. Of breadth of mind, of appreciation of human nature, of sympathy with views differing from his own creed, he knew as little as the rawest theological student fresh from the class-rooms of St. Andrew's or Aberdeen. Macaulay's celebrated essays are assuredly no answer to Utilitarianism; they were not even a telling criticism of the system of thought which they were intended to expose. They are, in fact, some of the weakest writings penned by their author. But in one respect the essays on Utilitarianism are conclusive: they prove past a doubt that James Mill was guilty of the absurdity of trying to lay down deductively a theory of human nature without taking into account the lessons to be learned from the teaching of history. "It may be reason, but it is not man," is a principle of wide application, which never came within the view of the author of the 'Analysis of the Human Mind.'

Macaulay proves that James Mill neglected the teaching of history; Mr. Bain proves still more conclusively that James Mill did not understand, and scarcely studied, human nature as it existed around him in English society. He proposed an elaborate scheme for reforming the Church: his plan was nothing less than to transform the Church of England (or, rather, the clergy of that Church) into a body for propagating sound Utilitarian morality. All theological dogmas were to be dispensed with; prayer, at any rate in the popular sense of the term, was to cease. The work of the clergy was to "consist in supplying all possible inducements to good conduct." All families were to be assembled on the Sunday, "clean and well dressed"; since to be cleanly and well clothed has an "ameliorating effect."

"Besides addresses of a purely moral kind, instruction in science and useful knowledge would be of great service. Even branches of political science might be introduced, such as political economy and the conditions of good government. Some of the elements of jurisprudence would be valuable. These would be the more serious occupations of the day of rest. There should also be social amusements of a mild character, such as to promote cheerfulness rather than profane merriment. Sports involving bodily strength are not well adapted to promote brotherly feelings; their encouragement in antiquity had in view the urgency of war. Music and dancing would be important. . . . A conjoint meal on Sunday would have the happiest effects. . . . The author finally disposes of the objection, How is all this to be done? If there are as many people in earnest about religion as there are who pretend to be, all difficulties would be overcome."

These sentences from Mr. Bain's biography give us a fair sample of James Mill's proposals for the reform of the Church. Even Mr. Bain is startled. He can hardly believe that his hero "could have supposed it possible in the course of a few years to unlearn the whole of the Christian traditions, and to remodel the entire ritual upon the basis of a religion of natural theism." His surprise is natural enough, but he hardly sees the whole absurdity of James Mill's scheme. It was a plan impracticable in itself, and utterly unsuited for the time in which it was propounded. Mill proposed to transform the Church of England into a society for the founding of mechanics' institutes, the propagation of useful knowledge, and the maintenance of a very weak form of natural theism, just at the moment of an ecclesiastical revival. Mill's scheme of Church reform was published between 1830 and 1836. These were the years when Newman was laying the foundations of Tractarianism at Oxford. Mill was forty years behind his age. He fancied that a scheme which might possibly have commanded the support of the Convention in 1790 would suit the Englishmen of 1830.

As readers meditate upon the grotesque absurdity of the philosopher's plans, they naturally enough think that they have the measure of James Mill's practical capacity, and that the author of this monstrous scheme for the reformation of the Church was one of those logical fanatics who, without any knowledge of the world or of mankind, form plans of innovation the practical futility of which is concealed from their author, but from no one else, by their logical coherency. Mill, in short, if we judged of him by his weakest side, might well be deemed an inferior Abbé Sieyès, without any of the excuses for his errors which may be urged on behalf of the great French constitution-monger. But no mistake would be greater than to fancy that James Mill's weaknesses and defects gave us the measure of his character. He was not such a leader of men as he is painted in John Mill's 'Autobiography.' We may feel quite sure that the comparison between James Mill and Voltaire is simply ridiculous. The attempt to put him on anything like the same level as Bentham is almost equally absurd. We may be allowed to doubt whether he had either a sense of humor, inventive originality, or any insight into the general spirit of the age. But, for all this, he exercised a great influence and did an important work. His merits, and also his defects,

enabled him to acquire great authority over men such as Grote, the two Austins, and others who were gifted with far rarer intellectual and moral gifts than Mill himself. The harshness, or, to speak plainly, the brutality, which made him a despot at home, and which we may well suspect was in great measure the cause of the estrangement between himself and Bentham, hardly affected his relation to his disciples. His influence was, to quote John Mill's own expressions, due to "mere force of mind and character." Nothing gives a clearer idea of the impression he made on men who came under his influence than the following passage from a letter of Grote's:

"I have breakfasted and dined several times with Ricardo, who has been uncommonly civil and kind to me. I have met Mill often at his house, and hope to derive great pleasure and instruction from his acquaintance, as he is a very profound, thinking man, and seems well disposed to communicate, as well as clear and intelligible in his manner. His mind has, indeed, all that cynicism and asperity which belong to the Benthamian school, and what I chiefly dislike in him is the readiness and seeming preference with which he dwells on the *faults and defects* of others—even of the greatest men! But it is so very rarely that a man of any depth comes across my path, that I shall most assuredly cultivate his acquaintance a good deal further."

This passage contains, according to Mr. Bain, the "strongest language Grote ever employed in describing Mill's censorial tendency. His mode of speaking" of James Mill "in later life was in terms of almost unexceptional eulogy, as may be seen in his article on John Mill's 'Hamilton.'" What was true of Grote was true, in the main, of James Mill's other disciples. The man's force of character, his logical acumen, and his controversial power made themselves felt, and his cynicism and asperity were forgotten, overlooked, or possibly even relished. For qualities which are unpleasant in themselves excite something like admiration when they are found to be effective as arms against our foes; and Mill was throughout all his later life the leading assailant of all the foes of Benthamism. In such a struggle his best moral characteristic had, it must be observed, the opportunity of displaying itself to advantage. He may have been selfish and overbearing; but no one can read his life, or reflect upon the effect which James Mill produced upon his followers, without being convinced that he shared to the full that fine public spirit which was the noblest trait in the reformers of 1830. No one can wonder that a man fanatically attached to his own political convictions, gifted with immense strength of will, endowed with marked logical acuteness, and, above all, inspired with fervent zeal for the promotion of what seemed to him the cause of freedom and progress, should have exerted an influence over young men with whom he came in contact quite out of proportion to his speculative ability and to his insight into the wants and feelings of the time.

If James Mill's influence was considerable, it must also be conceded that by means of this influence he did in his day good and lasting work. "As Brutus," says John Mill of his father, "was called the last of the Romans, so was he the last of the eighteenth century; he continued its tone of thought and sentiment into the nineteenth (though not unmodified or unimproved), partaking neither in the good nor in the bad influences of the reaction against the eighteenth century which was the great characteristic of the first half of the nineteenth." If we except the words placed within a parenthesis, this is by far the acutest criticism passed on James Mill and his work by his son. Of "modification" or "improvement" of the ideas of the eighteenth century little trace will, we suspect, be found in James Mill's works. If he had been, like John Mill, a teacher bent on modifying and reconciling apparently opposed views, he could never have done his special task. Benthamism was the application to the political life of England of the ideas of the eighteenth century. Mill was the representative of militant Benthamism. He gave to the Benthamite creed a precise logical form. He reduced it, as applied at any rate to politics and law, to a body of clear-cut dogmas. To do this is not, indeed, to extend men's knowledge of truth, but it is to place truth in a form in which men can and will fight for it. An examination of the very singular chapter in Mr. Bain's work on the history of reform certainly suggests the conclusion that Mill and his allies had a good deal more to do than is generally known with the conduct of the agitation which carried the Reform Bill. What is certain is, that James Mill gave form and shape to the speculative opinions which found practical expression in the bill itself, and in the series of measures of which the Reform Bill was the parent. James Mill, in short, prepared, propagated, and fought for the formulas of Benthamism. This was work for which his narrow, vigorous, and logical Scotch intellect was admirably adapted. We have most of us derived from another Scotchman, who promulgated dogmas of his own which were generally far less rational than the doctrines of Benthamism, a tendency to despise formulas and the man who creates them. This contempt may be carried a great deal too far. A thinker who gives to any doctrine a definite dogmatic shape increases, for the moment at least, its effective power. James Mill, by formularizing the teaching of Bentham, made it victorious at a crisis of English history. The man who did this is assuredly at least as worthy of note as the son by whose name James Mill's reputation has been eclipsed; and all who hold that, in the sphere at any rate of legislation, Benthamism has produced results of almost unmixed benefit to the world, will readily admit that James Mill was one of those teachers who have done good service to mankind.

RECENT LAW BOOKS.

Table of Cases Argued and Adjudged in the Supreme Court of the United States. 2 Dallas to 103 U. S. Compiled by H. J. Lauck and H. D. Clarke. Boston: Little, Brown & Co. 1882.

The Law of Subrogation. By Henry N. Sheldon. Boston: Soule & Bugbee. 1882.

The American Decisions. Containing the Cases of General Value and Authority decided in the Courts of the Several States, from the Earliest Issue of the State Reports to the Year 1869. Compiled and Annotated by A. C. Freeman. Vols. xxix.-xxxvi. San Francisco: A. L. Bancroft & Co.

Digest of the American Decisions, and Index to the Notes Thereto. With a Table of the Cases Re-reported in Volumes i. to xxx., inclusive. 1760-1837. Vol. i. By A. C. Freeman. San Francisco: A. L. Bancroft & Co.

Essays in Jurisprudence and Ethics. By Frederick Pollock, M.A., LL.D. London and New York: Macmillan & Co.

Leading Cases Simplified. A Collection of the Leading Cases of the Common Law. By John D. Lawson. St. Louis: F. H. Thomas & Co. 1882.

THE authors of 'Cases Argued' speak within bounds when they say that the want of such a table as their volume contains has "long been felt." For the last twenty-one volumes of Supreme Court reports there is no table in existence, and probably no lawyer, in preparing a brief for argument in which he has needed to refer to its decisions, has failed to come across a reference to some case which, owing to slovenly reporting or citing, it is difficult to find in the original volume. Mr. Wallace's passion for omitting all the descriptive parts of corporate names, and using the generic title "Railroad Co.," "Steamboat Co.," "Insurance Co.," instead of the full charter designation, has thrown a great deal of needless labor on the profession. The compilers of this volume seem to have corrected this error wherever it was possible.

Subrogation is a doctrine of the civil law which has become incorporated in our jurisprudence through the medium of equity, and has been, like other doctrines of similar origin, more fully developed in this country than in England. Mr. Sheldon thinks the most logical division of the subject would be into two heads—first, the subrogation of junior creditors of a common debtor, or of parties holding subordinate interests in the same property to the rights and remedies of senior creditors, or of persons holding paramount claims upon the property, after they have, for the protection of their own interests, satisfied these; secondly, the subrogation of one of several debtors who has, either under compulsion or for the protection of his property, satisfied a common creditor, or a creditor holding a charge upon his property as well as that of others, against those debtors by whom, or the owners of that property from which, he ought to have been indemnified (in whole or in part) against the burden which he has thus discharged. But, in our law, logical arrangement is generally out of the question, and so, for practical convenience, Mr. Sheldon has found it better to make a totally different one. He has made a careful collection of the authorities, and his propositions of law are stated with care and accuracy. The doctrine of subrogation has attracted a good deal of public attention in connection with the *Alabama* claims, and it is a singular and discreditable thing that the legislatures of the country whose judges have done their utmost to extend and develop this equitable right, should have treated it as non-existent in that case. The fact is, as a most cursory examination of Mr. Sheldon's treatise shows, that the insurer's right to be subrogated to all the remedies of the insured whom he has indemnified, originally a doctrine of marine insurance, has been already extended to fire insurance, and, although still denied in life insurance, begins to show signs of making its appearance there. When a railroad kills a passenger in an accident, the company which insures his life and pays the loss cannot recover. And why? Because, say the courts, the wrongful act affects the insurer only by reason of his "artificial contractual relation" with the insured. But that is equally true in the case of a total loss at sea or by fire. Mr. Sheldon might with advantage have given a little more space to the consideration of the cases on this subject.

Nothing could show more conclusively the sharpness of the professional appetite for reports than the success of the 'American Decisions.' There seemed little reason at the outset to anticipate any demand for such a series. The cases are all contained in the regular series of reports, and in court it is these which must be cited and read from. The work of annotation, of course, increases the value of a case, but this alone, even when done as well as Mr. Freeman does it, would hardly be enough to make up for the want of authority which attaches to the series as a whole. In every State, a lawyer making a brief consults first the decisions of his own courts, all of which he finds collected in a State digest, and then, if he goes beyond these, he would, one would think at first sight, consult the United

States digest, and text-books for cases in other States. But the fact seems to be that the work of reporting and digesting is so badly done that he will, as a matter of fact, consult any comprehensive and recent collection of cases which may be put in his way; and of all these, the 'American Decisions' are perhaps the best. With the 'Digest' now published, the lawyer who has the series has access to all the leading decisions of the State courts, and references in the notes which put him on the track of other authorities. The series, with the 'Digest,' in fact, constitutes a little library, in which the eternal hunt for cases may be prosecuted with profit.

Mr. Pollock belongs to a new school of legal writers, who have made their appearance in England since the writings of Sir Henry Maine began to attract attention, and who aim at combining the analytical method of Austin on the one hand with the Utilitarian method of Bentham and the modern historical method. The difference can best be indicated by a concrete illustration. Bentham maintained that "judge-made" law—*i.e.*, any new rule laid down by the courts—was not properly law at all, because it was law issuing from what he regarded as an improper source, and was made in a way prejudicial to the interests of society. Austin showed, on the other hand, that it was as much law as an act of the legislature, because it has all the essential characteristics of a law: it was a general command resting on sovereign authority, and having a sanction to support it. Now, the historical method shows that judicial legislation is, as a matter of fact, a phase in the development of all systems of law. There is no real antagonism between these views, or, at any rate, between the last two: one really fills out and completes the other. Austin has been criticised for treating law as a fixed system of rules consciously imposed upon subjects by the sovereign, much as the laws of morals are supposed by believers in the system of rewards and punishments to be imposed on man. The earthly sovereign says, "Thou shalt not steal," precisely as the Almighty does. The only difference is, that the earthly sovereign enforces his command by imprisonment in a terrestrial jail, while the Deity is supposed to annex to his the sanction of suffering in another world. But the historical method has shown us that if we go far enough back in the development of primitive communities, we soon get to a point at which the notion of law being imposed by a sovereign disappears, and we find everything regulated simply by invariable custom. In an Oriental village community, what we call law is hardly known. As any modern system of law is in part inherited from the past, it follows that a good deal of it must rest on antique custom, which has been handed down from a state of society which would have been unable to comprehend our views of positive jurisprudence. Mr. Holmes, in his learned treatise on the common law, has given some interesting illustrations of this sort of survival which Austin, in his analysis, did not take into account. But this does not affect the general truth of Austin's conception of law. Territorial sovereignty is itself a modern conception, and for purposes of analysis we need the idea of a command issued by the sovereign and addressed to the subject with a sanction attached. This idea of law was not original with Austin or Bentham, but has been conceived in a confused way by every English and American writer on the subject from Coke to Blackstone and Kent. The fact that parts of our law antedate the conception makes no difference. The responsibility of a master for his servant's act is a rule of law which, in the first instance, was probably not formulated as a rule by any sovereign, any more than the law of deodand, which may be traced to the early primitive tendency to attribute human qualities to inanimate objects. But this does not alter the fact that, when a railroad company is made to pay for the negligence of its employees, it is done in obedience to a rule of positive law, which must in theory have the same source with any other rule. The same thing was true of deodands, so long as they had any place in our law. Austin's analysis, it must be remembered, does not require us to imagine that every existing rule of law is actually a piece of legislation emanating from the sovereign; it is merely a norm, a method of conceiving of what law actually is. His critics, while they have shown that his theory is historically incorrect, have, for analytical purposes, failed to suggest any other, and it is obvious that no other can be suggested which will take in the historical as well as the analytical view of the subject. The legal conceptions, if they can be called such, which the historical inquirer finds prevailing in primitive communities cannot be expressed in the terms of modern law; but that is no reason why we should alter our conception of law as a body of rules enforced by sanctions annexed to violations of them by the sovereign. At any rate, as long as no other conception is brought forward to supply its place, we find ourselves unable to get along without it.

Mr. Pollock's book consists of thirteen essays on a variety of legal and ethical subjects, none of which are very original, though all are worth reading. It can hardly be said that his speculations advance matters much. He has an ingenious essay on the "Science of Case Law," in which he makes out an elaborate parallel between case law and the inductive method in science. The following extract shows what he means:

"The ultimate object of natural science is to predict events—to say with approximate accuracy what will happen under given conditions. Every special department of science occupies itself with predicting events of a particular kind; note, also, that each science occupies itself only with those conditions which are material for its own purposes. The object of legal science, as we here understand it, is likewise to predict events. The particular kind of events it seeks to predict are the decisions of courts of justice. Like the other sciences, it selects its own sets of conditions to deal with. Let us consider for a moment an event which has both physical and legal consequences. If A strikes B, then the effect of the blow on B's equilibrium is a matter of mechanics; the effect on his organism is a matter of physiology; the effect of giving him a right of action is a matter of law. For the scientific examination of the event in each of these several aspects, we want to know and to deal with the several appropriate sets of conditions, and those only; thus, if B struck A first, this is irrelevant to the mechanical question, but relevant to the legal question. The legal result is as definite and capable of prediction as either the mechanical or the physiological one; the needful thing in each case is that the right set of conditions be rightly observed."

In natural science we assume that nature is uniform. In legal science we find that an assumption is none the less needed, and accordingly we have the fundamental axiom of the uniformity of law, which we secure by the principle of *stare decisis*, and of revision by courts of appeal. The idea is worked out with a good deal of cleverness, but it does not seem at all fruitful from a legal point of view. The reader of a book like Mr. Pollock's is forced to ask himself at every page whether, after all, we have not reached the limits of analysis in jurisprudence, and whether it is not to historical research that we must look, for the present, for whatever new light is to be thrown on the study of the science.

Mr. Lawson has endeavored in his collection of cases to present them in a "clear, concise, and semi-humorous style." His idea is to disencumber the reported decisions of what is unimportant and superfluous, and give the student the principles involved in the briefest and most pointed way. "To this end, only the really leading cases have been selected, and these, instead of being some fifty or sixty, number in all over two hundred, and embrace nearly every branch of the common law of the land. To this end, also, correctness of statement has been adhered to, and humor has never been indulged in at the expense of truth." Hence the work differs essentially from such lawless, though amusing, treatises as the 'Comic Blackstone,' to the authors of which not even the facts of a leading case are sacred. The student will, in fact, find very little to corrupt, and something to amuse, in Mr. Lawson's collection. The following is the report of the celebrated case of Manby *v.* Scott, and is a fair specimen of Mr. Lawson's work:

"Sir Edward Scott, a respectable baronet of the seventeenth century, was not fortunate in his choice of a wife. The lady was fast, and the gentleman was slow, and they failed to hit it off together. Probably, therefore, it was to the no small relief and satisfaction of the worthy baronet when Dame Scott, as the reporters call her ladyship, determined to seek fresh woods and pastures new, and went right away. The good, easy man had not enjoyed such peace since the days of his bachelorhood. Twelve years passed away, and one day, at the stately house of England inhabited by Sir Edward Scott, there turned up an exceedingly seedy-looking female, who announced herself as Lady Scott, and the mistress of all she surveyed. Her rights, however, were very soon disputed. The baronet was a sensible person, and his pampered menials soon sent the old woman about her business. This action was brought by a merchant, who, although Sir Edward had expressly told him not to do so, had supplied Lady Scott with silks and satins during the time she was living away from her husband. The reader will scarcely be surprised to hear that Mr. Manby did not obtain a satisfactory settlement of his little bill, and Manby *v.* Scott is the chief authority for the principle that the wife's contract does not bind the husband unless she act by his authority."

This is something like the reporting in early Anglo-Saxon times, except that in primitive reporting there is no conscious attempt at humor. There may be students who will remember Manby *v.* Scott better for reading Mr. Lawson's remarkable version, as there are others who can remember versified reports such as the 'Leading Cases' published in England a few years since, in imitation of the styles of leading poets of the day; but the book can hardly be considered a serious contribution to jurisprudence. The humor, as will be seen from the above extract, is not very subtle, and it may fairly be doubted whether a student who needs such a modification of the usual method of reporting cases had not better abandon all idea of becoming a lawyer.

Mr. George Bliss has published and placed on sale a few copies of 'Chapter 410 of the Laws of 1882'—a bulky volume of over 800 pages. This statute is "an act to consolidate into one act and to declare the special and local laws affecting public interests in the city of New York." It takes effect on March 1, 1883, and will from that date substantially supersede a large mass of special and local legislation relating to this city, and coming under the following heads: the powers, duties, and liabilities of city officers and departments, including the provisions of the "charter"; the laws as to courts, court officers, and officers exercising their powers specially in this city, though not technically officers of the city government; taxation, assessments, street openings, etc.; piers, wharfage, and the harbor; ferries, auctions, amusements, buildings, tenement and lodging-houses, fires, immigration, pilotage, the port wardens, protection of sailors, births, deaths, health, duties of physicians, elec-

tions, mechanics' liens, crimes, and procedure; the commitment of children and others to charitable or reformatory societies and institutions. The act is the work of a commission consisting of the Corporation Counsel, Mr. William C. Whitney, Mr. Peter B. Olney, and Mr. Bliss, who were appointed under an act passed in 1879. Since 1813 there has been no authorized consolidation and revision of the laws relating to this city; and the Commission's work, which has been done with a great deal of thoroughness, is therefore a statute of vast importance. It should be understood that it is strictly a compilation, the Commissioners having had no authority to amend. The act contains no provision expressly repealing the laws and parts of laws believed to be superseded by it. Mr. Bliss says, however, that it is intended "after a time" to advise the passage of a law expressly repealing all prior provisions on subjects embraced in it. Of course, as a final revision, the act is incomplete until this is done, because, while conclusive as to anything which is expressly inserted in it, still, "so far as anything has been omitted which ought to have been inserted," the provision omitted must still be resorted to by courts and lawyers. The revision in this respect seems to be in very much the condition of the Revision of the United States Statutes. If the work of legislation at Albany and Washington could be stopped for a few years, there would be some chance of getting revisions which would be at least for a time final. But this is a mere dream. Mr. Bliss has ingeniously corrected an error made in binding, so that the value of the copy now published is not in any way affected by it.

History of the Twenty-first Regiment Massachusetts Volunteers. By Charles F. Walcott. Boston: Houghton, Mifflin & Co.

A HISTORY of a regiment, like one of a family name, is apt to suggest a mass of trivial details of insignificant persons. No such apprehension, however, is justified by this history of General Walcott's. The Twenty-first was a good regiment, of exceptional service. It was engaged at Roanoke Island and Newbern, forming part of one of General Burnside's three brigades. These were commanded by three able regular officers — Foster, Reno, and Parke — and their brilliant success is probably responsible for the subsequent unfortunate promotion of Burnside to a command entirely beyond his capacity.

In the year 1862 the regiment was in eight general actions, including the second battle of Manassas, Antietam, and Fredericksburg, in each of which it suffered a loss of one-third of the men engaged. At Antietam it was one of three regiments which in the afternoon carried Burnside's bridge. By an unfortunate omission in the report of the corps commander, General Cox, followed in the reports of Generals Burnside and McClellan, it has not generally shared with the Fifty-first New York and Fifty-first Pennsylvania, as it should, the glory of this action. The position was a strong one, resolutely defended, but what was finally done at one o'clock could have been more easily achieved at eight, when the Rebel left needed all its force to hold its own against the main attack of the morning. General Burnside's delay in carrying the bridge, and his dilatoriness in operating beyond it, alone kept the battle from being a complete and crushing victory. The fault lies between him and General McClellan, and it is doubtful whether it will ever be clearly and justly apportioned. Whosever the fault, the failure here was only second to that soon after at Fredericksburg, which forms an appalling example of the evil a well-meaning but incapable man may do. The regiment was in all the bloody battles of the advance on Richmond, and in the battle of the mine at Petersburgh. Its last battle as a distinct organization was at Poplar Spring Church, where again it brought out only two-thirds of the men it took in. On the march to Petersburgh, Company A was reduced to three privates. The regiment was finally reduced to 59 muskets for duty, and was transferred to the Thirty-fifth Massachusetts.

A clear and simple account of such a career, by an intelligent and cultivated man who was an eye-witness and principal actor in the scenes he describes, could not fail to be interesting. General Walcott usually confines himself to what he saw, with sufficient explanation of the main course of events to show the bearings of the action of his own regiment, and, on the whole, resists successfully the temptation to digress into the general topics of the war. The personal records and anecdotes of the regiment, which, by the way, are sometimes of general interest, are collected at the ends of chapters in convenient form to skip.

Portions of the narrative throw a curious light on the state of feeling and notions of discipline of the time. One punctilious sentinel shot and killed his corporal, and another his lieutenant, for not giving the countersign. One of these events occurred at the Annapolis Naval Academy—"a place as safe as Boston Common"; the other at a picket outside of Annapolis. The Governor of Maryland missed a slave in the Academy grounds. At his request the military commandant ordered the officer of the day to institute a search for the negro, who had crept up a chimney. This officer, greatly to his credit, tore off his sash and flatly refused to obey. In this he was imitated by each of the captains. After dark the men stole a boat, in which they launched the slave on his voyage to freedom. It does not appear that the officers' moral virtue but military vice cost them any penalty. The Colonel gave a pass to a citizen to take ammunition "for sporting" across the lines. The Lieutenant-Colonel, who was an Italian, and had got his notions of service under Garibaldi in Europe, refused to recognize the pass. It was referred to General Dix, commanding the department, and confirmed by him. The Lieutenant-Colonel, with a juster appreciation of the circumstances than his superiors showed, still refused to obey. He was placed in arrest, but soon released and put in command of the regiment. Thereupon he ordered a general jail delivery, including a man under sentence of a general court-martial. When this man returned to his company his Captain thought it came from a mistake, and returned him to confinement. He appealed to the Colonel, who again released him on his own responsibility. Thereupon he frankly told his Captain that for his action he proposed to shoot him the first safe chance he got, in battle or out. In this case "the dog it was that died," as the man was shot at Camden, and the Captain lived to write this book. Just before reaching South Mountain the regiment came upon two corpses in ragged gray uniforms on a tree beside the road, hanged by Stonewall Jackson for stealing. "Although the Rebel army (ragged and half fed) had just passed over the road by which we were moving, the ripe apples were left hanging untouched on the trees that lined the road; but, in sad contrast with Rebel discipline, the straggling plunderers from our well-provisioned delivering army left few apples, chickens, or growing pigs behind us on the march." General Reno, on another occasion, took Lieutenant-Colonel R. B. Hayes, afterward President of the United States, and then commanding the Twenty-third Ohio Volunteers, "severely though justly to task, in the presence of his men, for their piratical conduct" in plundering the country.

The book closes with a sketch and several graphic narratives of survivors of the nightmare horrors of Andersonville. The definiteness of the facts and figures gives a peculiarly vivid idea of the awful accumulation of extreme and long-sustained human suffering which will always make the place infamous.

Nasby in Exile; or, Six Months of Travel in England, Ireland, Scotland, France, Germany, Switzerland, and Belgium. By David R. Locke (Petroleum V. Nasby). Profusely illustrated. Toledo and Boston: Locke Publishing Company. 1882.

THOSE who have known Mr. Locke in his character of Petroleum V. Nasby, the depraved Democratic postmaster of Confederate Cross-Roads, will not find what they expect in this six-months' itinerary. It is professedly a serious work. It appeared originally in the European correspondence of the Toledo *Blade*, Mr. Locke's newspaper; and, as he modestly says in his preface, it is "not issued in compliance with any demand for it." He adds: "The ground we went over has been gone over by other writers a thousand times. We went where other tourists have gone, and what we saw others have seen. The only difference between the book and the thousands of others that have been printed describing the same scenes is purely the difference in the eyes of the writers who saw them. I saw the countries I visited with a pair of American eyes, and judged of men and things from a purely American standpoint." This is perfectly true, and it is something which may perhaps be expected to heighten the value of the book to other Americans, if not to Europeans. Europeans care less to know what Americans think about them than Americans do to hear what an American thinks about Europeans. There is something fascinating about the crudity of Mr. Locke's impressions. He travelled with a select little party, embracing what he calls a "faro-bankeress" and a fast young man from Chicago. The latter is drawn from the life, and shows Mr. Locke's literary faculty at its best. But Mr. Locke saw Europe with the eyes which he brought with him; and as his mind is quite destitute of original literary powers, except in the way of humor, he saw simply what he expected to find: in England, horse-racing, betting, brandy-drinking; in Ireland, oppression and tyranny; in France, marital infidelity, much cheerfulness, and dancing. All these impressions he had before he went to Europe, having got them in early life through the ordinary channels of English literature; and finding them verified by observation, he puts them naïvely down on paper as if his noticing them were a matter of some importance. Far be it from us to quarrel with the result. We have no doubt that thousands of American homes will be amused by the perusal of Mr. Locke's book, but it will, we regret to say, be more frequently the depraved humor of the work that pleases them than its value as a book of travel.

Constitutional History and Political Development

OF THE

UNITED STATES.

BY SIMON STERNE,

Of the New York Bar.

In presenting this work to the American people, the publishers do so feeling assured that it will meet with a hearty reception and approval, as filling a want long felt—viz., that of a popular, authentic, and well-written History of the Constitutional Progress of the United States from its inception to the present time, suitable alike for the jurist and the student

The author, Mr. Simon Sterne, states in his preface: "It occurred to me that a sketch of the Constitution of the United States as it stands in text, and as it is interpreted by the Supreme Court, accompanied by a history of the political controversies which resulted in the formation of and changes in that instrument, together with the presentation of the actual situation of political parties and questions, which in their turn may produce constitutional changes, would, if given within limited space, present such a view of the condition of the United States as to justify the book to the student of political history."

The work will also contain a full index, and an appendix embracing the Original Articles of Confederation and Perpetual Union between the States, passed July 9, 1778. Also the Constitution of the United States of America, with all the Amendments.

THE SOCIETY FOR POLITICAL EDUCATION have endorsed this volume, and will include it in their list of publications.

1 vol. 12mo, 334 pp., price $1 25.

8vo, paper, pp. 49, price 50 cents.

Third Annual Report, 1882.

8vo, paper, pp. 56, price 50 cents.

PAPERS OF THE INSTITUTE:

American Series I.,

CONTAINING:

1. Historical Introduction to Studies among the Sedentary Indians of New Mexico.
2. Report on the Ruins of the Pueblo of Pecos. By A. F. Bandelier.

8vo, flexible covers, 135 pp., ill., price $2.

Classical Series I.,

CONTAINING:

Report on the Investigations at Assos, 1881, by J. T. Clarke. With an Appendix containing Inscriptions from Assos and Lesbos, and Papers by W. C. Lawton and J. S. Diller. 8vo, flexible covers, 215 pp., ill., price $3.

G. P. Putnam's Sons,

27 and 29 West Twenty-third St., New York,

Have now Ready:

THE DEVELOPMENT of CONstitutional Liberty in the English Colonies of America. By Eben Greenough Scott. 8vo, cloth, $2 50.

THE POLITICAL CONSPIRAcies Preceding the Rebellion; or, The True Stories of Sumter and Pickens. By Thos. M. Anderson, Lieut.-Col. U.S.A. 8vo, cloth, $1.

New List of Fall Publications sent on application, and New General Catalogue (nearly ready) sent on receipt of stamp.

SPRING HOUSE,

Richfield Springs,

WILL REMAIN OPEN UNTIL OCTOBER 1.

INQUIRE ABOUT IT.

T. R. PROCTOR.

THE HYGEIA HOTEL, Old Point Comfort, Va., situated 100 yards from Fort Monroe. Open all the year. Equal to any hotel in the United States as a Summer Resort or Cold Weather Sanitarium Send for circular describing hygienic advantages, etc.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 14, 1882.

The Week.

THE absurdity of the verdict rendered on Monday in the Star-route trial is so glaring that it is difficult for anybody who has followed the proceedings with care to believe it honest. The foreman, Dickson, is evidently an intelligent man, and his conduct cannot be set down to stupidity; but his voting to acquit Brady and Dorsey, while bringing in Rerdell as guilty, is a monstrous piece of inconsistency. Rerdell, to be sure, made a confession as to the conspiracy, but if there was any conspiracy, Brady and Dorsey were necessarily parties to it. When the verdict came in, Brady and Dorsey are reported as having looked rather glum, and this may be accounted for by the fact that this peculiar verdict leaves them in a rather more awkward position than they were in before. Had the jury found that there was no conspiracy, or disagreed as to all, they would be no worse off than they were at the beginning of the trial. But now two of their "pals" have every reason for turning State's evidence and telling all they know. Rerdell has already shown that he cannot be relied on, and both he and Miner, if they feel that they are being sacrificed to let greater villains escape, will have the desire for revenge added to the desire to secure a pardon to lead them to make a clean breast of it. A pardon for these minor criminals would be well worth all the time and expense of the trial, if it could be used as a means of at length securing a verdict against Brady and Dorsey.

The story told by Dickson of the attempt to bribe him on the part of the Government is, of course, very silly, but taking it for granted that the verdict is not an honest one, it is just the sort of "cover" for a disagreement which it might have been expected such a rascal as Brady would furnish. Brady is a very sharp and long-headed man. His discovery of the Tilden cipher despatches, and the part performed by him in "carrying Indiana," showed this; but his sagacity where his own interests are concerned was displayed still more plainly in the petitions for expedition on which he always based his orders for increased pay to contractors. These petitions, though quite worthless for the purpose of excusing Brady from a charge of conspiracy, served throughout the case the end of befogging the issue, so that nothing but the very plain language of Judge Wylie in charging could have made plain what it was. In the same way, assuming that improper influences have been brought to bear upon the jury by the defence, nothing would be more like Brady than to attempt to produce an impression that the prosecution were hard at work trying to corrupt the jury. Brady's friends have been maintaining all along that there was something very extraordinary in the appearance of the Attorney-General in the case at all. It looked like a piece of persecution. Had the jury brought in nobody guilty, or disagreed, the result, coupled with a story of an attempt to bribe on the part of the Government, might have left the matter in a very confused condition.

Messrs. Hoar and Crapo, of Massachusetts, as well as Mr. W. A. Russell, have now both denounced assessments on officeholders, in letters to officeholders who had asked for their advice. Mr. Hoar is the last to appear in print on the subject. He thinks the first of Hubbell's circulars "unfortunate"; the second one "doubly so," as containing a sort of threat. He considers it "exceedingly indelicate and improper" that Senators and Representatives should solicit money from officeholders, as they are consulted about and have a large influence in appointments, and he hopes "the practice of such solicitations will stop." This is all very good; only we do wish that when Senators and Representatives dislike this sort of thing they would speak out and clear their skirts of it at once, without waiting for poor officeholders to write to them to know whether they had better give their cash to Hubbell's Committee, or use it in paying their debts, or supporting their families. Hubbell has been carrying on his operations for three months. He has on several occasions during that period defended them with the utmost effrontery, to the great scandal and injury of the party. He is now, and has been for some time, circulating as a campaign document a thoroughly sophistical defence of these assessments, made in June last by Senator Eugene Hale. It would seem, therefore, as if much mischief might have been prevented if these denunciations of his methods had been uttered at an earlier period.

When Mr. Robeson made his last speech on the Navy in the House, he remarked that what he had been he still was, and what he was he should continue to be. He might have added that what he had got he still kept, and what he kept he did not mean to part with. He is, however, having some trouble in securing a renomination for Congress. Notwithstanding his having got through some appropriations for improving the creeks in his district, he is "developing a good deal of weakness" in some parts of his district, and it is doubtful whether he will control the Convention. Public opinion seems to count for very little in the contest. Mr. Robeson evidently cares nothing about it so long as he can get the primaries; but if he does secure a renomination, the stories about his use of money now so rife will make his election far from certain. What a piece of luck it would be for his party if he were kept at home! His performances in Washington furnish so many valuable arguments to the Democrats that they, instead of trying to defeat him, ought to long for his election.

"One of the younger members of the Tariff Commission" has written a letter containing "the bottom facts about the Commission," which is interesting, but not news. He says that the manufacturers take no interest in the labors of the body, and do not give themselves the trouble to come before it. The reason of this is that they look on it as representing them, and therefore sure to take care of them. At Rochester and Indianapolis, he says, "the meeting was a farce," and at Buffalo, Detroit, and Cleveland only a few appeared. At Cincinnati matters were no better, and the writer begs that enough manufacturers may be got to come before them at Chicago to prevent the whole thing becoming the laughing-stock of the country. The Commission, if it can get nothing else, wants "the moral support of their [the manufacturers'] faces and presence at its meetings." Part of this explanation of the indifference of the manufacturers is sound. They do stay away because they think the Commission was intended to hold them harmless, and in this they are right. But they also stay away for the very good reason that they do not wish to be examined. They are quite satisfied with the tariff as it is, not because they would not like it higher, but because they know that if any change is made it will be in the direction of reduction, and that if they gave the Commission any account of their business whatever, it would be evidence in favor of reduction. Expecting them to go before the Commission voluntarily, therefore, and tell all they know, or expose themselves to being asked questions, is very like expecting a man who is doing a good business to publish the state of his affairs and the secret of his success for the benefit of jealous rivals. If the Commission were composed of freetraders or had a free-trade Congress behind it, doubtless the manufacturers would attend diligently and defend themselves; for men only defend themselves when they are attacked. Shrewd men only talk about their affairs when there is something to be gained by it.

They have another motive for silence in the fact that they find the managers of the Republican party assuming for the party, in all their utterances, that the voters are satisfied with the tariff as it is. Hubbell's Committee, as we mentioned last week, is issuing campaign documents, nearly half of which are defences of the tariff as it is and as it has been. He has nothing to say about revision or emendation. The documents all assume that the Republican party is not simply for protection to native industry, but for protection in the form and degree in which it has been afforded during the last twenty years. It is, therefore, much simpler and safer to support the Republican party, and "all that the name implies," than to go before the Commission to tell everybody what one's profits are and how he makes them. In supporting the Republican party half-a-dozen reasons can be given besides love of high duties. Moreover, manufacturers have much reason to feel encouraged by the success of the River and Harbor Improvement Bill. They know very well that such men as Messrs. Hoar and Crapo in Massachusetts would never have supported so outrageous a measure except under the influ-

ence of protectionist feeling. No man can believe in the present tariff without having his judgment warped or clouded about the whole question of public expenditure. He cannot remain economically-minded, no matter how high or pure his principles may be, if he thinks such a mode of promoting native industry as our present duties necessary or beneficial. He must consciously or unconsciously become friendly to lavish outlay, and disinclined to inquire too closely into demands on the Treasury.

Mr. Matthew Arnold had, a year or two since, a little magazine discussion with Mr. Conant, on the subject of copyright, in the course of which many arguments in favor of the right to steal foreign books were produced and examined. Mr. Conant urged, among other things, that the foreign author ought to make allowances for the Pirate, who had to make books cheap in order to help diminish the floods of ignorance poured into this country from abroad. Here, he said, you are sending over to us millions and millions of degraded and uneducated countrymen of yours, and imposing upon us the burden of educating and civilizing them, and then you abuse us for stealing your books for the purpose of accomplishing this very task. We beg now to call Mr. Arnold's attention to Mr. Munro, the New Pirate, for whom Mr. Conant never had a word to say. The Old Pirate may have made this country attractive to the class of population which Mr. Arnold's needed to get rid of, but nothing he ever did for it compares with what Mr. Munro is doing every day. Since the invention of the printing-press there has been nothing like Munro in the world. He has made the supply of books like that of air or water. He has not confined himself, we believe, to any one class of literature, but, like Bacon, has taken "all knowledge" as his province. Whether he, too, has pirated Mr. Arnold we do not know; but there is no doubt that he would if he thought that his books would do good here.

The *Sun* accuses us of gross injustice to Mr. Munro and other publishers of cheap reprints in calling them Pirates, and says that the people to assail are "the men who are preventing an international copyright which will protect the rights of the English author," or, in other words, "the English publishers." This is unfair. We called Mr. Munro a Pirate, not as a term of abuse, but for the purpose of giving him the highest praise. The term may be technically incorrect, and has unpleasant historical associations, but it is in common use to designate one who makes books cheap to the public at the expense of the author. Mr. Munro's life has recently been published, and this, it appears, is the business in which he is engaged. If we were to call him the Benefactor, or the Well-Doer, this would not be understood. We have been using the term in a good sense, and have shown that the New Pirate is doing a much finer work than the Old, because he really does what the old Pirate only pretended to do. Just now he is very unjustly assailed by all the class interests connected with literature, by the publishers and authors of Great Britain, Canada, and the United States. It may be that the British publishers are at the bottom of the trouble, and that they are trying to divert attention from themselves by denouncing the Pirate; but however this may be, we shall continue to defend him, and we have no doubt that if he keeps steadily at his work, the public confidence in him will be fully justified. The selfish greed of the British publisher, and his determination to get all of the business he can, are so notorious that we strongly advise the *Sun* not to waste its time in exposing him.

Mr. Blaine's New York organ thinks it "indecent and brutal" to doubt the sincerity of his talk about civil-service reform. It may be, but it would be almost silly to believe in it. He has practised civil-service abuses all his life, and risen by means of them in his management of State politics, through a period of over twenty years, and has never, during the whole of that period, uttered a word to indicate that he did not consider the spoils system a good one, while sneering much, both publicly and privately, at everybody who protested against it. When he came into office as a member of the Administration, far from giving his mind to reform, he plunged into spoils, and wallowed in them for three months, like a rhinoceros in an African pool, using every office he could lay hands on for the reward of his henchmen and hangers-on, without shame or scruple. He comes to the surface now in his adversity, and tells reformers that he believes in reform, but is overwhelmed by the difficulties of the subject. This is good as far as it goes, but he must remember that confidence is a plant of slow growth, and he must not feel hurt if some are silent and others laugh when he expresses a love of a stable tenure and appointment for merit. It is becoming the fashion now for old and hardened spoilsmen to talk reform, and say they desire it even more than the reformers, and have a plan of their own, which is always something different from the reformers' plan, and because different is sure to be something eminently practical. But this has gone on long enough. The reformers are not particular about plans. What they ask of Mr. Blaine and his kind is to prove their reforming sincerity by supporting *some* plan. Of course all plans are difficult of execution. All reforms, since the beginning of the world, have been surrounded by difficulties; but it is the business of statesmen to meet the difficulties, and not keep on walking round them, and whining, and telling everybody what a tough job it is going to be, and asking for more time for reflection. One may have patience with a toper who topes, and says frankly that he does so because he likes it; but a toper who topes, and says that at heart he is a temperance man, and only keeps on toping because he sees so clearly the difficulties of abstinence, or even moderation, is a sorry wag.

It is suggested by the New York *Times* that Mr. Frank Hurd, of the Toledo (Ohio) district, is a better representative of enlightened opinion on the subject of revenue reform than his Republican opponent in the Congressional contest in that quarter, and that there is no national exigency which should restrain Republicans who favor revenue reform from giving him their support. It may be added that Mr. Hurd is one of the few Democrats who have made an aggressive and consistent fight against the iniquities of the existing tariff, and that he has been singled out for punishment by the protectionists accordingly. He is entitled, by virtue of his earnest and effective support of tariff reform, to the votes of those Republicans whose views coincide with his own on this subject. It cannot be said that the rights of any human being, white or colored, will be put in jeopardy by his election, while it may be said truthfully that the right of American citizens of all shades of complexion to enjoy and dispose of their own earnings will be advanced by the return to Congress of so outspoken an advocate of freedom of trade.

The investigation of the trouble at Union College, between Dr. Potter, the President, and the Faculty, has been brought to an abrupt termination by the technical dismissal of the charges against him by the Trustees, for the purpose of enabling the Board to pass on the general question of his fitness for the Presidency. This action was taken unanimously. A resolution requesting his resignation was then passed by a vote of 9 to 8. The charges, if we may judge from the synopsis communicated to the press, were all frivolous in the extreme. If Dr. Potter had pleaded guilty to every one of them, it could hardly have affected his character in the smallest degree. They in fact suggested a boarding-school girls' quarrel rather than a conflict between the professors of a college and its chief officer. But then the mere fact that the Faculty were not ashamed to come forward with such accusations and urge them with pertinacity, is probably sufficient justification for the conclusion reached by the majority of the Trustees, that the interests of the College will be best served by Dr. Potter's withdrawal. Inability to get on with his subordinates, for whatever reason, is always good cause for the abdication of a man in power, however estimable or able or blameless he may be. The usefulness of the head of an institution is, in fact, often destroyed without any definable fault or shortcoming whatever on his side. That subtle force called incompatibility of temper is as fatal to the good management of a college or church as to the discipline of a ship or regiment, or the success of a marriage. When it shows itself, there is nothing for it but separation, and the time spent in investigating the charges and counter-charges which grow out of it is simply time wasted. They are almost always trumpery. About the indebtedness of Union College in all sorts of ways to Dr. Potter, there seems to be no question. He found it in almost a moribund condition, and he has placed it in a condition which may be called not only secure, but flourishing. That he has been unable to secure the support of the Faculty, therefore, is a misfortune for the institution as well as for himself.

Mr. Wm. E. Robinson, of Brooklyn, has been interviewed by a reporter on the condition of society and politics in Washington, and he gives a most alarming picture of the state of affairs. He found, he says, that "English ideas have poisoned our democratic republican system. All kinds of aristocratic snobbery are in vigorous growth. There is caste seen in the society of the employees of the Government. The Army and Navy and civil pension lists are menacing our institutions. Salaries have been enormously increased, and extravagance of every kind is running riot. There is a supercilious and impudent aristocracy, whose hands are in the public treasury up to their elbows. The balls, and dinners, and parties, the show of employees with liveried servants, and the disgusting snobbery of would-be monarchists are domineering all circles of society. The giddy heads of silly girls are crazy for something like court style and aristocratic etiquette." This accounts, of course, for the manner in which the Administration has allowed American citizens to be thrown into dungeons by the British. Mr. Robinson is an old observer, having been in Washington in "former times," so that it will not do for our contemporaries to pooh-pooh what he says, as if he were in the habit of making hasty or reckless statements.

The *Tribune* calls upon the women of America, who "saved Mount Vernon," to unite in a movement to save Niagara and keep it free from the vulgar desecration from which it is now suffering. It says: "If neither Congress nor the State of New York will move in the matter, why do not the women of America?" There is a fundamental difference between the case of Mount Vernon and that of Niagara which the *Tribune* seems to have overlooked. The interest in Mount Vernon is due to historical, political, and patriotic causes, and was widespread. The amount of money, too, required was very small. But the work of saving a waterfall from desecration involves an appeal to the love of the beautiful—a sentiment much less strong in the United States than some other sentiments. Governor Cornell probably fairly represents the feeling of the average American man as to Niagara, and his observation on hearing of the movement for an international park was an inquiry as to whether the defeat of the scheme would prevent the water from coming over the falls. There is no doubt, however, that for the American woman the beautiful possesses a deeper interest than for the American man, and if she can be roused to do something for Niagara, there is no telling what she may accomplish. A good deal has been made of the violent opposition of the hackmen, guides, and other waterfall parasites who now make money out of the *laissez-faire* system prevailing at Niagara. But this has been a good deal overestimated. It is indifference which is at the root of the trouble.

Although the Treasury began early in the week the prepayment of the $16,000,000 of called bonds due on the 13th instant, the reserve of the New York banks was nevertheless further reduced $1,726,250, and lacked nearly $2,000,000 of the 25 per cent. required by law of the national banks. The Treasury prepayment lowered the rates for loans for a few days, but the rate is now fairly 6 per cent. for demand loans and discounts. The rates for foreign exchange declined on account of the more liberal supply of commercial bills. The European money markets have tended toward higher rates. At the Stock Exchange it was a week of advancing prices. United States bonds advanced ½@1⅛ per cent., partly on a report that the Treasury intend buying bonds for the sinking fund instead of calling bonds for redemption. Railroad stocks advanced on the increasing tonnage of the roads, and the prospect of a large winter business at profitable rates. The crops of cereals are turning out much better than was expected, both in this country and in Europe, and the result is a heavy decline in all descriptions of breadstuffs. General trade is large in volume, and in other respects satisfactory.

A sensation has been produced in Austria-Hungary by the discovery at Kalinovitch, in Herzegovina, of authentic documents throwing an unexpected light on the Herzegovinian insurrection. The papers, which were left behind by fugitive insurgents, prove beyond a doubt that the intellectual leaders of the insurrection are not only to be sought, as was always supposed, in the camp of the Servian "Committee of Action" at Belgrade, and the Slavic branch committee at Moscow, but also in the immediate circle of Prince Nikita of Montenegro. It appears that the chief dignitaries of the principality have been acting the part of conspirators against Austria. Thus, the son of an influential Senator, who was sent, at the request of the Austrian Colonel Thömmel, to remonstrate with the insurgents who had sought refuge in Montenegro, really improved the opportunity to fan the spirit of rebellion among them. The documents contain detailed accounts of the insurgent forces and their positions, and while not implicating the Prince himself, point clearly to the active coöperation of his nearest relatives in the plot against Austria. Popular feeling in the empire loudly calls for active steps against Montenegro, whose ruler, until now *persona grata* at the Court of Vienna, immediately after the discovery hastened to that city to explain matters. However, the dogma that a quarrel with Montenegro means war with Russia will most likely be as sacredly respected by Count Kálnoky as it was by his predecessor, Baron Haymerle.

A story arrived on Thursday that there is a secret treaty between Turkey and Great Britain regarding the disposition of Egypt after the war. The *Sun* says it is "awaiting with not a little curiosity authentic information on this head." We would not, however, were we in our esteemed contemporary's place, wait very long, because we doubt if the authentic information will ever come. There is nothing in the whole Eastern question so unlikely as any such treaty. Turkey cannot dispose of Egypt. Her consent to England's taking it would be worth no more than her consent to the seizure of the Canal, and the Gladstone Ministry is bound by every consideration of expediency, as well as of honor, to deal with Egypt under the European concert, and to avoid secret agreements. Anybody, therefore, who has any curiosity to spare, would do well to expend it on some other topic.

The capture of Tel-el-Kebir on Wednesday by a simple rush, and the flight of Arabi's army almost without resistance, in utter disorder, is what everything that was known of the Egyptian troops and of Arabi himself fairly justified us in expecting. The fanatical Arabs, who were to die at their posts for Mohammed and Egypt, the immense host—about 150,000 strong—of well-drilled soldiers, commanded by accomplished young officers from the Military School in Cairo, which was to be divided in a suitable manner and hurled on Wolseley's flanks, the False Prophet who was to come down from the Sudan with half the Mussulman world at his back and bury the British under another wave of religious fervor, were, as we now see, creatures of the imagination. There are no such Egyptians and no such Arabi as various accomplished publicists and tourists and retired soldiers have been telling the reporters about for some weeks. Moreover, Sami Pasha, who is a sensible man, probably gave the *Herald* correspondent the other day in Paris a very correct account of the False Prophet, when he said his following probably consisted mainly of dervishes and beggars, armed, he might have added, with big sticks and bags for cold victuals. In fact, the Arabi movement has been from the beginning an immense imposture, favored by undoubted griefs on the part of the Egyptians. It was a monstrous and oppressive thing for the late Khedive to borrow and spend money as he did. It was, if not monstrous, very injudicious for the French and English, when they deposed him, to step in and take charge of the Egyptian finances, even ostensibly for the benefit of the bondholders. If anything can justify foreign interference with the financial administration of a country, it is the welfare of the taxpayer, not the interest of the public creditor. Interference of this sort was even more inexcusable in the case of a despotically-governed country than of one whose money affairs were in any degree under the control of a representative assembly. It was aggravated, as far as regards its effect on the Egyptian mind, by the displacement of large numbers of native employees to make way for foreigners. No worse injury could, in fact, be inflicted on a people in the condition of the Egyptians than the association, in their eyes, of financial reform with foreign meddling and office-hunting. The remedy for all this was not, however, a military mutiny. In no country in the world has a soldier's successful revolt ended in anything but disorder and corruption, and in Oriental countries this result is surer than elsewhere. To expect a Mussulman colonel, who has got up a revolt among the troops against his sovereign, to turn out what Christians call a patriot and a reformer, is to expect an improbability of the wildest kind. Nothing of the sort has ever been seen, and probably nothing of the kind will ever be seen.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, Sept. 6, to TUESDAY, Sept. 12, 1882, inclusive.]

DOMESTIC.

As the Star-route trial drew to a close, great interest was manifested in the proceedings at Washington. On Wednesday morning, when Colonel Ingersoll concluded the closing argument for the defence, the court-room was crowded. He summed up the case with considerable power, making a searching analysis of Walsh's testimony. He then dwelt upon the personal issues involved, in a manner to excite the sympathies of his audience. The speech was considered the most persuasive made by the defence. Attorney-General Brewster began his argument, the last for the prosecution, on Wednesday afternoon. He made an effective legal argument as to the difficulty of proving a conspiracy by positive and direct testimony. He concluded his speech at noon on Thursday. The counsel for the defence next presented the points which they wished Judge Wylie to charge. Judge Wylie then made the startling announcement that members of the jury had been approached in the most disgraceful way in attempts to bribe them. He had first heard of it about a week before, and had then advised the jurymen to say nothing about it, as he did not wish to stop the progress of the case. Within the past twenty-four hours, he said, he had heard of one attempt more villanous than the others. He therefore advised the jury to turn from such men with scorn. He wished to warn these men that they were not to commit such outrages without punishment. After the trial perhaps an investigation would follow. All the counsel for the defence then arose and demanded an immediate investigation. Foreman Dickson of the jury said that when the cases were disposed of he would lay all the information in his possession, in regard to the attempted bribery, before the Court. Judge Wylie announced that in his charge he did not intend to traverse the case from beginning to end, and then the court was adjourned for the day. On Friday morning he delivered his charge to the jury. It was unprejudiced and judicially fair, but the weight of it was against the defence. He took a few specimen routes and showed how extravagant and unnecessary the expedition had been. The law points raised by the defence were generally dismissed as untenable. In closing he warned the jury not to be influenced either for or against the defendants by the attempted bribery. At a few minutes before 3 o'clock the case was given to the jury. About 6 o'clock they came into court and announced that they had agreed only as to one defendant. The Court sent them out again. On Saturday morning at 10 o'clock they came before the Judge again and asked for further instructions. Judge Wylie's answers were very explicit, and were strong against the defence. They were again dismissed until 2 o'clock, at which hour, not being ready to report, a further recess was taken until 6 o'clock. They then appeared, and the foreman reported that the jury had come to an agreement as to some of the defendants named in the case, not as to others. The Court said that he was not ready to receive a partial verdict, and another adjournment was taken until 10 o'clock on Sunday. The jury at that hour announced through their foreman that they were no nearer an agreement than when their first report was announced. At 2 o'clock in the afternoon they sent word to the Court that they had nothing to report.

A verdict was finally presented to the Court on Monday. In the morning the foreman announced to Judge Wylie: "We report that the jury stand the same as they did when the report was made on Saturday last—decided as to four of the defendants and not able to agree as to the others." The Court would not then accept a partial verdict, but when a similar report was made in the afternoon, he admitted it. The jury then rendered a verdict of acquittal as to Peck and Turner, of guilty as to Miner and Rerdell, and as to the others they were unable to agree. On objection by Mr. Merrick that Peck had not been arraigned, being dead, his name was withdrawn from the verdict. After an angry passage between Messrs. Ingersoll and Merrick, and an earnest request on both sides to probe the alleged attempt at bribery to the bottom, the Court adjourned until Wednesday morning at 10 o'clock, when arguments on the motion in arrest of judgment will be heard. The vote on the final ballot, as to those against whom no verdict was rendered, stood as follows: Brady, conviction 10, acquittal 2; S. W. Dorsey, conviction 9, acquittal 3; J. W. Dorsey, conviction 10, acquittal 2; Vaile, conviction 11, acquittal 1. The verdict has occasioned a great deal of unfavorable comment, on account of the inconsistency of finding two of the lesser conspirators guilty and the principals not guilty. The Government will proceed immediately to summon its witnesses and try the parties in regard to whom there was a disagreement.

Foreman Dickson has made a general statement in regard to the charges of bribery. He alleges that on August 23 he was approached with an offer of $25,000, by an officer connected with the Department of Justice, if he would vote for the conviction of Brady and S. W. Dorsey. The man who approached him said that he represented the Attorney-General. Other jurors had been approached, but the sums offered were small.

Senator Hoar, of Massachusetts, has written a letter to an inquiring officeholder, in which he says: "I do not think any national officeholder need have the least fear of any unpleasant consequences to himself if he sees fit, in the free exercise of his own judgment, to refuse a favorable answer to the circular issued in the name of the Congressional Committee. When the first circular was issued the Secretary of the Treasury, by the direction and with the cordial approval of the President, caused a public statement to be made that every holder of office should feel as free to give his money or to refrain from giving it as he would in the case of any private object. Unfortunate as was the first circular, this second one is doubly so. What right has anybody who has once asked a freeman or a gentleman to contribute to a public object to inform him that he is 'surprised' by his refusal?"

Ex-Secretary Blaine, in a political speech at Winterport, Me., on Wednesday, said, in reference to civil-service reform, that he would be glad to see every Federal officer appointed for a specific period, during which he could not be removed except for cause, which should be proved and made a matter of record. He opposed a life tenure, but approved a term of seven years.

An election was held in Maine on Monday. It resulted in the election of Robie (Rep.) for Governor, by a plurality of more than 6,000 votes. The four Republican Congressional candidates, who were voted for on a general ticket, were all elected by about the same plurality. The State Legislature is strongly Republican, assuring the reëlection of Senator Frye to the United States Senate.

In the New York State campaign there have been no startling developments during the week. A large number of delegates to the State Republican Convention have been elected. On Saturday they were divided as follows: Cornell 57, Folger 43, Wadsworth 21, Wood 13, doubtful 5. An estimate of Governor Cornell's probable strength at the Convention is a total of 133 votes; 249 are necessary to a choice. Conkling's faction met with a severe defeat in the First Utica District on Friday by the election of four Anti-Stalwart delegates, headed by the late postmaster of Utica, whom President Arthur removed at Conkling's dictation.

A State Convention has been called by a committee, representing various temperance organizations in this State, to meet at Syracuse, October 4, to take steps to secure the submission to a popular vote of a prohibition amendment to the State Constitution.

A Workingmen's State Convention met on Tuesday at Buffalo, N. Y. It is probable it will join with the Anti-Monopolists in making nominations for the State ticket.

Samuel W. Hale was nominated for Governor, on Tuesday, by the New Hampshire Republican State Convention.

J. W. Adams has been nominated by the Democrats of Nevada for Governor.

On Thursday the Democrats of Illinois nominated Alfred Orendorff for State Treasurer, and adopted a platform favoring civil-service reform and condemning political assessments. It was anti-prohibition in its sentiments.

The State Central Committees of the two wings of the Republican party in Georgia held a meeting on Wednesday and agreed upon a common State ticket. This will greatly strengthen the opposition to Mr. Stephens in Georgia.

An important political meeting was held at Philadelphia on Friday. It was attended by leading Stalwarts and Independents, and was for the purpose of effecting a compromise between the wings of the Republican party in that State. No result of the conference has been announced. Another meeting was held on Monday.

The Philadelphia *Times* publishes, over the signature of its editor, a letter to T. P. O'Malley, Secretary of the Central Branch Land League, accusing John C. Delaney, State Librarian, of bargaining to sell the Land League vote of Pennsylvania to Cameron and the Stalwarts. One of the conditions for 30,000 Irish votes was to be the removal of James Russell Lowell from the Court of St. James.

President Arthur arrived at Wood's Holl, Mass., in the steamer *Despatch*, on Wednesday morning. He visited Nantucket on Thursday, but steamed away in the evening, reaching Marblehead, Mass., on Friday morning at 7 o'clock. He there received several informal visits on board the *Despatch*. Saturday was spent at Portsmouth, N. H., and vicinity. On Sunday he was at Bar Harbor, Me. There was a naval drill of the North Atlantic Squadron on Tuesday morning, and in the evening he started on his return trip to New York.

The Marquis of Lorne and Princess Louise are making a journey through the United States from Niagara Falls to San Francisco.

The Tariff Commission held meetings in a number of cities during the week. On Wednesday a hearing was given in Louisville, Ky. During the latter part of the week meetings were held in Chicago.

A private letter written by one of the younger members of the Tariff Commission, said to be Mr. R. P. Porter, has been published, in which he admits that the manufacturers take no interest in the Commission, and that the meetings which have been held in various cities have been a good deal in the nature of a farce.

A circular has been secretly distributed by the Mormon priesthood in Utah, giving instructions to their people directly opposite to the law rulings of the Commissioners appointed by the President under the Edmunds law.

Reports from the corn sections of the West are much improved. Oats are yielding beyond previous estimates.

The yellow-fever epidemic is increasing at Pensacola, Fla. There is little change at Matamoras, Mexico, the deaths averaging four a day. In Brownsville, Texas, on Monday, there were fifty-seven new cases and one death.

In the trial of President Potter, of Union College, Schenectady, N. Y., the Trustees voted unanimously on Friday to dismiss the

charges made by the Faculty against him, without reflection upon the Faculty, in order that the Board might consider the fitness of Dr. Potter for the Presidency. They then, by a vote of 9 to 8, resolved "that this Board, under a conviction of the necessities of the college, respectfully requests the resignation of the President."

The second annual Fair of the New England Manufacturers' and Mechanics' Institute was formally opened on Wednesday evening in Boston. Mr. Edward Atkinson delivered the oration of the day.

An Industrial Exhibition was opened at Cincinnati on Wednesday with great ceremony.

FOREIGN.

The Egyptians in the neighborhood of Kasassin began to exhibit increased boldness on Wednesday. Infantry disguised as peasants frequently fired at the British vedettes. General Wolseley requested the presence of a naval brigade in the army at the front, in order that the Navy might share the honor of the advance. In compliance with the request, 100 blue-jackets, ten officers, and a battery of four Gatling guns left Port Saïd for Ismaïlia on Thursday. The British outposts at Ismaïlia were strongly reinforced on Wednesday, and drove the enemy back. On that day an English train of 300 mules was attacked by Bedouins, but they were repulsed by the escort. Mounted infantry made a spirited reconnoissance at Mandara on Thursday. On Friday it was reported in Alexandria that Arabi was ill with dysentery. A reconnoissance was made near Kasassin on Friday with the object of driving out the Egyptians reported to have occupied a village near there, and also of erecting a field telegraph line. The village was found deserted, but the enemy's earthworks were discovered not far distant. They soon appeared in great numbers, and a skirmish was kept up with activity for about half an hour. While the British were retiring the enemy pursued them with considerable vigor. In the meantime Arabi continued defensive preparations with great activity. All the troops from Cairo were brought to Tel-el-Kebir; also the black regiments, which are the best in the Egyptian army. Night and day they worked in the intrenchments across the fresh-water canal. On Friday it was reported that this canal had been cut above Tel-el-Kebir, thus flooding the low-lands to the south of that place.

Early on Saturday morning, scouts and the Royal Lancers came into the British camp at Kasassin with the report that the enemy were approaching in great force. The British army was at once put in motion, and by 7 o'clock a lively artillery duel had begun. Arabi's troops of all arms, to the number of 13,000, with twelve guns, were spread over the long ridge in front of the British position. Their artillery fire was very active. The British replied with a forty-pounder, Krupp guns, and horse artillery. General Willis then slowly advanced with the infantry, and by noon the enemy had been driven to their works, from which they kept up the cannonading at 5,000 yards range. Five guns and many prisoners were captured by the British. Their loss was roughly estimated at 100 killed and wounded. General Wolseley, who arrived at the front soon after the battle began, reported that a very effective reconnoissance of the enemy's position was made during the engagement.

General Wolseley left the camp on Tuesday morning to make a final reconnoissance and prepare for the attack. The bulk of the English forces were in camp at Kasassin on Tuesday, and the army was ready to move. The march to the front was begun about midnight.

A fire broke out in Alexandria on Wednesday morning in the Rue Sherif Pasha. Several arrests were made for the offence. Antono Paulo, the Greek who was arrested on suspicion of being connected with an anti-European plot, was sent to Greece. The Egyptian Council of Ministers has considered the question of indemnifying inhabitants of Alexandria for losses sustained by incendiarism or pillage. They have proposed to the Powers to appoint an International Commission to settle the claims. The Nile has risen very high. On Wednesday it was reported that part of the enemy's position at Kafr-el-Dwar was flooded. The murderer of the Englishmen, Dobson and Richardson, was hanged at Alexandria, on Thursday morning, by the native police. A correspondent at Alexandria, from a most reliable source, reports the exact strength of Arabi's army as follows: Infantry, 44,000; cavalry, 18,000; Bedouins, 30,500; guns, 143; rocket tubes, 18. A large body of Bedouins approached Meks on Saturday morning and were shelled by the English. A few of them succeeded in entering, but were dislodged at the point of the bayonet. The British shelled the Bedouin intrenchments south of Meks during the whole afternoon.

The Rothschilds have presented to the British army in Egypt twelve tons of tobacco and 5,000 pipes, which the Khedive has allowed to enter duty free. A prominent financier has estimated that Egypt will lose about $350,000,000 by the war. The cotton crop, which is entirely lost, would have been worth about $200,000,000.

After a conference of three hours between Lord Dufferin and Saïd Pasha, at Constantinople, on Wednesday, the Anglo-Turkish military convention was informally signed. The proclamation of the Sultan against Arabi significantly states that his designs justify his "being described as a rebel." Lord Dufferin is dissatisfied because it does not expressly proclaim him a rebel. The formal signing of the convention will not take place until Lord Dufferin has received final instructions from England. Clause ten, which names Port Saïd as the point of disembarkation for the Turkish troops, has been reserved *ad referendum*. The difficulty in regard to the final signing hinges upon the question whether the Turkish troops, having arrived at Port Saïd, will be allowed to disembark or be required to await instructions from General Wolseley. The proclamation against Arabi has produced considerable agitation among the Arabs. It is reported that Arabi has expelled all Turks and Circassians from his camp.

A grand council was summoned in Constantinople on Monday to deliberate upon the relations of Turkey and England. It decided that the military convention must clearly indicate the landing-place of the Turkish troops in Egypt.

Two vague and unauthenticated rumors were set afloat on Thursday. One originated in Paris and was to the effect that England, with the assent of Russia, had signed a secret treaty with Turkey relative to the ultimate organization of Egypt. The other was spread in Alexandria, and alleged that the Sultan had offered Egypt to England two months ago, on the same conditions on which she took Cyprus, and that England had declined.

It is asserted that the British Government have decided to fortify Aden immediately, at the entrance to the Red Sea. A number of heavy guns will be sent there.

An armistice has been concluded between the Greeks and the Turks on the Thessalian frontier, based on the *status quo ante*. The Turks propose to compromise by ceding three of the disputed places on the frontier to Greece, if the latter will cede to Turkey the remaining two. Greece opposes this concession, and will mobilize an army if the negotiations fail.

Germany has advised the Porte to use moderation in dealing with the Greek frontier question. The differences are still unarranged.

There is a bitter feeling between the border populations of Albania and Montenegro. On Thursday a large party of Albanians collected on the frontier, and hostilities were only prevented by the moderation of the Montenegrins.

All of the dismissed Dublin constables were summoned to the Castle on Wednesday, and separately questioned as to whether they had been present at any meetings, and then informed that their cases would be considered. On Thursday 208 of the 225 dismissed constables were granted free pardon by Earl Spencer, and reinstated. On the same day a number of suspects were released.

Mr. Clifford Lloyd made a conciliatory speech at Loughrea, Ireland, on Thursday.

Francis Hynes, whose conviction for murder in Limerick, Ireland, was the cause of the recent charges of drunkenness against a jury, and the following complication which led to the arrest and imprisonment of E. Dwyer Gray, was executed in Limerick on Monday. There was no disturbance.

Mr. Stephen J. Meany, the American newspaper correspondent recently arrested at Ennis, Ireland, has given notice to the resident magistrate that he surrenders his recognizances to keep the peace, entered into on August 11. He says: "I cannot, as an American citizen, carry the stigma of a British bondsman, and, unaccused and unconvicted of offences, continue the confession of lawlessness that a continuance of the bonds would involve." The authorities in Washington deny that Mr. Meany has been instructed by them, as alleged.

Earl Grey died in England on Sunday, at the age of eighty. His father was Premier in 1830-34, during which time the son acted as Under-Secretary for the Colonies. He subsequently held for a short time the position of Under-Secretary for Home Affairs, and in 1835 became Secretary at War in the Melbourne Ministry. In Lord Russell's Ministry of 1846 Earl Grey was Secretary of State for the Colonies. Earl Grey was the author of a work called 'The Colonial Policy of Lord Russell's Administration,' in 1853, and of an essay on 'Parliamentary Government as to Reform.'

The health of the Archbishop of Canterbury, England, has greatly improved.

Madame Elise Van Koerber's plan for the international protection of female emigration has attracted attention in Liverpool and in other large cities. The Duke of Manchester, Lord William Seymour, and other prominent men are supporters of the project.

M. Duclerc, the French Prime Minister, in a recent conversation, declared that France needed no alliances, and that her aim was peace.

The strained relations between France and Italy have been aggravated during the week by the sentence passed by a French council of war in Tunis on an Italian, condemning him to a year's imprisonment for attacking a French soldier.

An engagement is reported to have occurred at Kairwan, Tunis, in which the French lost fifty killed, and the Arabs 150.

Two French officers of high rank were arrested in Berlin on Thursday while engaged in making sketches of the ground where cavalry manœuvres were being conducted.

It is reported that the difficulty between Japan and Corea has been arranged by Corea agreeing to pay $2,500,000 to Japan as compensation, and $250,000 to the relatives of murdered Japanese subjects. The difficulties between China and Japan, relative to Corea, have also been adjusted. A later report asserts that the Chinese intervened boldly, seized the father of the King, who led the insurrection, took him to China, and reinstated the King, protecting him with Chinese troops and ships.

At 3:24 o'clock on Thursday morning, there occurred at Panama one of the severest earthquakes ever known on the Isthmus. The Cathedral and many of the largest buildings in Panama were injured. The loss is estimated at several hundred thousand dollars. Several lives were lost in Aspinwall.

MR. BLAINE AS A REFORMER.

MR. BLAINE has at last given his views on civil-service reform in one of his speeches in Maine. We believe this is the first time he has taken the subject up. In all canvasses hitherto the only Federal topics he has touched upon have been the dangerous condition of the South (which he has now entirely abandoned), the finances, and protection to native industry. He now says that—

"he should be glad to see every Federal officer, however honorable his position, appointed for a specific period, during which he could not be removed except for cause, which cause should be specified, proved, and made a matter of record. He should be glad to see the tenure of all subordinate officers made longer at least than a Presidential term, so that the incoming of a new Administration would not be crippled or injured. Seven years would be a good length for a term, and would effect the desired end. He did not believe that a life tenure would be wise even if practicable, and was sure it was not practicable because it means pensions in the end, and might create a 'privileged class'; nor was he sure that life tenure insures the best, most faithful, and most honorable service, but believed a man would be a better officer if his mission should expire at stated periods, and his reappointment depend upon his efficiency. It will prove a far easier task to educate public opinion to the renewal of appointments to efficient and valuable officers, with sufficient salary to enable them to lay by something for a rainy day, than it will to get popular consent to life tenures with pensions, to a large civil list, constantly growing in number and constantly provoking opposition in the popular mind. This system belongs with royalty, and he did not believe that it can be domesticated in this Republic, and that those who agitate it will ever reach a practical result."

This is important as coming from a politician who has hitherto professed to consider the reform a somewhat ridiculous subject, and who, when he came into office last year under Garfield, at once began to commit and advise every variety of civil-service abuse. That his speech proves that his opinions on the subject have undergone any change, we do not believe; but it does prove that he thinks other people's opinions have. His own mind is, with regard to nearly all political subjects, very like the sheet on which lecturers throw illustrative views from the camera. It is ready to take and exhibit anything the audience is likely to find entertaining. So that though his utterances may not have much value as opinions, as testimony they have a good deal. They show that he, who is a very competent observer of the current of popular feeling, believes that there is a growing popular hostility to the use of the officers of the Government as the electioneering agents of the party in power, and that something is to be gained by a politician who advocates stability of tenure.

His plan of reform is to appoint all officers for a term, say, of seven years, which would have the effect of relieving them of anxiety about the Presidential election, and would relieve the incoming President from the pressure of officeseekers, which now takes up most of his time during the earlier months of his administration. During this term of seven years Mr. Blaine would allow no officer to be removed except for cause, to be specified, proved, and recorded. He is, however, unalterably opposed to tenure for life, as monarchical and leading inevitably to a system of pensions, which is monarchical too, and might create "a privileged class." For this change he thinks the popular mind might be readily prepared.

We believe a considerable number of leading politicians have now reached Mr. Blaine's position—that is, they have given up sneering, and declare themselves in favor of some reform. They are ready, for instance, for a short fixed term—President Arthur says four years, Mr. Blaine says seven. The trouble is, however, that they are never ready to legislate to this effect, and never ready when power is in their hands to practise in this direction. The reformers, we believe, will be glad of *any* step toward reform: a four-years' tenure if they cannot have seven; a seven-years' tenure if they cannot have tenure during good behavior. They will be glad if, even without any legislation at all, the President will refuse to remove officers except for cause, and Senators and Representatives will cease to quarter their personal followers on the public service as rewards for personal services. What they seek from politicians is, in short, *action* of some kind, and not incessant talk about monarchy, and aristocracy, and privileged classes, "visionaries" and "idealists." Let us have the four-years' term or the seven-years' term, and the irremovability except for cause, without humbug or evasion, and we will see how it works. If it works well, there will be an end of the matter; if it works ill, it will have to be changed. But do let us have an end of theorizing.

Mr. Blaine's horror of pensions, "as belonging to royalty," is rather diverting, considering the plunge into pensions without the slightest excuse made by Congress in 1879. One may search in vain the records of the most corrupt monarchies of ancient or modern times for a measure like the Arrears of Pensions Act. Corrupt monarchs used to give pensions to a few favorites whom they knew and liked, and to politicians who had done them definite service, but we have actually thrown the Treasury open to all the swindlers and perjurers in the country, and invited every scoundrel who wants a little money and does not mind shamming and false swearing to come in and get an annuity from the Government. It is possible that a community which can stand this spectacle could not bear seeing a few worn-out civil-service employees drawing small salaries during the closing years of their life, but it is not probable. It is also possible that they could bear it very well, and some day wonder what anybody could ever have found in it to object to.

"CORNERS" IN GRAIN.

THE subject of "corners" in the grain market is attracting more than the usual amount of attention just now, by reason of the bitter controversy going on at Chicago over the "July wheat deal," a phrase applied comprehensively to a series of transactions on the Chicago Board of Trade, in the course of which the firm of Armour & Kershaw bought up all the No. 2 spring wheat in the market, and in addition thereto bought a large number of July "options," which the sellers were not able to fill because Armour & Kershaw held all the grain of that grade within reach. In other words, Armour & Kershaw cornered the market, contrary to an express statute of the State of Illinois, and when business opened on the 1st day of August invited the "shorts" to come up and settle. The shorts declined the invitation, and appealed to the Arbitration Committee of the Board of Trade. The Committee decided that $1 35 per bushel was a fair price to be paid by those who did not or could not fill their contracts. Some of the shorts settled at this price; others refused to pay more than $1 30, and, lest the Board should expel them for infraction of the rules, applied to the courts for protection. A temporary injunction was granted; and so the matter stands, with the chance of somewhat protracted litigation. If the injunction is made permanent—as is not unlikely, seeing that the case is before Judge Jameson, whose denunciation of "corners" in a former case still rings in our ears—the Board of Trade will be compelled to appeal, seeing that the interference of the Court will virtually put an end to all discipline and destroy every bond which holds the body together.

We have said that a statute of the State of Illinois prohibits "corners" in the grain market. It does more: it makes the act of cornering, or attempting to corner, a criminal offence, punishable by fine and imprisonment, and declares all "options" to be gambling contracts and void. The theory upon which the law proceeds is evidently the same as that upon which the old English statutes against forestalling and regrating were based. The idea is that without some statute of this kind a few persons may possess themselves of all the food in the market, and advance the price to any point they please; in other words, produce a famine in the midst of plenty. Yet there is a material difference between the ancient law against forestalling and the modern law against option contracts. The former was directed specifically against an act deemed dangerous to the community—the act of monopolizing the food supply of the country. The latter is an attempted interference between two sets of "gamblers" in favor of one of them. The man who agrees to sell a certain quantity of wheat next month at a certain price, expecting to buy it meanwhile at a lower price, is not *prima facie* entitled to more consideration at the hands of law makers and judges than the man who agrees to buy it expecting that it will command a higher price. Neither of them, unless he is a miller, needs more wheat than will suffice for his daily bread. What he buys or sells above this is, in one sense, in the nature of gambling; but why one of them should be preferred to the other, and why a grain-producing and grain-selling State should give its preference to the one whose gambling is in the direction of lower prices for grain, it is not easy to see.

But, it is alleged, cornering the market is not fair play. This raises the question whether the sovereign power has any interest in fixing a limit to the losses of one set of gamesters, who are presumed to act with their eyes open, and, if so, whether the resulting advantage is sufficient to offset the harm which flows from interference with private contracts which are not necessarily hurtful to the community. If the short seller keeps down the price of grain

to the consumer, the cornerer puts up the price for the producer. The effects of their action upon prices are very much exaggerated in popular estimation, as was shown by Mr. W. F. Ford, the editor of *Bradstreet's Journal*, in his statement to the Senate Investigating Committee of this State a few months ago. Mr. Ford presented a table showing the fluctuations in the prices of cash wheat for fifteen years—that is to say, during a number of years before and a number of years since the practice of trading in options came in vogue to any considerable extent. No difference could be found between the two periods as regards the scale of fluctuations. Unless such difference can be shown, it cannot be argued that the community at large has suffered from option trading or from corners. When a corner is operated successfully the immediate gains of the cornerers and the losses of the cornered impress the popular imagination, and produce a feeling that something ought to be done for the "victims." This is the part which is seen. What is not seen is the fact that the cornering party have loaded themselves with an immense quantity of grain at extravagantly high prices, which they must sell at a loss. The price of regular spring wheat in Chicago on the 31st of July was $1.34@1.36. On the 1st of August the same wheat was quoted at 96@98c. It is always a matter of doubt whether the cornering party can get back from the shorts and the public together as much money as they have already paid to the public for their holdings.

That corners are, on the whole, injurious to trade may be readily admitted. But it is not by any means clear that they are more hurtful than arbitrary proceedings, under color of law, to set aside private contracts. It appears to us that the commercial bodies under whose rules the trading takes place are the proper and only safe tribunals to deal with them, and that however much the legislative authority may seek to interfere, the final and real decision must be made by those bodies. The interests of trade are their only interests, and they are bound by the very law of their existence to reach conclusions which will stand the tests of time.

A CURE FOR REPUDIATION.

THE case of The State of New York *vs.* The State of Louisiana, now pending in the Supreme Court at Washington, is as important as any which has ever come before that tribunal for consideration since its establishment.

The plaintiff sues the defendant on repudiated State bonds, under an act of our Legislature authorizing the holders to transfer them to it, and directing suit to be brought in its own name as assignee. The main question at issue relates to the jurisdiction of the Court. The Constitution provides (Art. III., Sec. 2) that the judicial power of the United States shall extend to "controversies between two or more States," and to "controversies between a State and citizens of another State"; but after the decision of the Supreme Court in Chisholm *vs.* Georgia, that these provisions made a State liable to suit like a private person, the strong State-rights feeling of the day led to the immediate adoption of the Eleventh Amendment, which was designed to prevent suits of this kind absolutely. This amendment is as follows: "The judicial power of the United States shall not be construed to extend to any suit in law or equity commenced or prosecuted against one of the United States by citizens of another State, or by citizens or subjects of any foreign State."

Under this provision, the New York holders of repudiated Louisiana bonds cannot sue the State of Louisiana, and the question is whether what cannot be done directly can be done indirectly by virtue of an assignment to the State of New York, which, under Art III., Sec. 2, is capable of suing. In other words, is this a "controversy between two States," or is it really a case in which citizens of one State are suing another, and resorting to a sham assignment to give jurisdiction? This question has been fully argued by Attorney-General Russell, who takes the ground that the assignment to New York makes the case a real "controversy between two States," because at the time of the adoption of the Constitution the right of any sovereign government, such as the States then were, to make the claims of its citizens the basis of a demand for redress against another sovereign government was recognized by international law. By this we suppose he means that it is entirely within the discretion of a State what claims of this sort it will press, for of course, by the universal modern practice of States, no government ever makes a *casus belli* of repudiated bonds. No government could maintain such a principle of liability against another, without admitting that if it repudiated its own bonds a *casus belli* would exist against itself; and, as most modern states have at one time or another repudiated, or "scaled," or "readjusted" their obligations, they have taken very good care not to insist upon any international liability of this nature. Therefore, on this point the Attorney-General's argument is hardly entitled to much weight, and it is, moreover, at the best something of a juggle with words; for, no matter what the framers of the Constitution intended, what the framers of the Eleventh Amendment meant was to frustrate their intention, and therefore the question recurs, Can this amendment be practically nullified by permitting a suit brought in the name of a State, but really for the benefit of its citizens?

The adoption of such a construction would undoubtedly deprive the States of that very immunity from suit which it was the intention of the Eleventh Amendment to guarantee. If a State may assume one class of obligations it may assume any, and the consequence would be that any one who could get the Legislature of his own State to pass a law adopting any claim of his against another State could in this way bring it within the jurisdiction of the Supreme Court. In reply to this, however, it must be said that the objection is not a serious one, because repudiated bonds constitute the only sort of claim that is likely to produce such legislation. The notion of the Attorney-General's office of each State being converted into a "claim agency" appears to us to be a mere bugbear.

The real legal difficulty in the case is that a decision in favor of the plaintiff must be placed on the extremely technical ground that the Eleventh Amendment guarantees a State immunity from suit only when the plaintiff of record is shown to be a citizen of another State, or a citizen or subject of a foreign government. It is of course possible for the Court to say that the plaintiff is the State of New York, and that it is entirely immaterial for whose benefit it brings the suit. The State *might* hold bonds of its own; it might, again, purchase the bonds in suit, and then the Eleventh Amendment would have no application. But if it might do this, the fact that it has actually chosen to proceed in another way, and sue as trustee for the owners, makes it less difficult for the Court to make the necessary decision.

That some means may be found for overcoming the difficulty everybody must hope, because otherwise the disease of repudiation will always break out from time to time, and the honor and credit of the entire country suffer in the future as it has done in the past. How great is the total amount of outstanding repudiated State debts which the decision will affect is not accurately known, but so many of the Southern States have settled with their creditors that the amount in itself does not present the same obstacle that it would have presented ten years ago. Some of them are able to pay their entire repudiated debt if they desire to do so.

THE MEXICAN WARWICK.

NEW YORK, September 8, 1882.

"WHAT all this signifies"—the curious political doings in Mexico mentioned last week—is a probable return of ex-President General Porfirio Diaz to power even sooner than was as a matter of course looked for. "Don Porfirio," or more familiarly yet, as he is termed by the populace, "Porfirio," is the Mexican power behind the throne. Everybody has long known that he was to be the next incumbent. Everybody has known that his creature, General Manuel Gonzalez, was but a *locum tenens*, who kept the place warm for him. It should be explained that the Mexican Constitution, as amended of late years, prohibits the holding of the Presidential office for more than one term, of four years, at a time. "Porfirio" himself, in his revolution against Lerdo, was an enthusiastic one-termer. With this motto inscribed upon his banners and the aid of his military prestige and personal popularity, he swept the troops of the more pacific, if not less unscrupulous, Lerdo before him in 1876, and seated himself in his place.

But there seems to be a good deal more in the wind just at present than the candidacy of Porfirio Diaz for the next term of the Presidency in 1884. Having the field indisputably to himself, since there is nobody in the country strong enough, even at three or four removes, to make head against him, the next year or two might naturally enough be "off-years" in politics. General Gonzalez, the stop-gap, however, is in a critical condition of health. He lost an arm at Puebla in the defence of that town against the French, and the wound has never healed. Puebla, entitled, after the patriotic custom in vogue, "de Zaragoza," in honor of the general in chief command, is a celebrated name in Mexican annals. It has given rise to the great Cinco de Mayo (Fifth of May), a date after which streets and boulevards are named, and which calls forth more processions, illuminations, and speech-making than even the 16th of September, the anni-

versary of the national independence. Gonzalez lost an arm at Puebla, and the stump of that arm, together with the exigencies of Porfirio Diaz, raised him to the Presidency. Gonzalez, like Diaz himself, sprang originally from the position of a common soldier in the ranks, but, though possessed of an equal amount of education with the latter—it cannot be very great in either case—he is a person of far more mediocre abilities. His imperfectly-treated arm has been a constant menace, and on at least one occasion of late there has been mounting in hot haste by persons who had especial interest in the event, under the impression that his decease was at hand. It may be either that the President will die, or that he will be found physically incapable of continuing his term to the end. There are indications that he may have begun to look at the case in the last-mentioned light, and to provide for his retirement himself. Although but a poor man when going into office, two years ago, and enjoying but a moderate salary, he has lately purchased the great hacienda, or agricultural property, near Tezcoco, once belonging to the Jesuit fathers. It is not given out publicly that he has done so; indeed, the effort is made to keep it quiet. Inasmuch as the cost was somewhere between a quarter and a half million of dollars, the populace would naturally begin its arithmetical calculations upon this surprising piece of economy, its speculations whether or not something might not have been saved from the labor of signing all the American railroad charters and those for other public improvements that have been going through so profusely of late. However, it is one of those things that leak out and everybody begins to know, and this although the purchaser has not himself taken possession, but has put in General Lalanne, the Governor of the place, to take charge for him.

Now, supposing that President Gonzalez is either to be retired in some such comfortable circumstances as this, or to die of his wound patriotically got at Puebla, his intending successor is naturally interested in seeing that nothing should occur thereupon to jar unpleasantly with the purposes which he has put himself to the trouble to form. Under the Mexican system there is no Vice-President, elected as such, to step into the Chief Magistrate's place in case of his death or withdrawal. The Chief Justice of the Supreme Court has been, up to the very last session of Congress, *ex-officio* Vice-President, and eligible to the seat. But it was confidently said by knowing persons in the spring that in case of Gonzalez's death, Vallarta, the somewhat venerable Chief Justice, would never take the vacant place. "Why not?" one asked with interest. "Oh, we shall see what we shall see," was the astute reply. Sure enough, at the earliest moment a law was put through Congress providing that the presiding officer of the Senate, and not the Chief Justice of the Supreme Court, should succeed to the office in case of the removal of the President of the nation, and should thereupon order a new election. This is being, or has been, ratified into a constitutional amendment by the phenomenally docile States. By a singular coincidence the President of the Senate who will have the ordering, or what, under the farcical system in vogue is the same thing, the absolute decision, of this new election is—Romero Rubio, the father-in-law of Porfirio Diaz.

Thus "Don Porfirio" sits back on his vast estates in Oaxaca, which he too has amassed with an exemplary economy, pleases himself to be Governor and commander of the military forces of this fighting State in the interim, and controls the destinies of his country with such ease as if he moved the ponderous weight with his little finger. In the absence of any efficient electoral system, and consequent means of redress by the ballot, Mexico is under as absolute a dictatorship to-day as was France under its last Emperor. The case is even worse, because under the ostensible division of powers there is no way of tracing the responsibility to its source. Not that there is the least danger of anybody's trying to do so. The country is tired of revolutions. "A bad government is better than a good revolution," is one motto. Another is: "There will be no more revolutions; all the grabbers have got places." Further than this, the railroads make it easy to put them down. Further than this, the railroads give employment to idlers who formerly had nothing better to do than follow the banners of insurgent chiefs.

How Porfirio manages to exert such absolute control it is not at first sight easy to see. Here is a great Congress of unbiassed men, as one might suppose, from all parts of the country. Surely some of these would stand out against dictation. Meekness is not a Mexican trait. Here are some who have declaimed fiercely against the French oppressors; here is a fervid Indian speaker who professedly models himself upon Mirabeau; here are poets and prose writers who have turned off diatribes against tyranny and odes to freedom, and all great ideas, after the most classic and republican French models. These Brutuses, however, if some there be, make no headway against the arts of Don Porfirio. Their inspiration is rather literary than practical. They are not particularly heard from, in fact; and his majorities are not merely sufficient, but enormous. Still, the case is fairly simple when looked into. The men are rarely unbiassed. They are sent by the Governors of the several States, and these Governors have been manipulated in advance. Porfirio avails himself, too, of the arts of the Strong Man, the Man on Horseback, all through history. He has both promises to make and threats. If everybody cannot expect a better office, he can at least lose the one he has. If he could be sure, too, that in case he held out, a band of heroes would hold out with him to the bitter end; but he cannot be sure of that. He may be left in the lurch, the only one of his clan to suffer the penalties. "The boys" are much given to "going back" on each other in Mexican history. From the year 1810 downward it is a record of tigerish personal courage, with conspiracies and betrayals.

The Latin race admires the military type, and Porfirio has captivated the popular imagination by his exploits in the field. The chief of them, it is true, have been in his own service. He has headed two revolutions, in the first of which he was defeated and pardoned, in the second successful. Lerdo, whom he finally dispossessed, was a civilian, an ex-schoolmaster. Lerdo, it was thought, tried to govern the country in the same pedagogue spirit in which he had governed his school. He succeeded to the Presidency from the office of Chief Justice. "Don Sebastian" (Lerdo) is spoken of as the most scholarly and really competent President the country ever had, but he lost favor by his lack of military talent, taking flight to New York when his fortunes were by no means in a desperate condition. The country people were strongly on his side at first, but this singular thing happened: that, finding him unable to protect them against the roving bands of revolutionists belonging to Diaz, they joined the latter in disgust, and went on with him to the capital.

Whether it is that Porfirio, putting some trust in the old motto, "Let me make the songs of a nation, and I care not who makes its laws," subsidizes a little the ballad-singers, or that they break forth with spontaneous admiration, certain it is that on Sundays up the Viga Canal, at Santa Anita, whither the populace swarm to indulge in unlimited pulque, tomales, cheap flowers from the floating gardens, and dancing, the strolling minstrels mingle in the revelry frequent long-drawn refrains to the praises of "Don Porfirio Di-i-az." The subject of these remarks is a person neither talkative nor taciturn. He is of commanding height, swarthy Indian skin, a figure stalwart but not heavy, and of a military, yet somewhat nonchalant bearing, all of which may add to the attraction. I saw him during the excursion down to Cuautla on the opening of the Morelos Railway—an opening followed a week later by an accident unparalleled, in extent and accumulation of horrors, in the annals of railway catastrophes. All official Mexico was there, and if the five hundred lives had been lost that day instead, the republic would have had to be reconstructed from the foundations. It is characteristic of something strangely happy-go-lucky and illogical in the Mexican temper, with all its fierceness, that in the decorative festoons hung around the banqueting hall of the old convent, now utilized as a railway station, for our dinner on this occasion, were set impartially the names of all the Presidents and various other great men of the Republic, from the Emperor Iturbide, who was shot for treason, down to Lerdo, who was driven out as a tyrant and traitor too—and to Don Porfirio, who ejected him. In the same way, though they have been so often one another's Brutuses and Cæsars, their portraits are impartially honored in the National Palace. The sword of Iturbide, too, is invoked in the sonorous national anthem, which, if the reasons were really good for shooting him the moment he set foot on shore at Vera Cruz, seems much as if we should invoke the sword of Benedict Arnold.

Porfirio is a romantic figure in his career, and his is a country, it may be said in passing, which bristles with romantic incidents to an extent we perhaps hardly give it credit for, since it is so far away. I shall not go into his strategic seizure of Matamoras, his capture by Lerdist troops while concealed on shipboard, his escape by leaping into the sea, his recapture and reescape by aid of the French captain, whom he afterward made consul at St.-Nazaire. He is romantic even in his Macchiavellian policy. One cannot say how powerful the Lerdist element in the country, after its complete overthrow and the flight of Lerdo himself six years ago, may be. At any rate, it was the only source from which danger was to be apprehended, and it was well worth conciliating. It was worth conciliating, too, from the social point of view. The real *crème de la crème* in Mexico are the "Mochos" as they are called. They may be said to consist of a Catholic element which regrets ineffectually the confiscation of the Church property, the few lineal survivors of the Spanish titles antedating the Independence in '21, and the survivors of the Court of the ill-starred Maximilian. The Mochos are rich, pass much of their time abroad, keep aloof with a refined horror from the vandalism of the later state of things, and occupy a good deal the same position as that of the old Legitimist clique in the Parisian Faubourg Saint-Germain. They have taken little voluntary part in the successive revolutions, leaving these to be chiefly fought out by the professional soldiers of fortune.

Now, Lerdo, as a man of education at least, and representing the respectable part of republicanism, is conceded to have been "in society," to have been received by the *gente honrada*. All this government of the *populacho* (the rabble) which has followed is not. The Mochos temporize a little, go, perhaps, to the wedding ceremony of some rich railway contractor's daughter, not to draw upon themselves direct persecution, but they do not open their houses in return;

they do not entertain. Mexican "society," apart from the hospitality of the Foreign Ministers, is of very slim proportions. Porfirio Diaz has known how to effect an alliance with the Lerdist faction, and to conciliate opposition from that quarter in what is probably a most effectual manner. He has married, for his third wife, I believe, the daughter of Senator Romero Rubio, who was the right-hand man and exiled partisan of "Don Sebastian" himself, and is now the President of the Senate and empowered to regulate the next election, which shall seat his new son-in-law in the chair. Nor has Don Porfirio had to hide any qualms of personal repugnance in this match. His prevailing fortune does not desert him. The young lady is under twenty, accomplished, and of a high-bred air. She will be recollected by Americans as among the very prettiest of the belles who took part in the round of festivities given in honor of General Grant at his last visit. This, too, will be pleasing to the people. Don Porfirio means that the people shall be pleased with him. When General Grant, on his first visit to the country in his tour around the world, was the curiosity and hero of the hour, Don Porfirio was his inseparable attendant and courteous host. A certain resemblance was traced between them. Both had been illustrious generals, both Presidents. When Grant returned a second time, and was now much less popular on account of his interest in railway concessions, and of a jealousy which had arisen of American aggressions, Don Porfirio was unfortunately obliged to be far distant, engaged in distributing charitable funds to sufferers on the northern confines of the Republic.

It is not simply in his marriage that he conciliates the Lerdists: the work has long been going on piecemeal. Veteran Army officers and others, thrown out of service by the defeat of that cause, after having been reduced to sufficiently gloomy straits, have been approached and won over in a taking way. I had the good fortune to make a long journey in Mexico with a colonel of the Army who had belonged to this category, passing with him among other places through Iguala, where Iturbide's famous Plan (of independence) was first drawn up. I will admit that my travelling companion had his defects, but he was of a philosophic turn, and we talked, as we jogged on day after day on horseback, of many interesting things connected with his country. He was on his way to take a command on the frontier. He said to me that the President, Gonzalez, who knew somewhat of his doings in virtue of an espionage to which he had been subjected, sent for him and asked, "Why do you continue to talk against the Government, and pass your time in idleness—you who were once so good a soldier?"

"Sir," the Colonel replied, "you know my sentiments and my cause. I cannot deny that I fought for it, and I take the consequences. I have pawned my valuables and my clothing for food. As to my idleness, I have no regular occupation to turn to."

"I admire your manliness," the President, instead of flying into the expected rage, replied. "Here is your appointment to the command of a regiment. Your cause is dead, as you know. I ask of you no political services. I ask you only to be, as before, a soldier."

It is needless to state that after this there was decidedly one Lerdist the less. I am not finding fault with all this astuteness and conciliation. Indeed, though the aggrandizement of an individual be at the bottom of it, it augurs well for the peace of Mexico, at least. The hammer-and-tongs policy has so long been in vogue there that a recourse to the chicanery of a charming matrimonial alliance and the affectation of bluff and soldierly sentiments will be welcomed, certainly by the foreign capital in the country, as a great improvement upon throat-cutting. Some further talk to the Colonel, in my hearing, I thought much more typical and indicative of debasement. We fell in with another travelling companion, an officer in the Customs service. When he learned that the Colonel was going to the frontier, with a view, among other things, to suppress the extensive smuggling carried on there, he said: "You had better make your little $20,000 or $30,000 by protecting it. That will be much less trouble. The smugglers will buy up your soldiers any way; so it amounts to the same thing." W. H. B.

THE DEATHS OF PROFESSORS BALFOUR AND JEVONS.

LONDON, August 24, 1882.

THE beginning of our holiday season has been clouded by the death—a death through what may be called holiday accidents—of two eminent men whom English science could ill spare: Professor F. M. Balfour, of Cambridge, and Mr. W. S. Jevons, lately Professor in Owens College, Manchester, and afterward in University College, London. Mr. Jevons, a man of only forty-seven years of age, drowned in bathing on the coast of Sussex, was of so modest a character and such retiring habits that he was not personally familiar to the world of London, but among students of his own subjects his reputation stood very high, and his works are doubtless well known to the scientific public in America. Considering that Britain was the birthplace of political economy, and that so many of the ornaments of that science have flourished here, it is somewhat remarkable that we should at present have comparatively few economic writers of eminence. Among these Mr. Jevons stood in the front rank—indeed, if one looks to the work he did, he may be pronounced distinctly the first. His was a thoroughly English mind—patient, careful, sober; accumulating facts with great industry, reasoning cautiously from them, comparatively indifferent to the graces of style, but stating what he had to state in a manner which was not only lucid but weighty. Those who met him for the first time were sometimes disappointed by the absence of vivacity in his conversation; but the longer they knew him the more they were impressed by the substantial strength of his powers, the soundness of his judgment, the cogency of his logic. Personally, he was a singularly likable man—simple and unassuming, with a fund of geniality which only disclosed itself after a time, and was then prized all the more because one had hardly guessed it. Though he wrote several valuable books on logical subjects—having, among other things, developed Sir William Hamilton's doctrine of the quantification of the predicate, and having expounded the methods of inductive and deductive reasoning, with singular fulness of knowledge, in a book on the 'Methods of Science and Logic'—he was probably best known in England by his economical treatises, and best of all by his book on the 'Coal Question,' published some fifteen years ago, in which he collected a vast number of facts bearing on the consumption of our supplies of coal, determined the rate at which the process of exhaustion is going on, and called attention to the probable results of that exhaustion at no very distant period. The work produced a great impression, and did much to stimulate Mr. Gladstone to his scheme for the reduction of the national debt. Nor ought it to be forgotten, in estimating Mr. Jevons's services, that he was one of the first teachers who by the fame of his writings gained credit and respect for the college at Manchester which has now ripened into a university, and which promises to be no unworthy rival to the ancient schools of Oxford and Cambridge.

Mr. Balfour's death is an even greater loss than that of Mr. Jevons, in so far as he was much younger, and had, to all appearance, a longer period of activity before him. Though little over thirty years of age, he had, by his physiological work, especially in the direction of embryology, placed himself in the front rank of scientific students. Probably there was no man of his standing who had done so much, or from whom so much was expected. Within the last year or two he had been elected a fellow of the Royal Society, and had been selected by the Committee of the Athenæum Club as one of the nine eminent persons whom they annually choose, *extra ordinem*, to be members of the club. A few months ago the University of Cambridge had founded a special new chair of Animal Morphology to be occupied by him. Possessed of independent means, and connected with some of the most considerable families in the country, he had resolved to devote his life to the study of physiology, and was just undertaking the laborious duties of secretary to our principal annual scientific congress, the British Association. No branch of research has made more progress at Cambridge of late years than physiology, and Professor Balfour was regarded as the most brilliant product and future head of that school. Being also a very cultivated and agreeable man, he is mourned by the whole of Cambridge, and indeed by many outside the University who knew him only as a friend. Since his death, which happened in the attempt to scale, with the help of one guide only, one of the most difficult pinnacles of the range of Mont Blanc, the Aiguille Blanche de Pétéret, two other fatal accidents have befallen English climbers in the Alps—one on the Wetterhorn, usually an easy mountain, the other on the Dent Blanche, a peak near Zermatt, seldom ascended, and only fit for practised mountaineers.

People often ask why it is that when the dangers of Alpine climbing are so well known these accidents should happen; and, further, what it is that induces men, and among them so many men of intellectual power and reputation, to risk their lives in an amusement from which no solid benefits are derived. As the practice of mountaineering is less common among Americans than among Englishmen, your readers may perhaps care for some remarks on a pursuit which has played, and still plays, so large a part among the English youth. Its dangers are not, when proper precautions are taken, really serious. Considering the number of persons whom Great Britain sends every autumn to ramble over glaciers and snow-fields, the percentage of accidents is very small. What makes it seem considerable is the amount of public attention called to each, and the fact that the victims are so often persons of vigor and promise; for the amusement is one to which the more intellectual men, especially the younger fellows of colleges at Oxford and Cambridge, eagerly devote themselves, while their duller contemporaries are more attracted by hunting or shooting. But well known as the proper precautions are, it constantly happens that they are neglected. A man who has waited for a week, through showers of rain and snow, to climb a peak or cross a pass, starts at last when a somewhat better day presents itself, although prudence would have told him that he ought not to venture till the weather was perfectly settled, and that the risks have been greatly increased by the fall of fresh snow. Perhaps he cannot get both the men he wants to have as guides, and therefore he takes the risk of having one only where two are needed. Perhaps he has a pet theory that there

is a shorter cut to the top than the usual route, and insists on taking it in spite of the guide's warnings. The very fact that mountaineering is now a developed art, some twenty-five years old, makes people forget the dangers and despise the safeguards, and leads them to assume that all will go well. And as all the greater peaks and all the more important passes have now been disposed of, adventurous spirits are driven to seek excitement or distinction in attempts on pinnacles which their predecessors had passed by as impracticable, or on passes which lead nowhere, and are only interesting because hitherto untried. So many things have been found possible, ever since the famous instance of the Matterhorn, which had been long thought inaccessible, that it is no wonder that desperate expeditions should sometimes be undertaken, and sometimes end in disaster. However, the commonest cause of mischief is mere carelessness or over-confidence; and, after all, the lives lost in mountaineering are few compared to those recorded every year in England from the use of fire-arms in shooting grouse, or partridges, or pheasants.

It is a more generally interesting question to determine what are the causes which have made Alpine climbing so popular among Englishmen, and so much more popular among them than in any other continental country. The French and the Russians climb scarcely at all; the Italians rather more; the Germans more, again; but none of these peoples nearly so much as the English. The love of natural beauty and grandeur, which seems to be stronger among the Teutonic races than in any others, is no doubt one of the causes. The scenery of lofty mountains, of towering crests of rock and extended snow-fields, is, indeed, not generally so beautiful as that of the valleys and middle slopes; but it is often more striking, or, at least, more strange and awe-inspiring — naturally, therefore, more attractive to the young. There is a sense of solitude, of vastness, of the terrible silence and severity of nature dominating these upper regions, which is felt nowhere else, and which powerfully draws men back to them who have once submitted to the spell. No one who merely looks at the snow-mountains from below, or takes a lady's stroll of half an hour upon a glacier at its lower end, can appreciate the intensity of the impression which the ascent of one of the great summits of the Alps or the Pyrenees makes upon imaginative minds. Doubtless, however, among our mountain-climbers there are many who have not much poetry in their composition. These are attracted partly by the mere love of violent exercise, and of exercise in the keenest and most invigorating air, partly by the passion for overcoming difficulties, for doing something new, for becoming conscious of their strength and courage and skill in undergoing fatigues and facing dangers which others shrink from. The need for this sort of excitement is a permanent need in human nature; and, though moralists may condemn people for exposing their lives to unnecessary risks, the fact that the condemnation is so often repeated shows how strong is the love of danger for its own sake. Our ancestors indulged it in war and in the chase; now, when war has become confined to a profession, and the only danger in the pursuit of wild creatures arises from one's own or one's companions' carelessness, the old passion insists on finding new avenues. And the mountaineers claim that their pursuit, even regarded in its lowest aspect, as a mere form of exercise, has the advantage over rowing and other forms of athletics that there is nothing vulgarizing or brutalizing in it, that it is not liable to be corrupted by betting, that it brings men into the best company—that of the grandest and most inspiring scenes of nature—and makes them seek success, not by defeating others, but by overcoming physical obstacles.

Whether the taste will be a permanent one, it is hard to predict; as it is quite recent, so it may prove transitory. Already it has lost some of its charm by the conquest of all the higher and more striking summits, and also by the way in which it has been reduced to a system. No book could be written now about the Alps which would have the charm of novelty that surrounded Professor J. D. Forbes's book, or the three volumes of 'Peaks, Passes, and Glaciers.' Still, while Englishmen continue fond of violent exercise and of grand scenery, while Switzerland annually draws thousands of German, English, and American tourists, the ice-axe and rope are likely to continue familiar objects in mountain inns. Nor is it at all impossible that this form of amusement may survive fox-hunting and grouse-shooting. They would be seriously shaken by any great change in the social order of England, and the growing tenderness toward the lower animals may perhaps in another hundred years make them seem barbarous to our more refined descendants, while mountain climbing will still have its poetical side. Y.

WHY DO PEOPLE HATE MR. GLADSTONE?

LONDON, August 24, 1882.

MR. GLADSTONE counts, of course, his thousands of admirers: the Liberal party is at this moment kept in power in virtue of his widespread popularity; but by many educated men and women he is abhorred with an intensity of abhorrence felt toward no other politician. What is the cause of this hatred? The answers given to this inquiry by rabid foes or by devoted followers are equally unsatisfactory. If I am to believe the *St. James's Gazette*, the Premier is a singular mixture of the fool and the knave; he is a sort of weak-brained Mephistopheles—a combination, so to speak, of treacle and sulphur. He is, in short,

> "a creature of such hideous mien
> As to be hated needs but to be seen";

and the only wonder is how any one can be simple enough to trust a villain whose portrait has been painted in the darkest colors every day during the last three years by the literary staff of the leading organ of Conservatism. If, on the other hand, I am to believe my excellent friends of the *Spectator*, Mr. Gladstone's one fault is that he is a great deal too good for this world. He combines all the various graces which have ever adorned any English statesman. He has the patriotism and disinterestedness of Chatham; he displays the financial genius of Pitt and of Peel; he possesses more than the eloquence of Sheridan; his wisdom surpasses the wisdom of Burke; and in ready wit and power of managing men he is more than the equal of Palmerston. Add to this that Mr. Gladstone is, like the lady who is described on her tombstone as the cousin of "Edmund Burke, commonly called the sublime," "beautifully religious." He is, in fact, in the judgment of the few who really appreciate his character, the leading theologian no less than the leading statesman of his age. His defects, his vices (if he has any) all lean to virtue's side. His one fault—the sole reason for the hatred entertained toward him by the "carnal mind"—is the excess of his goodness. Being created for paradise, he is hardly fit for this earth. His angelic temper is so good that it is mistaken for irritability, and his simple love of truth so deep that an ignorant world somehow confounds it with a tendency to disingenuousness or prevarication. It is, in short, the old, old story of Aristides. The English Philistine is wearied with hearing Mr. Gladstone called, in one form or another, "the Just." Future ages will appreciate his virtues; meanwhile, he shares the hatred felt at all times by the wicked toward all the best and noblest members of the human race.

I am myself a disbeliever in the existence no less of monsters than of angels. I utterly repudiate any explanation of the animosity undoubtedly felt toward Mr. Gladstone by large bodies of intelligent persons, which rests at bottom on the absurd supposition that the most eminent of English politicians is an idiot or a maniac, whose imbecility is surpassed only by his cunning. I find it impossible to acquiesce, on the other hand, in any explanation of the fact that many good and wise persons distrust the Premier which assumes that to dislike Mr. Gladstone is to be the foe of virtue. The one explanation is a gross calumny on a minister of the very highest talents and character, who has rendered the most important services to the English nation; the other explanation is a slander on some of the best and most sensible men to be found in the English nation. Mr. Gladstone, like every man who has ever ruled a great country, combines extraordinary talents and rare virtues with some very marked faults. The explanation, in short, of the hostility which his very name excites among some classes of his countrymen, is to be found in the circumstances of his position and the peculiarities of his character. The distrust and dislike of the Premier felt (often very unjustly) by almost all Conservatives, and by a considerable number of so-called educated Liberals, is, in the main, due to four causes.

First. Mr. Gladstone is the Premier who has first made well-to-do Englishmen realize the fact that they live under a Constitution which in theory, if not always in practice, is democratic. He has given actual effect to most of the reforms vaguely demanded by the English democracy. The abolition of the system of purchase in the Army, the disestablishment of the Irish Church, the Education Act, the introduction of vote by ballot, the two Irish Land Bills, are mere specimens of the kind of legislation which has been carried through by Mr. Gladstone. Each one of these enactments has in itself offended not only the prejudices, but the principles, of large and influential classes; and Mr. Gladstone's legislation, taken as a whole, has produced an effect far greater than can be attributed to each of its parts. It has proved that under a competent guide the English democracy—that is to say, a lot of Dissenters, shopkeepers, and artisans—can govern as well as reign. Now, hosts of gentlemen who theoretically delight in popular government do not really wish that the people should be king. They are therefore naturally irritated when a Minister enables the true sovereign of the country—the mass of the electors—actually to exert sovereign power. We may be quite sure that the Conservatives who, under Disraeli's guidance, "dished the Whigs" by the Reform Bill of 1868, did not intend to introduce a system of administration opposed to all the principles of Conservatism. They thought that the householders would be, if not Tories, yet far less ardent reformers than the traders whose votes decided the policy of the nation under the Constitution of 1832. Nor is it certain that but for Mr. Gladstone this hope would not have been more or less justified. There was, when he first became Premier, no ardent cry for political or social reforms. A Palmerston or a Russell would either have deadened the desire for change, or else have shown himself incapable of giving any practical effect to the demand for innovation. It is quite on the cards that but for Mr. Gladstone the Church of Ireland might still be connected with the state, and the land law of Ire-

land be still the same as that of England. He made the English democracy conscious of their power, and turned this power to practical account. During his earlier ministry he gave a democratic bias to domestic legislation. By the agitation against the foreign policy of Lord Beaconsfield's Government, and by his own action on coming into power in 1880, he made the English electorate feel that their wishes could dictate the foreign policy of the country. Can any one wonder that Conservatives detest a man who has (perhaps almost unconsciously) hurried the country along the path of democratic progress? The Minister who has done this was, it should be remembered, at one time a Tory of the Tories. He was never a Whig. Not much more than twenty years ago, he was a possible ally or leader of the Conservative party. He is hated by Tories with that special animosity which is the fruit of unrequited or of rejected love.

Secondly. Mr. Gladstone, though the head of the Liberal party, has never been, and never will be, in full sympathy with the Liberals who most truly represent the traditions—many of them very noble and sound traditions—of the Whigs. He is a man of far more democratic fibre than any leader who has ever come out of the great Whig houses. He is, like his master, Sir Robert Peel, far more closely connected by feeling and by principle with the mercantile and trading classes than was Lord Russell or than is Lord Hartington. He possesses, moreover, a confidence in popular sentiment, he shows a tendency to appeal to and to trust in popular feeling or emotion, utterly foreign to Liberals of the Whig type. But if Mr. Gladstone's Liberalism in some respects exceeds and goes beyond the Liberalism of the Whigs, it falls in some respects far short of the liberality even of Lord Palmerston. On every ecclesiastical matter he has always displayed the sentiment, if not the principles, of a High Churchman. The one legislative reform carried by Lord Palmerston was the Divorce Act. Its bitterest opponent was Mr. Gladstone. To get rid of ecclesiastical influence in all places of education, and especially to make the universities absolutely and completely open to the whole nation without distinction of creed or denomination, has been and is a main object of every Liberal who cares for intellectual freedom. It is assuredly no secret that Liberals of this type have received but very qualified assistance from the Premier. To this may be added that Mr. Gladstone's tendency (in some respects a very sound tendency) to yield attention to popular sentiment has more than once, and notably in his Irish legislation, led him to disregard the principles of political economy. How far he has acted wisely in this it is not my present object to discuss. All that I wish to point out is, that Broad Churchmen, and what are termed rigid economists, may legitimately enough look with suspicion on a leader who, however wide his sympathies, assuredly does not share some of the strongest convictions of men who are, after their lights, at least as zealous as Mr. Gladstone in the cause of reform and progress. Mr. Gladstone, in short, is in more than one respect the disciple of Peel; he is a man who, born a Tory, has become a democratic leader. It is reasonable that such a man should, to the end of his career, excite some distrust even among his followers.

Thirdly. Mr. Gladstone is by descent a Scotchman. No one could have read the speeches or "sermons" by which he aroused all the enthusiasm of the electors of Midlothian without perceiving that Mr. Gladstone's character of oratory and of feeling was as Scotch as his blood. There is about Scotch eloquence, as (I venture to hold) about Scotch sentiment, a good deal more heat and fervor than light or clearness. If you take two such different, yet such preëminently typical, Scotch writers as Christopher North and Carlyle, you will find in each of them a kind of verbosity and vehemence which, in spite of North's talent and Carlyle's undoubted genius, a good deal offends English taste. You feel as if the writer intentionally substituted violent assertions for argument, and tried to lash up his own moral feelings no less than those of his readers. Carlyle never argues at all. He denounces, he prophesies, he exhorts—he is, in short, a preacher. His sermons are often excellent for their purpose, but, like all sermons, they must be read for edification, instruction, or reproof; they must not be looked upon as an attempt to argue out calmly, rationally, or fairly the positions which the author means to enforce. Something the same may be said, at any rate, of Mr. Gladstone's Scotch speeches. They were suited for his audience; they attained their object; they expressed the genuine feelings of the speaker. But they were certainly not really suited for the taste of the large English public, who, to speak plainly, do not like Scotch sentiment or Scotch eloquence. The addresses were too hot, too vehement, and too wordy really to please educated Englishmen. If any one wishes to see how much Mr. Gladstone's Scotch type of eloquence differs from that of a genuinely English speaker, he should read side by side with any oration of Mr. Gladstone's the speeches either of Cobden or of Bright. You may disagree with every sentiment uttered by the leaders of the Anti-Corn Law League, but you must admit that the style in which their sentiments are expressed is admirable. I doubt whether the most ardent of Mr. Gladstone's English followers could read with pleasure his series of Midlothian addresses. Sermons are dull reading. Now, difference of style is a more weighty matter than men are apt to think. The features in Mr. Gladstone's style when he addresses popular audiences which do not meet the critical taste of educated Englishmen, betray a difference of feeling between Mr. Gladstone and his English readers. He is, in more respects than one, far too much of a preacher. The vehemence, the warmth, the hortatory morality of the pulpit is apt to irritate the audience. We suspect that at least half of the irritation caused by Mr. Gladstone's utterances arises from his being in substance a Scotchman who has to address an English public.

Fourthly. Mr. Gladstone has been before the world for half a century, but he is still, and always will be, *l'homme incompris* of English politics. No one doubts his high moral and religious principles. Every one knows his almost painful desire to make his meaning and his position precisely understood: his career has been a career of explanations. Yet, somehow, ordinary Englishmen cannot understand him. Bright, Russell, Palmerston, Sir Stafford Northcote, almost every other English statesman who has flourished during the last two generations, has been perfectly intelligible to his countrymen; he has spoken their language and thought their thoughts. With Mr. Gladstone alone it is otherwise. One does not "know where to have him," as the expression goes. Before he entered Parliament he astonished and charmed the Oxford Union by attacking the Reform Bill on Liberal principles. You will find, it is said, in the books of that debating society a long and elaborate note explaining why W. E. Gladstone on some momentous occasion spoke on one side of a question and voted on the other. And this trifling incident is typical of the Premier's whole course. The persons who agree with his principles rarely agree with his conclusions, and acts which meet the approval of his supporters have been defended by him on grounds which did not commend themselves to the judgment of the adherents who supported his policy. Americans, no less than Englishmen, have had some experience of the difficulty of understanding Mr. Gladstone. There probably was no man throughout the Union who was not convinced during the War of Secession that Mr. Gladstone was a supporter of the South. There probably is now no man throughout the Union who can understand the explanations or apology by which Mr. Gladstone some years ago proved, to his own satisfaction, that to announce that Jefferson Davis had made the South into a nation was consistent with the feeling of genuine friendliness to the North. The sort of perplexity felt in this matter by Americans will explain to them the hopeless state of muddlement into which Mr. Gladstone's explanations sometimes throw his best friends. An impertinent and ignorant correspondent once pestered the Premier with the inquiry whether he was or was not a Papist. It is reasonable to assume that the writer who raised this question was a fool and a bigot. It would have been perfectly easy to understand Mr. Gladstone's refusing to reply to a silly insult. It is not easy to understand how it came to pass that Mr. Gladstone's ultimate answer did not take the form of a direct negative; but it amounted, if my memory does not deceive me, to the assertion that if the Prime Minister were a concealed Papist, he would be a knave. Contrast this needlessly tortuous reply with the sort of "chaff" which Lord Palmerston would have lavished upon any fool who had asked him whether he was in the pay of Russia, and you will understand why Mr. Gladstone, who has passed his life in defining his position, has never contrived to make himself completely understood.

Enthusiastic Gladstonians will, no doubt, assert that the fault lies on the side of the English public. A statesman may, it will be said, supply his audience with explanations, but he cannot supply them with understandings. But though I doubt not that a certain kind of moral sensitiveness, with which ordinary Englishmen have but too little sympathy, has really been a cause of their not entering into the views of the Prime Minister, no one, I think, can fail to see that two peculiarities—or, to speak plainly, two defects—which are very characteristic of Mr. Gladstone, as they have been characteristic of some other eminent men, are the chief causes of the constant misunderstanding between him and large classes of the English people. He has, in the first place, never been able to admit that he, like other statesmen, has, under the teaching of circumstances, changed his views and, to a certain extent, his principles. To preserve his belief in his own consistency, he has constantly been forced to misrepresent, first to himself, and then to the public, the true and generally quite adequate grounds for his changes of policy. The hero of the Midlothian election refuses to acknowledge that he has sanctioned an act of intervention in the affairs of a foreign country. Hence he deliberately confounds attack with defence, and justifies the bombardment of Alexandria on the extraordinary plea that the English fleet, which might at any moment have sailed out to sea, battered down the Egyptian forts as a simple act of self-protection. He has, in the second place, never acquired that directness of expression and simplicity of language which is needed by any statesman who wishes to avoid, at all costs, the danger of being misunderstood by hearers who can neither enter into subtleties nor make allowance for reservations or provisos. It is reasonable to conjecture that Mr. Gladstone's mode of feeling, of thought, and of expression was profoundly influenced by Cardinal Newman and by Sir Robert Peel. Neither teacher was exactly the man to foster in a disci-

ple that kind of plain speaking which, often very wrongly, the English public fancy to be the sole and the sufficient guarantee for plain dealing.

A. V. DICEY.

Correspondence.

ERRORS OF THE CENSUS.—IV.

TO THE EDITOR OF THE NATION:

SIR: In this letter attention will be directed to discrepancies between the rainfall maps and tables contained in the Population volume of the Census; to contradictory statements in the same volume as to the temperature and rainfall of Colorado; and to errors in the table giving the population in 1880 of each square degree.

Table I *ff*, p. 40, shows the distribution of population in 1880 in accordance with annual rainfall. According to it, 136,542 residents of Alabama lived under an annual rainfall of 45 to 50 inches, and 462,259 under a rainfall of 50 to 55 inches. The map which shows the annual rainfall represents that no part of Alabama has less than 50 inches. Moreover, that part of the State which the map places under a rainfall of 50 to 55 inches did not contain at most over 350,000 people, as against the 462,259 which the table (I *ff*, p. 40) credits to it.

From the same map it appears that the section of Illinois which has a rainfall of over 45 inches lies south of a line drawn due west from the mouth of the Wabash to the Mississippi. The counties of Massac, Pulaski, Alexander, Union, Johnson, Pope, Hardin, Gallatin, Saline, Williamson, and Jackson make up this part of the State. The total population in 1880 of these counties was 155,848 (see pp. 56, 57). The table (I *ff*, p. 40) puts the population of the strip of Illinois which has an annual rainfall of 45 to 50 inches, at 351,285.

The map just mentioned indicates that no part of Massachusetts has a less annual rainfall than 40 inches. According to the table (I *ff*, p. 40), however, 69,049 inhabitants of that State lived under a rainfall of 35 to 40 inches.

The table (I *ii*, p. 43) places 1,012,117 of the population of Kentucky in the region having a spring and summer rainfall of 20 to 25 inches, and 636,573 in that having a rainfall of 25 to 30 inches. From the corresponding map, it appears that all portions of the State having a rainfall during the spring and summer less than 25 inches lie to the east of a straight line drawn from Chillicothe, Ohio, to a point on the southern boundary of Kentucky, about thirty-five miles west of the 85th meridian. The aggregate population in 1880 of the counties east of that line was 524,515 (see pp. 62, 63). If the map is correct, the table assigns half a million too many inhabitants to the 20 to 25-inch region, and half a million too few to the 25 to 30-inch one.

From the hypsometric sketch, it will be seen that a part of central Colorado is more than 10,000 feet above the level of the sea; and that a still larger section is between 6,000 and 10,000 feet above. Comparisons with the temperature and rainfall maps will show that the region above 10,000 feet, as well as a greater or less proportion of that between 6,000 and 10,000, has a lower temperature and a heavier rainfall than the other parts of the State. Thus, the mean annual temperature of this central belt is less than 40°, its mean temperature in July between 55° and 65°; its mean temperature in January between 5° and 10°; its maximum temperature under 95°; its minimum temperature from 40° to 50° below zero; its annual rainfall 20 to 25 inches; its rainfall during the spring and summer months between 15 and 20 inches. Of course the extent of this central tract on the various maps is not precisely the same, but the similarity in size and shape is close enough to be striking. On consulting the corresponding tables, it will be discovered that they widely diverge from the maps in more than one instance.

The section of the State which the map showing the distribution of the lines of mean annual temperature depicts as having a mean temperature of less than 40°, comprises the counties of Grand, Gilpin, Clear Creek, Park, Lake, Chaffee, Fremont, Hinsdale, San Juan, and Saguache, besides parts of others. The population in 1880 of the counties named was 58,056 (see pp. 51, 52). According to the table (I *m*, p. 17), however, the population of the part of Colorado in which the mean temperature was less than 40° was only 3,003. In this case, as in many others, any one can satisfy himself at a glance that something is wrong. On the map, Leadville is distinctly marked as in the region having an annual temperature below 40°, and the population of Leadville in 1880 was 14,820 (see p. 113).

Table I *u*, p. 25, distributes the population in accordance with the mean temperature of January. According to it, no inhabited part of Colorado has a January temperature below 10°. The corresponding map marks, as having a January temperature of 5° to 10°, a portion of the State made up of the counties of Gilpin, Clear Creek, Park, Grand, Lake, Chaffee, Saguache, San Juan, and Hinsdale. The population in 1880 of these counties was 53,321 (see pp. 51, 52).

The map showing the distribution of the lines of minimum temperature indicates that, with trifling exceptions, all that portion of Colorado which lies between the 105th and the 108th meridians has a minimum temperature of 40° to 50° below zero. This section of the State comprises twelve square degrees of surface. Seven of these are wholly within the —40° to —50° area, viz., the six square degrees included within the 38th and 41st parallels and the 105th and 107th meridians, and the square degree bounded by the 40th and 41st parallels and the 107th and 108th meridians. The population in 1880 of these seven square degrees was 91,992 (see p. lxx). The population of the other five square degrees, the great bulk of each of which is in the same minimum-temperature belt, was 21,859 (see p. lxx). According to the table (I *cc*, pp. 34, 35), the population in 1880 of the belt of Colorado which has a minimum temperature from —45° to —50° was 4,530, and of that which had a minimum temperature of —40° to —45°, 40,170; the total for both belts being only 44,700.

If Table I *ii* (p. 43) is to be relied upon, the population of that part of Colorado which has a spring and summer rainfall of 15 to 20 inches was 6,459. On the corresponding map, the section which is marked as having that rainfall comprises the counties of Grand, Summit, Saguache, San Juan, Hinsdale, Rio Grande, Gilpin, Clear Creek, Park, Lake, and Chaffee, containing in 1880 a population of 60,724.

There are several more or less serious mistakes in the table (XLII, pp. lxx and lxxi) purporting to show the distribution of the population in 1880 by square degrees. According to it, no part of the population of the country lives north of the 47th parallel and east of the 68th meridian. The extreme northeastern corner of Maine is thus situated. The section map, opposite page 49, indicates that a portion of this tract had in 1880 from 6 to 11 inhabitants to the square mile. A township map of the State will show that all of Hamlin Plantation and parts of the plantations of Cyr and Van Buren are in the square degree included within the 47th and 48th parallels and the 67th and 68th meridians. The first named had in 1880 a population of 612 (see p. 200). There are entries in this table (XLII, pp. lxx, lxxi) as small as 92, as in the case of the square degree bounded by the 47th and 48th parallels and the 124th and 125th meridians.

The towns of Grand Isle, Madawaska, Frenchville, and Fort Kent, the plantations of Walla Grass, Eagle Lake, Saint Francis, and Saint John, townships 17, range 4, and 17, range 6, and parts of the plantations of Cyr and Van Buren—all in Aroostook County, Maine—are situated within the square degree bounded by the 47th and 48th parallels and the 68th and 69th meridians. The aggregate population in 1880 of the places named, excluding the plantations of Cyr and Van Buren, was 7,374 (see p. 200). The population of the plantations of Cyr, Hamlin, and Van Buren was 2,280 (see p. 200). The aggregate population north of the 47th parallel and east of the 69th meridian was, therefore, 9,654. We have already seen that the table (XLII, pp. lxx, lxxi) credits no population to the part east of the 68th meridian; and it gives the population between the 68th and 69th meridians at only 4,160.

The towns of Limestone, Fort Fairfield, Easton, Mars Hill, Blaine, Bridgewater, Monticello, Littleton, Houlton, and Hodgdon—all in Aroostook County, Maine—are situated east of the 68th meridian and between the 46th and 47th parallels. Their aggregate population in 1880 was 12,567 (see pp. 199, 200). The table (XLII, pp. lxx, lxxi) puts the population of this square degree at 4,170.

The same table places a population of 4,180 in the square degree included within the 47th and 48th parallels and the 69th and 70th meridians. The portion of this square degree lying within the United States has an area of about 820 square miles. If the table (XLII, pp. lxx, lxxi) may be trusted, it has, therefore, a population of about 5 to the square mile. Both the settlement maps for 1880 indicate that no part of it has as many as 2 inhabitants to the square mile. The only inhabited parts of this tract are the townships 16, 17, and 18 of range 10, and 16 and 17 of range 11, Aroostook County, Maine. Their aggregate population in 1880 was 246 (see p. 200).

There is a similar mistake in the figures for the square degree bounded by the 46th and 47th parallels, and the 69th and 70th meridians. According to the table (XLII, pp. lxx, lxxi), the population in 1880 of this square degree was 5,657. A reference to the section map opposite page 49 will show that this square degree includes parts of Aroostook, Piscataquis, and Somerset Counties, Me. On this map this section of the State is represented as having less than two inhabitants to the square mile. I believe its only inhabited portions are the plantation of Seven Islands and townships 15, range 11, and 14, range 16, in Aroostook County, and townships 5 and 7, range 13, in Piscataquis County, with an aggregate population of 196 (see pp. 200, 202). There are some three or four places mentioned in the Census as being situated in Aroostook, Piscataquis, and Somerset Counties whose position I cannot locate on any map at present available. It is possible that some or all of them may be in the square degree under consideration; their aggregate population was, however, only 495.

In the table below I contrast the results which I have obtained, and which are at least approximately correct, with the figures given in Table XLII, pp. lxx, lxxi. The population of Cyr and Van Buren Plantations has been evenly divided between the two square degrees in which those plantations lie:

Square degree.	Census figures.	Correct figures.
47°–48° lat., 67°–68° long.	—	1,446
47°–48° lat., 68°–69° long.	4,160	8,208
46°–47° lat., 67°–68° long.	4,170	12,567
47°–48° lat., 69°–70° long.	4,180	246
46°–47° lat., 69°–70° long.	5,657	196

As will appear from an inspection of the sec-

tion map opposite page 49, the population of that part of Maine north of the 46th parallel is concentrated in a thin fringe of towns and plantations running along the eastern and northeastern boundary of the State. If the table were correct, that population would be not very unevenly distributed over the entire northern part of the State.

The aggregate population in 1880 of Kittson and Marshall Counties, Minnesota, Pembina County, Dakota, and Angus and Riddewold townships, Polk County, Minnesota, was 7,038 (see pp. 66, 53, 229). These counties and townships, as well as parts of Beltrami and Itaska Counties, Minnesota, and of Cavileer, Ramsey, and Grand Forks Counties, Dakota, lie north of the 48th parallel, and between the 94th and 99th meridians. According to Table XLII, pp. lxx, lxxi, the population in 1880 of the five square degrees comprised within the boundaries just mentioned was 5,161.

In my next letter I hope to conclude the discussion of the errors in the Population volume of the Census. JOHN C. ROSE.

BALTIMORE, MD., Sept. 5, 1882.

PROHIBITION IN MAINE.

TO THE EDITOR OF THE NATION:

SIR: Usually the *Nation* is found on the right side of a question, and deals with one it may be opposed to in a fair manner; but in the issue of August 31 there is a departure from such practice. In your notes of "The Week" in that number, you comment on the Chicago Convention of Prohibitionists. Then you say as follows: "Liquor is sold as openly in Maine to-day as it was before the Maine law was heard of." If that statement is made as applying to all of Maine, it is made against strong contradictory evidence. If made as applying to a small part of the territory of Maine, it is misleading. What will you do with the following testimony on this point?

In a message to the Maine Legislature in 1870, Gov. Chamberlain of that State said: "The laws against intoxicating liquors are as well executed and obeyed as the laws against profanity, unchastity, and murder." Gov. Perham, another of Maine's Governors, said in 1873: "It is probable that less intoxicating liquors are drunk in Maine than in any other place of equal population in the country, and perhaps in the civilized world." Gov. Dingley, also of Maine, in a written statement addressed in 1874 to the Commissioners appointed by the Canadian Parliament to inquire into the workings of prohibitory legislation in the United States, said:

"In nearly all our cities, with perhaps two or three exceptions, the law is enforced to a great extent with evident beneficial results; and even in the two or three cities where there is greater looseness in this direction, the traffic is by no means so free and open as it would be under a license system. In more than three-fourths, especially in the rural regions, the law is as faithfully enforced as any of the laws of the State, and *open dram-shops are unknown.*"

To this can be added the testimony of many other of Maine's high officials of earlier and recent date.

You further say: "When they have got their constitutional amendments adopted, they still have to meet the old difficulty of enforcement. The question is something like that of 'abolishing polygamy.' Would they employ troops? Would they break up all liquor-shops by means of a national police and throw the 'rum' into the streets? What would they do?" I would answer to the above: They would rely upon the moral pluck of the nation to enforce a law that it had made. They would do just what those States like Maine and Kansas have done—enforce the law as they do others upon the statute-books, by the ordinary officers and means of justice. It would require no more troops or police to enforce a prohibitory amendment to the Constitution than it now takes to look after illicit distilleries. It's a poor opinion one takes of the moral power of this nation if they are so helpless when arrayed against a few thousand brewers and rum-sellers. B.

FLORENCE, N. J., Sept. 8, 1882.

[The statement cannot be "misleading" if it be applied, as it was meant to be, to the large towns of Maine. It is in the cities that the liquor traffic does most mischief, that most drunkards are found, and that a liquor law is most needed. They are "a small part of the territory of Maine," but for the purposes of this discussion they are by far the most important part. It matters little that the prohibitory law works well in Aroostook County, if it does not work in such places as Bangor, Portland, and Rockland; and that it does not work there, we assert as the result of personal observation. In one of these cities we have seen three open bars, within a space of one hundred yards, in one street. Against this those very sonorous documents, Governors' messages, naturally count for little with us. They are seldom evidence of anything under heaven except the Governor's own state of mind. Moreover, the moral power of the nation "is not, on the liquor question, arrayed against a few thousand brewers and rumsellers" simply. This is one of those sounding fallacies with which politicians so often escape from impending corners, like the member of Congress who asked, in opposing a reduction of the whiskey tax, whether "a Government which had put down the greatest rebellion the world ever saw could not collect a tax of one dollar per gallon." The liquor problem lies in the question whether the moral power of the nation can, through material agencies, such as police and inspectors, prevent a very large minority of the population from creating a good and steady market for intoxicating drinks. The moral power of the nation has long been arrayed against the liquor traffic, but it does not, and cannot, prevent a man who desires liquor finding a man to sell it to him, except through constables. Governor Chamberlain's illustration touching the laws against profanity, unchastity, and murder is difficult to deal with, owing to its being a jumble. He can hardly have meant to say that the moral and legal preventives of murder in Maine were no more effective than those of drinking. One obvious distinction disposes of this. The murderer and his victim are never confederates in the commission of the crime, as the liquor-dealer and liquor-drinker always are. The laws against unchastity and profanity are not enforced at all, owing to the difficulty of proof, but people are not troubled by this, because the condemnation of both by public opinion is so powerful that the need of any law at all is doubtful. Moreover, there is no opinion anywhere in the civilized world favorable to profanity and unchastity on which the profane and unchaste can fall back for support. The Maine drinkers and liquor-dealers, on the other hand, can, and doubtless do, excuse themselves for violating the law, by saying that the great majority of civilized men do not regard the manufacture and consumption of alcoholic drinks as *mala in se.* In short, the state of opinion in most countries about drink, combined with the fact that the dealer and consumer are always *participes criminis* in breaking the law, make it necessary to have, not as efficient a police to execute a liquor law as any other law, but a police tenfold more efficient. Nor can the need of it be got rid of by general phrases, such as the "moral power of the nation," or "the moral pluck of the nation."—ED. NATION.]

NEW HAVEN FREE FROM CRIME.

TO THE EDITOR OF THE NATION:

SIR: In the *Nation* of Sept. 7 you speak of the display and notoriety attending the funeral of a person who was executed in this city on Sept. 1. You begin by saying that "there was a disgraceful exhibition on Sunday in New Haven at the funeral of 'Chip' Smith, the murderer, who was hanged on Friday." In conclusion, you say "that it is with something like despair that we see a community like New Haven so little regardful at once of its own reputation and the public good."

The funeral upon which you comment took place at Ansonia, ten miles from New Haven. The murderer and his victim lived in the same place, and there the crime was committed. As New Haven is the county-seat of New Haven County, the offender was tried, convicted, and executed here.

New Haven is a well-governed city, and is remarkably free from crime. A contrary impression seems to prevail in some quarters, owing, I presume, to the fact that some sensational criminal trials have been had here in recent years. The offences were, however, committed in other sections of the county. We are willing to bear our own burdens, but do not think it quite just that the sins and misdeeds of other communities should be imputed to us.

JOHNSON T. PLATT.

NEW HAVEN, Sept. 9, 1882.

SCIENCE AT MONTREAL.

TO THE EDITOR OF THE NATION:

SIR: Permit me to add to your correspondent's list of prominent European scientists who honored the recent meeting of the American Association with their presence, the name of Prof. Joseph Szabó, the distinguished mineralogist and geologist of the University of Buda-Pesth. Prof. Szabó has, during his brief stay in this country, availed himself of the opportunity to examine some of its principal mineralogical and other scientific collections, and to make an extended tour across the continent.

Very respectfully, A. H.

ACADEMY OF NATURAL SCIENCES, PHILADELPHIA, Sept. 5, 1882.

THE DUTY ON BICYCLES.

TO THE EDITOR OF THE NATION:

SIR: Your correspondent "M. B. T.," writing under the above title in your issue for August 24, is in error, and you were right. "The manufacturer" *did* "ask to have the duty on steel lessened," *and also* "the duty which falls on bicycles"; and he filed a formulated statement with the Tariff Commission to that effect. He recommended that the duty on bicycles be reduced from 35 per cent. to 25 per cent. Of course, he did not "inform the Committee that, by means of this heavy duty and $10 royalty charged for patents, the Pope Manufacturing Co. has established a monopoly which . . .

is exceedingly oppressive," as your correspondent puts it—perhaps because the company which Colonel Pope represented has done nothing of the sort, not only in his opinion, but in that of the majority of wheelmen. As that remark seems to do injustice, you may permit me to answer that by him and his company the royalties under patents have been reduced and kept down from about $25 to $10; licenses have been offered to all who were ready to go regularly into the business of making or importing with capital and enterprise, and they have extended facilities for obtaining and acquiring the use of bicycles all over the country. That there is no "monopoly" is shown by the fact that there are six other importers and seven other makers in the United States already.

But to return to the tariff. Not only was a reduction asked on both steel and bicycles, but for very good reasons. The duty on steel is 45 per cent. A little calculation will show that that puts the American maker, when the duty on bicycles is 35 per cent., at $4 25 disadvantage with the English maker; and the former might have asked that either the rate on bicycles be increased to 43½ per cent. or the rate on steel be reduced to 17 per cent. Instead, he, being a "freetrader," asked that the rate on the former be lessened to 25 per cent., and on the latter to 15 per cent. and 10 per cent., according to the degree of removal from the state of raw material; and this was asked solely for the increase of export trade. In the language of Henry Clay, fifty years ago, "the tariff must—ought to be reduced," on both articles, and wheelmen are glad that a fair representative of them has asked it.—Respectfully, C. E. P.

Boston, Sept. 9, 1882.

Notes.

Houghton, Mifflin & Co. will publish during the autumn a Household Edition of Bret Harte's poetical works, and two new stories, 'Flip, and Found at Blazing Star'; a Holiday Edition of the complete poetical works of Thomas Bailey Aldrich; a wholly new Riverside Edition, and also a limited *édition de luxe* of Hawthorne's complete works, with bibliographical notes by George P. Lathrop; a Household Edition of Saxe's poetical works; a Riverside Shakspere in three volumes, edited by Richard Grant White; a new edition of the 'Autocrat of the Breakfast Table,' carefully revised, and containing a new preface and bibliographical notes by the author; a new and uniform edition in seven volumes, crown 8vo, of Robert Browning's complete poetical works, including his "Agamemnon," "La Saisiaz," "Pauline," and "Dramatic Idyls" (First and Second Series), which will also be printed separately in one volume; a new edition in six volumes of the complete works of Edwin P. Whipple; Longfellow's 'Evangeline,' with sixteen illustrations by Darley, and also his tragedy of 'Michael Angelo'; a 'Life of George Ripley,' by the Rev. O. B. Frothingham; a 'Life of Ole Bull'; the following volumes in the "American Statesmen" series: 'John Randolph,' by Henry Adams; 'James Monroe,' by President Gilman; 'Daniel Webster,' by Henry Cabot Lodge; 'Thomas Jefferson,' by J. T. Morse, jr.; in the "American Men of Letters" series, 'J. Fenimore Cooper,' by Prof. T. R. Lounsbury; 'Oddities in Southern Life and Character,' by Henry Watterson; 'Doctor Zay,' by Elizabeth Stuart Phelps; 'The Book of Fables, chiefly from Æsop,' and 'The Bodley Grandchildren and their Journey in Holland,' by Horace E. Scudder; 'The Nature and Form of the American Government Founded in the Christian Religion,' by Judge Shea; 'History of the Papacy during the Reformation,' by the Rev. M. Creighton; Francis Bacon's 'Promus of Formularies and Elegancies,' now first published from private MS. notes of 1594, and illustrated by passages from Shakspere, by Mrs. Henry Pott; 'Notes on Foreign Picture Galleries,' by C. L. Eastlake; and 'Notes on Men and their Books,' by James T. Fields.

The same publishers have gathered for the first time, in a Household Edition, the poems of Alice and Phœbe Cary, who deserve to be remembered among the minor singers of America. A steel portrait of each introduces the collection composed by each.

Mr. Henry Cabot Lodge's excellent collection of 'Ballads and Lyrics' for children has had the success it merited, and has just been brought out in a larger form and more luxurious apparel by Houghton, Mifflin & Co. A red-line border has been given to the pages, and sundry full-page illustrations scattered through the volume. While it will be no easier to read, these adornments and the gilded covers and edges accent the book as a gift, which was not the case with the previous edition.

Henry Holt & Co. publish immediately Mrs. Kemble's 'Records of Later Life,' from the English edition; and 'Goodholme's Domestic Cyclopædia,' reduced in price one-half.

Porter & Coates, Philadelphia, have now in the press Dr. Edward A. Freeman's 'Lectures to American Audiences,' embracing "The English People in its Three Homes" and "The Practical Bearings of General European History."

J. B. Lippincott & Co. announce 'A Cruise under Six Flags,' by Prof. O. A. Ericsson.

G. P. Putnam's Sons will publish immediately 'Spoiling the Egyptians: A Tale of Shame, told from the British Blue-Books,' by J. Seymour Keay. Mr. Keay is an Englishman, and possibly not a friend of Mr. Gladstone's.

Harper & Brothers have nearly ready a translation of Prof. Wilhelm Müller's 'Political History of Modern Times (1816–75).' They have just added to their Rolfe edition of Shakspere 'Troilus and Cressida.'

Mr. J. Brander Matthews has made a volume of 'Poems of American Patriotism,' which Chas. Scribner's Sons will publish in October. The chronological arrangement reveals the fact that almost every telling incident in our history has been put into verse, and that this work has been shared among all our leading poets, scarcely one of whom is unrepresented in the volume.

Taking advantage of the revived interest in Landor caused by Mr. Colvin's 'Selections,' as well as by the life in the "English Men of Letters" series, Roberts Bros. have put his 'Imaginary Conversations' within reach of ordinary purses, bringing them out in five neat and tasteful volumes, "Oxford style." They will adorn any shelf, and will not fatigue the hand or the eye.

D. Lothrop & Co., Boston, have issued, in good style (we trust by arrangement with the authors or their English publishers), Messrs. Butcher and Lang's prose translation of the 'Odyssey.'

The fixed character of Mr. Edward McPherson's 'Handbook of Politics' makes praise or extended mention of that for 1882 superfluous (Washington: James J. Chapman). It contains messages and addresses of three Presidents, and shows the latest action of the Government on subjects such as Mormonism, the Chinese question, the Geneva Award, the liquor traffic, inter-State commerce, the status and rights of women, etc. The usual party platforms, and electoral and financial statistics conclude this invaluable record of our political history.

The Census Office has published a map of Alaska and adjoining regions, on a scale of 1:3,500,000, compiled by Special Agent Ivan Petroff. It is not above criticism in its mechanical execution, but it undoubtedly possesses the highest authority. Already excursions from Puget Sound to Sitka have begun to be made for the sake of the magnificent scenery of the coast and inland waters; and two years hence the practice may well become regularly established, when the completion of the Northern Pacific Railroad has enabled tourists to embrace in one short jaunt the wonders of the Yellowstone Park, the grandeur of the Columbia River, and the physical and anthropological attractions of Alaska.

The *International Review* has again changed hands, being made over to the *Industrial Review* Publishing Company, of Philadelphia. Mr. Robert P. Porter becomes sole editor.

We have received from Robert Clarke & Co. the Illustrated Catalogue of the Art Department of the Cincinnati Industrial Exposition now open. Though the first ever attempted, it does not suffer by comparison with those of New York and Chicago; on the contrary, there appears to be more than the usual proportion of sketches on a large scale. The pottery department has the merit of representing home manufacture.

J. W. Bouton has received the etching which *L'Art* gives gratuitously from time to time to its subscribers. It is an effective reproduction by Ulysse Butin of his own painting called "Waiting: Saturday at Villerville." A number of eager watchers on the wet strand, and notably a sturdy fisherman's wife with baby and little boy, scan the horizon to make out the sails of the already approaching fleet.

We have already described the new edition of Brehm's standard work, 'Thierleben,' with its 170 colored plates and more numerous woodcut illustrations (Leipzig, and B. Westermann & Co., New York). The division of Birds, with which it has been begun, is now extended by parts 28–44, in which the plates are not more remarkable for the singularity of many of the species depicted than for their artistic qualities and the care bestowed upon their execution.

The eminent Danish critic and essayist, Georg Brandes, who, by his long residence abroad, has become almost completely alienated from the land of his birth, was lately offered by a number of anonymous countrymen of his an annuity of 4,000 crowns for a period of ten years, provided he agreed to return permanently to Denmark. This seemed, indeed, a flattering recognition of literary labors which have deservedly won renown throughout Europe, Brandes being, perhaps, the most brilliant contributor to the German periodical press, especially on subjects connected with modern French literature. Brandes is said to have accepted the offer, but it is now thought that his anonymous admirers are in reality his enemies—that is to say, members of that Conservative party whom his unsparing criticism of the Danish Government, particularly in his late work on Lassalle, has so much displeased. In a word, the annuity was offered as a bribe. This explanation sounds plausible enough, in view of the simultaneous report that Brandes is to be offered a professorship in the University of Copenhagen, showing that even in Government circles the desire is felt to silence, or at least tone down, his vigorous opposition.

A French journal has discovered that Descartes was born at Sucé-sur-Erdre, near Nantes, and not at La Haye near Tours, having found an entry in the church at the former place of the baptism on September 9, 1644, of René, the son of "d'Escuyer-Messine-Joachim des Cartes conseiller du roi," and of "Marguerite Dupont dame de Chavagne." To appreciate the importance of this discovery it must be remembered that the great philosopher died, as another

French journal hastens to point out, February 15, 1650, which would make him less than six years old at the time of his death, the most remarkable case of precocity known, especially as he must then have produced his famous 'Discours. sur la Méthode,' etc., about seven years before his birth.

—We have received from Soule & Bugbee, Boston, a catalogue of law books to be sold at auction by Bangs & Co., on the 26th and 27th instant. The list comprises 1,660 numbers, among which we notice many interesting and rare books. In the first division ("Trials") is a set of Howell's 'State Trials,' in thirty-four volumes octavo, which is described in the catalogue as a "fine copy." The date is not given. There is also a "fine copy" of Hargrave's 'State Trials' (eleven volumes large folio, bound in six, 1776). No. 205, which should be very rare, contains the "Arguments of Sir Richard Hutton and Sir Geo. Croke, etc., upon a *Scire Facias* brought against John Hampden; and also the several votes of the Commons and Peers, etc.," a small quarto edition, published at London in 1641. No. 502 contains the trial of Stafford (folio, paper, London, 1680), bound up with which, to judge from the catalogue, is his speech on the scaffold, supplemented by "animadversions upon said speech, etc., etc.," these being "published to prevent the deceiving of Protestants" (London, 1681). There is also (No. 573) the trial of Sir Harry Vane (London, 1662, the year of the trial), described as "very rare—one leaf imperfect"; several different editions of Webster's trial for the murder of Parkman, one of which, Bemis's, is, we believe, hard to find; and (No. 600) a rare report of a witch-trial before Sir Matthew Hale in 1664. The collection of session laws, statutes, and law magazines is less interesting to the general book-hunter than to persons who are trying to complete sets, and to whom the intrinsic value or rarity of books is as nothing. In the next division ("Ancient Works on English Law") we find (No. 823) a first edition of Britton, black letter, small quarto, London, "no date"; (No. 884) a Fitzherbert's Abridgment, with the imprint 1516; a Fortescue's 'De Laudibus,' in Latin and English, 16mo, calf (1573); a copy of an interesting, if not ancient, work, Edward Livingston's 'Project of a Penal Code' (London, 1824), which is probably not often seen in this edition; a black-letter folio Lyttleton, without date; several copies of the 'Natura Brevium,' the oldest of which is in black letter; a black-letter Plowden of 1613. Nos. 1048–1062 have rather a political than a legal importance, being all books and pamphlets published by Prynne during the struggle between King and Parliament in the seventeenth century. The last division ("Ancient Works on Civil and Canon Law") is very full, and it would need careful going over to sift the chaff from the wheat. The cataloguers are probably quite safe in describing No. 1225, an original copy of the Code Napoléon (1807), as "scarce"; and a black-letter quarto edition of the Grand Coustumier (vellum), "in fine condition," published at Rouen in 1513, ought to be a prize, whether to bibliomaniacs or professional book-lovers. A Grotius, in octavo, published at Amsterdam in 1651 (No. 1333); numerous Justinians (going back to 1518); a black-letter copy of the Lombard Laws (Venice, 1537), and, curiously enough, a complete edition of Macchiavelli (1550), are also comprised in this division.

—A singular bid for fame is made by Mr. Lawson Valentine, of this city, in a pamphlet printed at the Riverside Press, at Cambridge, and entitled 'Houghton Farm.' Wishing "to provide a pleasant country home within convenient distance from his place of business," and having "in mind the realization of a long-cherished plan for doing something toward the progress of American agriculture," Mr. Valentine has taken in hand a thousand acres of land, not far from West Point, and has there established a residence "facing westward, and surrounded by lawns and an extensive natural park." "On the crest of the hill, at the eastern corner of the farm, a summer camp has been built, and a rustic tower from which there is an extensive view of the surrounding country"—to say nothing of other material constructions and "improvements" which the pamphlet sets forth. To crown the whole, Mr. Valentine has established at the farm "a scientific department devoted to agricultural investigation and experiment," and he has enlisted for this special service a "General Manager," a "Director of Experiments," and a "Botanist and Chemist." The pamphlet contains a detailed and, as it seems to us, a particularly dry account of a series of experiments on the growth of Indian corn made at Houghton Farm in 1880–81; together with a couple of brief essays by the well-known English experimenter, J. B. Lawes, relating to researches carried out on his estate at Rothamsted.

—The August number of the *Antiquary* (J. W. Bouton) contains several articles of interest to historical students. The first article, by Mr. Gomme, is upon Lammastide, and gives an account of several usages in the south of England, survivals from the village community: this date (August 1) was, as is well known, the time when the fences were taken down, and the enclosed fields thrown open to pasturage. The village community affords a subject for another paper also, by Mr. Fenton, entitled "The Influence of Pastoral Life upon the Village Community." It is an attempt to trace one stage in the evolution of this institution. Mr. Fenton being one of the soundest and most learned inquirers in this field, his paper is one of great value and importance. Dr. Brandes, of Göttingen, contributes a very interesting paper entitled "Old Footsteps of the Saxon Ancestors of the English Nation in Germany." It treats of the country about Detmold, and points out a number of names and linguistic peculiarities that attest at once a high antiquity and a near kinship to the English nation. In some respects the most important article is by Mr. Hubert Hall, "The Great Case of the Impositions." It treats of the Bates case, determined in the Court of Exchequer Chamber in the reign of James I. (1606), touching the right of the crown to lay "an imposition of 5s. on the cwt. of currants, in addition to the 2s. 6d. already levied." This case, it will be seen, touches the principle of the tonnage and poundage contest, and that for ship-money, of which it may in a sense be considered a forerunner. The article is to be continued, and we shall look with interest for its further discussion. Meanwhile it is enough to say that Mr. Hall has pointed out a serious mistake in Stubbs, in the assertion that the prisage of wines in the thirteenth century was "the right of the crown to take one cask out of every ten at 20s. the cask." In reality it was "taking for the King one cask before the mast and another behind—that is, one or both, according to the bulk of the cargo" (cargoes of less than ten tuns going free); and its value was far more than twenty shillings the cask. He shows further that Stubbs is wrong (vol. ii., p. 524) in asserting that "imported wines paid, besides the ancient prisage, 2s. on the cask"; the fact being that two shillings on the cask was the commutation agreed to by foreign merchants, while native merchants continued to be subject to prisage.

—At the last meeting of the British Association, on August 23, Sir John Lubbock vacated the chair in favor of Dr. A. W. Siemens, a German by birth, who has lived forty years in England, half that time as a naturalized citizen, so that the Mayor of Southampton could justly pronounce him an Englishman in moving the vote of thanks for his address. This address, which covers over six columns of fine print in the London *Times* of August 24, is hardly inferior in interest to that delivered last year by Sir John Lubbock, although it is of a very different character, Sir John's having been a summary of scientific progress within the last fifty years, while Dr. Siemens's address is concerned with the present, and still more with the future. As Dr. Spottiswoode said of the new President, "In an electrical age he is the special representative of electricity, and combines the highest theoretical knowledge of the subject with the widest application of that knowledge to practical purposes." To him are due many discoveries in the sphere of applied electricity, anastatic printing, the chronometric governor, the regenerator engine and gas furnace, the first electric railway, the electrical transmission of power, etc. It was but natural, therefore, that his lecture should deal principally with these and allied phenomena. After dwelling on the advantages of a closer union between theory and practice in science than has been customary in bygone times, a plea is made for the introduction in England, through the efforts of the Society, of the metre and kilogramme, with especial reference to the accurate unit measures now available in electricity, on account of the clear line separating conductors from non-conductors. How distinct these separating lines are, is graphically illustrated by the statement that the electricity from a small galvanic battery prefers the long journey to America in the Atlantic cable and back again through the earth to the shorter journey across the 4 mm. of insulating material. In another part of the lecture allusion is made to Sir William Thomson's improved compasses on Airy's principles, which neutralize the effect of iron and steel in ships; to Thomson's sounding machines, by the proper use of which, in connection with a good chart, mariners are in foggy weather rendered independent of astronomical observations, and such accidents as that which a few weeks ago befell the *Mosel* are rendered impossible; and to various accomplished and projected engineering tasks, among them the Channel Tunnel, which Dr. Siemens thinks depends at this moment upon military and political rather than financial and technical considerations—the submarine strata of impervious gray chalk having minimized the engineering difficulties. A new proof of the accelerating effect of electric light on vegetable growth is afforded in the fact that of two sections of land sown with cereals, the one which was subjected to the influence of electric light gained a height of four feet and ears in full bloom in three months, while in the other the grain stood only two feet high and had no sign of the ear.

—The most interesting portion of the address is that which discusses the prospect of lighting by gas and electricity. Dr. Siemens is understood to have large investments in both fields, so that his testimony may be accepted as impartial. Electric light, he thinks, will be preferred for drawing-rooms and dining-rooms, theatres and concert-rooms, museums, churches, and factories, and for passenger steamers, even if its ultimate cost should prove greater than that of gas. Gas, on the other hand, is of the utmost value to the artisan, as it requires little attention, and effects a saving on fuel by supplying warmth as well as light. Doubtless, too, gas will soon come into general use as the most convenient, the cleanest, and the cheapest of heating agents,

The application of gas for heating purposes has always been made difficult by the objectionable practice of reducing the pressure in the mains during the daytime to the lowest possible point consistent with the prevention of atmospheric indraught. The rivalry of electricity will remedy this, just as it has already overcome the monopolistic stagnation of the gas companies, and provided in some of the principal London streets improved burners, rivalling the electric light in brilliancy. The amount of light given out by a gas flame depends upon the temperature to which the particles of carbon in the flame are raised. In an ordinary gas flame not more than one hundredth part of the heat evolved in combustion is converted into light—a proportion which could be greatly improved by increasing the temperature of combustion, either by intensified air currents or by regenerative action. A pound of gas yields just twice as many heat units as a pound of ordinary coal, and the gas producer will, before many years, take the place of the complex and dangerous steam-boiler. This new arrangement, in connection with the dynamo-machine, "must mark a new era of material progress at least equal to that produced by the introduction of steam power in the early part of our century." When coal is consumed in the ordinary way, all the by-products obtainable in the manufacture of gas are lost. These by-products (coloring matter, ammonia, creosote, carbolic acid, gas-coke) exceed the value of the coal annually consumed in English gas works by £3,000,000. And not only are these valuable products lost when raw coal is used for heating purposes, but in their stead the cities are poisoned with carbonic oxide and the tons of smoke and coal dust which are mainly instrumental in the formation of fogs.

—Meyer's 'Schriftsteller-Lexikon' fully sustains the reputation for comprehensiveness and general accuracy which the preceding volumes of the *Fachlexika* have established for the whole series. Of course the 'Schriftsteller-Lexikon' is no more a universal cyclopædia of contemporary authors than is Vapereau's 'Dictionnaire Universel des Contemporains,' or Gubernatis's 'Dizionario Biografico,' but it is relatively less German than Vapereau is French, Gubernatis Italian, or 'Men of the Time' English. Vapereau, which retains most of the old plates in the new edition published in 1880, fairly bristles with notices of insignificant French journalists; while the patriotic preponderance of Italians in Gubernatis is made doubly apparent to the eye by its illustrations. Good distribution of the work among foreign contributors has given the 'Schriftsteller-Lexikon' a much more cosmopolitan look, and guarded it against glaring omissions of foreign celebrities, such as that of Ebers from the new edition of Vapereau. Still, Germany's own Helmholtz somehow was overlooked, a liberal construction of the word *Schriftsteller* justly including such other scientists as Tyndall, Huxley, etc. Altogether, the English portion seems to us particularly well done, the literary criticism, as in the case of Oscar Wilde, Ruskin, etc., being pithy and telling; whereas the American biographies are rather conventional and somewhat out of proportion to each other, Bayard Taylor being assigned more space than Emerson and Holmes combined. The notice of Motley is entirely insufficient. Of Joaquin Miller's 'Songs of the Sierras,' it is said that "it created in England a sensation such as has not been known since the days of Byron." American scientific writers are rather neglected. We look in vain for Dana (the geologist), Asa Gray, and Agassiz. The last was not excluded by the plan of the book, which reckons as contemporaries all those whose death has taken place since 1870, although the line is confessedly not strictly drawn. On the other hand, it is a little surprising to find Walter Savage Landor, who died in 1864, and Schopenhauer, who died in 1860. The biographies of Germans naturally err on the side of fulness. A little pruning would have excluded such meaningless characterizations as that of Count Schack, "who is at home not only in the halls of poesy, but in the great temple of art, . . . and whose heart beats warmly for all that is great and beautiful"; not to speak of the absurdly exaggerated praise bestowed on a writer of the calibre of Gustav Kastropp, whose dreary 'Kain' is "not lacking in deep problems of thought, while preserving the poetic bloom." The notice of Erckmann-Chatrian, which patriotically deplores the French Chauvinism of these writers developed by the late war, leaves it in doubt on which side of the Rhine their alleged loss of popularity has taken place.

—The 'Lexikon,' however, is open to serious criticism only in regard to its system of pronunciation, which is far from consistent. While the pronunciation of almost all French names is given (no general key to pronunciation being furnished), that of English names—like Molesworth, Stubbs, Kavanagh, Saxe—is often wanting. Similarly, other foreign names are neglected whose pronunciation is by no means self-evident to Germans, as, for instance, Arany, Szujski, Szymanowski, etc. The pronunciation of Greenwood is given as "grihnwudd," that of Bagehot as "bäschot"; and the syllable "ey" in almost all English words, as in Ripley, is directed to be pronounced like the German *e*. In spite of such small blemishes, we can only repeat our praise of the general accuracy of the 'Schriftsteller-Lexikon,' which is amply shown in the care taken to verify doubtful dates of birth, etc., a feature of encyclopædic work whose difficulty is entirely hidden from the general reader. We may mention as an instance of this the case of so well-known a contemporary as Louis Blanc, the date of whose birth is given in Meyer as October 28, 1813, in Gubernatis as 1814, in Vapereau (edition of 1870) as "vers la fin de l'Empire," and in the edition of 1880 as October 29, 1811. A pleasing omission is that of the many perplexing Christian names preceding the real name of so many Germans (although we suppose this innovation is responsible for *Henry* [C.] Lea and *John* [G.] Saxe); while a long list of pseudonyms is a very useful addition.

—As usual, the French theatrical annuals are very slow in appearing. The first was the ever-amusing 'Soirées Parisiennes' of M. Arnold Mortier (Paris: Dentu; New York: F. W. Christern), with its usual lively gossip and fantastic wit. M. Mortier is surprisingly successful in keeping up the freshness and the general level of his entertaining sketches. The preface is supplied by M. Ludovic Halévy, who has now broken off his partnership with M. Henri Meilhac, given up the stage, and set up as a novelist. Second comes the seventh volume of the 'Annales du Théâtre et de la Musique,' a most useful work of reference. Although its five hundred solid pages could readily have been reduced to four hundred by the vigorous excision of needless chatter, yet the bulk of the book is less than last year's and the workmanship is somewhat better. Worthy of remark is the list (given in a note to page 3) of forty-three operas, grand or comic (not bouffe), written by French composers and ready for the stage, of which only four have been acted in the past year. To be compared with this is the list (page 501) of the forty operas produced in Italy in the one year 1881.

MRS. OLIPHANT'S LITERARY HISTORY OF ENGLAND.

The Literary History of England in the End of the Eighteenth and Beginning of the Nineteenth Century. By Mrs. Oliphant. 3 vols. London and New York: Macmillan & Co. 1882.

WHATEVER else may be said of this work, it is entertaining. Nor would it be fair to assert that this fact is due to the perpetual interest we take in the men and times of which it treats. There is no subject, however exciting, which judicious treatment cannot cause to seem dull, and in producing this effect the historians of literature have usually left the writers in all other departments of learning far behind. That it is interesting is an acknowledgment that must first be paid to a work which lacks a great deal of what it claims for itself and of what has been claimed for it by others, but which, nevertheless, rarely fails to keep its hold upon the reader's attention.

The work itself does not justify its title. It consists in reality of a series of detached sketches of the leading writers who flourished during the latter half of the reign of George III. These men are often grouped together in a purely arbitrary manner. The chapters are in great measure independent of each other; many of them can be read separately, and the reader would not be annoyed by his ignorance of what has gone before. No general principles are anywhere stated, except some of the most superficial and conventional character. The work is simply a collection of essays, and as a collection of essays it would not subject itself to severe criticism. Unfortunately, Mrs. Oliphant has chosen to style it a history. She herself evidently regards it as a production of that kind, and apparently desires that it should be so considered and criticised by others. It must therefore be tested by the standard to which she herself has undertaken to have it conform; and, judged as history, it can only be pronounced a failure. The general views expressed are of the most superficial kind, the special information is exceedingly scanty, and, in addition, a good deal of the little that is given is inaccurate or misleading. A history of this period could not be written properly by any one unless as many years were spent upon it as Mrs. Oliphant has apparently spent months.

The criticism that will most obviously suggest itself is the scantiness of the information that the author has contrived to impart. Let any reader after finishing a chapter ask himself what he has learned, and he will be sorely puzzled to give an answer. There is appended, indeed, to each chapter a brief bibliography, and the date of the life and death of the authors mentioned in it; but these, of course, no one reads, or, if he does, the facts recorded make no impression upon the mind, because they do not enter into the regular current of the narrative. Most of the information given in the body of the work is so vague and general that there is little of it tangible enough to be retained in the memory. The writer presupposes the reader's knowledge of everything mentioned. There are references, for instance, to the Della Cruscan school of poetry, and to the scheme of Pantisocracy devised by Coleridge and Southey; but what is meant by each, or what was the story of each, will be vainly looked for in these pages. Equally unsatisfying are the accounts given of the personal career of the authors who are discussed. It may be said that we are all supposed to know these things. This is a position which the writer of essays or sketches can properly and fairly take, but it can never be justly assumed by the writer of a history. The one duty which the latter cannot shirk is to fur-

nish information: and even in regard to what are deemed facts generally known, he is bound to conform to the rule laid down by our old friend *Monsieur Jourdain:* "Of course I understand Latin, but you can talk to me as if I did not."

When we come in this work to writers now little known, this scantiness of information becomes a more conspicuous defect. There is a chapter on Dr. Darwin and Miss Seward, which may be taken as an illustration. A certain interest must always attach to the former on account of the greatness of his grandson; but he was interesting both for what he was himself and what he did, and for that new style of poetry which many of his contemporaries fondly thought was to influence profoundly the future literature of the English race. All that is really given of him here are a few bits of rather unsavory gossip, which, in addition to their unsavoriness, have the defect of untrustworthiness. Mrs. Oliphant blindly follows Miss Seward, in utter unconsciousness of the little reliance that is to be placed on that tuneful virgin's assertions, especially whenever anything that touched her own vanity came into the question. Equally meagre is the knowledge we get of Miss Seward herself and her little achievement, which she fancied so great; or even of her detestation of the critics who, according to her view, were little better than a band of pirates who cruised about, infesting the literary seas, with no other object than to scuttle every frail poetic bark that they felt themselves strong enough to attack. We seem to have heard similar opinions expressed in these later days. In all these cases, while it cannot be said of this work that the reader who asks for bread receives in its place a stone, it is certainly true that he is pretty frequently soothed, and sometimes smothered, with adjectives and flowery phrases, and gets for an account of what has been full descriptions of what may have been.

Still, scantiness of information can be pardoned if the information, such as it is, be accurate. Here is Mrs. Oliphant's greatest failure. She has all the skill of a practised writer in gliding skilfully over the thin ice of knowledge without breaking through; but the ice is very thin nearly everywhere, and the special student of the period cannot fail to see through it into abysmal depths of ignorance below. The trick of omniscience, which consists in reference or allusion to things little known without really saying anything about them, is always sure, in process of time, to tire; but it does more than tire when it is used to save the labor of investigation on the part of the writer, or to hide his lack of information. Mrs. Oliphant's inaccuracy about what is but little known can be inferred from her inaccuracy in regard to matters generally known or easily ascertained. We have space for but a few examples, but these are so easily capable of verification that the very fact makes them suggestive. She speaks of Southey as being "compelled to publish" "Wat Tyler" by "the malice of ungenial critics." Not only was "Wat Tyler" not published by Southey, he strove hard to prevent its appearance. He never included it among his works until long after it had been brought out by his enemies. Again, it is a natural and legitimate inference from Mrs. Oliphant's statement that the verse in which "Christabel" was written was borrowed from Scott; whereas we not only know that "Christabel" was produced much earlier than "The Lay of the Last Minstrel," but Lockhart directly assures us that it was Sir John Stoddart's casual recitation of the unpublished manuscript of Coleridge that suggested the strain to the Scotch poet. Mrs. Oliphant, on another occasion, refers to "Jeffrey's review" of Byron's early poems. Nobody has ever manifested anxiety to claim the paternity of that particular criticism; but whoever wrote it, Jeffrey certainly did not. In another place she refers to Jeffrey's "confusion" at his publishing the review of Wordsworth's "Excursion," beginning with the famous sentence: "This will never do." The fact of the matter is, that when Jeffrey came, in his old age, to publish selections from his criticisms in the *Edinburgh Review*, he displayed the extent of his confusion by reprinting this particular one, prefacing it with the statement that he retained the opinions which he then held. This review, indeed, which is altogether different in spirit and character from the account generally given of it, would not itself meet with wide dissent at the present time. It occupied thirty pages of the *Edinburgh Review* for November, 1814, and one-half of it was given up to extracts of fine passages. Mrs. Oliphant herself, after referring to Jeffrey's imaginary confusion at his declaration that the "Excursion" will never do, goes on to show, with some fulness of detail, that it never has done. The really blundering review of Wordsworth came out in the *Edinburgh* for October, 1807; but it is rarely, if ever, referred to by the Wordsworthians, and Jeffrey took care not to reprint it.

Mrs. Oliphant, again, is merely reëchoing the cant of the Wordsworthian school in exaggerating the disfavor with which the "Lyrical Ballads" were originally received, in order to make more marked by contrast their subsequent success. From the very beginning they had a band of ardent admirers, and some of the poems met with as much praise as others did with ridicule. First published in 1798, the volumes had gone in 1802 to a third edition. This is not great success, especially as the editions were small, but it was far from being failure. On this point we have the unimpeachable testimony of one of those "new gladiators of literature" who, according to the author, "fleshed their swords" upon the work. "The 'Lyrical Ballads,'" said Jeffrey in the review previously referred to, which appeared in 1807, "were unquestionably popular, and we have no hesitation in saying deservedly popular." An essayist is perhaps not to be held to strict responsibility for repeating these customary stories about the "Lyrical Ballads" being received as a whole with universal ridicule; but an historian can claim no such immunity.

This same lack of investigation colors all of Mrs. Oliphant's statements about Scott. She is constantly professing herself unable to understand why certain opinions should be held of his character as a man. It is, of course, impossible for her to understand, so long as she does not take the pains to investigate. If she had ever even heard of the Ballantyne-Lockhart controversy, which followed the publication of the 'Life of Scott,' there is nothing to indicate the fact in these pages. In the same spirit she treats the Byron controversy. She has clearly not read the letters of Lady Byron to her sister-in-law which have been for some time published. In discussing the matter she goes out of her way to attack by allusion Mrs. Stowe. She gently blames Lady Byron for telling any one about her domestic troubles, mainly because "some blabber, sooner or later, is sure to let the most unsavory relation out." It was a relation that ought to have been let out even earlier than it was. In no other way could it be met and overthrown. A slanderous story was told of a dead brother and sister; it was whispered in corners; it was confided to a friend here and a friend there. Its harm was in its secrecy. The publication of it was the probable cause of the salvation of the manuscript testimony that showed its falsity. Had it been deferred a generation or two—for it was confided to too many not to have been preserved and published eventually—the proof that destroyed it would in all likelihood not have been in existence. Mrs. Oliphant's account of Byron is, for that matter, the most inadequate and unsatisfactory of all her notices of the great writers. The criticism is of the most pronounced goody-goody type; the import of the facts in his career is misapprehended, even when the facts themselves are not misstated. Perhaps this utter misconception of the real situation, literary and political, reaches its height in the assertion that Byron's "Vision of Judgment" found no publisher for the reason that the poet, it seems, was losing his hold upon the public.

Nor can Mrs. Oliphant be regarded as more fortunate in her general views of the literary movement that manifested itself with such extraordinary power at the close of the last century. She does not appreciate the fact that it itself was but one form of a universal movement that was going on throughout Christendom. So little does she understand the time, that she even repeats the superficial assertion that it was Cowper who broke the spell of Pope. The reaction had begun long before Cowper published a line. His poetry was only an incident in the struggle that was going on between the old and the new. Early in the latter half of the eighteenth century, Joseph Warton had aroused the wrath of the adherents of the classic style by demonstrating, with a painful display of erudition, that Pope was only a poet of the second class. How far and how rapidly the feeling had spread may be inferred from the fact that Cowper himself tells us that he knew many men who maintained that Pope was no poet at all. This was a century ago.

We should be giving an unjust impression of these volumes were we, however, to treat them as the history which they purport to be, for cursory reading shows many other mistakes or misconceptions to which we have neither time nor space to refer. Looked upon as a series of sketches, however, they are justly entitled to a good deal of praise. The style, though diffuse, is always interesting. Much the greater portion of the matter is not taken up with detail of facts, in which the author is rarely to be relied upon implicitly, but with criticism and comment. Even when the reader dissents from the view expressed, he can ordinarily see that it is a legitimate conclusion from the writer's premises. And, finally, these essays record the impressions that have been made upon a cultivated woman of much more than ordinary ability by the lives and works of the great writers who belonged to the period she describes.

RECENT COLLECTIONS OF POETRY.

THE weak point of poetic collections and cyclopædias is usually the preface. Instead of simply bringing together his favorite pieces, and letting them stand on their merits, each editor tries to prove that he has hit upon some new device for selecting his materials. Thus, in 'Golden Poems by British and American Authors,' edited by Francis F. Browne (Chicago: Jansen, McClurg & Co.), there are three preliminary pages which aim to show that some new and peculiar chemical process has been adopted to detach from the whole body of literature the very best things. The editor says of such collections as Emerson's 'Parnassus' and Whittier's 'Poems of Three Centuries,' "it is no disparagement to them to note their limited range," the limitation being that they "express the individual tastes and preferences of their compilers"—as if any compiler could escape this restriction. When Mr. Browne inserts five poems by Richard Realf, four by

Dr. Holland, and only two each by Emerson, Longfellow, Holmes, and Whittier, he simply expresses his individual preferences, which in this case do not happen to coincide with ours. If not to please his own taste, for whose taste should he edit his book? *Pour le plaisir de qui alors?*—as the little girl said when her father explained that it was not for his own pleasure that he gave her a chastisement. Apart from this false assumption, and from some individual preferences with which we cannot coincide, the book is a good one, and ought to be a favorite, being well printed and not inconveniently large.

Some such collections aim at a definite class of poems, as in the amusing volume bearing the clumsy title, 'Here and There; Quaint Quotations: A Book of Wit,' selected by H. L. Sidney Lear (London: Rivingtons). It contains Praed's best poems and *Punch's* best hits; scraps from Swift and Peter Pindar; and it reveals the source of many a rhyme which beats time to nothing in many a man's head, and which no dictionary of quotations will ever elucidate. In some cases it is merely some modernization of an old joke, as where Sydney Smith applied to the chapter of St. Paul's Church the old suggestion of Mather Byles to the Boston city government—to lay their heads together and obtain a wooden pavement. Other scraps are too graceful to be lost, as is the case with Swift's pretty verses on "The Vowels":

> "We are little airy creatures,
> All of different voice and features;
> One of us in glass is set,
> One of us is found in jet;
> T'other you may see in tin,
> And the fourth a box within.
> If the fifth you should pursue,
> It can never fly from you" (p. 75).

Others recall the once famous improvisations of Theodore Hook, whose wit has left so little behind it. This, for instance, he sang on the entrance of a man named Winter, who came into the room as Hook was playing on the piano:

> "Here comes Mr. Winter, surveyor of taxes;
> I advise you to give him whatever he axes,
> And that, too, without any nonsense or flummery,
> For, though his name's Winter, his actions are summary" (p. 144).

And since jokes on law and lawyers are always in order, we cannot omit this "brief report of a case by a Master in Chancery" (Sir George Rose):

> "Mr. Leach made a speech,
> Angry, neat, but wrong;
> Mr. Hart, on the other part,
> Was prosy, dull, and long.
>
> "Mr. Bell spoke very well,
> Though nobody knew about what;
> Mr. Trower talked for an hour,
> Sat down, fatigued and hot.
>
> "Mr. Parker made the case darker,
> Which was dark enough without;
> Mr. Cooke quoted his book,
> And the Chancellor said, 'I doubt'" (p. 59).

'Tender and True: Poems of Love,' selected by the editor of 'Quiet Hours,' might seem to have too sentimental a title had not those two adjectives been associated on Prince Rupert's battle-flags as well as on the lips of lovers. The object of this volume is to exhibit human love in its most peaceful and domestic aspect, excluding the stormier emotions. Even the sorrow of absence is not portrayed, but only what is cheerful and hopeful. The result is an exquisitely selected little book, enclosing within somewhat narrow limits some of the best poetry ever written. We can criticise nothing in it except what seems a slight inaccuracy of reading here and there. In the sonnet from Petrarch, on page 25, "pathway be" should be "path may be."

There have been two recent additions to the growing library of books devoted to the English sonnet. The smaller of these, 'English Sonnets by Poets of the Past,' edited by Samuel Waddington (London: George Bell & Sons), is intended as a companion volume to his 'Sonnets by Living Writers.' These collections indicate the progress of public taste. When we consider that the selections of the Rev. Alexander Dyce attempted to preserve many of the sonnets of John Bamphylde and Miss Anna Seward, we can pardon Mr. Waddington for some things present and absent in his book, and even for rejecting Chapman as a "minor poet" (p. ix). He gives us, for the first time, two sonnets by Robert Burns, and there are other good additions. But some of his omissions seem almost whimsical, as, for instance, where he preserves Leigh Hunt's 'Nile' and 'Grasshopper,' and omits his fine sonnet on receiving a lock of Milton's hair; and while inserting seven sonnets by Drummond, leaves out his 'Icarus.' The notes, too, are rather scanty; there are poems which have a literary history, for the criticisms they have called out. Thus, Lord Thurlow's sonnet "To a Water-Bird" must always be associated with Charles Lamb's fine enthusiasm over it, as described in De Quincey's 'Literary Remains,' and also in a letter from Lamb to Bernard Barton.

The modest volume just named finds itself quite eclipsed by the sumptuous quarto in which Mr. T. Hall Caine has for the first time set these gems in a setting which is worthy of them. His 'Sonnets of Three Centuries' (London: Elliott Stock) wants nothing that can delight the external senses, and the editor has been liberal of notes and criticism, as well as almost too generous in his amplitude of selections. In his analysis of the structure of the sonnet, too, he is perhaps ultra-refined, and his strictness as to form can hardly sustain itself in a literature where, after all, the best examples, those of Shakspere, are in the less regular fashion. We note a few misprints, as where the best passage in Charles Tennyson Turner's fine sonnet on the Ocean—

> "Flung shoreward now, to be regathered soon
> With kingly pauses of reluctant pride
> And semblance of return" (p. 121)—

is spoiled by the substitution of the words "Hung shoreward." The editor also gives the later and inferior form of another exquisite poem by the same author, "The Traveller to his Wife's Ringlet" (p. 124); and yet, if authors will spoil their works, it can hardly be expected that editors shall not follow them. He adds some very valuable sonnets to those usually found in the collections—one especially by Charles Whitehead—and sometimes shows a positive want of taste, as in inserting a disagreeable one on "The Army Surgeon," by Sydney Dobell (p. 180). Perhaps his chief offence in American eyes will lie in his well-meant effort to include sonnets written on this side of the Atlantic; for he knows so little of our literature that his selections are almost always taken from inferior poets, or are samples of the cruder work of better poets, as in the case of Lowell. Of the profound religious sonnets of Jones Very, for instance, Mr. Caine has never heard; nor of "H. H.'s" "Burnt Ships" and "Ariadne's Farewell" and "Thought"; nor of Gilder's "I will be brave for thee"; nor of that unique sonnet by David Wasson, in the Shaksperian form, and having in it Shaksperian lines, and possessing as good a title to immortality as that of Blanco White's one sonnet:

> "As unto blooming roses summer dews,
> Or morning's amber to the tree-top choirs,
> So to my bosom are the beams that use
> To rain on me from eyes that Love inspires;
> Your love—vouchsafe it, royal-hearted Few,
> And I will set no common price thereon;
> Oh! I will keep, as Heaven his holy blue,
> Or Night her diamonds, that dear treasure won.
> But aught of inward faith must I forego,
> Or miss one drop from Truth's baptismal hand,
> Think poorer thoughts, pray cheaper prayers, and grow
> Less worthy trust, to meet your heart's demand;
> Farewell! your wish I for your sake deny.
> Rebel to love in truth to love am I."

This sonnet we find preserved for us, with other good things, in a little volume by Messrs. Alcott and Sanborn, which, like a good deal of the Concord literature, is quite as notable for what it quotes as for its original contributions—'Sonnets and Canzonets,' by A. Bronson Alcott (Boston: Roberts Bros.). Mr. Alcott's sonnets have an interest in view of his advanced years, and are certainly both clearer and simpler than his prose; they have sometimes great vigor and terseness of expression, and give some striking touches in the way of portraiture. But they have this peculiarity of arrangement, that on each alternate page there is some striking selection of prose or verse, often quite eclipsing the original contribution which fronts it on the opposite side. We do not remember, for instance, to have before seen this fine bit of Orientalism:

> "One knocked at the Beloved's door, and a Voice asked from within, Who is there? And he answered, It is I. Then the Voice said, This house will not hold me and thee; and the door was not opened. Then went the Lover into the desert, and fasted and prayed in solitude. And after a year he returned and knocked again at the door. And again the Voice asked, Who is there? And he said, It is Thyself. And the door was opened to him.—*Persian Poet.*" (P. 115.)

The volume, as it stands, is another literary fruit of that curious partnership of widely differing natures which has given to the world, for good or for evil, the "Concord Summer School of Philosophy," and which aims, with perhaps too self-conscious and overt a purpose, to prolong the intellectual fame of that celebrated town. As Mr. Alcott prefaces Mr. Sanborn's 'Life of Thoreau' with a sonnet, so Mr. Sanborn prefixes a letter and an essay to Mr. Alcott's book; and in the latter case, at least, the addition could not well be spared, and helps to justify us in classing the work rather among poetical collections than as a separate work. Passing lightly by the "canzonet"—which is really the vaguest part both of the title and of the book, and makes it remind one a little of the country chorister who knew two tunes, one of which was Old Hundred, while the other was not—Mr. Sanborn gives some keen remarks and criticisms on sonnet-writing and a rather varied mixture of good and mediocre examples. Among the former should certainly be classed two of the best early poems by that most unequal and disappointing poet Ellery Channing—those, namely (for the editor does not give the author's name), beginning,

> "Thou art like that which is most sweet and fair" (p. 22),

and

> "The day has past, I never may return" (p. 23).

Of this last, by some curious inadvertence, the editor omits the last two lines, thus spoiling it as a "fourteener." He gives, also (p. 31), that sonnet by Wasson which we have already quoted.

Another book lies before us, which resembles that just named in being a composite production and in being quite as valuable for its indirect as for its direct use. 'The Rhymester,' by the late Tom Hood, edited, with additions, by Arthur Penn (New York: D. Appleton & Co.), may or may not be a good rhyming dictionary, but the preliminary essay includes an uncommonly good anthology of poems, especially in the different French and Italian measures now so much in vogue. The original work was by Tom Hood, as he preferred to style himself—son of Thomas Hood. It was published some dozen years ago, and the American editor has taken it to pieces, inserted many good paragraphs and quotations, and added three new chapters to the original nine. These three treat of the Sonnet, of the Rondeau and the Ballade, and of other fixed forms of verse. They contain much curious knowledge and many quaint quotations, and we know no writer who has put so much agreeable information on this subject into so compact a

form. Many old-fashioned people will, no doubt, think that it is all a waste of time and space, and that all these mediævalisms are well enough summed up in Mr. Calverley's parody:

"The farmer's daughter hath soft brown hair
(Butter and eggs and a pound of cheese);
And I met with a ballad, I can't say where,
Which wholly consisted of lines like these."

TIBETAN TALES.

Tibetan Tales derived from Indian Sources. Translated from the Tibetan of the Kah-gyur by F. Anton von Schiefner. Done into English from the German, with an Introduction, by W. R. S. Ralston, M.A. [Trübner's Oriental Series.] Boston: J. R. Osgood & Co. 1882.

Two causes of widely different character have led to the collection and publication of a large mass of Oriental tales within the last few years. The theory of Benfey and his followers that the popular tales of Europe were consciously borrowed from Indian Buddhistic legends, invested these latter productions with an interest for a large class of readers who would never have cared for them in their specific religious character. On the other hand, it was soon discovered by the students of Buddhistic dogma and literature that anything like a complete conspectus of Buddhism involved an examination of its later development in the countries into which the ardor of its missionaries had carried it. It was just here that the two classes of investigators met. The peculiar value of the legend (letting this word cover every form of popular tales) in Buddhism is too well known to be dwelt on here; and it was soon found that an enormous number of these existed in China, Mongolia, and Tibet, sometimes as independent stories, often without any expressed Buddhistic moral or religious connection. It had previously been supposed that the great mass of Indian tales had entered Europe from the south, through Hebrew, Latin, and Spanish translations from Arabic sources, which, in turn, represented Indian originals through the intermediate stage of Persian. The publication of Jülg's 'Mongolische Märchen' (Innsbruck, 1868) showed that there was also a northern channel through which Oriental elements flowed as far west as Russia, and were thence disseminated, though not as extensively, of course, as from the southern point of distribution in Spain.

The above shows sufficiently the double interest attaching to Oriental tales and the expectations each new collection awakens. The title of the one before us is somewhat misleading. The Tibetan stories are, in reality, nothing but translations of Indian originals, and contain even fewer local traits than the average European fairy tale. The stories themselves are much less interesting than one would have a right to expect. In fact, the most attractive portion of the book is Mr. Ralston's admirable introduction, which contains materials for a history of Tibetan study, an account of the original text of the accompanying stories, and their European parallels. The stories in the present collection are taken from that part of the sacred canon of the Tibetans commonly known as the Kanjur, and which, with a second part, the Tanjur, is simply a translation from Sanskrit documents, the originals of which were discovered by Mr. Hodgson in Nepal about fifty years ago. Through the efforts of this scholar a copy of the sacred canon above mentioned was obtained and presented to the East India Company. The entire work consists of some 325 folio volumes, each weighing from four to five pounds in the edition of Pekin, which sold for $3,000. Other copies were afterward procured by Russian officials and placed in the libraries of St. Petersburg. This huge code was studied by two remarkable men, the Calcutta copy by Alexander Csoma Körösi, the Russian ones by Anton von Schiefner. The former was an enthusiastic Hungarian scholar who, as we lately had occasion to state, imagined that he could find in Central or Eastern Asia the original home of the prehistoric ancestors of the Magyars. Vámbéry says an old Hungarian, Count Teleky, gave him a curious account of the outset of Körösi's travels. The Count was standing before the gate of his house in Transylvania when he saw Körösi passing by, clad in a thin yellow nankin dress, with a stick in his hand and a small bundle." "Where are you going, M. Körösi?" asked the Count. "I am going to Asia in search of our relatives," was the answer. Körösi did not find his relatives, but he became a renowned Tibetan scholar, and his self-denying labors obtained high appreciation from his native country and from England, who welcomed and assisted him like one of her own sons. Körösi published an analysis of the Tibetan canon, but it was reserved for Schiefner, best known as the editor of the Finnic and Caucasian linguists, Alexander Castrèn and Baron von Uslar, to make its contents more popularly known. From the Dulva, the first of the seven divisions of that work, he translated into German the legends and tales which Mr. Ralston has excellently turned into English. The German versions appeared in the publications of the Imperial Academy of Sciences of St. Petersburg, and the English translation was undertaken at the express wish of Professor Schiefner, who unfortunately died before the book appeared. It is seldom that any literary work is the result of so many circumstances apparently fortuitous, but which really were produced by the intelligent effort of self-sacrificing students.

The stories themselves, as we have already observed, contain no local color. Mr. Ralston very frankly confesses this in his introduction, where he says:

"The tales contained in the sacred books of Tibet, it may be as well to remark at the outset, appear to have little that is specially Tibetan about them except their language. Stories possessing characteristic features and suffused with local color may possibly live in the memories of the natives of that region of lofty and bleak table-lands, with which so few Europeans have had an opportunity of becoming familiar. But the legends and fables which the late Professor Schiefner has translated from the Kah-gyur are merely Tibetan versions of Sanskrit writings. No mention is made in them of those peculiarities of Tibetan Buddhism which have most struck the fancy of foreign observers."

The value of the stories for purposes of comparison is not great. The longer legends resemble European popular tales but little, though many of the animal fables and some of the short stories have their counterparts in the West. Here and there, however, as Mr. Ralston remarks, even in the long narratives of the legendary class, certain features may be recognized as being common to both Europe and Asia. For example, Grimm's tale of "The Fisherman and his Wife" is substantially found in the story of King Mândhâtar; a variant of "Beauty and the Beast" is contained in the story of Kus'a, of the "Treasure-house of Rhampsinitos" in "The Clever Thief"; of Grimm's "Two Wanderers" in "The Two Brothers." "The Ungrateful Lion" is the Æsopian "Wolf and the Crane"; "The Wolf and the Sheep" is the well-known fable of "The Wolf and the Lamb," etc. Besides these more or less complete parallels, there are, as has been said, a large number of episodes or detached traits which resemble closely incidents in European tales. The resemblances have been treated by Mr. Ralston, in his introduction, with his customary thoroughness, and he has been quick to see the value of the Russian parallels, which his exceptional knowledge of the popular tales of that country enables him to cite so authoritatively. Some of the stories are anything but edifying, a fact that might be dwelt on were there any chance of the book becoming a popular work, or likely to be put into the hands of young people.

One of the shortest of the fables may be given here as a specimen of this class of stories. Its moral is out of all proportion to its length. It is entitled "The Jackal in the Elephant's Footprints," and runs as follows:

"An elephant came long ago to the Himalayas to drink water. In its track followed a jackal, which saw the elephant's footprints, and began to measure its own stride with them. 'These footprints are mine,' it said to itself. Then springing forward it set its foot in one of the footprints, and tripped over a broken piece of wood. A deity uttered this verse: In a word, O fool, thy footprints and those of the elephant are not alike. Give up this useless attempt. Thou wilt only derive weariness therefrom."

May this simple apologue not be commended to the modern fabulist, among others!

The Life of Giuseppe Garibaldi. By J. Theodore Bent, B.A. Illustrated. Harper's Franklin Square Library.

A GREAT part of Garibaldi's early life was one of adventure in uncivilized countries, of which no very accurate record exists, and as soon as he became a public character his friends and enemies vied with each other in inventing fictions about him. When he was in the prime of life, Alexandre Dumas composed a memoir of him, based on an account written by Garibaldi himself, and this was, as Mr. Bent says, given to the public "under unusually favorable circumstances"—"firstly, the account was written by himself, and, from the very nature of an autobiography, must have been essentially one-sided; secondly, there was nobody, or next to nobody, on this side of the Atlantic to tell us that other side which undoubtedly there must have been; and, thirdly, the facts themselves were painted in the gayest of colors by an able romancist." On the other hand, while his admirers built up fairy-tales about him, his enemies, whenever they could get a hearing, circulated the most malicious libels to his discredit. Mr. Bent mentions an amusing instance of this in the stories which were the product of a single winter spent by Garibaldi in the house of an ardent admirer at Alassio.

"In the town of Genoa, not so many miles distant, every one confidently affirmed that the General had left this house without so much as a present to his host; that he had not paid a single bill; and that his wife and children had destroyed everything in the house. 'Poor fellow!' his friends would say, apologetically, 'he is almost in his grave; he is not to blame for this.' But on visiting Alassio to confront the story, so to speak, face to face, a very different account was given. Garibaldi had presented the owner of the house with a diamond ring, which amply compensated him for the loan; he had rewarded his physician and his chemist, leaving not a bill unpaid, and, furthermore, had distributed a large sum of money among the poor, and the inhabitants of Alassio had accompanied him to his boat, on his departure, with great demonstrations of affection."

In fact, "hardly an event" occurs in the whole of Garibaldi's career—a career in which one event succeeds another with startling rapidity—"which is not keenly contested by friend or foe. Eye-witnesses of the same scene will give diametrically opposite accounts, according to the party-feeling which influences them."

Under these circumstances, the biographer of Garibaldi would have a difficult task before him if minute accuracy were necessary to a comprehension of his career. But it is not. His life is easy enough to understand, for it was the

life of a man in whom the intellectual was entirely subordinated to feeling. Mr. Bent gives, in an introduction, a very good analysis of his character. It was the influence exercised over him by Mazzini, and the longing for a free and united Italy, which made the foundation of his character. What he did in furtherance of the idea of Italian unity was very much a matter of accident, and consequently he failed in what he wanted to accomplish more often than he succeeded. It was the same with all the conspirators and revolutionists of his generation in Italy. They effected "risings" in one Italian state after another, without any previous calculation of the possibility of meeting and overcoming the forces sure to be sent against them. They were not political men, and Garibaldi was not a military man in any proper sense. He succeeded in the Sicilian campaign simply because the Government was too weak and corrupt to endure any longer or to get any moral or physical help from any quarter. All the subsequent disasters of his career showed that he never knew when to act and when to hold back, and he finally had to be thrown into prison by the Government which he was endeavoring to extend and strengthen, in order to prevent his ruining the cause for which he had taken up arms.

Of settled beliefs or opinions, outside the great creed of Italian unity and freedom, Garibaldi had no more than a mediæval crusader. His voluminous writings reveal his intellectual poverty at every page. He had almost a passion for inaccuracy, and preferred to give an account of his Sicilian campaign in a form which makes it impossible to say what part of it is history and what is fiction. His detestation of the priests found vent in stories which are evidently mere peasant-gossip reduced to writing. His political opinions were very variable—sometimes moderate, sometimes Utopian, sometimes communistic.

But for the work he had to do, that of arousing and sustaining popular enthusiasm, and convincing the world that the time for Italian freedom had come, this mental weakness did not disqualify him in the least. Had he been a more thoughtful man, had he been careful of consequences, he would have done nothing at all; for almost everything that he attempted, even that in which he succeeded, would have seemed to a man of calm temperament an impossibility. It was his reckless daring and devotion which endeared him to the hearts of his followers, and made foreign nations feel that a country which could produce such qualities could not remain enslaved.

It would be idle to attempt to criticise in detail Mr. Bent's narrative. He seldom gives his authorities for his statements, and this, perhaps, is prudent in writing the life of a man between whose legend and whose actual life it is impossible at times to discriminate; it improves the flow of the narrative at all events. The facts connected with his life in this country have always been supposed to be wrapped in a good deal of mystery; but in Mr. Bent's hands we find it all made plain sailing. Garibaldi, it seems, was "not over-popular" in New York, because, "unlike Kossuth, he did not seek ovations," so he went to "a back street on Staten Island," where he made tallow-candles for eighteen months. This was at the same time when "Ledru Rollin was a store-porter there, Louis Blanc a dancing-master, Felix Pyat a scene-shifter, Lamartine a mendicant, while a member of the German Parliament was a barber, and another patriotic Frenchman was vending cabbages in the streets of New York," who, we make bold to guess, was no other than the subsequent Emperor of the French, Napoleon III.

The Military Telegraph during the Civil War in the United States. With an Exposition of Ancient and Modern Means of Communication, and of the Federal and Confederate Cipher Systems; also, a Running Account of the War between the States. By William R. Plum, LL.B., of the Chicago Bar. Chicago: Jansen, McClurg & Co. 1882. 2 vols. 8vo, pp. 767. Illustrated.

THIS is a curious medley of trivial personal anecdotes about telegraph operators, glimpses of hazardous war service, an interesting chapter on military cryptographs, a little valuable history, and, as expressed in the title, a running account of the war. The author, himself an ex-operator, believed that the services during the Rebellion of the Telegraph Corps, which was not a corps, were not properly appreciated by the nation, and he has made a vigorous attempt to commemorate them, introducing by name every operator of whom he could learn anything, and an immense flood of details. When war compelled the military control of existing telegraphs and the erection of others, a few officials of telegraph companies, Mr. Anson Stager being the chief, were put in charge and were commissioned as quartermasters in order to bring them into military relations with the Government and the troops. Colonel Stager, then and since well known for his executive ability, and his assistants discharged these functions with conspicuous zeal and ability, and practically organized a new military arm. The mechanical work was done by hired commercial operators, with occasional details of soldiers; and these civilians, while generally persistent and often distinguished in the discharge of perilous and onerous duties, possessed and exercised the right of throwing up their places, except when an attempted strike was summarily suppressed. The Signal Corps, a part of the regular Army organization, was an entirely distinct body; and as far as it attempted to do electric telegraphing, it seems to have been held by these operators in jealous contempt.

This work is one continued panegyric upon the telegraph in war, where its powerful assistance in military concentration and control is beyond dispute. But the wire is not an unmixed good, and news that should not be disseminated sometimes flies as rapidly and as widely as messages properly sent. And if meddlesome orders from Washington might thus be avoided, few generals would object to an occasional destruction of the lines in their rear. But Mr. Plum's volumes, although overburdened with words and words, have the charm that always belongs to personal experience and enthusiasm discussing any phase of the war for the Union. No one will go to them to learn history, but, notwithstanding the worthlessness to the general reader of much that they contain, they throw valuable side lights upon the great war.

Selections from the Latin Poets Catullus, Lucretius, Tibullus, Propertius, Ovid, and Lucan. Edited by E. P. Crowell, Moore Professor of Latin in Amherst College. Boston: Ginn, Heath & Co. 1882. 12mo, pp. 300.

A SELECTION, for class-work, from the lesser, or rather the less-known, Latin poets has been long desired, and Mr. Crowell has, on the whole, satisfied the want very well. We do not miss any poem in the three smaller poets that would be regarded as indispensable; and as for Lucretius, Ovid, and Lucan, their works are so voluminous that there is room for a great variety of opinion in selecting. We should have desired from Lucretius some passage—perhaps from the second book—which would be a more complete specimen of his philosophical style and thought. The passages here given present him at his best as a poet, but college students would wish also to know him as a thinker, and to have a taste of his reasoning. The principal criticism which we should make upon the selections is in including Ovid at all. He is already tolerably well known and extensively read, and there are several fairly good editions of selections from his works. All the other authors here included are new to the ordinary college curriculum. Ovid does not seem to belong with them, and the space occupied by him could very well be devoted to giving more copious extracts from Lucretius, or to selections from Martial, a writer of genuine poetical merit and very attractive. The introductions and notes are good, but the editor seems to be very unwilling to express his own opinion. We have excellent criticisms from Mommsen, Cruttwell, Sellar, etc., and on controverted points we are told what these scholars, as well as Ellis, Munro, Paley, etc., think; but we are very seldom informed of Mr. Crowell's views.

The Catiline and Jugurtha of Sallust. Translated into English. By Alfred W. Pollard, B.A., St. John's College, Oxford. London and New York: Macmillan & Co. 1882. Pp. 274.

MR. POLLARD'S translation of Sallust is well executed: it is accurate and sufficiently elegant, but he appears to have aimed rather at accuracy than at elegance. The introduction and notes, chiefly historical, add a good deal to the value of the book, because they are not mere hand-to-mouth commentary, but rest upon an independent and intelligent comparison and study of all the sources of evidence. His conjecture as to the puzzling conspiracy of Catiline, in B.C. 66, is worthy of consideration. As is well known, Suetonius's account of this conspiracy is irreconcilable with that of Sallust and Cicero. These, of course, being contemporaries, are of higher authority; but Suetonius is a well-informed writer, whose evidence ought not to be rejected hastily. Mr. Pollard's theory is (p. xxiv.): "that there were two separate plots formed at this time, in both of which Cæsar and Autronius [both here and afterward this is carelessly spelt Antonius] were engaged. In the one [that described by Suetonius] they united with the head of the equestrian order, Marcus Crassus, and planned a legitimate *coup d'état;* in the other, they joined their fellow-democrats, Catiline and Gnæus Piso (whom we shall probably not wrong by crediting, even in B.C. 66, with some connection with the anarchists), and, if we may believe Sallust, contemplated, besides the establishment of a military power to counterbalance that of Pompey, a more widespread and indiscriminate massacre of the nobility than Crassus would have thought needful." Mr. Pollard's estimate of Sallust as an historian is sound. Regarding him as a political historian—"a consistent democrat and supporter of Cæsar"—"there is little to do but praise; there are, however, other aspects of his work in which it appears less satisfactory." His defects as a military historian are pronounced very great; and "by the way in which he draws on his imagination, he exhibits himself as the first of historical novelists." To sum up, "he may not be the equal of Herodotus, Thucydides, and Tacitus, but by his combination of excellences of style and of matter he is at least worthy to be ranked in the same class with them."

Romney and Lawrence. [Illustrated Biographies of the Great Artists.] By Lord Ronald Gower, F.S.A. Scribner & Welford. 1882.

THIS little book gives a somewhat entertaining account of fashionable artist-life in England a century or more ago, but beyond this it pos-

sesses no great interest. Romney and Lawrence were artists of respectable second-rate capacities and attainments, whose biographies may justly find place in a compend like Cunningham's 'Lives of British Artists'; but in a series of books treating of *great* artists, men like these have no proper right to appear. The names in the annals of British art which may be classed in the category of great artists are very few, and Romney and Lawrence, interesting and instructive though they be, are certainly not among them.

A Sequel to the First Six Books of the Elements of Euclid. Containing an Easy Introduction to Modern Geometry, with numerous Examples. By John Casey, LL.D., F.R.S., etc. [Dublin University Press Series.] London: Longmans, Green & Co. 1882. 12mo, pp. xvi.–159.

ABOUT one-third of this little work consists of such "additional propositions" in geometry as have already been embodied in the text of several treatises in use in the United States—*e. g.*, in those of Professor Chauvenet and Professor Olney. The remaining two-thirds is devoted to the Theories of the Radical Axes and Centres of Similitude of Circles, Harmonic and Anharmonic Section, Inversion, Reciprocal Polars, and other subjects which are often included under the collective name of "modern geometry." Many of these subjects are also treated by Professor Chauvenet in "Appendix II." to his Geometry, and by Professor Olney in "Part 3, chap. ii." of his treatise. They are, however, much more briefly handled by these writers. Professor Casey's work is as admirably done as it can be by one who adheres as strictly as possible to the traditional methods of Euclid. Those parts of the American treatises mentioned above are, we believe, almost universally omitted in the courses of study in our high-schools and colleges. Hence there is small expectation that the much more extended work of Professor Casey should come into use as a text-book. But, as a clear and convenient compend of the most useful and important propositions of modern geometry, and as an introduction to the works of Chasles, Salmon, Steiner, Witzschel, and other elaborate treatises, it cannot be too highly recommended to all teachers and cultivators of mathematics.

Die Jahre der Reaktion. Historische Skizze von Dr. A. Bernstein. Berlin.

THIS is a continuation, by the famous Berlin journalist and miscellaneous author, of his sketches of the revolutionary and post-revolutionary history of Prussia—'Die März-Tage,' 'Aus dem Jahre 1848,' '1849,' and 'Bis nach Olmütz.' It begins with "the day of Olmütz," November 29, 1850, when King Frederick William IV., through his minister Manteuffel, surrendered the recently accepted leadership in German affairs to Austria, and, sick of commotions and abortive political schemes, initiated a reign of reaction based on sentimental principles of guidance by divine right; and it ends with the formal assumption of the regency by that monarch's brother, the future King and Emperor William, in October, 1858, when the so-called "new era" in Prussian history opened. These eight years form one of the saddest periods in the annals of the Hohenzollern dynasty—a period of unnecessary national self-humiliation, of royal and feudal arrogance, senseless repression, wavering and hypocrisy in governing circles, and almost general disaffection. The King, dreaming, vacillating between the Constitution and the higher law of his royal conscience, haunted by fears of revolutionary machinations, and surrounded by an intriguing camarilla, followed the bigoted lead of the men of the *Cross-Gazette*, Stahl and Gerlach, until his distracted romantic mind gave way and the system collapsed.

The leading Democratic opposition journals of the period were the *Urwähler-Zeitung* and *Volks-Zeitung*, successively edited by our author, who now makes an excellent use of his rich store of political information and personal recollections, gathered during years of eager party strife, but sifted with a fairness and moderation unusual in retrospective narrations. It is true, Dr. Bernstein is still a combatant in behalf of democratic self-government, and his popular sketches are written for the political edification of the masses, and chiefly as warnings against possible relapses in constitutional life; but, while he has little more than contempt for the reactionary theories and practices of his opponents, and still likes to speak in the aggressive tone which cost the *Urwähler-Zeitung* its existence, and doomed so many numbers of the *Volks-Zeitung* to confiscation, and himself once to a protracted imprisonment, he is free from all harshness as to persons, and his political portraits are drawn with the cool impartiality of an historian. Frederick William IV. is shown up in all his unamiable weakness and morbid sentimentality; his happier successor is treated with favor, but without the least adulation; and Bismarck, then a figure of little note, appears only incidentally, like a shadow in the background. A pleasant historical optimism pervades the book, as it does all the author's writings. In point of diction, it belongs, perhaps, to the least brilliant of them. It is not free from diffuseness and repetition, and even a few slips as to facts occur, as when (in the first chapter) Victor Emanuel is introduced as King in 1848, and the reaction of that year in Naples (which began in May) is represented as a consequence of the insurrection of June in Paris. As affording a clear insight into the inner political life of the exceptionally curious, though far from attractive, period which preceded the accession of the most powerful ruler of Prussia, the work is, on the whole, very interesting.

Light: A Course of Experimental Optics, chiefly with the Lantern. By Lewis Wright. London and New York: Macmillan & Co. 1882.

THIS work comprises two subjects so distinct that we see no sound reason why they should be put together. It is, in the first place, a manual of experiments with the lantern, showing how a great number of optical phenomena may be exhibited by the aid of that instrument. This part of the work has every appearance of embodying the results of wide experience and of being well adapted to the use of professors and lecturers who desire to exhibit experiments to the public or to their classes. But there is incorporated with this practical manual a general treatise on light, which has no necessary connection with the subject of lantern experiments. The apparent motive for this extension is a desire to furnish the popular lecturer with everything he must know in order to please the public.

Our conjecture that this is the object is strengthened by the concluding chapter on the Unseen Ether, the Physical Trinity, and other subjects of a theological and hyperphysical character, which an intelligent country audience is always well pleased to have a lecture conclude with. If the object of the work was to give the reader any real understanding of the subject, it is a total failure. The author appears to know nothing about it, except what he has picked up from current text-books which he does not fully understand, and what he has found in the pages of *Nature*. There is, besides, such confusion and lack of clearness in his explanations that the difficulty of the subject is greatly increased. Partly in justice to him, it may be said that the modern theory of light is reduced to a mathematical system so complex in its geometric details that it is impossible to present it except by the aid of algebraic formulæ. As the author avoids the use of this means of exposition, we must allow for the imperfect method of explanation he is compelled to adopt when we closely examine the details of his treatise.

It is often difficult to see whether the want of clearness is owing to this inherent difficulty of his language or to his own want of understanding; but the latter cause is clearly traceable in a great number of cases. He still thinks there are exactly seven spectral colors. He attempts to illustrate refraction by the lowering of the note emitted by a glass when water is poured into it, thus showing a confusion of ideas on the subject of vibrations which it is hard to explain. He shows nearly equal confusion in attempting to explain the color of mixed pigments by the absorption of light in passing through colored liquids. He thinks there is an inherent and invariable uniformity in the diffraction spectrum, so that the experimenter who follows him might well be puzzled at finding differences among spectra of different orders. Here he simply misunderstands what the text-books have told him. His lack of knowledge culminates on page 193, where he attempts to explain the phenomena of diffraction produced by the passage of light through a grating. The main conclusion to be drawn from his reasoning would be that there is a certain direction in which light cannot pass through a slit, however wide the slit may be—a *reductio ad absurdum* of his own reasoning which it is curious that he should not see. In this connection he quotes an experiment of Schwerd, but it happens that Schwerd is one of the few names which we are unable to find in any list of physicists. In speaking of the velocity of light he quotes the almost absurd result recently obtained by a couple of English experimenters with inadequate apparatus, but knows nothing of the work of Michelson, published three years ago, by which the value of this constant was determined with greater accuracy than ever before.

Along with this lack of understanding there is a lack of logical form which here and there would strike even the unscientific reader. In section 46 the author begins to explain the correction of color in the achromatic objective, but stops abruptly in the middle of the subject, to pursue it a little further in section 53. In section 65 he says that "total reflection can be explained by mathematical analysis, and is so explained by Airy, while it is impossible to explain it by any other theory that has ever yet been framed." The idea of mathematical analysis being a theory, and a theory of light at that, would, we should think, strike even an unintelligent audience very oddly.

BOOKS OF THE WEEK.

Anderson, T. M. The Political Conspiracies Preceding the Rebellion. G. P. Putnam's Sons. $1.
Babyland for 1882. Boston: D. Lothrop & Co. $1.
Besant, W., and Rice, J. They Were Married. John W. Lovell Co. 10 cents.

Book of the Chronicles of the Pilgrims in the Land of Yahweh. D. M. Bennett.
Burr, F. A. Life and Achievements of James Addams Beaver. Philadelphia: Ferguson Bros. & Co. $1.
Butcher, S. H., and Lang, A. The Odyssey of Homer, Done into English Verse. Boston: D. Lothrop & Co. $2.
Converse, Harriet. Sheaves: a Collection of Poems. G. P. Putnam's Sons. $1 50.
Dewing, Mrs. T. W. Beauty in the Household. Harper & Bros.
Dippold, G. T. The Great Epics of Mediæval Germany. Boston: Roberts Bros. $1 50.
Encyclopædia Britannica. 9th ed. Vol. xiv. Kao-Lon. Boston: Little, Brown & Co.
Gonzalès, E. A Russian Princess. Philadelphia: T. B. Peterson & Bros. $1.

Halévy, L. L'Abbé Constantin. John W. Lovell Co. 20 cents.
Hamilton, E. J. The Human Mind: a Treatise in Mental Philosophy. Robert Carter & Bros. $3.
Holland, C. Spiritual or Magnetic Forces. Asa K. Butts.
Houdin, R. The Tricks of the Greeks Unveiled. John W. Lovell Co. 20 cents.
Hughes, T. Memoir of Daniel Macmillan. Macmillan & Co. $1 50.
Koolman, J. ten D. Wörterbuch der Ostfriesischen Sprache. Part 16. Pire-Welen—Püt-Water. Norden: Herm. Braams.
Lodge, H. C. Ballads and Lyrics. New ed. Boston: Houghton, Mifflin & Co. $3.
McPherson, E. A Hand-book of Politics for 1882. From July 1, 1880, to July 31, 1882. Washington: J. Chapman.
Myers, P. V. N. Outlines of Ancient History. Harper & Bros.
Norris, W. E. Heaps of Money. Harper's Franklin Square Library. Two-column edition. 15 cents.
Novissimum Organon: The Certainties, Guesses, and Observations of John Thinkingmachine. St. Louis: Authorship Publishing Co.
Reade, C. Singleheart and Doubleface, etc. Franklin Square Library. 15 cents.
Redcliff, Rebecca F. Freckles. John W. Lovell Co. 20 cents.
Report of the Commissioner of Fish and Fisheries for 1879. Part 7. Washington: Smithsonian Institute.
Robinson, P. Under the Sun. With a Preface by Edwin Arnold. Boston: Roberts Bros. $1 50.
Robinson, W. C. Elementary Law. Boston: Little, Brown & Co.
Rolfe, W. J. Shakespeare's History of Troilus and Cressida. Harper & Bros.
Scott-Browne's Text-Book of Phonography. Part 1. D. L. Scott-Browne.
Sumner, Prof. W. G. Andrew Jackson. Boston: Houghton, Mifflin & Co. $1 25.
Wright, L. Light: a Course of Experimental Optics. Macmillan & Co. $2.

Henry Holt & Co.

HAVE READY:

FANNY KEMBLE'S

Records of Later Life.

12mo (uniform with 'Records of a Girlhood'), $2 50.

NEW AND CHEAP EDITION OF

GOODHOLME'S

Domestic Cyclopædia.

8vo, cloth, $2 50.

"*Many single articles are worth the price of the work, and there are few households in which the compilation, as a whole, would not have a daily usefulness.*"—The Nation.

Kinley Hollow.

A New England Story. 16mo (Leisure-Hour Series), $1.

Old and Rare Books at Auction.

Messrs. Bangs & Co.,

739 Broadway, New York,

Will Sell at Auction, SEPTEMBER 26 and 27,

At 9.30 A.M. and 3.30 P.M.,

A very attractive List of Curious and Antique Books (collected and arranged expressly for this sale by Soule & Bugbee, Law Booksellers, of Boston), comprising

TRIALS, Singly and in Sets. 609 Titles, 731 Volumes.

SESSION LAWS AND STATUTES. 145 Titles, 757 Vols.

LAW JOURNALS, in Sets. 19 Titles, 229 Volumes.

OLD ENGLISH LAW-BOOKS. 377 Titles, 459 Volumes.

ANCIENT WORKS ON CIVIL LAW, ETC. 500 Titles, 725 Volumes.

These books, although they come mainly under the head of Law, are so old as to be, perhaps, more valuable as *history*. They include many beautiful specimens of early English, French, Dutch, German, etc., typography (both plain and rubricated); a variety of antique bindings, mostly in vellum; a great number of symbolical title-pages, portraits, head and tail-pieces, initial letters, etc., by the old engravers; interesting autographs, book-plates, and manuscript notes of former owners; and a full representation of celebrated works on common, civil, canon, feudal, and international law, from A.D. 1470 down to the present century.

No sale has ever offered more attractions in these directions to librarians, antiquarians, book-collectors, and booksellers.

Catalogues may be obtained from

BANGS & CO., 739 Broadway, New York,

or from

SOULE & BUGBEE, 37 Court St., Boston.

Robert Clarke & Co.

HAVE JUST PUBLISHED:

1. *LONGLEY'S AMERICAN PHONO*graphic Dictionary, exhibiting the *Correct and Actual Short-hand Forms* for all the useful words in the English language, about 50,000 in number, and in addition many Foreign Terms; also, for 2,000 Geographical Names, and as many Family, Personal, and noted Fictitious Names. 12mo, pp. 16 x 368, cl., $2 50.

2. *LONGLEY'S EVERY REPORTER'S* Own Short-hand Dictionary. The same as the above, but printed on *writing paper*, leaving out the Short-hand Forms and giving *blank lines* opposite each word for the purpose of enabling writers of *any system of Short-hand* to put upon record for convenient reference the peculiar word-form they employ. 12mo, pp. 4 x 368, cloth, $2 50.

3. *LONGLEY'S ECLECTIC MANUAL* of Phonography. A Complete Guide to the Acquisition of *Pittman's Phonetic Short-hand*, with or without a master. A new and carefully revised edition. 12mo, pp. 144, in stiff paper binding, 65 cents; cloth, 75 cents.

Mr. Longley's name has been prominently connected with Phonographic writing, reporting and publishing for the last thirty-five years. His system is that of Isaac Pittman of England, with all his latest improvements, and those suggested and developed by the best American writers on Phonography, and the author's own experience in the constant practice of his profession for many years.

HOUGH'S ELEMENTS OF FORESTRY. Designed to afford information concerning Planting and Care of Forest Trees for Ornament or Profit; and giving Suggestions upon the Creation and Care of Woodlands, with the view of securing the Greatest Benefit for the Longest Time. Particularly adapted to the Wants and Conditions of the United States. By Franklin B. Hough, Ph.D., Chief of Forestry Division, Department of Agriculture, Washington, D. C. With numerous illustrations. 12mo, cloth, $2.

HOVEY'S AMERICAN CAVERNS. Celebrated American Caverns, especially Mammoth, Wyandot, and Luray; Historical, Scientific, and Descriptive; with Notices of Caves and Grottoes in other Lands. By Horace C. Hovey. Map and plates. 8vo, cloth, $2.

THE ST. CLAIR PAPERS. The Life and Public Services of Arthur St. Clair, Soldier of the Revolutionary War, President of the Continental Congress, and Governor of the Northwestern Territory. With his Correspondence and other Papers, arranged and annotated. By Hon. Wm. Henry Smith, of Chicago. 2 vols., 8vo, with two portraits and a map, $6.

HENSHALL'S BOOK OF THE BLACK Bass. Comprising its complete Scientific and Life History, together with a Practical Treatise on Angling and Fly Fishing, with a full account of Tools, Implements, and Tackle. By Dr. James A. Henshall. 12mo, illustrated, cloth, $3.

MORGAN'S THE SHAKESPERIAN Myth; or, William Shakespeare and Circumstantial Evidence. By Appleton Morgan, A.M., LL.B, Author of 'Law of Literature,' 'Notes to Best's Principles of Evidence,' etc. 12mo, cloth, $2.

BUTTERFIELD'S THE DISCOVERY of the Northwest in 1634 by John Nicolet, with a sketch of his life. By C. W. Butterfield, Author of 'Crawford's Campaign,' etc. 12mo, cloth, $1.

Any of the above sent by mail prepaid on receipt of the price, by

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 21, 1882.

The Week.

THE failure of Hubbell to secure his renomination in Michigan is, of course, open to more than one interpretation. It may be that the Convention were governed, in throwing him overboard, by local considerations; and that they wished to treat him as kindly as possible under the circumstances, is shown by the fact of their passing a vote of thanks to him. But the fact nevertheless remains that the man who has made himself most conspicuous in doing what the Republican Congressional Committee allowed him to say publicly was the work most necessary at this juncture to the salvation of the Republican party, has been refused a return to Congress by his Republican constituency. No matter what the real cause of his dismissal, the Convention must have felt that it would be looked on in other parts of the country as an expression either of contempt for, or indifference to, his labors in raising the money on which the Congressional Committee says success in the approaching campaign depends. It is, therefore, in one sense, an unprecedented occurrence. It is like what in the old days, when the Republican party relied for success on appeals to opinion through the press and the platform, the relegation to private life of one of its most distinguished orators, such as Seward or Sumner, would have been. It must be remembered, too, that Hubbell is apparently not alone in thinking that the collection of money from officeholders is now the most important service to be rendered to the party. The Congressional Committee has tacitly approved of this view by allowing him to utter it in their name. Moreover, the Administration has tacitly approved of it by allowing him to send his agents through the public offices to terrorize the clerks into making contributions, as "the persons most directly interested" in Republican success. Besides this, Hubbell's Committee is now actually circulating as a Republican campaign document a speech by Mr. Eugene Hale, justifying the assessments on officeholders, mainly on the ground that the Democrats levied them in 1860, in the last days of Buchanan, when the party was in the lowest depths of degradation. To this complexion it has come at last in the once proud Republican party, which used to sweep the country with a storm of enthusiasm for great ideas.

Conventions in other places, in this State among the number, will do well to take note of Hubbell's trouble in his "home." It indicates clearly that something must be said in the platform about civil-service reform, and it must be stronger and more minute than even the famous six rules for the reform of the service which Conkling and Platt drew up and got passed by the State Convention of 1877. So much has been said on the subject in Republican platforms which has not come to anything in practice, that the public palate has got a little hardened, and needs stronger and stronger language every year. In fact, it has got to the point of requiring detailed specification of the mode in which the civil-service reform which the platforms commend is to be carried out. We have far passed the stage—and for this we owe a good deal to Hubbell's operations during the last three months—in which the subject can be safely dismissed in a few high-sounding generalities. A striking indication of the change which is coming over the public temper about it has just been afforded by the declaration, which has received 3,000 signatures of leading Republicans in and about Boston, that they will not vote for any member of Congress who is unwilling to make an explicit declaration of his adhesion to the reform.

The Philadelphia *American* — speaking, probably, for Mr. Wharton Barker—makes some explanations about the money Dorsey is supposed to have spent in "carrying Indiana," which go to relieve Dorsey of some of the imputations brought on him in connection with it, partly by his own character, and partly by the very peculiar way in which Vice-President Arthur alluded to his Indiana operations at the famous dinner given him in this city. It has always puzzled outsiders to know what was done with so much money in Indiana. The *American* says it was needed for "picketing" the State line to keep out colonists from Kentucky, who are, it is said, in the habit of coming over to "carry Indiana" for the Democrats. In fact, there seems to be hardly anybody in the Western country, who is not other wise occupied in the month of October, and takes any interest in politics, who does not lend a hand in "carrying Indiana." The United States Post-office in General Grant's day was, indeed, in some political circles, looked on as existing principally for the purpose of "carrying Indiana," and only secondarily for the conveyance of the mails. We hope, however, that the Philadelphians will not be too liberal with their money for "picketing" purposes. "Picketing" is a very vague term, and we do not believe that picketing, when superintended by the likes of Dorsey, is the noble thing which it seems on paper. We do not believe, in short, that Dorsey's pickets occupied themselves solely in keeping wicked men out of the State on election day. The *American* contributes further some very slightly veiled information about that estimable politician, Jay Gould, who, it intimates, offered the Republicans unlimited funds if he could have something to say about filling the vacancies on the Supreme Bench, and, failing in this, sent out a good sum, by a bird of his own feather, to "carry Indiana" for Hancock. All of this, except his designs on the Supreme Court, has long been known; what was the precise rascality he had in his eye when he contributed or offered to contribute to the Republican campaign chest, of course only few were able to say.

For some time the newspaper organs of the colored men have been hinting that they are rather tired of working for nothing. That is to say, they have been voting Republican tickets and asking no questions solely in consideration of past services rendered them by the party in the matter of freedom and equal rights, quietly accepting emancipation and the suffrage as a perpetual mortgage, the interest on which must be paid promptly every election day. Now, however, there is a disposition to inquire into the validity of this lien. The colored men are beginning to think that the old score is about wiped out; that the debt incurred before, during, and shortly after the war, has been fully paid by steadfast and straight voting, and that for further political services they should receive some equivalent in the form of a fair division of the fruits of their labors. They say that they have been working long enough without wages, under a system which has substituted a sort of party slavery in place of that kind from which they have escaped. Henceforth they propose to work on shares. This is the substance of the movement which was begun in this city on Friday by the organization of a Colored Republican Central Committee. Resolutions were adopted to the effect that the party has "failed to recognize the worth of the colored people as voters," and that hereafter "due recognition" must be given "in the Government service"—that is, in the distribution of offices. The colored voters intend henceforth to examine the color of a ticket before voting it. This demand is not surprising, and, under the existing party system of rewards for party services, it is not unreasonable.

Some of the colored Republicans of the Second Congressional District of Mississippi have resolved that, inasmuch as their party in that district "has been committed by its leaders to the support of the Greenback party," they "declare their steadfast allegiance" to Republican principles—which of course heretofore have been the opposite of Greenbackism; and that they will "seek to defeat the election of General James R. Chalmers" to Congress, "he being in no sense a Republican or entitled to their support." The position of these Republicans certainly is consistent and respectable. The Mississippi alliance with Greenbackism is as disgraceful as the Virginia alliance with repudiation; and it requires an extraordinary measure of effrontery, even for professional politicians, to present as a regular Republican candidate a Democrat like Chalmers, who has been turned out of Congress for the meanest and most shameless election frauds, who is "the recognized apostle of the 'Mississippi Plan,'" and who a little while ago was described by these politicians as "the hero of the Fort Pillow massacre" and the perpetrator of the worst atrocities during and since the war.

The Boston *Advertiser* makes the curious mistake of calling "four Irishmen who are doing good service for Great Britain just now"—

Lord Dufferin, Admiral Seymour, Sir Garnet Wolseley, and Lord Beresford—"all Kelts." The New York *Sun*, in correcting this, makes a mistake of its own, for it says that "only one of them is a Kelt," Lord Dufferin. The fact is that Admiral Seymour is neither an Irishman nor a Kelt, and that Lord Dufferin is no more a Kelt than Sir Garnet Wolseley. His family name is Blackwood, and his ancestor, a Scotchman, settled in Ireland in the seventeenth century. Since then the Blackwoods have intermarried with Joyces, Stephensons, Temples, Finlays, but with no Kelts, unless Miss Sheridan was a Kelt, which is extremely doubtful. The truth is, the intermixture of blood among all classes in Ireland has been very great, so that it is questionable whether the island now contains any pure Kelts at all; but as a general rule, if any exist, they are to be found among the Catholic Macs or O's. The chances are a thousand to one that a Protestant Irishman who is neither a Mac nor an O' has little or no Keltic blood in his veins. But it is none the less true that the Keltic temperament is more or less diffused through the Irish of all breeds by a process which in every country works greater or less assimilation even without mixture of blood. Both Sir Garnet Wolseley and Lord Dufferin are, though not Kelts, distinctively Irish in mind and manner, and the Beresfords, though very pure Anglo-Norman, have outdone most Kelts in love of what the Kelts call "divilmint," or, in other words, in exuberant animal spirits. Wellington was one of the few examples of an Irishman with a very English temperament, but he was peculiar even in his own family. His brothers were men of the Dufferin type, though none of them, we believe, cared much for the country of their birth, in which their ancestors had dwelt on one side for three hundred and on the other for seven hundred years—one of the results of a deplorable political history of which Ireland has had abundant experience.

M. D'Haussonville, one of the descendants of Lafayette, who came out last year to the Yorktown celebration, has been publishing reminiscences of his trip in the *Revue des Deux Mondes*, which are very agreeable reading, curiously accurate for a French writer, and for the most part very complimentary to the country and its institutions. But he tells one story of his experience of the New York police which is not pleasant reading, and, in fact, is calculated to bring the blush of shame to the cheek of patriotism. M. D'Haussonville is a man of a philanthropic turn, and, after seeing other things illustrative of the condition of the poor in this city, wished to see the low lodging-houses. A policeman was detailed to accompany him on his visits to them, which lasted about a quarter of an hour. The rest of the story we will tell in his own words:

"In passing before a wretched-looking drinking shop, my policeman had said: 'This is the only place where you can have a nice drink.' I had taken no notice of this hint, the meaning of which, I confess, had escaped me. As we were going to separate, I was thanking him, when he said: 'Aren't you thirsty?' This time I understood, but wishing to see how he would take it, I answered: 'No, and besides I am just going to dinner.' 'Well, then,' said he, 'give me something to drink your health with.' I then went with him to a grogshop, where we took a glass of an atrocious reddish-looking liquid, adorned with the name of 'Sicilian Wine,' and I gave him a dollar; but I could not help thinking of a certain Parisian gendarme, who once passed the whole night with me going through the low quarters of Paris, and to whom I offered a napoleon, but who refused it, saying that he was on duty. There is good, after all, in the French police, and I only wish that it was as well paid by the city and as vigorously supported by the public as the police of New York."

It would be curious now to hear the reflections of the New York policeman on M. D'Haussonville. They probably consisted simply in the proposition that he was a "mean cuss" for not having given him five dollars.

Professor Esmarch, a surgeon of great authority and reputation in Europe, has printed for general circulation a lecture delivered by him at Kiel, reviewing the surgical treatment of President Garfield. He concludes that the wound was not necessarily mortal, that the cause of the suppuration which led to a fatal result was not the bullet, but the repeated probing and examination of the wound by fingers and instruments not protected from septic infection by Lister's method. He does not think the splenic artery would have ruptured had not putrid suppuration been established by this means. He refers to the popular superstition that the bullet is the cause of all danger in a gunshot wound, and asserts that had no search been made for the ball, and the wound been properly dressed so as to exclude germs, the President would have been alive to-day. The history of this case shows indeed that truth is stranger than fiction. A fatal misfortune seems to have attended every step. If we may believe a majority of the surgeons in attendance, no satisfactory examination of the wound was made when it should have been done; no one seems to know how or by what authority the principal physician was called—the very positions of assassin and victim are disputed. Then comes the man with the induction balance, which was thought to be a very triumph of science, and he informs us, in a paper read before the Montreal meeting of the American Association, that he mistook a bed-spring for the bullet. Afterward came an autopsy, in which the bullet was not found in the body at all, but in the débris removed from the intestinal cavity; its situation, however, was said to be determined at about two feet from the situation where the surgeons expected to find it. Probably all these things should not affect the impartial minds of the Board of Audit appointed by Congress to adjudge the expenses in the Garfield case, but it certainly is not the way the outside public look at it. Dr. Bliss having started in with a bill of $25,000, all the others must be equally conscious of their deserts in order to get a proper proportion when the "scaling down" comes. Dr. Lamb has a modest charge of $1,000 for his services in performing the autopsy. We understand that he is in the habit of making post-mortem examinations, and we should be very much surprised to learn that he ever received a tenth part of that sum for any autopsy he ever held. It has always been supposed that President Garfield was, in all practical respects of daily life and death, the same as any other citizen, but these be royal charges. It is understood that Dr. Bliss bases his enormous fee upon certain "consequential damages" to his practice. We may perhaps be allowed to doubt whether the added importance attached to "the President's physician," and the notoriety resulting therefrom, have not done something to help his practice, and may not be considered as a fair set-off to the "damages."

The activity in the money market increased as the week advanced, and the rate for demand loans on stocks reached 7@8 per cent., and the discount rate for prime mercantile paper 7 per cent. The Bank of England discount rate was also advanced to 5 per cent., but the effect of this action was partly neutralized by the closing of the war in Egypt, which had steadily drawn gold thither from England. At the Stock Exchange, prices advanced early in the week, but during the latter part showed a declining tendency, on account of the rise in the rate for money. The tonnage of the railroads is steadily increasing, and the rates on it are kept up to profitable figures. The corn crop is turning out very much larger than was expected, and the crop of wheat, which is now substantially gathered, exceeds any previous yield. The general trade of the country continues in a sound and healthy condition, and is of large volume.

The Anti-Monopolists, in their Convention at Saratoga on the 13th inst., adopted a platform demanding Government supervision and "control" of corporations, so that the capital invested shall return "reasonable dividends"; free canals; the purchase of the telegraph-lines by the Government, and their operation as part of the postal system; the establishment of postal savings banks; a currency to be issued by the Treasury only; laws to prevent "combinations to inflate or depress prices"; the repeal of all "objectionable sections" of the Penal Code; a State Labor Bureau, with power to arbitrate, and, in case of corporations, to "establish and alter the wages to be paid"; pure judges; the abolition of the prison contract system; the deduction of incumbrances from real estate for purposes of taxation; reform of the civil service; woman suffrage, and "equal pay with men for equal work."

The critics and moralists and reformers who are always haranguing the American people about their decadence and corruption do not seem to notice the damaging blow to their view of the condition of the country given by the Star-route jury. According to the accounts of the foreman and others, attempts were made to bribe them all with offers of from $25,000 down to $200. The jury was a common, and, to judge by its verdict, extremely ignorant jury, and yet every one of these offers was spurned, if not "with the toes of their boots," at any rate with scorn. This shows that while attempts at bribery may be rife, the purity of the people may be relied on to make them unsuccessful, which is a very satisfactory though singular state of things. The fact is, that the condition of society in Washington closely resembles that of Greece and Rome in their purest and best days, when, as every school-

boy knows, the most incorruptible public characters were continually being approached by powerful Government officials like the Attorney-General, though they always turned a deaf ear to corrupt proposals. Dickson's account of himself can only be matched in Plutarch. One such unblushing example of virtue ought to offset a great many Ring-thieves.

Mr. Blaine has been writing a paper on "The South American Policy of the Garfield Administration," which appears in a Chicago magazine. In it he declares that this policy had two principal objects in view: first, to bring about peace and prevent future wars in North and South America; second, to cultivate such friendly commercial relations with all American countries as would lead to a large increase in the export trade of the United States, by supplying those fabrics in which we are abundantly able to compete with the manufacturing nations of Europe. This was certainly an excellent policy, but it was one of those cases in which much depended for success on the means taken to bring it about. The means taken by Mr. Blaine were peculiar, and he did not succeed; and there is something very characteristic in his attempt to make out that his policy, which was only fully developed after Garfield had been shot, should now be regarded as Garfield's, and in this way attempt to curry favor with Independents. He might as well attribute it to Washington.

Henry George has made a demand for compensation against the British Government for unjustifiable arrest in Ireland. He was going about in Ireland with one of the Eton masters, when he was arrested by the police, with his companion, as a suspicious person, and kept in custody for several hours, until an examination could be had before a magistrate, when he explained all that seemed queer in his movements. The arrest was certainly a stupid blunder, but it does not seem to have been accompanied with any needless annoyance, and we doubt whether the State Department, even if so disposed, can make out a case which will entitle him to anything in the nature of a pecuniary salve. A foreigner who goes voluntarily into a country in a disturbed state, in which suspicious persons of his nationality do abound, is, as we have all along maintained, entitled to a speedy trial if arrested on suspicion, and to a speedy release if the suspicion proves groundless; but we know of no precedent or rule which exempts him even from arrest on suspicion. No government is expected to guarantee travellers against mistakes of this kind under such circumstances. Mr. George's case, too, is somewhat peculiar, inasmuch as he is an ardent advocate of the confiscation of landed property, so that his appearance in Ireland at this juncture might fairly be called inopportune at least. A spark is in itself a harmless, pretty, and even useful thing, but a spark in a powder magazine is mischief in its most malignant form.

Arabi's force at Tel-el-Kebir appears to have been just what all that was known of the Egyptian Army before the insurrection would have led us to expect. He had apparently mustered in all about 50,000 men, of whom one-half were regulars, the rest raw levies, whom a well-filled arsenal enabled him to arm. The complete collapse of the insurrection on the defeat of the army, and the ready submission of the Notables, in Cairo as well as elsewhere, confirms the belief that the movement was mainly military, or in other words was the work of revolted soldiery, which the population accepted as Orientals accept all things which seem irresistible. Arabi's resistance was almost unquestionably due in a large degree to the common Oriental ignorance of the resources of foreign states. But he must also have relied largely on some disagreement among the Powers which would impede England's action, and he must have been secretly encouraged by Turkey. In fact, during a large part of the time this encouragement was not secret at all.

If the London *Times* in any degree reflected the sentiments or foreshadowed the action of the Gladstone Ministry, its lucubrations about the propriety of putting Arabi Pasha and his leading confederates to death would be very unpleasant reading. To hang Arabi or any of his men for rebellion, considering the part they have played in the Government of Egypt for the last two years, would be a very shameful and unjustifiable thing for the British to do, and even still more shameful to permit the Khedive to do, as he owes his power to do it solely to British bayonets. We may be sure, however, that it is something which Mr. Gladstone will not permit, though there is probably not a blatant Tory Jingo, in or out of England, who would not like him to do it, partly for love of seeing some unsuccessful man hanged, and partly for love of seeing Gladstone disgrace himself and his Cabinet. But assuredly, if, as we have already said, that immense crime, the burning and pillage of Alexandria, be brought home to Arabi or anybody else, hanging will be too good for him. If he should be hanged, however, for anything, Arabi would have no right to complain. One of the causes of his revolt against the Khedive was the interference of the latter with the execution of the sentence which Arabi had got passed by a packed court-martial on a number of Circassian officers whom he accused, on trumpery evidence, of conspiring against him. He had them sentenced to banishment to the Sudan, a terrible region, in which death through the climate is certain to white men. Besides this, no good Mussulman—and Arabi is said to be a Mussulman theologian—can consistently object to being hanged by any Christian who gets him into his power, inasmuch as he is taught from his childhood, and, if pious, firmly holds, that the killing of unbelievers is a duty, which circumstances may put in abeyance, but which is never wholly extinct. No one can cherish such a view very long without having a sense of reciprocity grow up within him which would make his own execution by a victorious enemy seem a natural, if not a becoming, attention.

It appears that a tribunal of some kind is to be set up for his trial and that of five or six other pashas, who led in the rebellion. As for Arabi himself, the Khedive more than once condoned his mutiny, and acquiesced in his impudent usurpations. Had he cut him down or arrested him when he made his first appearance at the palace at the head of the revolted troops, the "national" movement would probably have ended there. But there is no denying that after that Arabi received much encouragement to go on with his agitation, if in no other way, from the silence or submission of both the Khedive and the representatives of the Powers. The military revolt began with the fall of the Nubar Ministry, in April, 1879. During the remaining two years the Khedive was left to struggle with it as best he could, the Army growing all the while more turbulent and insolent. It was not till the 8th of January, 1882, that France and England sent the famous joint note, promising the Khedive that they would give him armed support if the worst came to worst. But just before this, on the 5th, Arabi was appointed Assistant Secretary of War, with the approval of the French and English Consuls-General and Controllers, on the ground that it was better to have him in the Government than outside of it. It is not surprising that under these circumstances the joint note should have simply exasperated him and his confederates, and that when he received it there should have been, as Mr. Blunt says, a peculiar gleam in his eye. Nor is it surprising if by this time he had come to the conclusion that England and France were afraid of Egypt and the Egyptians, and might be defied with impunity. These things must be taken into account in trying him for either treason or mutiny.

Now that the Egyptian Army has been dissolved, the first thing in the Egyptian problem which comes up for discussion is, of course, the mode in which the country is to be policed, and policing in Egypt involves the maintenance of some force capable of keeping the Bedouins in order. The idea of a gendarmerie with English officers—something like the irregular native cavalry in India, we presume—has been suggested in England, and is approved of by a portion of the French press, and is most likely what will be done. But it will hardly do for some time to come to leave Alexandria and Cairo without a small English garrison to reinforce the police if necessary. The Khedive's position must long, if not always, be precarious. He is a weak man, who has been restored by Christian arms, and will probably be permanently discredited thereby. In fact, it is a great pity that he cannot be got rid of, and something more practical and useful set up in his place. He must prove a source of embarrassment for a good while, if not always. Mehemet Ali's dynasty in Egypt owed all its power to the vigor and truculence of the old man and his son Ibrahim, both of whom had a short method of dealing with Arabi Beys. The line has apparently run out, as far as strength goes, and as it has no sacred character, the sooner it goes the better. An effete despot is a bad thing anywhere, but it is unusually bad in the East, unless he can set up as a Caliph or "theologian."

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, Sept. 13, to TUESDAY, Sept. 19, 1882, inclusive.]

DOMESTIC.

MR. BLAINE has published a paper, in the *Weekly Magazine*, of Chicago, on "The South American policy of the Garfield Administration," in which he says that the two principal objects of the foreign policy of Garfield's Administration were to "bring about peace, and prevent future wars in North and South America," and "to cultivate such friendly commercial relations with all American countries as would lead to a large increase in the export trade of the United States." He then goes on to defend the steps he took to bring about these very laudable objects.

By Tuesday night most of the delegates to the New York Republican State Convention had arrived in Saratoga, and the canvassing for votes was going on in earnest. It is impossible to predict the result of the Convention, as the situation is such as to require actual balloting to determine which of the candidates for the Governorship is the leading one.

The State Labor Convention of New York adjourned on Wednesday without putting a ticket in the field.

The New Hampshire Greenbackers held a State Convention on Wednesday. The platform declares against fusion with either of the present parties, and favors a general railroad law.

The Democratic State Convention of Massachusetts met on Tuesday, and nominated Benjamin F. Butler, of Lowell, for Governor, Samuel W. Bowerman for Lieutenant-Governor, D. N. Skillings for Secretary of State, and William A. Hodges for Treasurer. Gen. Butler was nominated by acclamation. One of the resolutions censured the "weak and vacillating course of the President toward Irish-Americans and Great Britain," and called for the release and indemnification of imprisoned American citizens in Ireland. Another of the resolutions was in behalf of labor reform and of reasonable legislation to lessen the hours of labor.

The Independent Republican campaign in Pennsylvania was opened on Friday by a mass-meeting at Horticultural Hall in Philadelphia. The attendance was large and enthusiastic.

A despatch from Cincinnati on Friday announced that the Republican County Convention had adopted a resolution declaring "that in accordance with the action of the Republican State Convention of 1880 at Cleveland, and of that at Columbus in 1882, we demand that the present Legislature prepare and submit to the popular vote a clause, amending the State Constitution, which shall enable the Legislature to regulate the traffic in intoxicating liquors."

The Republican State Convention of Colorado met on Friday and nominated Ernest L. Campbell for Governor. The platform denounces the demonetization of silver, and recommends the apportionment of the funds arising from the sale of public lands to the sinking of artesian wells in Colorado.

The Republicans of the Oregon Legislature held a caucus on Monday night and nominated John H. Mitchell for United States Senator by thirty-four votes. The Democrats have nominated Judge P. P. Prime.

On Wednesday the Republican State Convention of South Carolina adopted a resolution offered by Congressman Mackay, "that the Convention of Union Republicans of South Carolina, while repudiating the financial principles advocated by the Greenback party, and reaffirming the principles of the Union Republican party, do recommend that at the next general election the voters of the State, in the interest of a free ballot and a fair count, cast their ballots as Republicans for the State ticket nominated by the Greenback-Labor Convention on the 6th inst."

Official returns from sixty-one counties of Arkansas show the vote for Governor to have been: Berry, Democrat, 75,940; Slack, Republican, 39,947; Garland, Greenbacker, 8,271. The State Senate will stand: Democrats 28 out of 30, and the House 73 Democrats out of 91.

Governor Colquitt, of Georgia, intended to appoint the son of the late Senator from that State, Ben. H. Hill, to fill the unexpired term of his father in the Senate. Mr. Hill, however, has declined the prospective appointment, stating that the office is "beyond his aspirations."

The Appointment Officer of the Treasury Department characterizes as untrue the published accounts of the recent appointment and promotion of a large number of colored employees in that Department.

An Albany branch of the New York Civil-Service Reform Association was organized on Monday, with a list of officers which includes a number of the most influential and substantial citizens of both parties in the city.

The annual meeting of the New York State Bar Association was opened at Albany on Tuesday. The President of the Association, Mr. Sherman S. Rogers, delivered the opening address. Attorney-General Brewster made a short speech, in which he referred to the Star-route cases, saying that the people had recently witnessed something in the administration of justice which had shocked the whole country. He said that if juries could be handled and dealt with as the Star-route jury had been, then apparently trial by jury was itself a doubtful legal remedy. But he said he did not believe this. He believed it was only a demonstration of the usefulness of juries, for from the evil consequences here exposed there is a moral reaction, and a moral judgment, which those who undertook the corrupting process will never escape.

On Friday Judge Wylie set aside the verdict in the Star-route cases. Miner and Rerdell are to be granted a new trial, and the second trial of these two, together with Brady, the Dorseys, and Vaile, will begin on the first Monday in December next. Turner is acquitted. The ground on which the new trial was granted was the general unreasonableness of the verdict, and the dragging of the bribery matter into the deliberations of the jury-room by Foreman Dickson, contrary to the instructions of the Court.

On Wednesday evening Foreman William Dickson, of the Star-route jury, sent a letter to the Attorney-General in which he stated that an officer in the Department of Justice, Henry A. Bowen, a Special Agent assigned to Arizona, offered him (Dickson) a bribe to influence his judgment and verdict. Dickson adds that a sworn statement of the detailed facts has been filed with the District Attorney of the District of Columbia. Dickson also asks the Attorney-General for protection against the attacks which have been made upon his private character by officers and employees in the Department of Justice.

A statement prepared at the Pension Bureau shows that during the fiscal year ending June 30, 40,939 original claims for pensions and 34,148 claims for increase of pensions were filed. The number of claims rejected was 21,295, and there were allowed during the year 27,664 original applications and 10,231 for increase of pensions.

During August there arrived in the customs districts of Boston, Baltimore, Detroit, Huron, Minnesota, New Orleans, New York, Passamaquoddy, Philadelphia, and San Francisco, 43,076 immigrants, 7,047 citizens of the United States returned from abroad, and 2,470 aliens not intending to remain in the United States.

The Census Bureau has issued a bulletin classifying the population of the United States by nativity. The number of native-born is: white, 36,843,291; colored, 6,632,549; total population, 50,155,783.

Arrangements have been made for announcing the approach of frost in some of the tobacco-raising States. The Signal Bureau at Washington will telegraph to central points, and the growers will be informed in all directions by the firing of cannon.

Secretary Teller has appointed a Commission to negotiate with the Sioux Indians for the cession of part of their reservation in Dakota. The appointment of the Commission is in accordance with a provision of the Sundry Civil Appropriation Bill.

Comptroller Lawrence, Treasurer Gilfillan, and Second Comptroller Upton, composing the Board of Audit for passing upon the claims growing out of the last illness and funeral of President Garfield, at a meeting held Monday evening, examined all of the claims on file. It was found that not more than half the claims presented were drawn up in accordance with the provision of the circular defining the shape in which they should be prepared. It was agreed that all the claimants should be requested to file their bills and proof with the Board before October 20. The Board has received a claim from the Independent Ice Company for $1,516 92.

Mr. Henry George has written a letter to President Arthur formally calling his attention to his recent experience in Ireland. He says that he was imprisoned in spite of his assertion that he was an American citizen and on legitimate business; moreover, that such cases are constantly occurring, and that many American citizens in Ireland have been subjected to even worse indignities and hardships. In conclusion he says: "I submit to you that it is due to their own dignity that the United States should claim for their citizens travelling in countries with which they maintain relations of amity exemption from wanton annoyances, unreasonable inquisitions, and imprisonment upon frivolous pretexts. Yet I regret to say that the belief prevails there that the United States take no interest in the treatment of their citizens in foreign parts."

Chief-Engineer George W. Melville, of the *Jeannette*, together with the seamen William Ninderman and William Noros, arrived in New York on Wednesday by the Cunard steamer *Parthia*. They were received with great enthusiasm by representatives of various official bodies and a crowd of other people.

A card has been issued by Lieutenant John W. Danenhower, denying that he said that if Engineer Melville had not turned back from the first search, Captain De Long and his companions might have been saved. Lieutenant Danenhower also denies that there was ever any ill-feeling between himself and Engineer Melville. He says that, on the contrary, his relations with him have always been of a very pleasant character.

The Unitarian General Conference opened its biennial session at Saratoga on Tuesday morning, with Governor John D. Long, of Massachusetts, in the chair. Governor Long delivered the opening address.

A monument to Capt. William Morgan, who divulged the secrets of masonry, and was supposed to have been abducted and murdered therefor in 1826, was unveiled at Batavia, N. Y., with appropriate ceremonies, on Wednesday.

A despatch from Pittsburgh on Saturday stated that the compromise offered by the striking puddlers had been rejected by the iron-masters. The manufacturers declared that nothing short of a full surrender on the part of the strikers would be accepted. District meetings of the Amalgamated Association were held on Tuesday in Pittsburgh, Wheeling, and Youngstown, at which it was decided to withdraw all the demands made on June 1, and to present the old scale to the manufacturers for their signature. This virtually ends the strike, and it is believed that the manufacturers will sign the scale and

resume at once. The strike has lasted 116 days, and it is estimated that the loss to the men in wages is between $8,000,000 and $10,000,000, while the loss to the manufacturers is only conjectural.

A terrific cyclone passed over the township of Winsted, Connecticut, on Thursday night. A number of persons were injured and great damage done to property.

The yellow fever is spreading in Pensacola, Florida, and Brownsville, Texas. In addition to this, Brownsville is being threatened with an inundation, as the water is still rising in the streets, and many families are being driven from their homes by it every day.

The international military match between representative teams of twelve from Great Britain and the United States was shot at the Creedmoor range on Thursday and Friday. On Thursday the teams shot at targets distant 200, 500, and 600 yards, the British making nineteen more points than the Americans. On Friday the teams shot at targets placed respectively at 800, 900, and 1,000 yards' distance. The result of the two days' shooting was that the British team was victorious by 170 points. The total scores for the two days' shooting were: for the British team, 1,975; for the American team, 1,805.

A race between the well-known oarsmen Courtney and Ten Eyck and Dempsey took place at Alexandria Bay on Monday. Courtney won by two lengths.

The three days' festival of the "Mystic Order of the Oriole" in Baltimore closed on Thursday evening with a spectacular procession, witnessed by many thousands of people.

FOREIGN.

At dawn on Wednesday morning the British army, under General Wolseley, having marched from Kasassin during the night, attacked Tel-el-Kebir and carried the works in twenty minutes. The attack was a complete surprise, and Arabi, with such of his troops as could escape, fled to Zagazig. The English loss was about 300, while the Egyptian loss is estimated at 1,500 killed and wounded, sixty guns and several thousand prisoners captured. Immediately after the battle General Macpherson made a forced march with the Indian contingent, and occupied Zagazig at four o'clock in the afternoon. On Thursday the British troops entered Cairo, where they were "enthusiastically received." All men of rank who were concerned in the rebellion, except Abdellal Pasha, the commander at Damietta, made submission, and Arabi Bey and Tulba Pasha surrendered unconditionally.

On Monday the Egyptian Council of Ministers proposed a decree, which was signed by the Khedive, dissolving the Egyptian army, and stating that officers guilty of rebellion would be prosecuted and punished according to military law. Riaz Pasha, Minister of the Interior, states that as the restoration of order will be impossible unless capital punishment is awarded to the leaders of the revolt, he shall abandon the country if any milder sentence is passed against them. The question of what is to be done with the rebel leaders is now engrossing attention in England. Upon the arrival of the Khedive in Cairo a regularly constituted court will be established for the public trial of the rebel chiefs, who will be allowed to engage counsel. A despatch to the New York *Tribune* on Sunday says that the charge of military insubordination will probably be got rid of, as the rebels acted with the sanction of the Caliph, but that for those concerned in the massacre at Alexandria the severest punishment will be demanded.

On Tuesday Abdellal Pasha telegraphed from Damietta that he never intended to disobey the orders of the Khedive, and intimated his readiness to surrender. He says he awaits the Khedive's orders. All day Monday and Tuesday bodies of infantry, cavalry, and artillery poured in from Abukir and other places, and laid down their arms. Twenty-three thousand men altogether had on Tuesday made submission at Kafr-el-Dwar. The Ministry of the Interior has been transferred to Cairo, and the Khedive will go there on Thursday, and on the 27th instant there will be a grand military review there. The Egyptians are everywhere returning to their homes and working on their farms.

Lord Dufferin has informed Said Pasha that as the military operations in Egypt are practically terminated, there is no longer, in the opinion of her Majesty's Government, any necessity for a conclusion of the military convention.

The news of General Wolseley's brilliant victory was of course received in England with great rejoicing, and the press and people unite in praising him and giving him all the credit for the success of the campaign. There were, however, no illuminations or public demonstrations. The Archbishop of York has invited the clergy to observe next Sunday as a day of thanksgiving, and publishes a special service for the occasion.

The Indian Government announces the issue of a loan of 25,000,000 rupees, to meet the expenses of the Indian contingent in Egypt.

The Russian Minister of Finance announces that during the first half of the present year the receipts of the Government increased 19,500,000 rubles, and the expenditure decreased 23,500,000 rubles. A despatch to the London *Times* from St. Petersburg says that the allotted term of a year for the maintenance of the minor state of siege in St. Petersburg and a few other towns expired on the 16th inst. A Russian newspaper hears that it will be prolonged for another year.

A despatch from St. Petersburg on Tuesday said that the Czar would probably start for Moscow that night for his coronation. All private telegraphic service and railway traffic in the direction of Moscow will be suspended until his arrival there, and 30,000 troops will be stationed along the line as far as Moscow. Absolute secrecy is maintained in regard to the actual date of the coronation.

The Emperor Francis Joseph, of Austria-Hungary, and the members of the Imperial family, arrived in Trieste on Sunday to be present at the celebration of the anniversary of the incorporation of Trieste with Austria. They were warmly greeted by the people. A man named Overdank, a native of Trieste, with two bombs in his pocket, was arrested at Ronchi, and the subsequent "extraordinarily enthusiastic" reception of the Imperial family at the theatre is said to have been partly due to the impression that the arrest of Overdank had "averted a catastrophe."

It is rumored that Sir Charles Dilke, Under Foreign Secretary, is likely to be appointed to a seat in the Cabinet, and that fresh appointments will be made to the Presidency of the Council and the Chancellorship of the Duchy of Lancaster before the next session of Parliament, and that Mr. Childers, War Secretary, will become Chancellor of the Exchequer.

It is announced from Ireland that Messrs. Parnell, Davitt, Dillon, and Brennan have decided to hold a conference in the autumn, in order to start a national movement in which various movements now being carried on separately will be consolidated upon a platform of national self-government, the abolition of landlordism, the promotion of home industries, the rights of labor, and paid representation in Parliament.

The Lord-Lieutenant of Ireland, who has been travelling in Connemara, has been received with much attention during his trip. On Friday he visited the scene of the murder of the Joyce family, near Cong. He was strongly escorted, and the route was guarded by parties of police.

In connection with the case of Patrick Walsh, whose execution for the murder of Martin Lyden was fixed for Friday next, a legal difficulty has arisen, it being alleged that in passing sentence against Walsh Judge Lawson failed to use the phraseology prescribed by law. On Tuesday it was announced that Earl Spencer had definitively declined to respite the prisoner.

A woman was shot by a process-server near Glenties, County Donegal, while resisting the seizure of her cattle. The process-server has been arrested.

At Swineford, County Mayo, a thousand ejectment decrees are posted at the Courthouse at the suit of Lord Dillon. No rent has been paid on Lord Dillon's estate since 1879.

A number of "suspects" were released from prison on Tuesday. The remaining suspects in prison, with the exception of those who can be brought to trial, will be speedily discharged from custody.

The race for the St. Leger stakes for three-year-olds on Wednesday, at the Doncaster September meeting, was won by Lord Falmouth's brown filly Dutch Oven. Geheimniss, the favorite, came in second, and Shotover third.

The race between the Hillsdales, the American crew, and the Thames Rowing Club crew came off on Friday afternoon, and was won by the latter by four lengths. The Hillsdales led for two miles and then broke a slide. Half a mile from the start the Hillsdales forced the Thames crew over toward a barge and fouled them badly.

Lord Aberdare, Baroness Burdetts-Coutts; William Black and Walter Besant, the novelists; Norman Lockyer, and Philip H. Calderon have joined the Longfellow Memorial Committee.

A cable despatch received in London on Thursday announced that the British man-of war *Phœnix* had been wrecked off Prince Edward's Island. All the materials, guns, etc., have since been taken off, and the ship is now offered for sale as she lies on the beach. None of the crew were lost.

A contract has been signed between the Portuguese Government and Mr. Braem, for the laying of a cable between Lisbon and the United States, touching at the Azores.

All the political parties in Prussia are actively engaged in prosecuting the electoral campaign. The Berlin papers on Monday published addresses to the electors.

The International Electrical Exhibition was formally opened at Munich on Sunday.

Heavy floods have occurred in Lombardy, Venetia, and the Tyrol. The city of Trent is submerged and Verona is inundated, but there has been no loss of life.

King Humbert has conferred the decoration of the Order of the Crown of Italy on Col. J. Schuyler Crosby, late American Consul at Florence.

The eleventh Federal Congress of Mexico met on Sunday. Señor Rubio, father-in-law of Gen. Porfirio Diaz, was elected President of the Senate, and Señor Dublan of the Chamber of Deputies.

President Gonzalez's message to the Mexican Congress refers with satisfaction to the progress of the Republic; speaks approvingly of the agreement with Guatemala and the establishment of diplomatic relations with Chili; says that "the Government of the United States, a country with which we are connected by other interests in addition to those of proximity, has given and received from us proofs of the sincerest friendship." He refers to the recent agreement for crossing the Rio Grande and for reconsidering certain claims against Mexico, and approves of the course taken by the United States in relation to mediation between Guatemala and Mexico. In regard to the peace congress, he says it has been indefinitely postponed. The Mexican revenue for the last fiscal year was $30,000,000, while from 1867 to 1877 it only averaged $16,000,000 per year.

One hundred and two deaths from cholera occurred in Manila on Friday and Saturday, and 346 in the vicinity of the town.

WHAT WILL MR. GLADSTONE DO WITH EGYPT?

MR. GLADSTONE'S enemies, who are a numerous but very heterogeneous body, have been much embarrassed in trying to make capital against him out of the Egyptian affair. They first said that, in interfering at all, he was doing the very thing he had denounced Lord Beaconsfield for doing, or had, in other words, turned Jingo. But, as a matter of fact, in his Scotch speeches during the canvass, he expressly acknowledged, and with his accustomed solemnity, that the responsibility for the position which the Beaconsfield Ministry had, in conjunction with France, taken in Egypt, would have to be assumed by its successors, whoever they might be. He denied emphatically, too, in the same speeches that he was a peace-at-any-price man, and recalled with much heat his readiness to fight, in 1870, in defence of Belgian neutrality, if need had been; and in defining the objects of the present invasion of Egypt recently he used language very similar to that employed by him in describing the objects of such a war on the Rhine. So that he cannot be charged in the Egyptian matter with any inconsistency, or with the abandonment of any principle he has ever defended. He attacked the Afghan and Zulu wars not as wars, but as needless and impolitic, and therefore unjust and cruel wars.

Of course, if the Egyptian enterprise had miscarried, his enemies would hardly have dwelt much on the charge of inconsistency, and would have confined themselves to that of incompetency, which in military matters is a much more effective political weapon than any change of doctrine. Luckily for him, the campaign has been extraordinarily successful. It has increased the renown of a general whom the Liberals first brought into prominence, and has vindicated amply the reorganization of the Army, which the Liberals undertook and carried out. In fact, the army which Wolseley commands in Egypt is a new army, made by Wolseley himself under Mr. Gladstone's auspices, and fiercely assailed and discredited by the Tories, into whose hands General Roberts, unfortunately for himself, tried to play, when he came back from India, by making himself a witness against the young soldiers of the new short-service régime. It was, therefore, a proud sight for Mr. Gladstone and Mr. Childers, as well as for Sir Garnet Wolseley, in a party as well as in a patriotic sense, when the new troops swarmed with unloaded rifles over the entrenchments at Tel-el-Kebir, in the gray of that Wednesday morning.

Up to this stage, therefore, Gladstone has not only got off scathless, but renewed the strength of his Ministry. His critics, accordingly, are turning their attention to the future, and having failed in their accounts of the crimes he has committed, have begun to depict those which he is almost sure to commit before very long. The first of these is the destruction of what is called the rising Egyptian "nationality" revived by Arabi Bey, and which would, they say, if Gladstone had let it alone, have become in a short time very flourishing, after remaining 2,500 years in abeyance. On the point whether there be such a thing as Egyptian nationality, the evidence is of course conflicting. There are some European and American observers who had faith in Arabi's intention to set up an independent, self-governed, and progressive Egypt, but they are very few in number, and none of them have any better ground for their belief than communications from Arabi himself, and the Ulemas and Pashas who were in sympathy with him. These communications would have more weight if the public of Christendom had not had within the present century so much experience in Turkey, as well as through the Mussulman world generally, of the remarkable dexterity of the Mohammedans of our time in using Western phrases and catchwords either, to keep the infidels at bay or to get hold of their money. No men have more complete mastery of the sounding phrases of modern progress, and use them with more dexterity in diplomacy, than the Turks; but there is not as yet any sign that a single Western idea has made the slightest impression on any Turkish brain.

Arabi Pasha, though ignorant, is cunning, and he and his confederates have apparently not been behind their Turkish confreres in supplying what our boys call "taffy" to the wandering European philanthropists, jurists, and travellers who have asked for a sight of their programme. They tell these that they seek the things which they know will excite Christian sympathy and admiration. In Turkey these have long been "reform" and equality before the law; in Egypt the object is "nationality." But they remain all the while good Mussulmans, to whom reform and equality are detestable and impious, and who do not know, and have not known for twelve hundred years, what nationality means. They have only one country, which is Islam, and know of but one mark of nationality, and that is belief in the true Prophet. There can be hardly a doubt, in fact, on a calm view of the history of the Mussulman world and of the workings of the Mussulman mind in our day, that what Arabi meant by Egyptian nationality was the exclusive handling of Egyptian money by prominent Mussulman Notables, including himself, without other accountability than the obligation of giving the Sultan a fair share. All beyond this is dust for the eyes of amiable enthusiasts like Mr. Wilfrid Blunt, whose help in getting the European Powers to let them alone was likely to be valuable.

Mr. Gladstone will now undoubtedly disregard the nationality chimera, as he is in duty bound to do, and treat Egypt as a patch of Islam in which circumstances have imposed on the Western Powers the duty of keeping order. The severest test of his wisdom will be found in his treatment of the public debt. To restore the old Joint Control with France, or, in other words, give the foreign creditors a security which they never expected and had no reason to expect, would be an act of oppression beyond all question. Order in the administration of the finances he may exact, but the satisfaction of the public creditors should be left to some sort of Egyptian Assembly, fairly representing whatever honesty or policy in financial matters there may be in the country. The Army will doubtless be disbanded, as a body for which there is no use, and its place in the preservation of order be taken by some sort of gendarmerie. The Khedive will probably then be allowed to reorganize his government under British supervision, and the completed arrangement be submitted to the Powers for their approval, at a conference in which the British say will be the most potential. In short, it is not likely that the relations of Egypt with foreign states will undergo much change through the war, but the authority of the Khedive will hereafter appear irresistible, and there will probably be a gradual reconciliation of the official and landholding class to infidel bookkeeping and tax-collecting. The apparent gladness with which they are all submitting to the invader is a somewhat ludicrous illustration of the political value of their sympathy with Arabi.

A SUGGESTIVE POLITICAL REMINISCENCE.

THE tricks and the ways of that eminent patriot, ex-Senator S. W. Dorsey, as revealed in the Star-route trials, recall and possibly throw some light on a discreditable political transaction of the closing hours of the Presidential campaign of 1880. When the Democrats cowardly abandoned the "tariff for revenue" plank of their platform, and unwisely attempted to hedge on this question, the word was passed along the whole Republican line to press the issue vigorously. And as part of the machinery for "pressing," cards and placards in great numbers were issued by the Republican committees, bearing the following and similar inscriptions:

"Keep this in your mind, and don't you forget it:

"Republican protection means plenty of work, with good wages and empty poorhouses.

"Democratic free trade means closed workshops, starvation wages, and crowded poorhouses.

"The Republican party will protect your employer so he can sell his goods, and keep you steady at work with good wages.

"The Democratic party will, by their free-trade policy, empty your workshops, break up your happy homes, and fill your poorhouses."

Although in the light of subsequent events—the long-continued and extensive strikes and labor disturbances, and the revelations of the census to the effect that the wages paid in the highly-protected iron industries of the country average but $1 25 per day—these proclamations and assertions seem now rather farcical, there was nothing more to be urged against their use than against a multitude of other expedients which all parties resort to for achieving success in all heated political campaigns, and which for the occasion are regarded by the public as legitimate. But somebody in political authority on the Republican side went further; and at least one card was issued from the Republican headquarters in this city, Brooklyn, and at various points in Pennsylvania and New Jersey, and extensively circulated, which was a bold and brazen fraud, and as much a forgery as the Chinese letter attributed to General Garfield, inasmuch as it purported to give quotations from a pamphlet published by the "Free Trade Club of London," to the effect that "the salvation of England depends on

the destruction of American manufactures," and that such destruction can best be accomplished by the success of the Democrats and free trade; when no such pamphlet or quotation or anything analogous was ever issued or printed, and no such club as the one specified ever existed. When these circumstances were made known, some attempts were made to deny that such forgeries and false statements were ever perpetrated, or that any Republican organization ever participated in their circulation; and Mr. Stephen W. Dorsey, as Secretary of the Republican National Committee, in particular, addressed a note to the *Nation*, in which he professed to be very indignant that any one should be willing to give currency to such "inexcusable" statements; but when abundant and overwhelming evidence in support of their correctness was offered, Mr. Dorsey and others concluded that discretion was the better part of valor, and suddenly dropped the subject, while on the part of the public the circumstances have now probably been almost entirely forgotten. The revelations of the "Star-route" conspiracy, however, throw a flood of light on the methods of the astute Mr. Dorsey, and prove that even if he was not cognizant of the disgraceful political transaction alluded to, he was not unfamiliar with just such acts, and that his every-day associates were men who would not scruple to forge, plunder, cheat, and lie, if it suited their interests to do so. Furthermore, a man who a year subsequent to the transactions noted could from his place in the national Senate write a letter to a postmaster in Arkansas, asking him to attach to certain bonds, designed to be used in Star-route contracts, a postmaster's certificate that, "after the exercise of due diligence to inform myself of the pecuniary liability and responsibility of the principal and his sureties in the foregoing bond," he deemed them to be good for double the amount, when no one of the bondsmen was personally known to him, is just the sort of man to do an act like the issuing of the forged political (tariff) cards, and then afterward unblushingly lie about it. The text of this letter, which was addressed to J. H. Clendening, Postmaster, Fort Smith, Ark., is as follows:

"December 8, 1877—You can rely upon my aid, which has saved you on more than one occasion. Keep your office straight so it will bear inspection, and there will be no trouble. I send you some bonds which I desire made for a friend. Have it done, but under no possible circumstances allow any one to know from whom they come. Make the bonds at once, and return them to me here. Keep clear of routes or rivers or friends."

Clendening refused, on the ground that he did not wish to lay himself open to penalty for fraudulent certification. A day later, our immaculate Senator tried the same game on Postmaster Haycock, of Pine Bluff, Ark., in this equally characteristic letter:

"UNITED STATES SENATE CHAMBER,
"WASHINGTON, December 9, 1877.

"Dear Colonel: Long before you get this you will be confirmed and I hope all right. I send you to-day a bundle of bonds to be made, which I hope you will have filled up and duly certified to according to law. This is for an intimate friend of mine, and I ask you to do it as a special favor to me. Under no circumstances allow anybody to know that I have written on this subject. But I shall rely on you to have it done. Return the bonds to me as soon as made, and certain by the 28th of this month.

"Yours truly, S. W. DORSEY.

"Hon. George Haycock, Pine Bluff."

Haycock, like Clendening, refused to be a party to fraud, and sent the above letter to the Department; but it is interesting to note that subsequently Postmaster Hadley, of Little Rock, Ark., signed these same bonds, in the manner that Dorsey directed, and was dismissed from his office by reason of it. And yet Mr. S. W. Dorsey is Secretary of the Republican National Committee!

THE LATE DR. PUSEY.

IT is only old men who now recall distinctly the period when Dr. Pusey, who has just died, was at the head of a movement which was literally convulsing not only the religious world in England, but the world which, though not religious itself, thought religion a useful thing. It is impossible for any one in our time to get an adequate idea of the alarm with which "Puseyism," as it was called, filled England, without going back to the magazines and newspaper files of that period. When a man of this generation looks at the "Tracts for the Times" which caused it all, he is literally filled with amazement. He finds it impossible to understand why anybody cared to read them, much more why anybody was troubled by them, or why they made any sensation. There is a passage in Newman's 'Apologia' in which he describes the great awe which fell upon him when he finally discovered that, in the Monophysite controversy, Rome had the best of it, which probably few young or middle-aged men now read without a smile, but which describes very well the state of mind, both of the Puseyites of that period and of the public whom they were frightening. They felt that they were the leading actors in a mighty revolution, and the English people were afraid they were right. They were proposing return to the doctrine and discipline of "the Fathers," and though few Englishmen knew who "the Fathers" were, they had a strong belief that they were dreadful ogres in some manner connected with Popery, brass money, and wooden shoes, and they kicked, and screamed, and protested against going back to them for any purpose whatever.

Newman and some of the others relieved them by "going over to Rome," but Pusey remained to testify within the English Church, and to pour from the press a steady stream of the new doctrine, which continued almost without interruption down to his death. The alarm about Puseyism lasted fifteen years, though with rapidly diminishing intensity, when it was found that the sect, on the whole, was not a large one, and it may be said to have ended with the passage of the Ecclesiastical Titles Bill in 1851, forbidding the assumption of territorial titles by Roman Catholic bishops. This enactment seemed to give relief to the overwrought Protestant mind, which from that day to this has apparently not cared one straw about Dr. Pusey's sayings. The English public has since then followed Newman's career with interest, as that of perhaps the best specimen of what is called a spiritually-minded person that our times have produced, with an intellect of singular subtlety, and a capacity for graceful and lucid English for which it would be hard to find a parallel in our literature. But it follows him and reads him with simple curiosity, or with an admiration which may be called æsthetic rather than anything else. Dr. Pusey, on the other hand, stayed in the English Church, holding his professorship of Hebrew, in which his scholarship was but mediocre, and his canonry, which surrounded him with dignity and affluence, and sending forth book after book and pamphlet after pamphlet, which few but the clergy ever read. He was assailed a few years ago for indulging in auricular confession, and he confessed the charge and defended the practice, but nobody cared, though when he first showed a leaning for it, he almost sent a tremor through the kingdom. Most Englishmen feel now that if anybody is weak enough to confess, it is but proper that there should be parsons weak enough to listen to them.

Dr. Pusey's own observation of his active lifetime must have filled him with strange sensations. The changes he witnessed in the spiritual world in England were even greater than those which took place in the material world. No social, or political, or commercial changes wrought by science within the present century can compare with those which it has wrought in the character of the religious controversies. Dr. Pusey saw every question which stirred men's blood in his youth disappear from the arena of religious discussion, and others of which he had never dreamed take their places. In his youth the battles of faith were fought by two sets of verbal critics over passages in the Bible and in Patristic literature. Before he died he found his colleagues and successors engaged with a totally new set of antagonists, with strange weapons and strange armor, who made no pretence to be Biblical critics, or to have ever looked into the Fathers, and yet were acknowledged by all to be the most formidable foes by which the Church was ever assailed—so formidable as to compel even the Roman Catholic prelates not only into tolerance toward, but something like alliance with, such guerrillas as the Salvation Army and Moody and Sankey.

THE SERVANT QUESTION.

LESS attention than ever seems to be paid this year in the press to the question of domestic service. Forty years ago the difficulty of getting and keeping servants was one of the great public questions of the day. The relation of master and servant was not something to make fun of in the comic papers, as it was in England: it was a serious, perplexing, absorbing problem, which agitated the mind of every American householder far more than many of the questions presented by politics, finance, or religion. The memoirs of Mrs. Kemble, which have just been published, show that, when she came to this country, servants, as known in Europe, did not exist; and, in fact, in New England a new word, which was a curious reflection of the condition of society—"help"—had to be introduced to designate a class that did not recognize the relation of superior and inferior at all. Later than this, when city life began to become of more importance in the United States, and the employing class to become more exacting, the press was filled with discussions of the questions presented by domestic service. No subject

was ever discussed with more zeal, or apparently more fruitlessly. The condition of domestic service was exposed over and over again, in public and private; the Irish, who were the only class offering for the work, were ridiculed and abused for their incompetence and unfaithfulness; the absurdity of Americans refusing to go into service was over and over again pointed out, and at the same time their entire unfitness for the discharge of the duties of servants was demonstrated; and yet with each recurring year the problem came up anew.

Latterly there has been a cessation of the discussion. This is, no doubt, partly because the supply of domestic servants is better than it once was, and partly because experience seemed to show that the question presents in most cases problems which public discussion, however intelligent and acute, will not settle. For profitable public discussion of any domestic relation it is necessary that there should be some public issue involved. The relations between husband and wife are always "up" in the newspapers, because their legal rights and duties, and the changes in these which appear from time to time to become desirable in them, are always coming before the courts and the Legislature. We might say the same thing of parent and child, guardian and ward, trustee and beneficiary, receiver and corporation. But the relation of mistress and cook, or waitress or chambermaid, presents neither a political nor a legal aspect. Generally, in fact, it is not a legal relation at all. When the lady of the house engages a waitress, she does so, as a general thing, without any intention of making herself responsible for more than subsequently giving her orders and discharging her if she does not "give satisfaction"; for the mistress is usually a married woman, and in the present condition of the law of married women the legal responsibility for what the wife does with or to her servants falls upon her husband, although the actual management of them devolves upon her. When the emancipation of women is complete, possibly this anomaly will be swept away; but for the present the mistress is mistress in fact, but generally not in law. Besides this, servants hardly ever go to law. The volumes of law reports annually issued show that domestic service gives rise to less litigation than almost any other relation of life.

Domestic servants, too, are not an agitating class. They never demand "equal rights for labor," or hold meetings for a reduction of the hours of toil. We never hear of demonstrations of cooks or chambermaids, or even waiters and coachmen, or processions of them marching through the streets with flags and transparencies, or strikes. They never run candidates at a local election, and, in fact, they are distinctly non-political in their tastes and habits. They might have done all this, but they have not, and the fact that they have not tends to make the employing class feel that agitation or discussion, on their side, is less necessary, and thus the tendency to complete silence, on both sides, is becoming more and more marked every year. A generation ago, as we have said, there were on every side loud complaints against the character of domestic servants in the United States, on the ground that they were mainly Irish. The press and books of travel used to teem with denunciations of them for this peculiarity, which they obviously could not help. They met the attack, however, with modesty and reserve. They did not come out and write letters to the papers, as they might have done, insisting that if Americans would not go into service, and very few French or Germans came over here, they were conferring a boon on the country by doing its domestic work. They simply remained silent, and let the storm rage on.

Now it has spent its force, and, as we say, it begins to be seen that the question of domestic service is one which must in the main settle itself. Of course, whenever it is actually discussed we hear only one side. The mistress belongs to the class in society which reads and controls the organs of public opinion. She can write letters to the newspapers; her brothers and husbands and cousins write editorials explaining her grievances; while the servant, on the other hand, has no mouthpiece of any kind. She controls no newspapers or magazines, she is lucky if she can read them; and probably one reason why she never replied was that the din of the discussion about her never reached her ears at all. She never knew, so long as she was Irish, that she was a universal object of execration and contempt and ridicule; she never heard the stories illustrating her ignorance and incorrigibility. Now that her place has been taken in part by Germans and French she does not know the reason. She knows only when she "gives satisfaction," and whether she "likes her place." If she does not, she changes it.

There is a great deal to be said for servants as a class, as there is for all classes except Ring-thieves; but it probably never will be said, for there is no one to say it for them, and the period of their reaching that point in "culture" where they will care to get up any discussion of the subject for themselves is probably far off.

POSITION AND PROSPECTS OF THE HOUSE OF LORDS.

LONDON, August 31, 1882.

THAT contest between the two Houses of Parliament which has now become an annual event, expected as regularly as harvest in August and fogs in November, is keeping before men's eyes in England the question of what is to be done with the House of Lords. Such contests are even now disquieting. They may become dangerous. While the House of Lords remains what it is, they must necessarily recur whenever the Liberal party has a majority in the House of Commons. How, then, is the House of Lords to be reformed? When must that reform be undertaken? By what constitutional mode can it be carried through against the will of those who are to be reformed, and who must, by the reform, be shorn of some of their privileges? Or, as some bolder spirits declare, is reform after all unnecessary, and may it not be better to abolish and be done with an institution which is a mere survival from feudal times? These are questions which excite little heat, because the matter is not thought to be a directly pressing one, but which are constantly present to the minds of politicians, and might at any moment, by any act of boldness on the part of the upper Chamber, be pushed into the foreground. Some of the Peers themselves, particularly the younger Tory Peers, who of course are more hot-headed, chafe so much under their present condition of nominal equality of powers, theoretical superiority in rank, and practical obligation to submit to the will of the Commons, that it is by no means impossible that they may seek to precipitate a solution of the problem.

The theory of the House of Lords which used to be put forward by constitutional writers, thirty or forty years ago, assigned it a two-fold function—to criticise and to moderate. A critical chamber would evidently be very serviceable in our constitution. The House of Commons, in spite of the numerous stages which every bill has to pass through, and the unlimited opportunities for discussion in all those stages, often legislates hastily and carelessly. It sends up a good deal of bad work to the House of Lords, bad especially in form, but sometimes also bad in substance. To correct the errors of the Commons, to fill up its omissions, to put its bills into a better scientific shape, sometimes even to review their policy and point out that they will not work for good, would be an admirable function for a body composed of experienced men, many of them ex-officials, several of them accomplished lawyers, most of them possessing more leisure than members of the House of Commons, who have constituencies to attend to, can command. But the House of Lords does not discharge this duty of criticism, at least as regards public bills (for in the case of private bills its committees are sometimes useful). It sits only four days in the week, and usually for an hour or two only on each of those days. It pays little attention to details of form, and suffers slovenly-drawn clauses to pass unamended. Its debates very seldom throw any fresh light on the policy of a measure, not so much from the incompetence of its members—for there are a good many able and experienced men among the Peers—as because it will not take the trouble to go thoroughly into any questions which have not what may be called a direct political importance—that is to say, which are not party questions, affecting the balance of political power or the interests of the upper class. The critical theory may therefore be said to have broken down.

The other function which our Upper Chamber is credited with is that of moderating violent outbursts of popular passions, and resisting those imprudent and ill-considered changes which such outbursts produce. The House of Commons, as an elective body, naturally reflects the momentary feelings of the country. When the country is strongly excited it sends up members pledged to some particular measure, or to support some particular popular leader. The measure may be a rash one, or the leader may be a reckless or impetuous person, whose policy is likely to involve the country in dangers, perhaps domestic, perhaps foreign. How useful to have a body not dependent on nor affected by the temporary fluctuations of popular opinion, which will interpose the authority of its social dignity, its high character, its administrative experience, and will stay the tide of revolution; addressing arguments to the people which may cool their passions and instruct their reason, delaying the dangerous measure until the nation has had time to reflect and appreciate the serious consequences that will flow from it.

This is the theory of the function of second chambers in general; it is that of the Senate in France, it is to some extent (although, of course, greatly modified by the fact that your Constitution is a Federal one and that the Senate represents the States) that of the Senate in the American Congress. In order to realize it adequately, a second chamber must have authority—the authority which will make it listened to and its re-

sistance respected—which will enable it to check the momentary popular will without provoking revolutionary demonstrations against itself. Now, authority has many sources. Setting aside that which comes from the delegation of the people, or of divisions of the people represented in local assemblies, one may reckon the following as existing in the members of the body: Wealth, or what we call the having "a stake in the country," is one source. Birth, and the elevation of spirit, the refinement of manners which are supposed to accompany high birth, are another. Intellectual power, ripened by experience of affairs, is a third. Diligence, a conscientious attention to the duties which the Constitution imposes, is a fourth. Elevation of character, purity of aims, disinterestedness, a patriotic preference of the interests of one's country to the interests of the individual or of the class to which he belongs, is a fifth and the most important of all, for loftiness of soul, honesty in the highest sense of the word, is rarer than intellectual capacity, and a far more powerful factor in winning the confidence of one's fellow-men. I do not say that there are not other sources of authority, but it will be enough to examine how far our House of Lords possesses these five.

The first it has in ample measure. Nearly all the Peers—that is to say, the Peers who sit in their own right in the House of Lords (for the nobility of Ireland and Scotland are only represented there)—are rich, many very rich, some millionaires whose fortunes have no parallel except in America. Their wealth consists mainly in land and houses and mines. They are, speaking broadly, a body of great landowners. As to birth, the English nobility has not much to boast of compared with the titled class in some Continental countries; in Germany, for instance, or Austria, or even in France. The origin of most of our English noble families is recent, it is often far from creditable; nor are their manners any better, their ideas any more delicate or refined than those of educated Englishmen generally. In point of intellectual gifts the Peers are neither better nor worse than other people. Some thirty of them—those who usually conduct the debates in the House of Lords—are men of ability, a few of great and striking ability. The fact that it is these few by which the country chiefly knows its Upper Chamber, and that the proceedings are more decorous than in the House of Commons—a bore or a fool being more easily snuffed out—gives people an impression of the capacity of the Lords as a whole which is in excess of the truth. If one was to reckon in all the Peers who never speak, and never even attend except when they are whipped up to some party division, the average talent of the House would not exceed that of any other class of educated men. In other words, if one were to set aside about a dozen persons who are, or have been, Cabinet ministers, and have gained knowledge and skill thereby, one might get an equally good House by taking it by lot from among persons whose incomes exceed, say, $15,000 a year. As to diligence in attending the sittings of the House, and considering projects of legislation, or watching the ordinary business of the country, I have already spoken. The House of Lords sits at 4 o'clock, and usually rises before 7, in time for its members to go home and dress for dinner. There are seldom more than forty members present (the necessary quorum of the House of Commons), often only twenty; while it is only four or five times in a session that the number exceeds 200.

One comes last of all to consider the influence of disinterestedness and an unselfish devotion to the welfare of the nation. Now, it would obviously be too much to expect these rare and precious qualities to be largely present in the members of any Assembly, however high in rank. The most one can well look for is that the Chamber should not at any rate be strongly prejudiced by feeling or self-interest in any one direction, but that, the different sympathies, ideas, interests, of different classes and groups and industries and schools of thought, political and religious, throughout the country being fairly represented, there should result something approaching an equilibrium, which would allow the general welfare of the commonwealth to be uppermost in the thoughts of the Assembly; men at least seeing that, since they could not secure the predominance of their special interest, they must win the confidence of the nation by deliberating, or seeming to deliberate, with a view to its common benefit. This is, unfortunately, the point in which the House of Lords is conspicuously deficient. It is a House of rich men, and particularly of rich landowners. The landowning interest so overwhelmingly predominates, that the Peers cannot even pretend to rise superior to the peculiar interests of their class. Their whole behavior for the last twenty years has been that of men anxious to defend all the advantages and prerogatives of great proprietors. And as political conservatism has more and more tended to identify itself with wealth and the ownership of land, they are now also the House of one political party. In the House of Commons the majority shifts to and fro from Liberals to Tories and back again to Liberals; in the Lords the Tories have during the last few ministries (for some decades ago things were quite different) possessed an immense majority. They are now about three to one to the Liberals. Some important sections of opinion do not exist among them at all. There is no Irish Home Ruler in the House of Lords; no Radical, probably no Nonconformist.

Such being the actual state of our Upper Chamber, such important sources of authority being wanting to it, it will be easily understood that it has little moral authority in the country, and is unfit to discharge the function of moderating the excesses of popular excitement. What it rather does is to bend to the people when they are really eager and passionate, because then it fears for its own existence, and at other times to resist their organ, the House of Commons, by cutting down and maiming, or wholly rejecting, measures which seem prejudicial to its interests, but which no strong tide of popular feeling presses forward. This is not a satisfactory state of matters. The very predominance of one political party is enough to spoil the House of Lords for its moderating function. And, in fact, nobody now defends the House of Lords in theory. But how to improve it is another matter, which would require a letter to itself. Y.

OLD STRASBOURG AND ITS CORRESPONDENTS.

PARIS, August 31, 1882.

BEFORE the time of newspapers it was difficult for princes and free towns to have any accurate information on the affairs of the world. The great potentates had their ambassadors, and their couriers who regularly carried despatches; but many princes of inferior rank, even when they were not sovereign princes, found it worth their while to have regular and paid correspondents in the places where the general affairs of Europe found their settlement. The archives of some of these princes show what a keen interest was felt in politics by such men as the Duc de Bouillon, the Duc de la Trémoille, the Duc de Rohan. M. de Bouteiller and M. Eugène Hepp have just published the political correspondence addressed to the magistrates of Strasbourg by their agents between 1594 and 1683, and they have thus rendered some service to history. Let us say first a word of the two authors of this interesting publication. M. de Bouteiller was once an officer of artillery, who became a Deputy from Metz under the Empire, and was the Mayor of Metz at the time when the town was besieged and taken. He left it after the war, and now lives in Paris. M. Hepp was born in Strasbourg, and was, before the war, the Secretary of the Committee which presides in Strasbourg over the affairs that concern the so-called Confession of Strasbourg. He retired to Paris after the war, and has lately been named Director of the Department of the Non-Catholic Confessions at the Ministère des Cultes. In 1819, M. de Kentsinger, who was Mayor of Strasbourg, published two excellent volumes of historical documents concerning the history of France, taken from the archives of Strasbourg. These volumes showed what interest all the kings and princes of the sixteenth and seventeenth centuries had taken in the affairs of that city. The volume before us brings us back also to the time when Strasbourg was a true republic, and had an almost absolute sovereignty, her connection with the Empire being almost nominal. She had more immunities and privileges than Frankfort, Speyer, Worms, Bâle, Colmar, Haguenau. She could make peace and war, extend her fortifications; she had her own gold mint; she could give an asylum to exiles; she could confer the right of citizenship on anybody. More than that, she could make treaties and conclude alliances with foreign potentates.

Strasbourg became very early a sort of democracy. The constitution was, however, often remodelled; it took its definitive form in the fifteenth century, and it lasted without much change till 1790. The "Plebeians" (artisans and burghers of all conditions) were divided into twenty tribes, represented each by fifteen elected members. These three hundred selectmen were the true parliamentary representatives of the city. No important decision could be taken without their assent; they ratified the treaties; they made the Reform, and decided, by a majority of 278 against 1, on February 20, 1529, that the celebration of the Mass should cease in Strasbourg "till it was proved that it was a work agreeable to God." The administrative body was a Council or Senate of thirty members, one-third of whom were noblemen. Each of the plebeian tribes was represented in the Senate by a plebeian member, and the Senate itself chose the noble Senators from the ranks of the old nobility which had its castles in the Vosges. The Senators were only appointed for two years; and the Senators could only be reëlected after an interval of two years. Four *Stattmeister*, taken from the nobles, presided over the Senate. The plebeian members of the Senate elected among themselves the *Ammeister*, who was the true chief of the city, and who was taken successively from each tribe.

The executive power was formed by three councils or boards: 1. The Council of Thirteen, which had precedence over the two others, and was composed of four ancient noble Senators or Stattmeister, of four ancient Ammeister, and of burghers. This council had the management of the foreign policy. 2. The Council of Fifteen, composed of five noblemen and ten plebeians, which had the management of interior affairs. The members of these two councils were appointed for life; they formed what was called the *Beständiges Regiment* with the third council, the Chamber of Twenty-one, which was the oldest of the three, and which had a very complicated organization. In reality, the plebeian

selectmen constituted something like a Legislative Assembly ; the Chambers of Thirteen and of Fifteen formed the executive power ; and the two Senates—the Senate proper and the Council of Twenty-one—represented the administrative and judicial authority. This rudiment of a parliamentary government was much admired ; it was praised by Æneas Sylvius Piccolomini (Pius II.), by Macchiavelli, by Erasmus.

Toward the end of the seventeenth century the local government of Strasbourg had become somewhat corrupted. "When, in 1681," say MM. de Bouteiller and Hepp, "the city was united to France, it could, without inconvenience and without any danger for the new sovereign, be left in possession, for a century more, of a constitution which was nothing but an inoffensive machine from the day when the double institution of a prætor and of a royal syndic maintained it within the limits of purely local interests." The French Government contented itself with the care of the general interests connected with the welfare of Strasbourg, and the local government became a sort of oligarchy or close corporation, till the French Revolution.

Let us return to the times when the Chamber of Thirteen was a real power—when it corresponded with kings and princes. This chamber had agents abroad in various places ; it was one of the necessities of a Republic, placed between France and the Empire, to have reliable information on all the principal events of the time. These correspondents received a small pension from the Republic. They were not costly : we find one, named Flavigny, who contented himself with twenty-four gold florins a year (150 francs). The correspondence of Flavigny is very interesting ; it lasted for about thirty years—from 1597 to 1626—and it had the character of a family correspondence, full of small details ; it would now be called a journal. Flavigny resided in Metz ; he sometimes addressed his letters from that place "à mes très honorez et magnifiques Seigneurs Messieurs du Conseil d'Estat qu'on appelle le Conseil des Treizes de la République Libre et Impériale de Strasbourg." He generally, however, addressed his letters to "Monsieur Jean Philippe Böcklé, Stätmeister de la Ville et République de Strasbourg," and afterward to the successors of Böckle, to Jean Simon of Brünbach, etc.

These letters are all the more interesting because they were written chiefly after the death of Henri IV., at a time when France fell into the greatest confusion, and during which it seemed as if anarchy would become permanent. Flavigny was a good and honest man ; it is a pity that his information was generally at second hand—he collected rumors, he wrote all he heard of. His impressions are interesting, as showing the state of mind of an intelligent observer, but the news he sent to Strasbourg was often false—he was obliged to contradict it himself afterward. Still, every historian will do well to read his letters. The good Flavigny often complains of his own ignorance: "Voilà comme les fausses nouvelles se font place pour un temps et traversent les esprits des hommes."

In the letters of Flavigny petty details are mixed up with the greatest political news. For instance, after speaking (January 16, 1612) of a trial between the Jesuits and the University of Paris, he says, without any *trait d'union :* "The only son of the President, Jeannin [the famous negotiator], was killed as he was coming out of the house of a courtesan, after having himself killed a gentleman of Queen Marguerite's who was waiting for him at the door. He has been interred without any ceremony ; the other has been gibbeted." Speaking of the quarrels of the Duc d'Épernon with his son, the Duc de Candale, he says : "The Duc d'Épernon is tormented by M. de Candale, his eldest son, who demands the partition of the property of his deceased mother. He left for Orléans, without taking leave of his father. Each house has its curse. M. de Villeroi is well, thank God ! He has been at the point of death. France would have lost too much in him." Many interesting dates and details are found concerning the actions and movements of the Duc de Bouillon, of the Duc de Rohan, of the Prince de Condé, of Lesdiguières, of the princes of the blood.

You can judge of the state of France at the time by such items as these :

"The Chevalier de Guise, who is the youngest son of the late Duc de Guise, having met the Baron de Lutz toward noon, and having asked him to leave his carriage, himself dismounted from his horse, and, after having said a few words to him, drew his sword. The Baron de Lutz drew his, and was killed. He was more than fifty years old. . . . The morning after this quarrel, the Prince de Joinville, his brother, had another with a gentleman of the court. In Paris there is a great tumult; all is disorder and combustion. These personal quarrels tend to a public one, and we are on the eve of it, if God in his grace does not change matters" (January 14, 1613).

The month afterward, Flavigny writes :

"As for the news from France, you must know that after the Chevalier de Guise had been pardoned for having killed the Baron de Lutz, he was challenged by the son of the Baron. He at once accepted the challenge ; and when they came to fight, the Chevalier, after having been wounded on the shoulder and in the belly, without any danger of death, however, killed the son of said Baron, and the younger son of the Baron then ran away, after having wounded the second of the Chevalier."

There are curious descriptions of the "entrées" of the governors of Metz. When M. de la Valette, the son of the Duc d'Épernon, arrived in 1613, he was received by a hundred of the richest burghers of Metz, "by three hundred unmarried young men, dressed in white and black, the colors of the city, armed with pikes ; by four thousand burghers well armed, and by three thousand peasants. He placed himself under a canopy of silver cloth and black velvet, borne by four magistrates ; went to the portal of the Cathedral, where he was received by the canons and priests, and swore to use faithfully his powers in the service of the King. The streets were all hung with tapestries, and decorated with garlands and escutcheons. Next, the magistrates presented to M. de la Valette a carriage lined with embroidered silk, with four grays, and a horse, with a magnificent saddle. They gave him, for his father, the Duc d'Épernon, a rich piece of tapestry, twelve casks of wine, etc."

The details about the civil wars are numberless, but they are scattered without any order, and cannot be useful to anybody but the student of the period which elapsed between the death of Henri IV. and the majority of Louis XIII. The details about the Maréchal d'Ancre and his wife, and about the Duc de Luynes, are particularly interesting. Flavigny speaks of "the Marquis d'Ancre doing everything he likes in France, naming and deposing the principal officers of the crown at his will and caprice." We see also in his letters the beginnings of Richelieu.

After the letters of Flavigny, the volume of MM. de Bouteiller and Hepp gives us many letters of another correspondent of the magistrate of Strasbourg, whose name is Talon ; but his correspondence concerns a much more recent period. The letters written after 1626, between that date and 1679, have all been lost or destroyed. The correspondence of Talon begins only in 1679, and it has no connection whatever with the correspondence of the worthy Flavigny.

THE CLERICAL SITUATION IN GERMANY.

BERLIN, August 24, 1882.

I HAVE for months delayed writing upon the clerical question. Not being initiated into the secrets of the diplomatic transactions, I wanted to wait for the result of the negotiations of the Prussian Government with the Pope. It was but just to give the former a fair chance of proving that it had not acted as rashly as had been anticipated even by its friends. Now that about a year has elapsed since a Prussian Minister was sent to Rome, and that important concessions have been made to her, the question suggests itself, What Prussia has gained in return? I am sorry to answer, Not only nothing, but on the contrary she has earned the scornful laughter of her own Ultramontane subjects, the derision of the followers of the Papal See, and the disdain of political men. The Roman papers, with a mischievous joy, report that the Pope has broken off negotiations with Prussia. Herr von Schloezer left Rome six weeks ago, and is perfectly superfluous there. He will return in the fall, but for whose profit is not yet apparent. Thus far not even a basis has been agreed on upon which negotiations for an amicable settlement can be prosecuted. His mission has only been a game of bluff, which will be continued during the winter with the same negative results.

In the meantime the work of the Pontifex is done by his German subordinates, although the Prussian Government does everything in its power to propitiate those whom a few years ago it called the enemies of the German Empire. In all educational matters Herr von Gossler makes use of his momentary freedom and does just as he pleases. The Liberals, who during their ascendancy neglected to press a law of public instruction, which just now would be of enormous value, are at present earning the fruits of their negligence. School inspectors who had been appointed to guard against clerical influences have been removed, and are supplanted by Ultramontane Hotspurs; new seminaries for the education of boys by priests, and under their exclusive influence, have been opened; the school, on the whole, is every day more unconditionally surrendered to them, and now even the few so-called "state priests" are sacrificed to the demands of the Roman clergy, or at least not defended against their insolence.

The worst of all who rouse the passions of their flock is the newly-installed Prince Bishop of Breslau, Herr Herzog. This gentleman, before his election by the Government, was considered one of the softest and most pliable members of the Roman hierarchy, and for that reason, and with that blind stupidity which has distinguished the Berlin bureaucracy in the elevation of bigoted and perverse Catholic priests to high offices, had been promoted to so important a position as that of the Breslau bishopric, with which, by the way, is connected a yearly salary of 360,000 marks—$90,000—besides the usufruct of well-furnished palaces, castles, and country seats. The new Bishop, for his apparently amiable disposition, had been exempted from taking the oath of allegiance. In order to prove himself worthy of the favor bestowed on him, he had scarcely taken his seat when he issued a proclamation against the so-called state priests as usurpers, who must abstain from officiating in contradiction to the principles of their Church, and surrender to their Bishop, who would thereupon deal with them according to his pleasure. He even threatened those who did not at once obey his orders with disciplinary measures and excommunication. You will probably remember that when, in the midst of the conflict with Rome, several

hundred parishes became vacant, the Government appointed all those Catholic priests who swore allegiance to its laws and promised to carry out its policy. These men, who in the hour of need stood by their congregations and the Government, were bitterly attacked by the adherents of the infallibility of the Pope, and generally distrusted by their former brother priests, but with a very few exceptions valiantly bore the brunt of the battle. As they acted at Herr von Falk's summons and at the risk of their lives defended his policy, his successors must protect them. Any attack directed against these priests is at the same time directed against the Government, which, of course, will sacrifice its own honor and dignity if it does not interfere for these unselfish allies, who confided in its energy. If they be humiliated, the Government also is humiliated and morally hurt.

Herr Herzog treats the Prussian state as if it did not exist, as if it had not a word to say about the regulation of the present and future position of the state priests, and as if there were no sovereign will which under all circumstances must be consulted. The Bishop, in ignoring this fact, commits the gravest sort of insult, and provokes the Government by not proposing an amicable arrangement. On the other hand, Bismarck's men, in their own interest, too, before appointing this Herzog, could and ought to have provided for these poor priests, to save whom from an unmerited doom would at that time have been an easy task; but they were either in too great a hurry to fill the Breslau vacancy, or they did not think it worth their while to trouble themselves with the future of a few dozen of faithful adherents. Now, the penal code punishes those priests (bishops, of course, included) who threaten their inferiors, with disciplinary punishment, with a fine of from 200 to 500 thalers and imprisonment from one to two years. Will the law be strictly applied to the bishops? I am sure it will not. Thus far the Government has kept silence, but in the long run it cannot continue to ignore the Roman challenge—for it is, of course, not the Prince Bishop of Breslau who is acting against the crown, but undoubtedly it is the Pope himself who dictates his policy. This declaration of war against the Government is the ripest fruit which the Church policy of Messrs. Puttkamer and Gossler has thus far borne. It is easy to foresee what will finally become of the state priests. Some of them have manfully answered the frivolous charge of the Prince Bishop and controverted his accusations; others, abandoned by all their former friends and supporters, are willing to yield to him; but the great majority for the present keep quiet, and, for want of organization, will by and by return as repentant sinners to the bosom of the Church.

Another quarrel which the new Bishop has picked is the question of the so-called mixed marriages—that is, where one party belongs to the Protestant and the other to the Catholic Church. Fifty years ago this question gave rise to differences between the Archbishop of Cologne and the Prussian Government, and was practically solved by the promise of the "nupturiendi" that their children should be educated as Catholics. Now, Herr Herzog insists even on an extension of the alleged rights of the Catholic Church. He forbids his priests to give their nuptial benediction in case a Protestant clergyman should also be called upon to perform the same act. The proclamation on the walls of the Breslau Cathedral declares such mixed marriages invalid, and treats the issue of them as illegitimate. It is rather cruel on the part of the Ultramontane brethren thus to disappoint their friends in the Government; but the latter will, as it informs the public to-day, inquire whether the proclamation was issued or sanctioned by the highest authorities of the Church, and, if so, demand its withdrawal. How innocent, meek, and simple! As if Rome did not know what it was about!

There are a great many people whose conscience is troubled by such intolerance, although practically they need not heed it, for since 1874 the validity of a marriage exclusively depends on the Civil Marriage Act. However, this attempt at an enlargement of the clerical power is by the unconcerned majority treated as a harbinger of peace, since its natural consequence will be that the civil performance of marriage will gain ground from day to day, and frustrate all Orthodox Protestant attempts at its abolishment.

The *Kulturkampf* is at an end, and it will not be renewed by the Government, which has not deposited its arms in the fencing-room, but has thrown them away altogether. Thus, in spite of all grandiloquent phrases, it will not be able to renew it, and the only result left is the power which it has raised, and with which it will be bound to reckon in all future emergencies. This power is the only real product of the conflict abruptly broken off—a product which has retarded our progress more than any reactionary epoch could ever have done. Henceforth we have in the empire a "corpus catholicum" which in stately numbers sends its representatives into the legislative bodies, and which for years to come will make the formation of healthy parties impossible, and prevent a progressive domestic policy. A rupture has overtaken the nation, and, in spite of an outward unity, neither laws nor administrative measures will be able to heal it. Bismarck, in consequence of his impatience, and from hatred of his Liberal allies, has suffered an ignominious defeat from which he will never recover. Was it not he who in 1873 said, "It is the defence of the Government, and the drawing of the boundary line between royal dominion and priestcraft, for which we are at present acting, and this line must be formed in such a way that the state can exist within it; for in matters of this world it has the precedence and the power"? Upon the next generation will devolve the reparation of the fact that for fear of a Liberal Canossa the Chancellor chose the Clerical Canossa as the lesser of two evils.

It is a pity that the redress of these wrongs must be referred to the future, as we do not live under a really constitutional government. The ministers who, by order of Bismarck, have brought about this defeat, will, instead of resigning, not only not lose their portfolios, but be rewarded for their zeal in attending to the orders of their master, who played out his imperial Chancellorship and acted as if he had not a word to say in Prussian politics. The Chancellor will have to fight with centrifugal tendencies more than ever before, and Rome will not rest before she has drawn every possible advantage from her present favorable position. Or will Bismarck take up the cudgels again? I believe not. The Emperor is too old and too despondent to favor a new beginning with Rome; besides, the court influences are bitter against the revival of the *Kulturkampf*. What, however, is worse than this, the good faith of Bismarck has justly become doubtful to all those who formerly, even enthusiastically, stood by him. Thus they will not be taken in a second time, and they, of course, distrust a leadership which wantonly sacrifices its best auxiliary troops. The Conservative papers now laugh at those innocents who really believed in the sincerity of the Government. We daily read such tirades in their newspapers as the cheap advice to their poor victims that they also ought to make their peace with the Orthodox Church, and that by doing so they would patriotically relieve the Government of a great embarrassment.

There is, in my opinion, only one way to prevent further mischief: it is the utter defeat of the Conservatives in the approaching elections for the Prussian Landtag. It was their alliance with the Ultramontane party which brought about this lamentable compromise of 1880, if compromise it can be called, where one side reaps all the benefits, and concedes nothing in return. From the indecent haste of the Conservatives the Centre has drawn the conclusion that the Prussian Government could not wait any longer. In not granting all at once what Rome demanded they gave her a pretext to keep back and play the offended. Thus the measure which by the minions of the Government was extolled as a great statesmanlike act turns out a miserable failure. The Ultramontanes know very well that these men, among whom are all the influential Orthodox Protestants, have no hold on public opinion nor on the minds of the people, and that accordingly they can dictate terms. They make these gentlemen run the gauntlet by openly proclaiming, "urbi et orbi," the Roman theory that a Protestant's marriage with a Catholic cannot be tolerated by the Church; that the state priests are not entitled to any forbearance or mercy on its part, and that the Prussian Government must surrender unconditionally before peace can be restored. The Conservatives are willing to swallow even this pill, as they can only gain a majority with the help of the Centre. This short-sighted and perfidious policy must fail. It is doomed by its own disloyalty. The people must, therefore, and I hope will, afford the leisure to the Conservatives to think over their policy far from parliamentary business and the troubles of public life. This is the only chance left of making Rome understand her situation. +++

Correspondence.

NORMAL SCHOOLS AND THE UNIVERSITY.

To the Editor of The Nation:

Sir: I was much interested in the letter concerning Normal Schools which was published in your last issue. A paper on the same subject by Professor T. R. Price was probably the most important read at the recent meeting of the Virginia Education Society. There is at present no special training provided in this State for teachers, and Professor Price urges that no separate school be established, but that a Normal Department be added to the University, just as there now exist departments of Agriculture, Medicine, Law, and Engineering. He thinks, in short, that the trouble with normal schools, as they are now organized, is that they are too entirely removed from the influence of the universities. They may teach how to teach, but they cannot give the thorough and general training without which no one ought to teach.

J. H. D.

Norfolk, Va., Sept. 11.

ERRORS OF THE CENSUS.—V.

To the Editor of The Nation:

Sir: In previous communications various mistakes in the Population volume of the Census have been pointed out. In the present letter attention will be directed to the consideration of the effect of these mistakes upon the value of the work.

An examination into the influence of tempe-

rature and rainfall upon the distribution of population constitutes a prominent feature of the volume under discussion. The space which this investigation occupies, and the detail in which its results are worked out, evidence the importance attached to it by the Census Office. The maps and tables which contain its results are evidently intended to corroborate each other. The tables purport to give in detail the population of the temperature and rainfall belts delineated upon the maps. As has already been seen, there is, however, in many cases, flat contradiction of a map by a table. In not a few instances it is plain that the climate of considerable sections of country is materially misrepresented by the one or the other. In the letter published in the last number of the *Nation* attention was called to discrepancies as to the climate of a part of Colorado. As was then shown, the maps closely agreed with one another in representing that the high ground of central Colorado had a heavier rainfall and a lower temperature than the rest of the State. The tables do not bear out this representation in its entirety. If the maps are correct, the facts revealed are of great interest and, so far at least as concerns the rainfall of the spring and summer months, of the highest practical importance. On the other hand, if the tables are to be relied upon, the facts indicated are doubtless quite as interesting and important as those shown by the maps, but they are different from them.

This Colorado case is only a more striking example of a numerous class of errors. It is not often easy to decide whether the blunder lies in the map or in the table ; it is clear that both cannot be right. If you consult only the table, you come to one conclusion ; if you examine the map, you come to another ; if you compare the two, your only possible conclusion is that something is wrong. On the whole, however, there seems to be some reason to believe that, in the great majority of cases at least, the mistakes are in the tables, and not in the maps. I do not wish to be understood as expressing a positive opinion on this point, and even the suggestion is intended to apply only to the temperature and rainfall maps and tables.

So far as I have noticed, the total population of each State and Territory, as given in the tables just spoken of, is correct. An inaccurate statement of the population in one belt in a State, therefore, necessarily involves a counterbalancing inaccuracy in the others. The mischief done by a single slip does not end here. Each of the temperature maps illustrates a group of four tables, showing the distribution in accordance with temperature of the aggregate population in 1870 and in 1880, of the colored and of the foreign population respectively. A diagram is constructed from these tables, and the totals contained in them are used in the compilation of still another table. This last, besides reproducing the totals referred to, purports to give the number of inhabitants to the square mile in 1870 and in 1880; the increase in density during the decade; the percentage of the total population in each belt in 1870 and in 1880 ; the population below each belt in 1870 and in 1880 ; the percentage of the total population below each belt in 1870 and in 1880 ; the percentage of the total colored population in each belt ; the percentage of colored population of each belt to the total population of the belt ; the percentage of the total foreign population in each belt ; and the percentage of foreign population in each belt to the total population of the belt. Upon this last table, in its turn, is founded the discussion of results. The rainfall tables are of similar arrangement, save that no comparisons are made with 1870.

Most if not all the errors that have been pointed out in these tables are carried through all of them illustrating the same map, and, as a consequence, affect to a greater or less extent the results and the discussions based upon them. If the consequences of a particular blunder are worked out in detail, it will be better perceived how large an influence it may have.

In the first communication on the subject of the errors of the Census, mention was made of the misplacement of the figures for Missouri in the tables (I *l*, p. 16 ; I *m*, p. 17 ; I *n*, p. 18 ; I *o*, p. 19) showing the distribution of population in accordance with mean annual temperature. As was then explained, this change of position produced some very absurd results. A large and populous section of country was said to have only 13,903 inhabitants, while a narrow strip containing a trifling population was credited with 1,323,176. It is hard to understand how so gross a blunder could have escaped detection, yet it not only passed undiscovered, but was carried on through a long series of calculations.

Tables I *l*, p. 16 ; I *m*, p. 17 ; I *n*, p. 18 ; I *o*, p. 19, distribute, in accordance with mean annual temperature, the aggregate population in 1870, the aggregate population in 1880, the colored population in 1880, and the foreign population in 1880, respectively. The population of each of the four temperature belts between 45° and 65° of mean annual temperature, as given in the tables named, is below contrasted with what it would be if the error in Missouri were corrected:

Mean temper'ture groups.	Aggregate populati'n in 1870.		Aggregate populati'n in 1880.	
	Census figures.	Correct figures.	Census figures.	Correct figures.
	Table I *l*, p. 16.		Table I *m*, p. 17.	
45°-50°.....	12,202,544	11,159,808	15,022,030	13,698,854
50°-55°.....	12,347,374	12,719,592	15,793,958	16,285,333
55°-60°.....	5,091,820	5,754,297	6,649,287	7,466,685
60°-65°.....	3,577,710	3,585,751	5,190,923	5,204,826

Mean temper'ture groups.	Colored population in 1880.		Foreign population in 1880.	
	Census figures.	Correct figures.	Census figures.	Correct figures.
	Table I *n*, p. 18.		Table I *o*, p. 19.	
45°-50°.....	227,850	127,024	2,754,796	2,673,171
50°-55°.....	761,482	818,218	2,227,338	2,179,077
55°-60°.....	1,641,948	1,685,604	447,026	576,845
60°-65°.....	2,226,560	2,226,994	131,587	131,654

It will be seen that the figures given in the tables are in some instances more than a million out of the way. The diagram on page lvii is based upon the incorrect totals above copied. It is to be regretted that it is not practicable to reproduce here the diagram as it is, and contrast it with one prepared on the same plan, but with the mistakes corrected. The importance of the Missouri slip would be seen at a glance.

Table XXXIII, on page lvii, rests upon the same statements of population. If the change in place of the Missouri figures had not occurred, most of the results given in this table for the temperature belts between 45° and 65° would have been materially different, as will appear from the comparisons made below :

Mean temperature groups.	Population below each group.			
	1870.		1880.	
	Census figures.	Correct figures.	Census figures.	Correct. figures.
45°-50°.....	14,879,647	13,836,911	18,793,837	17,470,661
50°-55°.....	27,227,021	26,556,503	34,587,795	33,756,494
55°-60°.....	32,318,841	32,310,800	41,237,082	41,223,179

The differences shown above are in some cases quite material, particularly in the proportion of the colored population in each belt and their relative numerical importance in the belt.

The transfer of the Missouri figures affects no less than sixty-eight separate statements in this volume. It is believed that most, if not all, of the other errors in the temperature and rainfall tables are equally far-reaching in their consequences. That these tables and the discussions based upon them are no better than rough approximations, seems a necessary conclusion from the facts already stated.

The Census Office realized the important influence of extent and density of settlement upon the political, social, and industrial condition of the country, as is evident from the fulness with which the subject is treated. It has been pointed out that in this portion of the work there are many serious errors. In the second letter it was shown that the maps would lead a person consulting them to very inaccurate conclusions. Some sections of the country were represented as having a population far in excess of the facts, and in other cases precisely the opposite error was made.

My examination has been confined to the first 122 pages of the volume. In that part of it are contained the discussions and the general tables. Forty-seven errors in those pages have been pointed out. I have forborne to mention others which I have discovered, for want of time and space ; and there is no doubt that other persons have discovered many that have escaped my notice. Indeed, I seldom have occasion to read with care any part of the volume, that new errors do not reveal themselves. In preparing this letter, I examined the diagram on page lvii, in order to determine the effect upon it of the Missouri blunder. I then saw for the first time that the line intended to represent the population of 1880 was marked as representing that of 1870, and *vice versa*. The diagram as a consequence indicates a heavy decrease of population during the decade.

An exhaustive scrutiny of the volume has not been attempted. One table has been compared with another, or with a corresponding map. If contradictions did not reveal themselves, no further attempt was made to test the accuracy of the statements. It not infrequently happened that the calculations necessary to fix the full extent of some patent error, revealed the existence of previously unsuspected ones.

Probably no statistical work can pretend to accuracy unless its proof-sheets have been subjected to repeated, careful, and intelligent revisions. Such revisions would almost infallibly have detected and corrected most of the numerous errors pointed out in this correspondence. These considerations would seem to cast a degree of suspicion over the entire work. If there is well-grounded reason to question the accuracy of its results as published, much of the value of the Census is lost.

Whether it is now practicable to subject the volume to a searching examination, and in a second edition to correct its blunders, I do not know. In any event, it is earnestly to be hoped that more care will be exercised in the preparation of the yet unpublished volumes.

JOHN C. ROSE.

BALTIMORE, MD., Sept. 14, 1882.

A CORRECTION.

TO THE EDITOR OF THE NATION :

SIR : I am not willing to leave uncorrected a statement in your last issue (in a notice of my collection of 'Golden Poems') that the insertion of "five poems by Richard Realf, four by Dr. Holland, and only two each by Emerson, Longfellow, Holmes, and Whittier," expresses my "individual preferences." It does not express them. The limitation to two poems was imposed by the owners of the copyrights ; and in my preface is a distinct statement of the fact of such copyright restrictions, as explaining "any seeming disproportion in the representation of the various authors."—Yours,

F. F. BROWNE.

CHICAGO, Sept. 16, 1882.

A CURE FOR REPUDIATION.

TO THE EDITOR OF THE NATION :

SIR : In your article, "A Cure for Repudiation," in the number just received, while you point out the supposed difficulty of a State (for its citizens) *maintaining a suit* upon repudiated bonds of a sister State, you omit allusion to the insuperable obstacles in the way of enforcing execution. I entertain little doubt that the case of New York *v.* Louisiana ought to go to judgment for the plaintiff. Aside from the argument of Mr. Attorney-General Russell, cited by you, I think it clear, by all the analogies, that it is not competent for the Court to inquire beyond the fact that the plaintiff is the holder. It would have been clearer, however, if the plaintiff were a holder for value (market), or, better still, if it had paid the face value to its citizens who were bona-fide holders.

Maintaining the suit does not begin to approximate to the "cure for repudiation." The real difficulties would be reached when you come to the category of the *quo modo* in collecting the money. The Supreme Court has been compelled to halt before now for want of machinery—*e.g.*, in Kentucky *v.* Dennison, 24th Howard. Who would take the *fieri facias*? Could the officer levy on furniture in the State offices, or garnish the treasurer and collectors of taxes? In a supplementary equity suit, could a commissioner be authorized to sell the capitol square by public auction ; or could a receiver be appointed to conduct the government as of a municipal corporation? The exercise of any of these remedies would be destructive of State sovereignty, and therefore out of all question. The judgment would be *brutum fulmen*.

I fear the disease is incurable, and the worst of it is the patient can never die. J. H. L.

LYNCHBURG, VA., Sept. 15, 1882.

CONGRESS AND REFORM.

TO THE EDITOR OF THE NATION :

SIR : While thanking you for your very courteous and candid discussion of my article in the *International Review*, I will ask permission to offer some comments upon the points which you advance in relation to the French Government ; and, first, as to the cause to which you justly ascribe much of the weakness of the Executive —the want of power on the part of the latter to dissolve the Chamber without the consent of the Senate. It is, indeed, a grievous defect, and needs to be remedied, though in what way, the burden is, fortunately, not upon us to decide. I hold, however, that the same difficulty does not exist in our case, inasmuch as, although the President has no power of dissolving Congress, the same practical result would be arrived at through our short terms. Speaking from memory, I believe the average duration of Parliament is for three or four years, and the expense and turmoil of a dissolution are so great as to form a serious responsibility for any party or ministry. Our Congress comes to a natural end every two years, and it would be perfectly easy for any Cabinet to arrange important test questions so as to come just before the end of a term, while the fear of their constituents would lead members to be careful about worrying the Cabinet too severely in the interval. At any rate, if French experience is against us in this respect, this result is offset by its demonstration that the institution of a responsible ministry, which the late Mr. Bagehot maintained was only practicable under a limited monarchy, is perfectly so under what he called the Presidential system ; that the President need not be the head of a party, but only a pure and highminded man, in whom the majority of the country have confidence. The careers of Presidents MacMahon and Grévy are incidents of which any country might well be proud.

The true question seems to be, not whether the French have worked the institution perfectly, but whether they have done better with it than they would without it : what would have been the consequences if both Chamber and Senate had been left to their own devices, and without any leadership at all, as our Congress is—a question which, I think, admits of no doubtful answer. Within the last twenty years constitutional government by a ministry has been introduced into nearly all European countries (where it did not exist before), with various degrees of success. In Italy, the trouble is precisely the same as in France—a factional division of parties and constant changes of ministries, unable to secure any effective control of the Legislature. This proves nothing against the institution itself, which I believe to be the only hope of popular government, but only the absence of political sense and experience among the people, of any effective organization of great parties, of free and general public discussion, and of a watchful press, such as ours would be, if it had anything to watch ; in short, of all those qualities which have been the cause of success in Great Britain, and which our people possess in so eminent a degree that it seems more than probable that the institution could be made to work in this country as well as, or better than, in that. You will please observe that I do not advocate the admission of the Cabinet officers to Congress as any specific in itself, but as a means of enabling the people of this country to come to the aid of the Executive as against the encroachment and unsurpations of the Legislature, which constitute the greatest danger to our political future.

I have followed with pain and regret the increasing tendency to which you allude, to extend the influence of politics in the French civil service ; but I draw from it the conclusion that there is no country in Europe whose history during the last century involves a more important lesson for the United States as regards the danger of excessive power in a legislative body, worse even than that of the Executive, because, besides its own inherent evils, it tends ultimately and almost certainly to the establishment of the latter. That history, instead of a purposeless series of revolutions, seems to me to represent a steady, though fluctuating, struggle toward a working relation between the Executive and a legislative body in its proper functions. The first revolution failed because it threw the whole power, which for two centuries had been in the hands of a despotism, into those of a legislature which was totally incompetent to wield it. The Jacobin and Cordelier clubs corresponded very closely to our caucus machinery, and led straight to the power of Napoleon, and after him of the restored Bourbons. The revolution of July failed because Louis Philippe and Guizot, in the face of the passion for equality which had grown up, persisted in restricted suffrage for a very small class of rich electors, and governed by as corrupt a Chamber as any in Great Britain during the last century. The revolution of 1848, again, failed because the Legislature could not govern, and the same cause produced a second Napoleon. For the third time a Legislature is trying its hand, with this important difference, that the germs of a responsible ministry are making their appearance. The progress is, on the whole, encouraging, but the danger is still in a preponderant Legislature, unable to use power and unwilling to part with it, while the militarism which is crushing Europe offers perilous facilities to any adventurer of adequate genius to renew the old remedy of arbitrary power. The hope is in the widening intelligence and the growing strength of the popular will.

The history of the United States since the Constitution, both local and national, is of the steady increase of legislative and the decrease of executive power, with the single exception of the period of our Civil War, when the necessity of real government led to the temporary establishment, by popular consent, of a military despotism almost as complete as that of France. The condition of this country, the habits of the people, and the extent of local self-government, will, no doubt, postpone for a long time the full consequences of this political error ; but ominous signs are not wanting that government by legislature is as impotent as it has ever been, and that sooner or later civil strife will call sternly for stronger executive rule. It is for this reason that I have long labored, and while the breath of life is in me shall continue to labor, to make our people understand the difference between executive power which is strong but responsible to the national will, and the only other alternative which is possible, however long it may be postponed—such a power which is strong but irresponsible.—Respectfully yours,

GAMALIEL BRADFORD.

NORTH ELBA, N. Y., Sept. 8.

[We must remind Mr. Bradford that the expiration of a Congressional term by legal limitation cannot possibly be made to mean

the popular eye an appeal to the people by the Executive as a dissolution does. To attract popular attention, and put popular judgment in motion on a particular point, the President has to say or do something to indicate that he desires a popular decision between himself and his opponents, either about his policy generally or some part of it. To suppose that the people would pronounce this decision at the ordinary biennial election, is to suppose that they pay that close and constant attention to the work of government on the absence of which Mr. Bradford's demand for increased Executive responsibility is based. A dissolution in France or England calls them to the polls because it is a veritable appeal to the voters, the answer to which will decide who shall administer the Government. The ordinary Congressional election would decide nothing unmistakably. It might be a condemnation of Presidential junketing, of Congressional corruption, or of half-a-dozen things besides, and every newspaper would be able to put a different interpretation on the result; so that the President would be no wiser after it than before.—Ed. Nation.]

Notes.

D. Appleton & Co. have in preparation a new edition of Dana's 'Household Book of Poetry,' reset and considerably enlarged to accommodate the later growth of poets. They will also publish this month 'The Young People of Shakspere's Dramas,' a book for youthful readers.

A 'History of the Plymouth Colonies,' by W. T. Davis; a 'Memoir of Miss Edgeworth,' by Grace A. Oliver; and 'Ralph Waldo Emerson: An Estimate of his Character and Genius,' by A. Bronson Alcott, are in the press of A. Williams & Co.

J. W. Bouton announces an edition of one hundred copies of Lodge's Winckelmann's 'History of Ancient Art,' in four volumes, royal quarto, printed by hand; 'The Complete Works of Meissonier,' 320 reproductions in photogravure from the original paintings, in size imperial folio (to be sold in monthly parts by subscription); Makart's "Five Senses," of corresponding size and mode of reproduction; a 'Descriptive and Historical Catalogue of the Works of Murillo,' by Charles B. Curtis, illustrated with etchings—in two sizes, octavo and imperial octavo, the latter containing the etchings in two states; 'A Catalogue of the Masterpieces of Modern Art throughout the World,' illustrated, and uniform with the Salon Catalogue, by F. G. Dumas; 'Cradle-land of Arts and Creeds,' by Charles J. Stone; 'Bible Myths and their Parallels in Other Religions'; and 'Medical Economy in the Middle Ages.'

A. C. Armstrong & Son's fall announcements include a new illustrated library edition of the 'Works of William Gilmore Simms,' at a greatly reduced price; cheaper editions of May's and Hallam's Constitutional Histories of England; 'Gesta Christi, or a History of Humane Progress,' by Charles Loring Brace; 'Revivals: How and When?' by the Rev. W. W. Newell; 'Birthday Flowers, their Language and Legend,' by W. J. Gordon, illustrated by Viola Broughton; 'Niagara, and Other Famous Cataracts of the World,' by George W. Holley, quarto, with full-page illustrations; and Brækstad's capital version of Asbjörnsen's 'Folk and Fairy Tales' ('Round the Yule Log,' as the English edition is called).

Lee & Shepard will bring out during the autumn 'Paul and Persis; or, the Revolutionary Struggle in the Mohawk Valley,' by Mrs. Mary E. Brush; 'Water Analysis,' by Dr. George L. Austin; the following holiday volumes: 'Ring Out, Wild Bells,' with designs by Miss Humphrey, 'That Glorious Song of Old,' illustrated by Fredericks, and 'Curfew Must Not Ring To-night,' illustrated by several artists; together with numerous juvenile works, embracing 'Our Boys in India,' by Harry W. French, with illustrations from photographs, and 'The Wonderful City of Tokio,' by Edward Greey.

'Erothanatos, and Sonnets,' by Leonard Wheeler, will be published immediately by James Miller.

A new "Men of the Time," to be called 'The Biographical Dictionary of Notable Living Americans,' has been undertaken by Edwin T. Freedley and F. V. Van Artsdalen, M.D., of Philadelphia. As the subjects of it are solicited to celebrate themselves, there is now a fine chance for those of our statesmen who have been slighted by Vapereau to bring themselves properly before their contemporaries and posterity.

Harper & Brothers have brought out a new edition of Nordhoff's 'California,' which first appeared in its original form about nine years ago. It has been thoroughly revised and rewritten to adapt it to the present time. It does not appear to have lost by revision any of that glow of admiration which distinguished the original book, and under the influence of which old Californian readers sometimes found the charm of novelty in the description of their most familiar surroundings.

The double number 7-8 (vol. vii.) of the *Library Journal* is filled with the valuable proceedings of the Cincinnati Conference of Librarians in May last. The most important papers are given in extenso, and include several systems of library classification, of which that devised by Mr. Schwartz is fully displayed and exemplified.

The September-October number of *Education* contains a sketch of the career of Charleston's excellent Mayor, Mr. W. A. Courtenay, with a steel portrait. We remark, also, for its good sense the article on the "Influence of a Foreign Education on American Girls," by Mrs. L. H. Stone.

An English edition of Wagner's "Tristan and Isolde" has just been issued by Breitkopf & Haertel in Leipzig. The translation of the text is by H. & F. Corder, the translators of "Parsifal," and the arrangement of the vocal score by Dr. Hans von Bülow. Bülow's score of "Tristan" is beyond comparison the most perfect work of its kind in existence, Wagner himself having expressed his great satisfaction and surprise at the skill and art with which Bülow overcame the difficulties presented by this, his most complicated and characteristic work. The score is an inexhaustible mine of harmonic, melodic, and rhythmic treasures. The number of sharps, flats, and double flats on every page is extraordinary, and any piano pupil who is afraid of those signs can effect a lasting cure of this weakness by playing over the whole score of "Tristan" two or three times. The price in Germany is only $2 50.

The "Discours fa dins la vilo coomtalo de Fourcauquié i jo flourau de Prouvenco per W. C. Bonaparte Wyse" (Discourse at the Floral Games of Forcalquier, May 14, 1882, Montpellier, 22 p. 8vo) has been published. Though by an Irishman, it is written in Provençal and conceived in the most hopeful mood as to the future of that language. But a still more curious publication is a report of sixteen pages, read at the same meeting by J. B. Gaut, and written in Provençal sonnets. The latter has been published at Aix—price 25 cents.

—In recent contributions to *Knowledge* (July 28 and August 18) the Abbé Moigno and Mr. W. Mattieu Williams, the distinguished writer and scientist, give some interesting personal experiences as to the value of tobacco and "drinks," and the relation which stimulants generally hold to the production of work intellectual as well as physical. The veteran Abbé (now an octogenarian), whose memory appears to have been, and presumably still is, of an unusually retentive kind, and who for this reason was threatened by Arago with being "burnt as a wizard," claims to have attained to "incomparable health" and to have been "one of the greatest workers" of his age through an almost total abstinence from stimulants. To the carrying out of this principle of abnegation, doubtless helped by rigid adherence to simple dietary and other habits, are ascribed his "indefinite capacity for work," "unconscious digestion," and the possession of a countenance unmarred by either wrinkles or pimples. The only break in the illustrious health career of the mathematician appears to have been made during a brief sojourn in Munich, where, with the learned Bavarians (the most famous of whom, Steinheil, an associate investigator in the department of physics, boasted of smoking six thousand cigars annually), the Abbé indulged in the obnoxious custom of smoking and drinking; and during the period of the preparation of the 'Calculus of Variations,' when he discovered that his memory was rapidly failing. With the total disuse of tobacco over a period extending from September, 1863, up to June 25 of this year, the proportional increase of vegetable over animal food, and the limitation of stimulants to a daily half-cup of coffee and a "small spoonful of brandy, or other alcoholic liquor," there was a speedy return of both bodily and mental vigor, and with the results characteristically described by the writer.

— The experiences of Moigno are supplemented by Mr. Richard A. Proctor, the astronomer and editor of *Knowledge*, with some of his own personal researches in the field of dietary sanitation and mental development; the general outcome of his observations being that "for steady literary or scientific work," and "throughout the hours of work (or near them)," for most men "something very close to total abstinence from stimulants is the best policy." This is in perfect harmony with the views of Mr. Mattieu Williams, who also notes the prejudicial effects of stimulation upon certain kinds of bodily exercise. Mr. Williams's remarks are more strictly directed to the subject of pedestrianism, and as coming from one who has had a very considerable experience, both as an ordinary vacation pedestrian and as a mountaineer, deserve no little attention. He found, by practical experiment, that the use of stimulants on a foot journey, while it produced a "temporary exhilaration that was pleasant enough while it lasted," invariably after a short time brought on weariness, almost an inability to accomplish the last few miles of the daily stage, and the desire of "halting at a roadside 'pub.' or wine-shop, for a drink on the way." No such inclination seems to have been entertained when "the only beverage was water, or water plus a cup of coffee for breakfast *only* (no afternoon tea). Then I came in fresh, usually finishing at the best pace of the day, enjoying the brisk exercise in cool evening air." As a final summing up of his observations, Mr. Williams gives it as his "firm conviction that the only beverage for obtaining the maximum work out of any piece of human machinery is water, as pure as possible; that all other beverages (including even tea and coffee), ginger-beer, and all such concoctions as the so-called temperance drinks, are prejudicial to anybody not under medical treatment. To a sound-bodied man there is no danger in drinking any

quantity of cold water in the hottest weather, provided *it is swallowed slowly*. I have drunk as much as a dozen quarts in the course of a stiff mountain climb, when perspiring profusely, and never suffered the slightest inconvenience, but, on the contrary, have found that the perspiration promoted by frequent and copious libations at the mountain streams enabled me to vigorously enjoy the roasting heat of sun-rays striking so freely and fiercely as they do through the thin air on the southward slopes of a high mountain."

—The President of the Stuttgart *Litterarischer Verein* complains that his name is continually miscalled. Quoting Goethe's 'Dichtung und Wahrheit' to the effect that a man's name is not a cloak to be thrown on and off at will, but fits him like his skin, which cannot be cut off without pain, Herr Keller continues: "My father baptized me Adelbert, not Adalbert; he gave me a name of the nineteenth century, to which I belong. Why will people persist in sending me back to the tenth? We do not say nowadays adal, nebal, sattal, sessal, wachtal. Ought we to give up Adolf for Adahulf, Hellmuth for Hiltimuth, Hirsch for Hiruz, Hecker for Hagihar, Konrat for Chuonrat, Wilhelm for Willahalm?"

—The *Revue Critique* notes the establishment in Paris of a society (Société Historique) designed to be an intellectual centre like the Athenæum Club in London, or, as the statutes of the Society put it, "to form a vast association inspired by the love of Knowledge and of our Country." The Society creates a club which is to serve as a place of meeting for all those who are occupied with historical studies in the broadest sense: not merely political history, but literary, artistic, linguistic, philosophical—the history of Knowledge, in fact. There is to be a reading-room, and the club will enable its members to buy French and foreign books on the best terms. The annual fee is sixty francs for the first 500 members, afterward 100 francs. Among the members we remark Cherbuliez, Du Camp, Fustel de Coulanges, Laboulaye, Henri Martin, Renan, Léon Say, Sully Prudhomme, Taine. The *Revue* says that with all the many artistic, political, commercial, and agricultural clubs of Paris, there has never before been a literary club.

—Terrien de Lacouperie has made a discovery, adopted and carried forward by Prof. Robert K. Douglass (*Academy*, August 12), which will give great satisfaction to the unhappy people who, not knowing any Chinese, have attempted to get some idea of the Chinese faith from translations of their sacred books. The Yî King, as it is understood by learned Chinese and translated by Professor Legge, consists of such sentences as this: "Lî indicates that (in regard to what it denotes) it will be advantageous to be firm and correct, and that thus there will be free course and success. Let (its subject) also nourish (a docility like that of) the cow, and there will be good fortune." The prisoner who got as far as the war with Pisa in Guicciardini's History and chose the galleys in preference to finishing the reading, would have gone very little way in the Yî King, though Professor Douglass contents himself with saying that "when we read chapter after chapter like this we feel that there must be some mistake—that the clew to the text must be lost." Now, however, it appears that the Yî King is not a religious book at all, but a collection of vocabularies, ephemerides, and the like, and that no one need read it but the professed Chinese philologists, which is a great relief. Only it is a pity that the discovery was not made in time to keep it out of "The Sacred Books of the East," a series which is already becoming somewhat expensive.

—The new 'Deutsche Geschichte' of George Kaufmann is a very acceptable book, covering very compendiously, and at the same time with great thoroughness, one of the most confused and baffling periods of history. It consists of two moderate-sized octavo volumes (somewhat less than 800 pages in all), ending with the death of Charles the Great in 814. The first volume, "Die Germanen der Urzeit," is, so to speak, an independent work, of about the scope of Arnold's 'Deutsche Urzeit' (see the *Nation*, Sept. 16, 1880), which reaches to the foundation of the Frank monarchy, and is continued in a second volume to the death of Charlemagne. Kaufmann makes his dividing line the settling of the Goths in Spain (419). Probably his second volume—"Von dem römischen Weltreiche zu der geistlich - weltlichen Universalmonarchie des Mittelalters"—will be found the most useful part of his work, for the period stood much in need of an historian. Mr. Kaufmann's view of the great crisis of this period is judicious and impartial. He recognizes the healthy elements that still existed in the Roman Empire, "but with cultivated nations despotism is always short-lived, and without a sound division of property it is impossible for any state to exist." This reference of the decay of the Empire to social causes is of the highest importance. The dedication to Rudolph Sohm is a clear indication of the author's attitude in regard to the constitution of the Frank period. We are inclined to think that nowhere will be found a better sketch of the government under Charles the Great.

—The value of photogrammetry on scientific expeditions is discussed by A. Meydenbauer in No. 7 of the *Verhandlungen* of the Berlin Geographical Society. The possibility of using photographs as a basis for measurements of landscape and architecture has long been known, the author's first experiments in this line dating back twenty years. Professor Jordan showed on his Egyptian tour that it is possible to construct a chart with the aid of an ordinary photographic apparatus; but the process requires laborious observations, which can be avoided by using such a camera as was exhibited in 1867, in Paris, by Laussedat, with fixed focus, whose pictures contain all the elements necessary to enable any person to construct a reliable chart from the views taken on the spot in a purely mechanical manner by any other person. The advantages of this photogrammetric process are various, and enable us to utilize many improvements of which photography is still capable, but which are not required for ordinary purposes. Already it has been shown that many expensive old archæological prints are incorrect, whereas in the photogrammetric pictures the details are not only absolutely correct, but can be more conveniently studied than even in their natural state, a microscope here taking the place of a spyglass; nor need such disadvantages as limited time or climatic conditions be any longer taken into consideration. On men-of-war making coast observations it will be an easy matter to take along a sufficient supply of plates, whose weight makes them objectionable for expeditions by land. It is suggested, however, that this difficulty might be obviated by the use of paper in place of the glass plates. For military purposes the use of a photogrammetric apparatus on a captive balloon would be great. The balloon need not be large enough to carry a man, for the objective could be opened by an electric current. At a height of 500 metres, in ordinary conditions, the place and arrangement of troops, etc., could be indicated distinctly. As for the distance at which details can be fixed on the plate, it was found that in German latitudes one kilometre to ten indicates the limits, whereas further south—epecially on plateaus and on summer afternoons—coarse mountainous outlines were visible at fifteen km. As the use of the apparatus requires special training, the establishment of an institute for this purpose would be desirable. With a corps of well-prepared operators, photogrammetry would, the author thinks, mark as great a progress over old methods of measurement as the introduction in military affairs of artillery did over former methods of attack.

MR. MALLOCK'S DISCOVERY.

Social Equality. A Short Study in a Missing Science. By William Hurrell Mallock. New York: G. P. Putnam's Sons. 1882.

THIS book, if the author's account of what it contains is to be believed, is one of the most important contributions to human knowledge made since the time of Bacon. He says boldly that he has discovered a new science, which is nothing else than the "science of human character"; and not only this, but that by means of it we are furnished with a key to the solution of some of the gravest problems presented by the social inequalities produced in the progress of civilization.

What he undertakes to show is that the idea of the social-democrat, that the perfection of society involves social equality, is all nonsense, and that the corollary derived from it of a general redistribution of property is a fallacy. "The theory is that we can redistribute the existing wealth of the world, and yet not diminish the amount of it." The wealth in the world having been produced by labor, and the wealthy classes being mere accidental appropriators of it, this should be done. If, Mr. Mallock declares, labor is really the cause of wealth, as has hitherto been taught by the economists, and believed by the mass of mankind, the position of the democrat is unassailable, and "on the side of the conservatives there is no more to be said, except pitifully to ask for a short reprieve." But the new science enables Mr. Mallock to show that the real cause of wealth is not labor, but something far different, and consequently the conservatives are masters of the situation.

From Mr. Mallock's account it seems that several previous philosophers came very near discovering this missing science, particularly the political economists, Herbert Spencer and Buckle. Adam Smith discovered political economy, and missed the science of character by a hair's breadth; Spencer, with his sociology, came within an ace of it; and Buckle, with his science of history, came as near it on one side as Spencer did on the other. In the discovery of sciences, however, every child knows that a miss is as good as a mile. An example or two from Spencer will show what a miss he made of it. "If," says Spencer, "in crossing a street a man sees a carriage coming upon him, you may safely assert that, in 999 cases out of 1,000, he will get out of the way. If, being pressed to catch a train, he knows that by one route it is a mile to the station, and by another two miles, you may conclude with considerable confidence that he will take the one-mile route." Further: "The desire to avoid punishment will so act on the average man as to produce an average foreseen result." Similarly: "On the average of men the desire to get the greatest return for labor, the desire to rise into a higher rank of life, the desire to gain applause, and so forth, will each of them produce an average result also." And finally: "To hold all this is to hold that there can be prevision of social phenomena, and therefore social science."

Now, says Mr. Mallock, it is extraordinary that

Spencer should not have felt that what all this pointed to was not social science, but the science of character.

"Surely, one might think nothing could be more clear than this. The science described thus must not only, like Buckle's, point to a science of character, but it can be nothing more or less than the science of character itself. Such would be naturally our conclusion from the extracts above quoted; but if we follow Mr. Spencer further we shall see that it would be a wholly wrong one. The science of character he does indeed touch upon; but he does this as though he hardly knew what he was doing. Though he touches it, he does not grasp it; though he sees it, he does not recognize it. Never wholly out of contact with it, he is yet always sliding off it, as though it were an inclined surface. Not once does he fasten on it, as the real centre of the question; and he practically misses it quite as much as Buckle did."

It is the custom for most scientific men, when they discover new sciences, to state in plain language their scope and limits; and the first criticism that we have to make upon Mr. Mallock's discovery is that he does not clearly explain what the science of human character is. Astronomy, we know, is the science which informs us of the laws which govern the movements of the heavenly bodies; political economy relates to the laws which govern man as a wealth-producing and exchanging animal; and in analogy with these we should suppose that Mr. Mallock's science would give us the laws which govern human character. If it did, it would be invaluable to everybody. It would enable us at once to predict human action, which now is a business relegated to "mind-readers" and other quacks, just as chemistry was once in the hands of the alchemists, and astronomy in those of the astrologers. Mr. Mallock appears at the outset to say that his science will do this. "If, however, on the other hand, any special action be given us, it can show us, as a certainty, that it was produced by a special motive; and conversely, that if the special motive is wanting, the special action is sure to be wanting too. This holds good throughout the whole science of character." But, satisfactory as this is, the illustrations he gives of the nature of the science are rather bewildering. The first of these is a quotation from George Eliot: "Emotion is obstinately irrational; it absolutely refuses to adopt the quantitative view of human anguish, and to admit that thirteen happy lives are a set-off against twelve miserable lives, which leaves a clear balance on the side of satisfaction." "Now," says Mr. Mallock triumphantly, "of all the countless readers who have thought these words true, not one, perhaps, has recognized them as a hard scientific generalization. Yet such they are; and if they be true at all, the truth they embody belongs to a science of character, as much as the formulæ of a chemist belong to the science of chemistry, and would be as much in place in a scientific educational handbook." Another illustration of the nature of the science is taken from "La Bruyère: "Love may lead to ambition, but ambition will never return to love." A third is from "Othello": "Trifles light as air are to the jealous confirmations strong." It may be admitted that if there is a science of character, and any one of these quotations is an illustration of its truths, or laws, or facts, then all literature is full of materials for it, and our wonder that a man of Mr. Spencer's grasp of mind should be "always sliding off it as though it were an inclined surface" is considerably increased.

"George Eliot does not say," continues Mr. Mallock, "that everybody feels emotion; La Bruyère does not say that everybody falls in love; Shakspere does not say that everybody is made jealous. The generality of the statements does not lie there. As general statements they mean nothing more than this: that given the emotion, given the love, and given the jealousy, emotion, love, and jealousy will act in certain uniform ways."

This shows, however, that all hope that the new science will enable us to predict individual action is idle; and as we acquire a deeper acquaintance with it, we find that it has no such aim. All that it enables us to do is to tell that certain motives produce certain results. Mr. Mallock's last example is his most striking illustration: "All productive labor that rises above the lowest is always motived by the desire for social inequality."

It will be seen from this that Mr. Mallock's science consists of isolated propositions about the relation between men's motives and their actions. These all rest on observation. It is a truism that we know nothing of human motives except as they are inferred from human acts. Experience teaches us what the desires of the mind impel us to do, and we assume uniformity of action throughout the race. If a poor man lies in wait for a traveller on the highway, knocks him down, and robs him of his purse, we infer with considerable certainty that his motive was to get the money in it; and observation of the manner in which men act under temptation teaches a number of truths of the same kind. But, taken altogether, what science of "character" do they produce? Mr. Mallock does not tell us; and when we really examine what he has been saying, we find that instead of explaining what his "science of character" is, or giving it a definition, and showing how it is related to other human sciences, he has been collecting a number of general truths about various human passions and motives, and assuring us that they imply a science, which he has discovered. And finally, the science yields him the startling truth that we have quoted above about the desire for inequality. It is just as isolated as any of the others, and he proposes in the first place to prove its truth, and then with it show several important things:

"Now, I have made no attempt as yet to prove this proposition true; it still confronts us as utterly unsupported. My sole aim hitherto has been, before proving it to be a truth, to explain the kind of truth that I propose to prove it to be. Firstly, it is a truth belonging to an inductive science, and it embodies as such not opinions as to particulars, but knowledge as to a permanent principle; and secondly, while this knowledge cannot be applied to the present so strictly as to enable us to predict a man's future actions, it will enable us, suppose a given action predicted, to state as a certainty that a certain cause must produce it. Given the action, it will enable us to reason back to the motive; and given the absence of the motive, to deny the possibility of the action. In other words, it will afford us no certainty that a hundred years hence there will be any skilled labor at all in the world, but it will afford us a certainty that if there be any skilled labor, the desire for social inequality will have been the motive that produced it, and that social inequalities will be existing to make the desire operative."

Mr. Mallock then proceeds to prove his scientific truth or law, that labor is the result of a desire for inequality. As far as we understand his proof, the evidence of it consists in the fact that in the early stages of civilization wealth is produced by means of slavery. One man enslaves others in order that he may be better off than they, and the wealth that they produce is consequently the result of his desire for inequality.

To return to his original proposition about the democratic desire for equality, we now see what he means by saying that labor is not the cause of production. Production is caused by the desire for inequality; and if you take away this desire for inequality, and substitute a desire for equality, you are on the high road to chaos—*q. e. d.* But the fact is that Mr. Mallock's truth is a mere invention of his own. Nobody desires inequality as an end. If the beginnings of civilization rest on slavery, slavery itself rests on conquest, but one tribe or nation does not conquer another because there is a longing for inequality, but because it wants the other's women or lands or cattle. The conquerors make the slaves work merely because they do not want to work themselves; they are able to do this, no doubt, because of an inequality of strength, just as a modern capitalist is able to employ labor because of an inequality in the means of subsistence; but it is an extraordinary inference from this to imagine that the desire for inequality is the cause of labor. It seems to have escaped Mr. Mallock that it is very much against his proposition that it should have been left to him to discover it. The truths of his "science of human character" all rest on ages of observation of man by his fellows; and if there had been any such thing as a general desire for inequality, we should have heard of it long ere this. We have heard of the desire for riches, pleasure, fame, power; but it was left to Mr. Mallock to discover that there was an eternal human longing for inequality as an end in itself.

From the desire for inequality Mr. Mallock draws the momentous conclusion that "any social changes that tend to abolish inequalities will tend also to destroy or diminish our civilization." This would seem to show that in any given state of society the existing inequalities were always right, and it could be used in support of the system of slavery or polygamy, or any kind of abuse that it seemed desirable to defend. But Mr. Mallock, feeling that this would be going too far, guards himself against such an inference by declaring that the efficiency of the desire for inequality, "as the cause of civilized production," will increase with its magnitude "only within certain limits." These "will differ according to the temperament, the political history, and the occupations of each separate people." But "precisely the same principle will be found to underlie all of them. Inequality, as it increases, will in every case increase production, until by its magnitude it begins to cause despair or indifference rather than hope in the skilled laborer, and misery and weakness instead of resolve in the unskilled. As soon as it increases beyond this point production will diminish; as soon as it decreases toward this point again production again will increase."

In other words, there must be just enough inequality, but not too much; and where the "point" to which Mr. Mallock refers is to be found no man can say. Now, what his book is designed to show is the absurdity of the dreams of the social-democrat, who longs for a general division of the property of the world, and the abolition of inequalities of all kind. On his own showing, all he has managed to prove is that there must always be inequalities in the world, if there is to be civilization, but that how great these inequalities ought to be must depend on circumstances. All this might have been proved, and has been proved over and over again, by writers who never heard of the "science of human character." There is nothing new in Mr. Mallock's conclusions, and if his means of reaching them are new, they are as certainly wrong. The whole argument is really a juggle with words, and his discovery of the "science of human character" a monstrous mare's nest.

The Life and Works of Thomas Bewick: Being an Account of his Career and Achievements in Art. With a Notice of the Works of John Bewick. By David Croal Thompson. With 100 illustrations. London. 1882.

We have at last, in the volume before us, a full and satisfactory record of one of England's

greatest artists. It is not often that a book so thoroughly fulfils the promise of the title-page. Mr. Thompson's labor has evidently been one of love; yet he has avoided the not unusual exaggerative admiration of the enthusiast. He has given us no indiscriminate eulogy, but a plain, straightforward, impartial narrative, not brilliantly but well written, sober, careful, and sensible, such as best befits the character of Bewick, the plain, simple Englishman, "more like a small farmer than a competent artist," homely for all his genius. We have waited long for this much-wanted addition to our biographies; Jackson and Chatto's account in the 'Treatise on Wood-Engraving' being limited by the more general object of that book, Atkinson's 'Memoir' being only a sketch, and the 'Memoir' written by Bewick himself lacking continuity and completeness.

Thomas Bewick, both as artist and as man, may well claim an extended recognition. Famous as an engraver, yet greater as a draughtsman, whether copying from life or designing, and without need of reference to his works in water-colors, he takes rank with the foremost men in English art. Only a draughtsman on wood (on small pieces of wood—his best blocks some three inches square), yet in truth to nature and in the power of humorous and pathetic invention he is not surpassed by Hogarth himself. Is the genius of Holbein less manifest in the "Dance of Death" than in his larger works? Nor is the greatness of Bewick less than that of Hogarth, though the one in his "Marriage à la Mode" has painted perhaps the best and most lasting of English pictures, and the other has only rendered in black and white the birds of England and those marvellous tail-pieces to the 'Birds' and to the 'Fables.' For true and perfect delineation of bird or beast, when he saw them in life, no one could excel him; his landscape is equally truthful (a single cut, the "Tame Duck" is proof sufficient), and we have no better representations of English—say, rather, Northumbrian—landscape than those which either serve as backgrounds to his birds or stand as pictures by themselves. His human figures are not academical, and want grace (grace was not needed in the subjects that he preferred), but in his best works they are excellently drawn, well composed, and suited to his purpose. For all the higher qualities of an artist Bewick's place is among the first. Due honor to him on such ground has come but lately. As the engraver only we incline to think he has been somewhat overrated. We would also call him rather the improver than the restorer or inventor of engraving on wood. However poorly, the art was practised by others before he began, and Robert Branston, his contemporary, was certainly the more accomplished *engraver*, Bewick's most remarkable work showing little of what would be technically known as engraving skill. Distinct, however, from that mere technical capacity was the artist faculty which made light of all scholastic deficiencies, and which, breaking through or escaping the conventional, was the occasion of his peculiar method—that of using the graver always as a pencil, drawing every line with it—a method commonly known as "white line," the true and distinctive method of engraving on wood. It is this which distinguished Bewick from Branston, the Bewick from the Branston school. As engravers only, Branston and his greater pupil, John Thompson, were superior to Bewick. Bewick's own pupils, Nesbit, Clennell, and Harvey, excelled him as engravers, Nesbit and Clennell not departing from the master's method.

We are here supplementing our author's writing. He takes little critical notice of the Bewick *engraving* (not without reason when the critic is not an engraver), and gives his chief attention to the more important designs. These are thoroughly treated of: catalogued, described, and well discriminated as to merit. In this respect the book is most satisfactory. Everywhere we have evidence of careful research and conscientious examination. The writer seems to have looked into everything bearing on his subject, from Jackson's 'Treatise' to last year's publications of the Fine Art Society. We have lists of all the engravings that can fairly be attributed to Bewick; we have accounts of the several editions of his more important works; we have descriptive notices of what, in the 'Quadrupeds' and 'Birds,' the author would consider the best cuts. Dissenting from his judgment of the inferiority of work in the 'Fables' (there are marks of other hands employed, but no signs of the master's decline), we are bound to acknowledge Mr. Thompson's general correctness. He is well informed, and has given us amply of his information.

Of the man Bewick—of his life, as well as of his work—we have a good and, we cannot doubt, a very faithful representation. Of his parentage, his early country life and training; of his simple habits, his manly, earnest, blameless character, we have enough, and that well told, to bring the man before us. It would have been out of harmony with Bewick's nature to write of him gushingly or garrulously; but there is no stint of honest and well-grounded admiration. Errors there may be, only to be found by close comparison with the sources of information open to Mr. Thompson. But the work bears the stamp of close inquiry and faithfulness. One error we have detected may be a misprint. Writing of his marriage (note to p. 85), we find: "Bewick at this time was thirty years old." On the same page it is stated that the marriage took place on the 20th of April, 1786. At page 1 we are told that Thomas Bewick was born on the 12th of August, 1753. Note also at page 116 *zebra*, a misprint for *zebu;* at page 117, *Sandal* for *Sandoe;* and at page 127 a reference to page 176, in Bewick's first edition, which should be page 170. And our copy of the first edition does not contain either the Black Bear or the Harrier, both spoken of by Mr. Thompson as to be found there.

What most we have to find fault with in the book may be here appended without intention of subtracting from the praise we have already only justly given. Few things are absolutely perfect. Our chief objection is to the choice and arrangement of the engravings. Number rather than choiceness seems to have been the motive of selection—shall we say with the author or with the publishers? John Bewick, the brother, an engraver too, and a designer of much talent, though not of original genius, is very properly introduced by Mr. Thompson, and treated of not only in connection with his greater brother, but on his own account also. We do not therefore need eleven examples of his inferior work, all out of one small publication, the 'Looking-Glass for the Mind,' scattered among the pages merely to add to the show. Fourteen more of early and quite uncharacteristic blocks by Thomas Bewick, from his 'Select Fables,' 1776, 1784, seem given for no better reason, just because they were within reach. The book-plates at pp. 232-3, and the cut on page 228, are certainly not by Bewick. We should be very doubtful of the book-plate "on copper" at page 89, and of the small "Chillingham Bull," page 109. The Parnell cuts, pp. 153 and 161, may be partly his, but he never touched the Thurston drawings at pp. 92 and 219—they are probably Clennell's. A happier selection of blocks, such as that in the September number of the *Century*, might also have been given, had others been available. All allowances, however, made for choice, we must decidedly protest against the placing of the cuts—distributed as if only to get a look of continual illustration, without chronological order or juxtaposition with the text. This sort of thing may suit an "illustrated" Christmas-book, where cuts are only wanted to attract, but is intolerable in any history. The cuts are some from the original blocks, some from electrotypes, some "reproduced" by "Swain's process." In all cases they do injustice to Bewick, being taken from worn blocks or from not the best impressions. It is not easy to see how this could have been avoided; and Mr. Thompson has wisely rejected copies.

Mr. Thompson is hard upon Anderson, our first American engraver, for his copies of the 'Quadrupeds' and other works. "Pure piracies" he calls them. The words would be strictly correct, had they been put forth as Bewick's. But the title-page is plain: "the figures engraved on wood, chiefly copied from the original of Thomas Bewick"; the engravings also showing for themselves that they were not Bewick's—all of them, as Mr. Thompson is careful to note, reversed, that being easier than reversing them on the wood—"faithfully copied, but the workmanship decidedly inferior." Inferior of course: they were copies. Also, they were the first attempts at engraving made in this country.

Turning back from our objections, we can but commend the author for a book well worthy of its subject—a valuable addition to our knowledge of Bewick and of his works.

Selections from the Writings of Walter Savage Landor. Arranged and edited by Sidney Colvin. London and New York: Macmillan & Co. 1882.

"I SHALL dine late; but the dining-room will be well lighted, the guests few and select." This was Landor's prediction of his own future in the world of letters, and it has certainly been fulfilled. The Landorians are a mere handful, and there seems little likelihood that they will ever be more. Indeed, there is danger that, as those pass away who have seen that remarkable man face to face, and felt the influence of his extraordinary personality, and his work comes to rest upon its literary merit alone, it may sink into undeserved oblivion.

In the case of no writer that we can call to mind has there been so great a contrast between the characteristics of the author himself and those of his work; and in none, had we only the work to judge by, should we form so erroneous a conception of the author's personality. Who, from reading, say, 'Pericles and Aspasia,' could imagine that the author was the Boythorn of Dickens? Those who have read Landor's life and have a vivid conception of "the old lion," full of passion, of fire, of sudden fierce wrath, exploding into furious fulminations at mere trifles; full also of tenderness and pity, and of quivering indignation at any wrong done to the innocent and weak; the Landor who (as is said) flung an impertinent per on out of a second-story window into the garden, and then cried in horror, "Good God! I forgot the violets!"—these would naturally expect from such a man work of a volcanic kind—passionate, wild, irregular, full of splendors and glooms, and saturated with intense vitality.

Strangely enough, it is just the opposite of all this. Clear, calm, severely self-restrained, perfectly defined in every part, almost colorless, Landor's work impresses us much like a piece of Greek architecture. We see that the workman has perfect command of himself and of his material at every moment; that every word has been chosen with deliberate preference, and

every sentence carefully wrought and fitted to its place. No man ever subjected himself to severer literary criticism, or took greater pains with the minutest parts. He sought his words, he said, "with care, difficulty, and moroseness." Thus he became "faultily faultless"; he gained perfection of a kind, but he lacks spontaneity and those happy audacities and sudden flashes which are the inspiration of the moment. We admire his noble and pathetic passages; we cannot find a fault or suggest an improvement; yet they never give us a thrill or a glow.

Again, the form he has chosen for by far the greater part of his work—that of Imaginary Conversations—is one not likely now to please the popular taste, though it had some vogue in the glacial period of English literature. It could only now be made successful by one who had the dramatic gift of conceiving or creating a living character, with thoughts and speech all his own. Of this gift Landor had nothing. What history and biography could tell him of his characters he took; and, of course, he made a Czar Peter brutal and a William Penn mild; but, beyond this, the thoughts, in the main, are the thoughts of Landor, and the voice is always the voice of Landor.

But it is not our purpose to go into detailed criticism of Landor's work. Thus much has been said to show why here, if anywhere, a volume of selections is justified, that the public may have the chance of learning something of a really great writer, whom in any other form they are not likely to know at all. Landor lends himself very kindly to this treatment. Most of his finest gems may be detached from their settings without damage; even of his best works, fragments are often as good as the whole. And Mr. Colvin has made his selections with taste and judgment, so as fairly to represent the whole body of Landor's work.

We have space for but a single extract, chosen to give an idea of Landor's descriptive power. The centurion Caius Marius, having entered the besieged city Numantia, reports to his tribune what he beheld therein. The famine-stricken remnant of its inhabitants had thrown themselves in despair on a burning pyre.

"The funereal horn that sounded with such feebleness sounded not so from the faint heart of him who blew it. Him I saw; him only of the living. Should I say it? there was another; there was one child whom its parent could not kill, could not part from. She had hidden it in her robe, I suspect; and when the fire had reached it, either it shrieked or she did. For suddenly a cry pierced through the crackling pine wood, and something of round in figure fell from brand to brand, until it reached the pavement at the feet of him who had blown the horn. I rushed toward him, for I wanted to hear the whole story, and felt the pressure of time. . . . When I gazed on him in height almost gigantic, I wondered not that the blast of his trumpet was so weak; rather did I wonder that famine, whose hand had indented every limb and feature, had left him any voice articulate. . . . He held the child against me, and staggered under it.

"'Behold,' he exclaimed, 'the glorious monument of a Roman triumph!' . . .

"The crowd of incumbent bodies was so dense and heavy that neither the fire nor the smoke could penetrate upward from among them; and they sank, whole and at once, into the smouldering cavern eaten out below. He at whose neck hung the trumpet, felt this and started.

"'There is yet room,' he cried, 'and there is strength enough yet, both in the element and in me.'

"He extended his withered arms, he thrust forward the gaunt links of his throat, and, upon gnarled knees that smote each other audibly, tottered into the civic fire. It, like some hungry and strangest beast on the innermost wild of Africa, pierced, broken, prostrate, motionless, gazed at by its hunter in the impatience of glory, in the delight of awe, panted once more, and seized him!"

The typography and general finish of this little book are very neat, and the portrait full of life and spirit. Two or three slips of the type are not worth noting; but it may save a reader some puzzling if we mention that the mysterious "to excueel" on page 299 should be "to exue it."

Victor Emmanuel. By Edward Dicey, M.A. New York: G. P. Putnam's Sons. 1882.

Mr. Dicey has told the story of Victor Emmanuel's life with a great deal of skill, and, without exaggerating his virtues of mind or character, has given a picture of the King's career with which his warmest admirer could hardly find fault. This was not perhaps a difficult task, for it required no subtle analysis or profound psychological inquiry. The last Duke of Savoy and first King of Italy had a mind and heart of great simplicity, though his knowledge of character and his common sense enabled him to make use of other men very different from himself in this respect—astute politicians, who all their lives played his game, not always themselves knowing it. There is something very amusing and at the same time instructive in the remark attributed to the King when he heard of the catastrophe of Sedan and the capture of the wily intriguer who had, ever since his accession to the throne of France, been aiding the cause of Italy chiefly at his own expense: "Only to think that that worthy man would always insist on giving me advice!" The French alliance was, of course, originally the work of Cavour, and it is still one of the secrets of history what were the precise terms of the engagement entered into between the Italian Minister and Napoleon at Plombières, in 1858, under which France agreed to assist Italy against Austria. But Cavour owed his opportunity of making this secret treaty, as well as that of Turin, by which Sardinia became an ally of France and England in the Crimean war, to the King's thorough comprehension of his ability. Throughout his career he always displayed that willingness to repose confidence where it was merited, and absence of a jealous distrust of superior intellectual power, which is one of the unfailing marks of a really great fitness for the work of governing men.

No one can read any account of the rise of modern Italy out of the Sardinian monarchy without seeing that the King, Cavour, and their assistants in the work accomplished it because the race and generation to which they belonged possessed that precious gift for which Italy for centuries had been longing—political sense. Why it should have been lacking for centuries, and should have suddenly appeared in the very quarter in which the Italians had least expected to see it; why, when the whole Peninsula had for a generation been ringing with a demand for a republic, it should unexpectedly have found its saviour in a ruler the traditions of whose family and training were solely aristocratic and military, is a puzzle which can only be fully explained by a more minute study of the social and constitutional development of Piedmont prior to the accession of Victor Emmanuel than Mr. Dicey in a brief biography could afford to undertake. It is, however, just as self-evident now as it was doubtful in Italy then, that the cause of a United Italy was doomed to continual failure until the kingdom abandoned by the ill-fated Charles Albert had been reorganized and recreated by his warlike and politic son. In this work, as Mr. Dicey points out, nothing showed Victor Emmanuel's talent for government more conspicuously than the fact that, in the early and critical portion of his career, he recognized the necessity of being a constitutional sovereign in fact as well as in name, "even when by so doing he ran counter to his own personal preferences and wishes. Very few constitutional rulers have ever adhered so faithfully to the principle that the choice of ministers is a question to be decided by parliament alone, and that it is for a minister, and not for a sovereign, to determine upon what elements the minister shall rely to obtain a majority." A signal instance of self-restraint shown by Victor Emmanuel in this respect was in his allowing Cavour to separate himself from the Conservative party, of which the Prime Minister D'Azeglio was the chief, and to form a coalition with the Left. Victor Emmanuel's life cannot be made romantic, for his character was not romantic; but the romance of the redemption of Italy surrounds all the pregnant events of his reign with a halo which time can never dim. Like the simple heroes of classical history, he was more intent on discharging the task to which he had set himself than in arousing popular enthusiasm for it, or giving it an attractive and spectacular appearance. But the deeds he did were in themselves romantic, the epoch was romantic, and the country he saved, the country of romance. The plainest and simplest story of his life fires the imagination and stirs the blood of the reader.

History of the Twelfth Regiment Massachusetts Volunteers (Webster Regiment). By B. F. Cook. Boston: Twelfth Regiment Association. 1882.

In the still summer nights that came after Big Bethel—before the lively bustle of preparation had given place to the "hope deferred that maketh the heart sick"—the sidewalks of the quiet Boston streets began to echo to the alert tread of young men returning from their drill-halls and armories, keeping step to a new and stirring marching song. It is said to have originated with the Second Battalion M. V. M., in garrison at Fort Warren. It was adopted by the Twelfth Regiment, and by it soon introduced to the public. When this regiment received its colors in Boston on the 18th of July, 1861, and again when it passed through Boston from Fort Warren, going to the field, on the 23d (two days after Bull Run), it sang this song, "John Brown," with a full band. The times added an eloquence to the words, and the inspiring music shouted by 1,040 men pulsated through the crowded streets with thrilling effect. The regiment saw hard service, bore its full part, fought well, and suffered heavily at Cedar Mountain, South Mountain, Antietam, Fredericksburg, and Gettysburg, and did credit to its State and its cause. Three years later, July 1, 1864, with eighty-five men from the field, and eighty-five more gathered on the homeward route from detached service and from hospitals, the regiment again marched through the Boston streets, in sad contrast to its original strength and freshness. A week later it was mustered out of service.

This History is a modest compilation of diaries of various members of the regiment. It contains a capital map of the regiment's marches throughout its service. This is in agreeable contrast to the rough and illegible woodcuts with which publishers of late have fallen into the habit of illustrating books on the war. The Twelfth seems to have shared with the Twenty-first a tendency to "plug" its superior officers for not coming up to its notions of sentry etiquette. This record says: "June 12, 1862—At evening, General McDowell was examining the regimental picket-line, when the sentry demanded the countersign. McDowell refusing to give it, the guard fired, missing the General, but wounding an aide in the leg, and killing his horse. McDowell complimented the sentry for his prompt discharge of duty. (The aide's opinion does not seem to have been obtained.)"

A Dictionary of the Popular Names of the Plants which Furnish the Natural and Acquired Wants of Man in all Matters of General and Domestic Economy. By John Smith. London and New York: Macmillan & Co. 1882. 1 vol. 8vo, 459 pp.

In this volume the venerable ex-curator of the Royal Gardens at Kew has gathered a large amount of more or less useful information in a popular and convenient form. The subjects treated are arranged under their English or vernacular names alphabetically, while an index of genera noticed in the work adds to its value for the scientific student, who may thus readily discover the uses and popular name of a plant with which he may be acquainted generically. Besides plants directly useful to man, numerous ornamental and curious plants are included, which, as articles of traffic and commerce, are with doubtful propriety considered economic in the technical sense. Evidences of hasty compilation are not infrequent. For example, *Kamala*, the product of an East Indian tree of the Euphorbia family, is only described as a dye, while its better-known and important anthelmintic properties are not noticed. Our hickory nuts are included, but nothing is said of hickory wood. (The fact, by the way, seems to have hitherto escaped recognition, that the wonderful development of the American trotting horse is due to the hickory tree; from no other material could the light, strong carriage peculiar to America have been constructed, and without the light carriage, Maud S. or Clingstone could not have been produced.) *Cereus*, a genus of cactus, occupies half a page without mention of the most important of the entire family, the great tree cactus of our Mexican boundary—an omission which travellers who have seen the "Suwarrow" on the Arizona desert will not well understand. The definition of *Mirabel*—a variety of plum—as "a French name for candied or preserved plums," is certainly too general.

But defects of this nature are not, after all, very important, and will be readily overlooked in a work that contains so much information of the sort which it is often most difficult to find.

BOOKS OF THE WEEK.

Browne, I. Humorous Phases of the Law. New edition, revised and enlarged. San Francisco: Sumner, Whitney & Co.

Johnston, A. K. School Atlas of Astronomy. New and enlarged edition. By Robert Grant. G. P. Putnam's Sons. $4 50.

Equity Pleading—Subrogation—Blackstone.

JUST PUBLISHED.

*A REVIEW OF BLACKSTONE'S COM*mentaries, for the use of Students of Law and the General Reader. By Marshall D. Ewell, LL.D. (being the first volume of Ewell's "Essentials of the Law"). 16mo, 640 pages, in leatherette, $2 50, net; in law sheep or half English calf, $3, net.

This Abridgement is so full as to be practically a new edition of Blackstone—with the obsolete parts omitted. What is retained is so marked by different kinds of type and by prominent catch-words that the proportionate importance of each paragraph is seen at a glance. No notes (except a few of an explanatory nature) have been made. The result of the editor's careful and experienced work is a "pocket Blackstone" at a moderate price. It is one of the finest specimens of University press-work.

*A CONCISE TREATISE on the PRINCI*ples of Equity Pleading. With Precedents. By Franklin Fiske Heard. 226 pages. Small 8vo, cloth, $2, net: law sheep or half calf, $2 50, net.

This book is what it claims to be, "concise." It presents the principles of Equity pleading briefly, and in accordance with modern reforms. The appendix of Precedents will be found very useful.

The Virginia *Law Journal* says: "A very useful and excellent book, well calculated to assist not only the classes for which the author says it was especially designed, but the general practitioner."

THE LAW OF SUBROGATION. By Henry N. Sheldon. 370 pp. Law sheep or half calf, $3 50, net.

The principles of subrogation are now of such general application that this work is of value to all members of the legal profession. The *American Law Review* (Sept., 1882) says: "For the purposes of the practitioner, the work is done to admiration. Its arrangement is logical, and its statements terse, vigorous, and abundantly supported by authorities. It is not only honest, but able, and we take great pleasure in welcoming it as a valuable accession to the literature of our guild."

NOTED FRENCH TRIALS: Impostors and Adventurers. By Henry W. Fuller. 12mo, cloth or cartridge paper, $1, net.

Mr. Fuller has selected from the Causes Célèbres some of the most startling and interesting, and presented them in an attractive form. The Table of Contents includes: The False Martin Guerre; The Woman Without a Name; Collet; The False Dauphins; The Beggar of Vernon; The False Caille; Cartouche; Mandrin.

Recently Published:

THE REPORTERS. Arranged and classified, with incidental remarks. By John William Wallace. Fourth edition, revised and much enlarged. Law sheep or half calf, $5 50, net.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 28, 1882.

The Week.

THE *Herald*, the *Times*, and the *Journal of Commerce* had leading articles on Saturday of a somewhat alarming character on the subject of the relations of the Associated Press with the Western Union Telegraph Company and its present controller, Mr. Jay Gould. The substance of the matter, as stated, is that Gould and the telegraph company have manifested a desire and purpose to have a voice in the collection as well as the transmission of the news for the press, and to supplement their functions as common carriers with those of news agents. This attitude on the part of Gould and the telegraph company, the *Herald* informs us, has been supported or acquiesced in by three members of the New York Association—viz., the *Tribune*, the *World*, and the *Express*—and, up to a recent period, opposed by four members—viz., the *Herald*, *Times*, *Sun*, and *Journal of Commerce*. The *Journal of Commerce* says also that offers for the purchase of that paper were lately made, which it believes to have been made with a view to obtaining another vote in furtherance of this scheme. Some time after this offer had been made and declined it is stated that the *Sun* exhibited signs of wavering and of going over to the Gould side, but has stopped short of actually doing so. The *Times* publishes sundry extracts from the *Sun* on the subject of Gould and his political projects which lead the former to indulge the hope that Mr. Dana is not under Gould's influence to any alarming extent. The *Journal of Commerce*, on the other hand, appears to take a very serious view of the *Sun's* attitude, and the *Herald* thinks that the time has nearly come for the Government to consider the expediency of taking the telegraph business of the country into its own hands. The attitude of the Western Associated Press is also commented on as not so decidedly opposed to the Gould plan as it might be and ought to be.

Supposing the information given by these papers to be correct, the only comment the case admits of is that any partnership between the newspaper press and the Western Union Telegraph Company (whether controlled by Jay Gould or by any other man), in the business of collecting and preparing the news by which the people are guided in their daily affairs, is not to be thought of. Such a project will be resisted by every journal with the least grain of independence—every one whose opinions are of any value or consequence. We have not the least idea that the *Sun* will yield upon that issue an inch more than the *Herald*, or the *Times*, or the *Journal of Commerce*. Nor have we any apprehension that the Western Associated Press will ever consent to such a partnership. There is, we believe, another issue involved in the controversy—whether the Associated Press shall allow itself to be forced into an exclusive contract with the Western Union Telegraph Company, binding all its members and clients to give all their business, general and special, to the Western Union Telegraph Company, under a threat that if such a contract is not made the latter will take the news business into its own hands. We can understand how the *Sun* may desire to avoid a quarrel of this kind without intending ever to admit the telegraph company into a partnership in the news business. The "exclusive contract" system, however, is manifestly a species of tyranny, and ought to be resisted upon grounds of public as well as private policy.

The results obtained at the Saratoga Convention cannot be considered a fair expression of the wishes of the Republican voters of New York. Setting aside the small tricks and trades so effectively employed after the Convention met, by which the mastery of the State Committee was obtained and the Dutchess County delegation taken from Governor Cornell, the nominal victory achieved by the Administration party was based upon the virtual disfranchisement of four-fifths of the Republican voters of New York city. The rotten boroughs of Manhattan Island nominated Folger and Carpenter. The disgraceful condition of the party machinery in this city has long been the opprobrium of State politics, and to some extent of national politics. Last year the State Convention, controlled by the opponents of the Administration, seemed to be in the mood to order a reënrolment of the electors, to the end that all Republicans within the respective Assembly districts entitled to vote might participate, if they chose to do so, in the selection of delegates to nominating conventions. The resolution looking to this reform was defeated by a small majority. A year has passed by, and the rotten boroughs have ground out their customary grist of misrepresentation. We are perfectly convinced that the large majority of the Republicans of New York city were opposed to the nomination of Mr. Folger, or of any candidate wearing the badge of the Washington Administration. If the votes of those who were not allowed to participate in the primaries cannot be claimed for the candidates on any other ground, they can certainly not be claimed, even under the prevailing rules of party ethics, for a ticket so nominated, on the ground of ordinary party obligation.

The question whether Mr. Folger should, and whether he will, resign his position as Secretary of the Treasury at once, or whether he may be permitted to wait until after the New York State election, seems to agitate the politicians in Washington severely, and presumably those elsewhere who in some way or another expect to be benefited by a change. Some persons, probably belonging to the latter class, seem to be very anxious that the change should take place as soon as possible, and although perhaps not very punctilious as to political propriety under ordinary circumstances, they insist that Mr. Folger cannot with decency remain at the head of the Treasury while he is a candidate for the Governorship of New York. Why not? Because it may be said that he will use the power and patronage of his office to further his canvass in the State? It is just as probable that the Treasury patronage would be used for him by his successor as by himself. We see no reason why Mr. Folger should resign on that account. When a President or a Governor is nominated for reëlection, he is not expected to give up his place during the campaign. The same rule applies to the Secretary of the Treasury. Besides, Mr. Folger, if he wants to remain in official life at all, had better wait and see how the election will turn out.

There is no want of candidates for Mr. Folger's place. In the first line Mr. New, of Indiana, now Assistant Secretary of the Treasury, is mentioned; and it is reported from Washington that he not only has "set his heart upon it," but that he believes he has a "sure thing." The reason offered quite seriously by a Washington paper why, according to the fitness of things, Mr. New should be given the Treasury Department, is a very curious one. It says that the success of the Republicans in Indiana at the last Presidential election was mainly owing to three men: ex-Senator Dorsey, Mr. Dudley, and Mr. New. One of these, it says, had an offer of a place in the Cabinet (ex-Senator Dorsey); one was put at the head of a large and influential office, the Pension Bureau (Mr. Dudley); and now, Dorsey and Dudley having had their chance, it is no more than fit and proper that the third one, Mr. New, should be made Secretary of the Treasury. This is conclusive, and ought to settle it. That Mr. New is a man of a calibre rather small for the Treasury Department might be overlooked under such extraordinary circumstances. But from a variety of symptoms we must conclude that the Stalwarts of this State are blind to the eternal fitness of things, and look upon Mr. New's elevation to the head of the Treasury with great disfavor. They do not want anybody there who might manage the Treasury patronage from a Western point of view. They insist that the Treasury should continue to be in the hands of a New York man. Their voices are, therefore, for Mr. Crowley, of this State, now a member of Congress, to whom, however, some Stalwarts of influence prefer ex-Senator "Tom" Platt. There is evidently a chance for statesmen. No wonder some of them are getting impatient at Mr. Folger's backwardness in resigning.

The shrewdest and most important piece of work done by the Democratic Convention at Syracuse consisted in the nomination of Mayor Cleveland, an able and highly respected lawyer of Buffalo, for the Governorship. Mr. Cleveland is not a man of national reputation, but he has just that kind of standing before the people

which is apt to tell in a campaign like this. A popular uprising against Republican ring rule lifted him into the mayoralty of the city of Buffalo, a Republican city, by a majority of many thousands. He has therefore the advantage of having already once, as a Democrat, been elected to an important place by Republican votes, and all reports agree that he has fully justified the expectations of his constituents by crushing dishonesty and evil practices, Democratic and Republican, right and left, with an iron hand, and taking care of the interests of the city in every direction with excellent judgment. There does not seem to be any impression anywhere that Mr. Cleveland's nomination was brought about by any illegitimate influences, or that he owes it to anybody in particular. His character as a citizen and as a public officer, and his success as a politician in this nomination, seem to be equally unimpeachable. The principal Republican paper in Buffalo has declared in favor of Mr. Cleveland, and a telegraphic despatch reports that thousands of Republican citizens there are offering him their support. In other parts of the State signs of great disaffection among Republicans are constantly appearing. On their side, the Democrats are united again and will act harmoniously for the first time in many years. It is true that the admission of Tammany will in the course of time bear a large crop of trouble and confusion to the Democrats. But at present, at least, they will act together, probably with much vigor and enthusiasm. Will it be surprising if the outcome of all this is a disastrous Republican defeat? If so, the party will have to thank for it that overbearing faction whose selfish, dictatorial, and demoralizing rule has for a long time made many good Republicans think that temporary defeat would be a wholesome lesson. That thought may become an important factor in this year's contest.

The Massachusetts Convention got over the difficulty about the River and Harbor Bill very successfully. There was no mention of it either in Mr. Hoar's speech as Chairman, nor, as we believe out of courtesy to him, was there any in the platform. But condemnation of it was very clearly expressed by the nomination of Mr. Bishop for the Governorship over Mr. Crapo, one of the late members of Congress who voted for the bill, and who, but for this disturbing force, would undoubtedly have obtained it. His failure to get it appears to be generally taken as an indication that Mr. Hoar's own chance of re-election is small, or, in other words, that the disapproval of his vote on the River and Harbor Bill felt by his constituents has not been modified or overcome by his printed defence of it. His own opening speech was strongly protectionist, and, indeed, treated protection in an extreme form as a fundamental Republican doctrine, and in this probably revealed the real source of his error with regard to the River and Harbor Bill. A man who is profoundly convinced of the value of a high tariff must be even unconsciously disposed to lax views as to the manner in which the surplus thus accumulated in the Treasury should be spent. The Convention dealt with this aspect of the case gently but firmly, by saying that "it is clearly the duty of Congress to act speedily to reduce taxation in all its forms, and to lighten the burdens of the people. More revenue than is needed for the public uses the Government should not take. An overflowing treasury offers tempting inducements and a plausible excuse for inordinate expenditure." As the result is held to indicate the triumph of the younger generation of Republicans over those who have had the party in charge since the war, and who, however progressive, are still somewhat dominated by its ideas and influences, there is apparently enough discordant feeling created to give some comfort to the Democrats, but Butler's nomination is a plaster which would probably heal any possible amount of soreness or dissension among Republicans.

The Connecticut Republicans also abstained from touching the River and Harbor Bill, but they heartily endorsed President Arthur, and also said a good word, though not quite so strong a one, for civil-service reform. Both denounce assessments, which is hard on the Congressional Committee, who are circulating a defence of them by a New England Senator as a campaign document. The Connecticut Republicans are more outspoken about prohibition, as they recommend the submission of an amendment to the Constitution prohibiting the manufacture and sale of intoxicating drinks; while the Massachusetts men only ask for the "candid consideration of all propositions in aid of temperance and good order"—one of the mildest requests and most difficult to refuse ever put forth by a political organization. Massachusetts, however, asks for the same candid consideration for propositions "touching equal rights of suffrage, independent of sex," a matter which Connecticut overlooks, but atones for the omission by a dig at "the growing influence of the great corporations of the country." We do not believe a demand for "candid consideration" will do in platforms in lieu of a formal expression of opinion, though it sounds like a convenient mode of escape. It is in reality an exhortation to intellectual integrity, which is not the function of a party or its convention. What we want to know of a party is what legislation it means to enact or retain, not what virtues either of heart or head it thinks worthy of commendation.

The spirit of revolt in the Republican ranks seems to be by no means confined to the East. In Oregon, ex-Senator Mitchell was nominated for the United States Senate by a majority of a caucus of the Republican members of the Legislature, whereupon the minority flatly refused to vote for him; and as the majority which nominated him is not strong enough to elect him, and the Democrats will give their votes to a man of their own, Mr. Mitchell will probably fail. The country will certainly lose nothing by his defeat. It should not be difficult for the Republicans of Oregon to find and unite upon a much better man—of course, not ex-Attorney-General Williams, who was one of Mr. Mitchell's competitors for the place. The better class of Republicans will also have learned with great satisfaction of the final downfall of Chauncey I. Filley, the Republican "boss" of Missouri, one of the most reckless and unscrupulous Machine operators and spoilsmongers in the country. He was Chairman of the State Committee, and resolved that this year the Republican party should hold no Convention, but vote for the State candidates of the Greenbackers, and thus amalgamate with them. He induced a majority of the members of the State Committee to support him in this scheme, whereupon the rank and file of the party took the bit in their mouths, revolted against this usurpation of the "boss" and the majority of the State Committee, called a convention by general consent, in which all parts of the State were represented, nominated an excellent ticket, made an uncommonly good platform, and appointed a new State Committee. Thus "Boss" Filley all of a sudden finds himself without a party, and, we trust, even without a considerable fraction of one.

Mr. Stephen B. French, of this city, the Police Commissioner, and intimate friend of President Arthur, and known in politics as "Steve" French, has got himself into what would be to men outside politics an exceedingly unpleasant scrape. He appears to have been for some time much troubled in his mind as to the course Collector Robertson was likely to take in the nominating Convention. Would Robertson, Steve asked himself, support the Administration as a member of the State Committee? Would he support it as "controller" of the Westchester County delegates, whom, according to Steve, he has long held "in the hollow of his hand"? Steve watched Robertson and waited on him a good deal with the view of obtaining some clew to his designs, but apparently without result. At last, having to leave town without having unmasked the Collector, he went to the Convention, and presented himself at the meeting of the State Committee with what purported to be a telegram authorizing him to act as his (Robertson's) proxy, and he did so act. His vote as such proxy did not, it is true, change the majority in the Committee, but it was very influential as a sign of a *débâcle* among the Half-Breeds, which promised the Stalwarts a happy issue to all their undertakings. It now appears that the telegram was a forgery, that no such despatch was ever sent, and that it was not even written on a delivery blank. Steve, in fact, admits that it was a forgery, but one by which he himself was deceived. Who gave it to him he cannot tell, nor can he give any good reason for expecting Mr. Robertson to select him as his proxy. Moreover, he has been making statements about Mr. Robertson which the latter pronounces false, and which Mr. French's own witness has not only failed to sustain, but flatly contradicts. Now, Steve, as we have said, stands very high among "the boys" who manage the affairs of the Republican party in this city. In fact, he stands at the top. He is, we believe, the only one who enjoys unlimited access to the President; and then, too, as a Police Commissioner he is a guardian of public morals, and an official example of probity to the youths in the public

schools and in the College of the City of New York. Consequently his fall is a serious matter, though one would never think so to see the way people laugh when it is mentioned. It is, however, almost worse for what it suggests than for what it reveals. Thoughtful men are asking themselves, If Steve be capable of this sort of thing, what must be the moral condition of Jake, Mike, Barney, Ed, and Johnny, and Bob, who are Steve's trusted subordinates, and drink deep at the same well of practical politics? Is this a fair specimen of the "American system" as practised in this city by these estimable men? If Steve fails in veracity or worse on a pinch, what does Jake or Mike do when he finds himself in a tight place, or in sore need of something he has not got?

Mr. McKeon, the District-Attorney, made an excellent order the other day prohibiting any of the subordinates in his office from quitting their posts to attend either of the Conventions. The gravity of the evil against which it was directed was well illustrated in the trial last week before Recorder Smyth, in the Court of General Sessions, of the boy McCabe, who shot his stepmother. When inquiry was made for the articles found on the prisoner, it was discovered that they had been left at the Coroner's office in charge of a "man," but "the man" was gone to Syracuse. The prisoner's coat had been taken from him at the station-house, but "the man" had also given it to the prisoner's father. It then appeared that both the Coroner and Deputy Coroner had gone to Syracuse, and the court had to adjourn in order that they might be telegraphed to and brought back. It is to be observed, too, that these minor officials, who abandon their posts to go to conventions, are hardly ever either delegates or alternates. They go as "heelers," or henchmen of some boss, and simply tout for him in the hotel corridors, or shout for him in the gallery of the Convention.

Mr. Henry George is having a curious kind of success. His book—'Progress and Poverty'—has attracted a good deal of attention as an eloquent and striking presentation of some of the evils of modern society. His remedy, and the sole one, is the confiscation of the land of the country by the Government, and its conversion into public domain. He is going about now in England and Ireland, where there is much trouble about property in land, with somewhat of the air of a man who has discovered a sure cure of which people are beginning to see the value, and appears to think that it will first be tried in this country. The truth is, we believe, that he has not made a convert of a single owner of land in the civilized world. If he could produce one human being who was willing that his farm should be taken from him by the state without compensation, or who would not regard such a thing as robbery, to be submitted to only because resistance was useless, it would show that he was making some progress, however small. But we do not believe he can produce one such case of genuine conversion. The landholders of every civilized nation would, in fact, resist his scheme to the death, and they are so large a proportion of every civilized nation that their will in such a matter is supreme. Mr. George is probably cheered up by the adhesion of a considerable number of persons who own neither real estate nor any other kind of property, but we warn him that when confiscation day arrives they will make themselves scarce. As to the morality of the plan, it happily does not, as yet, need discussion, and Mr. George will get no one to discuss it with him. Whether a man or woman who has put a life's savings into a farm or lot ought not to forfeit the land and have the rent of it go to pay taxes for another man who put his savings into Government bonds, or into a steamboat, is a question which has not as yet become practical, and cannot become so without a complete revolution in the ideas of the race about social justice. It is a great pity that a man with Mr. George's powers of statement should be taken up with such a chimera.

The "subscribers" to the Irish "Skirmishing Fund" have held another meeting, at which the Committee of Investigation made a report, which substantially recommended that nothing more be done in the matter at present, because an "eminent Nationalist" has promised to "use all his energies and his best influence toward an honorable settlement of the question." The Committee was very glad to accept his offer, being naturally "anxious to have the matter taken from the public gaze." The public, we can assure the Committee, desires nothing better, as its "gaze" is very tired of the matter. But the "eminent Nationalist," if he expects to settle it, must be a man of fortune and leisure, for he has many years of unremunerative toil before him, unless, indeed, he expects to be paid out of subscriptions yet to come in for finding out what has become of those already received. *Harper's Weekly* recently reminded those natives who are amused by the Irish difficulties with their Skirmishing Fund, that Americans too have raised a skirmishing fund, of the disposition of which no account is rendered, and about which it would be well for that "eminent Nationalist," Mr. Jay Hubbell, to give some information to the subscribers. As long as he withholds all information as to what he does with the money, and the subscribers put up with his reticence, the Irish skirmishers seem less idiotic than they really are.

The feature of the week in Wall Street was a demonstration which was made on the money market by a clique of speculators who had arranged their books so as to profit by a decline in the price of stocks. This demonstration to establish high rates for money was made possible by the low reserve of the New York banks, which had fallen last week to $2,271,825 less than 25 per cent. of the deposit liabilities of the banks. The amount of money which the New York banks have sent away this season "to move the crops" is less than usual; it is true that the foreign exchanges have so ruled for several months as to take money from rather than bring it to New York, but the banks have accommodated their credits to this movement step by step, so that this could not justly be ascribed as the reason for the low percentage of bank reserves. The drain of money into the Treasury has been much in excess of the Treasury payments, and in the close working of the other influences affecting the supply of loanable funds the Treasury absorption of cash had been sufficient to give the stock speculators the opportunity which they improved. On Monday they sent the rate for call loans on stocks up to plain 15 per cent. per annum, and endeavored to reëstablish the old custom of quoting money per diem by making a few loans at 1-16 of 1 per cent. per day, which is equal to 22½ per cent. per annum. On Tuesday they ran the rate per annum up to 20 per cent., and again made loans among themselves at 1-16 per cent. per day. At this point the Treasury came in and ordered the prepayment each week, without rebate, of $5,000,000 of any of the called bonds, including the $25,000,000 recently called for December 23, the prepayment to begin on the 27th instant. This broke up the plans of the money-squeezers, and the rate for call loans began to fall, and soon reached plain 6 per cent. per annum, some loans having been made on the afternoon of that day as low as 3@4 per cent. Stocks and securities at the Stock Exchange which had begun to tumble, immediately stopped in their decline and advanced. Mercantile paper which could not be sold became salable, and confidence took the place of distrust and apprehension. Railroad earnings continue large, and general trade, although threatened by the money stringency, also continues large and profitable. It is doubtful whether the experiment of tightening the money market to affect Stock Exchange speculation will be tried again this season, so unprofitable has the first attempt turned out.

The deposition and imprisonment of the Grand Shereef of Mecca by orders from Constantinople, coming so soon after the murder of his predecessor, which was believed to have taken place also by orders from Constantinople, seems to show that the Sultan is still not easy in his mind about the Arab movement for his deposition from the Caliphate, and its restoration to the Arab line from which the Turks took it on the conquest of Egypt in the sixteenth century. That such a movement exists and is formidable, and receives a fresh stimulus from each sign of the decline of the Turkish Empire, there is no doubt, and it is especially annoying to the Sultan from the fact that one of his dreams just now is said to be the strengthening of his spiritual sway, as a compensation for the decline of the temporal. Any suspicion of sympathy with the new school will therefore, probably, make Mecca "unhealthy," as they say in New Mexico, for the Grand Shereef, whoever he may be, as long as the Sultan can reach the city with armed force. It is a misfortune for the reformers that they must, in order to have any standing in the Mussulman world, keep possession of the Prophet's tomb, and that, in order to have a Caliph of their own, they must drive away the Turkish troops, who, owing to the breech-loaders and the new drill, are much more formidable to the Arabs than they used to be in old times.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, Sept. 20, to TUESDAY, Sept. 26, 1882, inclusive.]

DOMESTIC.

THE New York Republican State Convention met at Saratoga, on Wednesday, and after the usual preliminary proceedings proceeded to ballot for Governor. The three most prominent candidates for the nomination were Charles J. Folger, Alonzo B. Cornell, and James W. Wadsworth. Mr. Folger was the so-called "Administration candidate," the other two being the nominees of the Anti-Administration or "Half-Breed" wing of the party. Mr. Folger was nominated on the second ballot, receiving 257 votes, eight more than was necessary for a choice, and his nomination was then made unanimous. On Thursday the ticket was completed, by the nomination of B. Platt Carpenter for Lieutenant-Governor; Charles Andrews for Chief Judge of the Court of Appeals; and A. Barton Hepburn for Congressman-at-large. The platform announces that the party has no new doctrines to present upon the questions of honest money, pure elections, the regulation of traffic in intoxicating liquors, the protection of home industry, and the necessity of restricting the power and influence of corporations; denounces monopolies and the Democratic party; urges the people of the State to "examine with intelligent care the constitutional amendments submitted to them"; discourages the practice of appealing to the Legislature to overrule the action of the local authorities; recommends the submission of the liquor question to the popular vote; points with pride to the financial achievements of the Republican Administration; recommends competitive tests for admission to the civil service, together with a fixed term for incumbents, "removal from office during the term of appointment to be only for cause"; approves the recent law of Congress designed to suppress polygamy; praises Governor Cornell's administration; and approves President Arthur's veto of the River and Harbor Bill

Judge Folger's nomination has been received with rather lukewarm approval by all that portion of the New York Republican press which represents the Anti-Administration wing of the party, and since the results of the Democratic Convention, the general feeling seems to be that the Republicans will have an uphill fight.

The Democratic State Convention met at Syracuse on Thursday, and adopted a platform arraigning the last Republican Congress for its shortcomings and extravagance; recommending a reform in the tariff; favoring the immediate passage of a civil-service reform bill by Congress; condemning the assessment of Government employees for political purposes; denouncing monopolies and demanding the repeal of all laws which tend to make "the rich richer and the poor poorer"; favoring a diffusion of education; demanding a revision of the laws relating to shipping and the carriage of ocean freights; favoring self-government for cities; opposing child-labor in factories; recommending laws regulating primary elections; and favoring the free-canal amendment. On Friday the ticket was nominated, which is as follows: for Governor, Grover Cleveland; for Lieutenant-Governor, David B. Hill; Chief Judge of the Court of Appeals, William C. Ruger; Congressman-at-large, Henry W. Slocum.

The Republican State Convention of Missouri, called in opposition to the decision of the State Central Committee, met at Jefferson City on Wednesday and nominated a State ticket by acclamation.

The Nebraska Republican State Convention met on Thursday and nominated J. W. Dawes for Governor. The platform reaffirms the faith of the party in free labor, free speech, and free schools; advocates currency on a specie basis and a protective tariff; demands legislative control of corporations; and maintains that legislation should prevent unjust discrimination on the part of railway companies.

At an adjourned meeting of the Colorado Democratic State Convention on Friday, resolutions were adopted declaring that reform in the civil service is absolutely necessary. The spoils system and the assessment of public servants for political purposes were denounced, and penal legislation demanded to destroy these evils. The resolutions insist that the remnant of the public domain shall be reserved exclusively for actual settlers as homesteads; recommend a tariff for revenue only, and denounce the Tariff Commission.

An immense meeting of Germans convened in Cincinnati on Sunday evening, under a call of the Association of Independent Citizens, who avow that they aim at guarding personal liberty, and the right to remain "free men on Sunday"—meaning to eat and drink what they please; to allow each one to observe Sunday in his own way; and to obtain legal protection for every branch of business, and uniform taxation. The call disavows all intention to form a new party.

The press throughout the country has been agitated during the week on the subject of the relations of the Associated Press with the Western Union Telegraph Company and Jay Gould, its present controller. It is said that Mr. Gould and the telegraph company desire and propose to collect, as well as transmit, the news for the press. The New York *Herald* stated in a leading article that this purpose of Mr. Gould's had been agreed to by three of the newspapers composing the New York Associated Press—namely, the *Tribune*, the *World*, and the *Mail and Express*—and that there was danger of certain other of the newspapers composing the Associated Press being bought over by Mr. Gould, thus giving that gentleman the control of all the news which is distributed to the newspapers. In view of this danger, the New York *Herald* thinks that the time has come for the Government to consider the expediency of taking the telegraph business of the country into its own hands.

There was a Cabinet meeting at Washington on Wednesday, at which were present the President and Secretaries Frelinghuysen, Lincoln, Teller, and Folger. Only routine business was transacted.

President Arthur will be unable to be in Boston on October 3, the day set for the celebration of the Webster centennial. The celebration has therefore been postponed until October 11, at which date the President will be able to be present.

A reception to Engineer Melville took place at Washington on Saturday evening. Assistant-Secretary-of-State John Davis presided, and the orator of the evening was Mr. R. W. Thompson, ex-Secretary of the Navy.

Up to Sunday last the money value of donations to the Garfield Memorial Hospital fund amounted to about $80,000.

General Hazen, Chief of the Signal Bureau at Washington, has received advices that the supply expedition which sailed July 8 from St. John's, Newfoundland, with additional stores for Lieutenant Greely's party, returned on Saturday last to St. John's, having failed in the attempt to reach them on account of the ice. Depots were established, however, to secure their safe retreat should it become necessary a year or two hence.

By an agreement between the United States and Swiss Post-office Departments, executed in Washington on Tuesday, the 19th inst., the limits of weight and dimensions of sample packets exchanged between the two countries are increased to 350 grains in weight, thirty centimetres in length, twenty centimetres in breadth, and ten centimetres in depth. This increase goes into effect on the 1st of October.

The Secretary of the Treasury on Saturday issued a call for registered bonds of the acts of July 14, 1870, and January 20, 1871, which will be paid at Washington on the 23d of December, 1882.

District-Attorney Corkhill and his assistants were occupied on Tuesday in taking testimony as to the alleged attempts to corrupt the Star-route jury. The proceedings were private.

Mr. Henry George's letter to the President has been referred to Secretary Frelinghuysen. It is learned at the State Department that Mr. Lowell in August acted upon this case, as well as that of Mr. Meany, and that the two cases have been the subject of correspondence by telegraph since the time of the arrests.

The first of the four parties which the Commission appointed by the United States Government has selected to observe the forthcoming transit of Venus from the southern hemisphere sailed for Liverpool on Wednesday. The party consists of Prof. Simon Newcomb, Lieut T. R. Casey, Ensign J. H. L. Holcombe, and Prof. Julius Ulke. These gentlemen will observe the transit from the neighborhood of Cape Town. The three other parties will witness the planet's projection on the sun's surface from Santa Cruz, Patagonia; Valparaiso, Chili; and New Zealand, respectively.

General Kimball, a member of the Utah Commission, arrived in New York on Monday night, and reports the fight against Mormonism to have been fairly begun. He said that the effect of the Commission's work was already apparent in various actions of the Mormons, many of whom were beginning to separate their families with a view to avoiding the cohabitation clause of the law, and large numbers of them are taking out naturalization papers.

A great rain-storm began on Friday morning and inflicted some damage in New York, Brooklyn, and the surrounding country, and serious damage in some parts of New Jersey. The extraordinary nature of the storm is shown by the fact that more than nine inches of rain fell in fifty-six hours. Extensive floods resulted on Saturday in the neighborhood of Paterson, Plainfield, Elizabeth, Newark, and other New Jersey towns, demolishing a great number of bridges, flooding houses, carrying away dams, and causing washouts in all directions, and many thousands of dollars will be needed to repair the damages. Several persons lost their lives.

Despatches from various points in the Northwest report more or less heavy frosts in eastern Iowa, northern and central Illinois, and northern Indiana. In only a few places, however, was the frost heavy enough to injure the corn crop.

The steamship *Lepanto*, of the Wilson line from Hull, arrived at New York on Sunday with her bows badly smashed in—the result of her having run into and sunk the steamship *Edam*, of the Netherlands-American Steam Navigation Company, on Thursday last, during a dense fog, in latitude 41° and longitude 66° 34′. All the passengers and crew of the *Edam* were saved, with the exception of the assistant and third engineers.

A bad accident occurred in the tunnel of the Harlem Railroad, at Eighty-sixth Street, New York, on Friday. The Portchester special train being forced to take the Harlem track by some obstruction on the Hudson River track, was run into by a Harlem train. The last car of the Portchester train was wrecked, and two passengers were killed and twenty-one persons hurt more or less seriously.

FOREIGN

On Wednesday reports of outrages and disturbances in the interior of Egypt continued to arrive in Alexandria. All the European houses and factories in Tanta and a few houses in Benha and Birket-el-Saba were reported to have been looted. An examination of the Treasury at Cairo proved that about £200,000 were taken by Arabi Pasha, of which £18,000 have been discovered at the War Office. It is probable that other deficits will be found in the Department of the Interior. A despatch from Alexandria on Friday night announced

that Damietta had surrendered to General Wood. Of the original garrison of 7,000 at Damietta, however, only 800 negroes remained on Friday night, and they fled without surrendering, after having plundered the town. A despatch from Alexandria on Saturday said that it was disgusting to witness the enthusiasm of the natives for the Khedive and to hear the expressions of loyalty of many who have been notoriously the friends of Arabi Pasha.

Arabi Pasha and his accomplices, both military and civil, will be tried by a court-martial, in which British officers of high rank will sit. The Khedive has issued a decree appointing a special commission to inquire into and prosecute the authors of the outrages committed in Alexandria in June last. This commission is to consist of four Europeans and three natives, and is to be under the presidency of Abderrahman Rushdi Bey, a Maltese renegade and Minister of Finance in Arabi Pasha's last Ministry. There will also be another commission, which will sit at Tanta, to investigate the crimes committed in other parts of Egypt during the rebellion. The Khedive's Government is making wholesale arrests of the supporters of the National party; all who signed the proclamation authorizing Arabi Pasha to continue the war are being imprisoned. The Princes Ibrahim, Hamed, and Kamil, who signed the petition prepared by Arabi Pasha last May for the deposition of the Khedive, arrived on Friday to pay their respects to the Khedive, but he refused to receive them. Some of the princesses of the Khedive's family are said to have been seriously compromised by the revolt.

It is generally believed that property valued at £1,000,000 will be confiscated and applied to the indemnification of sufferers by the massacres.

The Khedive has issued a manifesto stating that England has great interests in Egypt, both in regard to finances and traffic through the Suez Canal; that for the protection of those interests she was compelled to interfere, but that she has no intention of annexing the country. The Khedive also announces that he has authorized General Wolseley to represent him in restoring order and punishing the rebels, and all loyal Egyptians are called upon to render him every assistance.

The Khedive has offered Sir Edward Malet, the British Consul-General at Alexandria, the Grand Cross of the Order of the Osmanli, the highest decoration he can bestow.

On Tuesday the Khedive arrived at Cairo. He was received at the depot by the Duke of Connaught and General Wolseley with all possible military honors. The streets through which the Khedive passed were densely crowded, and the natives gave him a friendly welcome.

A grand reception was held at the Ghezireh Palace on Tuesday by the Khedive. Nearly 1,000 representatives of different villages were present. The Khedive refused to receive many implicated pashas and beys who came to profess loyalty, and warned the Ulemas and other high personages that they would be severely punished if they relapsed into disloyalty.

Arabi Pasha is reported to have said that the best thing the English could do for Egypt would be to send the Notables and other leading men out of the country, for if they do not, vengeance will surely be wreaked upon them after the departure of the British. Arabi says he is sorry he fought the British, and asserts that he never thought they would send so large an army to assist the Khedive, else he would not have gone into the war. He denies that he had any communication with the Sultan during the war.

The Khedive, with the approval of England, has offered Baker Pasha the task of reorganizing the Egyptian Army. The latter has accepted the task.

A solemn service of thanksgiving for the British pacification of the country was held in the Roman Catholic Church at Alexandria on Sunday. There was an immense congregation present. Thanks for the success of the British troops were also given in the churches in London and the provinces on Sunday.

It is officially announced in England that General Wolseley and Admiral Seymour will be raised to the peerage, in acknowledgment of their services in Egypt.

A despatch from London says that members of a committee disapproving Mr. Gladstone's Egyptian policy having, with a view of discrediting his opinions on foreign politics, reiterated the charge that he sympathized with the South during the American Civil War, Mr. Gladstone, replying through his secretary to an inquiry on the subject, writes that the statement attributing such sympathy to him is untrue, and contrary to authentic facts long ago made public.

The Grand Shereef of Mecca has been deposed and imprisoned at Taife, where Midhat Pasha was a prisoner. Abdallah Atricun has been appointed Grand Shereef. He is a brother to the Shereef who was murdered some time ago, as was then supposed by orders from the Sultan, because he was favorable to the British.

The Sultan of Turkey has ordered the immediate surrender to Greece of the whole frontier fixed by the International Commission. The representatives of the Powers who, at the invitation of Count Corti, the Italian Ambassador, had assembled at Constantinople on Sunday to discuss the Turco-Greek frontier question, dissolved their meeting on hearing of the settlement of the difficulty.

The Czar and Czarina arrived in Moscow on Wednesday. Immense crowds lined the streets through which they passed from the depot to the Kremlin palace, and they were received with the utmost enthusiasm. On Thursday the Czar held a reception in the Kremlin, at which he expressed thanks for the cordial welcome and the many assurances of loyalty which he had received. The object of the visit is to view the exhibition, which is to close on the 1st of October. A despatch from St. Petersburg to the *North German Gazette* says that the idea of an improvised coronation is out of the question. On Sunday the Czar and Czarina returned to St. Petersburg.

A despatch from St. Petersburg says that a recent speech of General Drenteln, Governor of Kieff, against the Jews, has been taken as a signal by the peasants and minor officials of the provinces for the renewal of hostilities against the Israelites. From all sides accounts are received showing a revival of anti-Semitic animosity.

It is reported that the German Government intends to devote its attention to the execution of a project for the construction of a canal to connect the North Sea with the Baltic.

A despatch from Berlin says that on Saturday the entire press congratulated Prince Bismarck on the twentieth anniversary of his entrance into the Prussian Ministry. The Opposition journals, while condemning Prince Bismarck's home policy, warmly referred to the services he had rendered the nation.

The Emperor William of Germany has written a letter to the King of Saxony, in which he says it affords him sincere satisfaction to again assure himself how entirely the King's views coincide with his own respecting the importance of keeping the troops in a state of readiness for war.

A despatch from Dublin states that owing to the release of a number of prisoners consequent upon the immediate expiration of the Coercion Act, the authorities have sent away certain persons suspected of informing, fearing that they would be murdered if they remained. On Thursday the last of the "suspects" were released from Kilmainham jail.

Patrick Walsh was hanged on Friday for the murder of Martin Lyden.

A Conference of Irish Nationalists will meet in Dublin on the 17th of October. Toward the end of the year there will be a great Irish National Convention to review the position and condition of the country. The delegates to this Convention will be elected by the people. A scheme has been propounded by Mr. Davitt for the formation of a gigantic organization whose leading objects will be the improvement of the social and political condition of the Irish, and the prevention of emigration from Ireland by obtaining profitable employment for laborers and evicted tenants. The scheme is to be discussed at the Convention of Irish Nationalists. Mr. Parnell, however, refuses to sanction the project, on the ground that the formation of such an organization would be impossible under the existing Coercion Act.

The Dublin *Freeman's Journal* states that Mr. Dillon will retire from Parliament owing to ill health. In a letter announcing this intention, Mr. Dillon says it will not be possible for him to take any part in Irish politics for the next few years.

Mr. E. Dwyer Gray has written a letter to Lord Mayor Dawson regarding the development of Irish manufactures. He advocates the holding of an exhibition in 1883 and the formation of an association to push the sale of Irish manufactures. He also advocates the holding of an Irish exhibition in the United States, and suggests that the United States should modify their tariff in favor of Irish productions.

Mr. Gladstone, replying to a correspondent, reiterates the declaration that he is unable to interfere with the operations of the Mormons in England, as he presumes their converts go with them willingly.

The Earl of Derby, the Right Hon. Hugh Childers, the Right Hon. William E. Forster, Sir Henry James, and other prominent men, have joined the Longfellow Memorial Committee.

A meeting was held in London on Wednesday evening to discuss the proposed introduction of Chinese labor into Great Britain. A motion calling upon the Government to frame measures to prevent the importation of Chinese was adopted.

Delegates representing 20,000 miners, at a conference at Rotherham, England, on Monday, decided to demand an advance of fifteen per cent. in wages.

Overdank has confessed that he drew lots with his confederates to decide who should attempt to take the life of Francis Joseph, and that he intended to throw a bomb into the garden of Miramar Castle. The High Court of Venice has given an opinion in the case of the recent arrests, that the extradition of persons conspiring against the life of the Emperor of Austria on Italian territory is allowable.

The Emperor of Austria has subscribed 100,000 florins for the relief of the sufferers by the recent floods in the Tyrol.

Baron van Lynden, the Dutch Minister of Finance, announced in the States-General on Monday that he estimated there would be a deficit in the budget of 26,000,000 florins.

At a consistory held at Rome on Monday Monsignor Czaki, Papal Nuncio at Paris, and Monsignor A. Bianchi, Nuncio at Madrid, were created Cardinals.

The Mexican Congress has adopted a constitutional amendment declaring that in the event of the death or removal of the President, his successor shall be the Senator who presided over the Senate during the month preceding the vacancy. When the Senate is not in session, the President of the Permanent Committee, who is alternately a Senator or Deputy, is to succeed. In the case of a permanent vacancy, the elections are to be held immediately. Hitherto the Chief Justice has been ex-officio Vice-President.

The exhibition building at Sydney, New South Wales, has been totally destroyed by fire with all its contents. The loss is estimated at £500,000.

MR. FOLGER'S NOMINATION.

THERE is no reason for surprise at the result of the New York Republican Convention. The struggle which preceded the nomination was virtually a struggle between two Machines—the National Administration Machine on one side, naturally strong by its patronage, and in this instance reinforced by Jay Gould and Mr. Conkling's "legal practice," and on the other side the State Administration Machine, reinforced by an honest public sentiment recognizing the good features of Governor Cornell's official conduct during the latter part of his term. Had the decision of the question, who should be the Republican candidate for the Governorship, been in the hands of the masses of the party, the relative strength of the Machines as such would not have turned the scale. But as it was in the hands of the politicians who "fix" and "run" primaries, and who get themselves elected as delegates to conventions, and who are under the influence of the Machines all the time during the different stages of the proceeding, there could scarcely be any doubt as to which Machine would eventually prove the strongest. If there was anything calculated to cause surprise, it was that the number of delegates to the Convention elected with the expectation that they would vote for Cornell or Wadsworth, was so large. But it was not surprising at all that a number of them, sufficient to give the National Administration Machine the ascendancy, should in the Convention have been won over, probably much to the disappointment of those who sent them there. There is much cheap material among New York politicians in both parties, and that material shows itself in its true character when power passes from one faction or one leader to another.

The nomination of such a man as Mr. Folger would, as such nominations go, be considered a strong one were the nominee permitted to stand on his own merits. As a member of the Legislature and as a Judge, Mr. Folger made a very creditable record. As Secretary of the Treasury he has done some very reprehensible things, of which the appointment of the notorious Mike Dady is a specimen, while he has credit for having refused to do things still worse. His management of the business affairs of the Department has been, on the whole, respectable, too. But as the Republican nominee for the Governorship he appears under decidedly unfavorable circumstances. The rapidity with which he skipped from a high judicial position into the Treasury and then tried to skip from the Treasury into the Governor's chair of this State, all within one year, is calculated to produce the impression either of great unsteadiness of purpose on his part, or of readiness to let himself be used as an instrument for the purposes of others. He appears, moreover, as the candidate of the national Administration for a State office, and if anything should be odious to the popular mind, it is an intrusive interference of the Federal power with State affairs. Such interference has, indeed, not been unusual in this State, but there is certainly a growing sentiment against it. It is scarcely necessary to add that the appearance of Jay Gould and the legal practitioner Conkling, with wires and leading-strings in their hands, is not a captivating background to Mr. Folger's candidacy.

What the general effect of his nomination on the masses may be, we can as yet, of course, only guess. The leaders of Mr. Cornell's forces in the Convention naturally gave in their adhesion without hesitation. It is quite probable that the professional politicians on that side are perfectly sincere in their assurances of support. It is, indeed, reported from Saratoga that some of the non-professionals, especially Wadsworth men, complain of the use of corrupt means in making up a majority for Mr. Folger, and threaten to "bolt." How much there may be in this, time will show. But as to the rank and file of the party, we are persuaded that thousands of good Republicans in this State, when they read the news of the nomination, laid down their paper with a languid sort of equanimity, saying, "Well, now let us wait to see what the other side will do."

The stories which are being told of the way in which the nomination was brought about —of the bargaining, intriguing, purchasing, and even forging which attended it or procured it—must place Judge Folger in a position of some embarrassment. In fact, the situation is one in which it is hard for a man of high character to know how to act. He is reported by an interviewer to have expected the nomination, if it came to him at all, as the free and practically unanimous offer of the Convention, brought about after a fair comparison of views and trial of strength. It has come to him, however, as the result of a victory of one faction, achieved, the minority says, by foul means, and leaving behind so much openly avowed discontent as to make his election even now seem very doubtful. Moreover, his small majority undoubtedly came from this city, which has now no real representation in any Republican Convention, and whose delegates have few or no relations of any kind with nine-tenths of the voters for whom they undertake to speak.

This is a state of things which must make the inconveniences of the rôle Judge Folger has taken on himself seem greater to him every day, owing to the very qualities which led the Stalwarts to select him. An ordinary politician would not have answered their purpose. The reputation of their leaders is such that it is impossible for them to succeed in any enterprise dependent on the moral sense of the community without producing a standard-bearer with a better one. To have had a man like Mr. Folger within their reach was, therefore, a piece of luck for them which might not happen to them again in twenty years. But, sagacious as he is and long as his experience of politics has been, he can hardly have realized the way in which the party regards them, and the small amount of moral weight which conventions controlled by them carry, when he put himself into their hands. He can afford to be Governor of New York, but can he afford to seek the Governorship, or seem to seek it, or be made to seek it, for any other purpose than filling it with the highest efficiency and integrity? Will Judge Folger be just the same after half the voters of the State have satisfied themselves that a set of political jobbers have put him in nomination partly to cover up their own shortcomings and partly to restore their Machine? No matter how sure he may feel that he would make a good Governor if elected, it must be of moment to him what people think about the way he became Governor. He cannot, like Mr. Cornell, better his condition before the people by being a good Governor. His character needs no rehabilitation or vindication. His capacity and integrity are both sufficiently established to enable him to forego the additional lustre which any fresh office could give them. But he may encounter an enormous deal of discomfort by having, as an upright man, to quarrel with his backers, and may bring great discredit on his perspicacity by having to plead that he did not know them when he allowed them to run him.

There was a time when a man of high standing could console himself for accepting a nomination from doubtful hands by the reflection that he was going to stand on a platform which contained a genuine political programme. But Judge Folger's friends do not furnish candidates with any such platforms nowadays. Their platforms do not contain their own high resolves, but exhortations to other people to be good. The things they commend to popular consideration are almost always things which they are themselves determined to avoid; so that their candidate can never flatter himself that he is charged with a mission or has the care of a great cause. If Judge Folger really meant what he said, that a nomination to be acceptable to him must be brought about by worthy means, he must, we repeat, read the current news about the proceedings which brought about this one with great perplexity as well as amazement, while making up his mind what answer to make. The public will certainly expect from him in this matter some practical illustration of what he considers fair in politics.

THE DISAPPOINTMENT IN EGYPT.

WHETHER the telegraphic reports from Cairo on Tuesday of the way in which Arabi Pasha is crying craven be correct or not, there is no doubt that the manner of his surrender and the behavior of the population since the surrender are an immense mortification to those who had vouched for him as a fanatical patriot and the head of a genuine national movement. The enthusiastic and brilliant reception of the Khedive at Cairo, the Mohammedan clergy being among the first to receive him at the railroad station, is certainly, considered as the termination of a two months' campaign on behalf of national independence, almost worthy of opéra-bouffe, and must fill Egyptian sympathizers like M. de Lesseps, Mr. Wilfrid S. Blunt, and Mr. Keay with honest shame. Poor M. de Lesseps is doubtless in a worse position than any of them, because he promised more terrible fighting on behalf of the Egyptians than any of the others. They said that Arabi's cause was just, and that he had the Egyptian people at his back, but M. de Lesseps said he would die in the last ditch, and one of his

friends predicted that even the Bedouins, who "can see a hare behind a tuft of grass a kilometre off," "would pluck the English sentinels like flowers," and that 80,000 men at least would be required to restore the Khedive. But Arabi, the people, the Bedouins and all, have betrayed their friends. Probably the most extraordinary failure of all was that of the Bedouins on the night before the attack, when they let the invading army get within 1,000 yards of Arabi's position in the open desert without giving the alarm. For men who could see a hare a mile off this certainly showed a distressing want of vigilance. But every other incident of the campaign was in keeping with this one, and now the abject submission of the chief gives what ought to be a tragedy the air of a rather broad burlesque.

How this impression of Egyptian desperation got abroad, it is not easy to see if we examine Egyptian history only. Egyptian troops have never made a respectable figure in any war, and those who know the fellah best are most emphatic in denying him all military qualities. He has all sorts of good stuff in him, but he has not the stuff of a good soldier. Nor is there much support for the expectations about him to be found in the history of other Mohammedan peoples. It is more than two centuries since any Mohammedan force was considered formidable on account of its morale. The Persians and the Indian Mussulmans have, during that period, displayed nothing but feebleness and want of enterprise in the field. The Turks have, since the siege of Vienna, shown none of their old martial fire, and have constantly receded before Christian aggression. The defence at Plevna was rather an accident than a revival. Their success during the fourteenth, fifteenth, and sixteenth centuries was due — as any one may see who reads Busbecq's 'Memoirs'—rather to their superiority to Europeans in discipline, in organization, and in armament, than to religious zeal. In other words, the Europe they terrified was a collection of poor barbarous and disorderly states, in which the military art was hardly cultivated at all. The success of the Turks was therefore enormous, and there can hardly be a better illustration of the terror they inspired in Christendom than the continuance to our own day of the old belief that a fanatical Mussulman is a formidable soldier.

The only Mussulman people who in recent times have done anything in war to sustain this belief are the Afghans, and yet they have never shown real tenacity on a set field. They have shown, however, wonderful tenacity in continuing hostilities. They have the unconquerable hate, and the courage never to submit or yield, which are supposed to be characteristics of all Mohammedan zealots, but they do not show it under arms. They fly nearly as readily as the Egyptians, but they do not throw away their arms, and they are always ready to try again, and they never kiss a conqueror's hand. They make their submission with dignity.

The suddenness and completeness of the Egyptian collapse will probably have some effect on European diplomacy in the East, by diminishing the impression of the intractability and ferocity of Mohammedan populations, which has really had considerable influence thus far in upholding the Turkish Empire. Down to the Russo-Turkish war of 1877 it was quite common for the Turkish Ministers to repress the troublesome importunity of foreign Ministers by hinting at an outbreak of fanaticism which would put Christian lives and property in danger, and which the Government would be unable to control. One argument, too, and a very effective one, used against the introduction of reforms into Asia Minor by extraneous pressure, has been that the population being mainly Mussulman, it would be difficult for any power but the Porte to control them, and that, deplorable as their lot was under Turkish rule, they must be left to their fate as long as their master did not care to improve it. What has occurred in Egypt is therefore not unlikely to make the ambassadors at Constantinople less gingerly in using pressure, and less troubled by the accounts the pashas will give of the effect on the Turkish people of concessions to infidels.

ARABI AND HIS ARMY.

KNOXVILLE, TENN., Sept. 16, 1882.

IT was my fortune—good or ill, it is hard to say—to spend something over two years in Egypt, in the service of the late Khedive, Ismaïl Pasha, as an officer of Engineers in his Army. I lived in Cairo with my family, was daily in intimate association with the native population, and had charge, as Chief of the Third Section, of the General Staff of the Topographical Bureau. I trust that the opportunities offered for observation have made me somewhat familiar with the country and its people.

Since the days of Mehemet Ali, and his great warrior son, Ibrahim Pasha, Egypt has entirely lost her military prestige; she has had no recent victories of any importance. It is true that during the reign of the Khedive Ismaïl Pasha the boundaries of Egyptian dominion were extended, apparently by military conquest, over a part of Nubia, Darfur, Kordofan, and up the Nile almost to the Equatorial Lakes. But these conquests were really not won by fighting successful battles; they were the results of creating dissensions among the native tribes, of purchase and bribery, of superior diplomacy and treachery, of following up the march of trade by detachments of troops, and converting trading stations into forts and military posts. In 1876 the Egyptian troops under Rauf Pasha made a successful attack upon Harrar, a walled town of the Sumalis. With this single exception, all of their recent military efforts have been most disastrous failures. I need only mention the series of terrible catastrophes attending the abortive attempts at conquest in Abyssinia during the years 1875 and 1876. The writer was one of the unfortunates who participated in those inglorious undertakings, and knows whereof he speaks. The first expedition into Abyssinia was under Colonel Arendrup, a Danish officer in the service of the Khedive. He commanded a column of troops of all arms, numbering about 3,500 men. They were apparently excellent troops, were well organized, well drilled, well armed, and well equipped in every way; and yet on the very first encounter with the Abyssinians the entire force engaged was literally wiped out of existence. Only a few desperately wounded, maimed, and mutilated men, who were left as dead by their ruthless foes, were the survivors of that bloody fight. These wretched sufferers, with wonderful vitality, crawled off the field of carnage, hid themselves by day in the caves and jungles, fed on wild fruits and berries, dragged their festering limbs along at night, and reached Massowah, some of them weeks after the battle, and told the horrible tale.

To wipe out this disgrace and avenge this defeat, a large army, which ultimately numbered fully 20,000 men, equally as well appointed in all respects as the other force, was sent into Abyssinia. They reached the Abyssinian plateau without resistance, and about 12,000 of them at one time were engaged with the hordes of King John. Of all that met the King in the open field, but very few returned to the two forts which formed the flanks of their position. I have no intention of giving a description of this battle of Gura, as it is called, but simply of showing the fighting capacity of the Egyptian troops. The position occupied by the Egyptian Army was an excellent one: they were on an open, nearly level plain, themselves posted on the rising ground; they were splendidly equipped with Remington breech-loading rifles; their artillery was composed of French mountain-howitzers, English steel guns, and German Krupps, besides a fine rocket battery; their cavalry was magnificently mounted and perfectly armed; they were commanded by the Commander-in-Chief of the Egyptian Army, and his best officers; they had some dozen or more American and European staff officers to encourage them, exhort them, and set them a good example. King John attacked them squarely in front, with his host of naked, barefooted, bare-headed warriors, who had but few fire-arms, no artillery, no organization—nothing military, in fact, but courage. And yet, in one hour and a half, all of 7,000 troops who were outside of the forts, except a bare handful, were killed or captured by the Abyssinians, who rushed upon them with sword and spear and shield, and slaughtered them like sheep in the shambles. The loss of the Abyssinians was about 150 men!

This bare statement of facts makes comment unnecessary. How it all happened it is difficult to tell. Colonel Dye, who was in the battle, wrote a book to explain it, but did not succeed, I think, even to his own satisfaction. Why it so happened is easier to answer, and the answer is this: the Egyptians will not, cannot fight. A disaster equally complete, but on a smaller scale, occurred to a column of Egyptian troops under Munzinger Pasha, nearly contemporaneously with the Arendrup tragedy. This column was marching through the Galla country to coöperate with Arendrup, and, when several days' journey from Tajurrah, was attacked at night by the natives, and absolutely annihilated. The writer saw one of the victims of this catastrophe, who escaped because his wounds were thought to be certainly fatal. He was an officer of Engineers, and will be mentioned again.

The events thus briefly epitomized plainly demonstrate the lack of fighting qualities of the Egyptians. Now, the question naturally arises, Why are they thus utterly worthless as soldiers? That question it is the main object of this article to answer. There are two classes of soldiers in the ranks of the Egyptian Army. The smaller class consists of Nubians, Darfurians, Sudanese, and Berbers from up the Nile. Many, in fact it is said that most of them, are slaves, either taken or bought from the regular slave-hunters and traders of the interior, and liberated by the late Khedive Ismaïl, by being placed in the Army. However recruited, they constituted the only fighting part of the Army in the Abyssinian campaign, and they were vastly inferior to the colored troops of the Union Army during the late Civil War. They have some soldierly quali-

ties: they are strong, hardy, able-bodied men, can stand heat and hard work and long marches well; they are docile, obedient, and seemed to learn the routine duties of military life readily, and perhaps under good officers might make fairly good soldiers. Some of these negro troops went with Prince Hassan to Turkey, and participated in the Russo-Turkish war; but there was no mention made of any brilliant achievements accomplished by them, and it was said they suffered terribly from the coldness of the climate of the mountain regions of Turkey, and were therefore of little service.

The larger part of the Egyptian Army is made up of recruits taken by conscription from the villages and fields of the lower delta. These fellaheen are the most abject of slaves, and have been so for hundreds of years. They are not slaves of a single owner who would be responsible for their welfare, and would profit by their well-being, as was the case with the former slaves of the South. They are the slaves of the soil upon which they live, and of every man who occupies a higher position in life than they, from their own sheik-el-beled to the Khedive. Every effendi, bey, and pasha with whom they come in contact in any way whatever looks upon them as different beings from himself, calls them habitually "ebn-el-kelb," sons of dogs, and kicks, cuffs, and beats them *ad libitum*. In consequence of this bad treatment, and by heredity, they are low, mean, cowardly, and cringing beyond any people on the face of the earth. And the manner in which they are drafted into the Army, and the way they are subsequently treated by their officers, does not in the least improve them. They are dragged from their fields while at work, or snatched from their mud huts, chained together in gangs, and carried to the citadel, and there kept in close imprisonment until they are drilled and uniformed. They are not allowed to settle their own affairs, to make any provision for their families, or even to bid their wives and children farewell, when the time for their conscription comes. When the recruiting sergeants lay hands upon them, it is as if a sudden and terrible death had claimed them; and they are mourned and wept over by friends and relatives as if they were dead.

Once become soldiers, and branded as it were by the uniform, escape from the ranks, until term of service expires, is impossible. Desertion is generally punished by death, even in time of peace. They are treated by their officers no better than they were by their taskmasters in the fields. The courbash is the instrument of punishment for every trivial offence, in spite of the fact that flogging is prohibited by law. Not only is the common soldier whipped by his company officers, from sergeant to captain, but even the subaltern officers are subjected to the same indignity by their superiors. The writer once saw a lieutenant held down by two men of his own company, while his colonel beat him unmercifully with a walking-cane. When the beating was finished by the bey's becoming exhausted, the lieutenant arose, took off his sword and handed it to his superior, and said: "You have disgraced me in the presence of my own men; I am no longer worthy to be an officer—put me in the ranks." For this—the only manly act I ever witnessed among these people—the lieutenant was charged with insubordination and mutinous conduct, was tried by court-martial, was sentenced to be shot, and I saw the sentence put into execution.

This was during the Abyssinian campaign; and on another occasion I witnessed the novel sight of a colonel giving his own major a good thrashing with a walking-cane, and the major took it like a lamb, without a murmur or even a grunt of disapprobation. The lieutenant of Engineers mentioned above as having escaped from the Munzinger massacre, had receipted to the Government for some engineer stores and a small sum of money for engineering purposes. Although he came back to Cairo desperately wounded, and brought back a few of his engineer troops, yet he was tried for the loss of the property and money, and his pay was stopped until the loss was made good. This is not hearsay. This lieutenant was in my own corps of Topographical Engineers. I was his chief, and had to approve his pay-account, and I know all the circumstances just detailed to be facts.

No wonder, then, that such a people—so treated when in civil life that every spark of manhood is crushed out of them, and so abused as soldiers that they have not even the courage of a crushed worm, which strives to sting the heel of its destroyer—no wonder such a people will not fight. And the inglorious termination of Arabi Pasha's wretched attempt at revolution is but the legitimate result of his and his deluded followers' antecedents. No one who knew him and his people had any doubt how the affair would end from its very incipiency. I made Arabi Bey's acquaintance in Abyssinia. He was then a lieutenant-colonel. After the Egyptian Army was defeated by King John, Arabi Bey was made an envoy, and sent to the King with presents and bribes, and propositions for peace. He was so far successful in his mission that King John gave the Egyptian Army an opportunity to retreat from his country without molestation. For this brilliant achievement Arabi Bey was promoted to the rank of colonel, made a bey of the first class, and decorated with the order of the Medjidieh. This cumulation of honors turned his head. He was probably, at that time, the only native Arab who held so high a rank—the beys and pashas being universally Turks or Circassians. He imagined himself a great man, and thought he was chosen of fate as the deliverer of his people.

A few words as to the conduct of the campaign on both sides. Arabi Pasha has done better than I ever thought he would. He held his troops together quite well, and manœuvred them well, for a man whose natural ability is not great, whose education is meagre, and whose military experience has been small. It is my opinion that Arabi Pasha has received instructions from a source little suspected by most people. That he should have made his first serious stand at Tel-el-Kebir, with his back as it were resting on Zagazig, shows that some one wiser than himself put the idea into his head that that position was the key to the Nile delta. He must have learned that from General Stone—not since the General has cast his fortunes with the Khedive, of course, but before that time, and before Arabi Pasha put himself in the attitude of open rebellion. It was a favorite idea of General Stone's that Tel-el-Kebir and Zagazig would one day be of great moment in Egyptian affairs. I have frequently heard him speak of their strategic importance; and when I tendered my resignation in 1875, the General told me he regretted my leaving before I had helped him fortify *these two places*.

Sir Garnet Wolseley has conducted the attack upon the Egyptians in a manner altogether admirable. In view of all the difficulties he has had to encounter, his progress has been remarkably rapid. His taking Ismaïlia for his base of operations put him on the shortest line of march to Cairo. His gradually forcing the enemy back until he could get all of his forces together at their strongest point may have looked to some unwise and unmilitary, but it was exactly the right thing to do with the foe he had. In this way he was enabled to deal one deadly blow and end the war at once. This he knew he would be able to do. Finally, the manner of engaging the Egyptians showed his perfect knowledge of their calibre, and his consummate skill. He went at them with a rush, as the Abyssinians did, and that was the end of the whole matter.

S. H. L.

THE RELIGIOUS CONDITION OF ENGLAND—THE SALVATION ARMY.

LONDON, September 7, 1882.

THE doings of a body which calls itself the Salvation Army have, during the last few months, excited an amount of attention from the educated classes in England which is chiefly remarkable as showing how little those educated classes seem to have previously known, or cared about, the religious phenomena which manifest themselves among the humbler part of the population. I will not attempt to write the history of the movement, which for the matter of that has lately been set forth in one of our best magazines, the *Contemporary Review*, by its founder and dictator, General Booth; but the occasion is a suitable one for saying something about the state of religious belief and practice among the masses in England, and considering how far such organizations as this are calculated to amend it.

Amendment it certainly needs. Whether the poorest class, the day laborers in town and country, were in the habit of attending church and shaping their conduct with some reference to what they heard there, even in Roman Catholic times, may be doubted; it is at any rate not so certain as Roman Catholic writers are apt to assume in talking of "ages of faith." But since the Reformation there seems to have been always a section of the poor who lay outside religious agencies, and with the growth of great towns this section has naturally grown vastly larger. At present, of the artisan and laboring class in the towns—the class which lives by weekly or daily wages for manual labor—certainly less than a half, and perhaps only a fourth, can be said to belong to any church or denomination: that is to say, to be in the habit of regularly attending any place of worship. The more intelligent and active-minded artisans are chiefly Dissenters, and for the most part Methodists—we have, like you, several different Methodist bodies—or Baptists. The Irish are, of course, Roman Catholics, and a certain number—small but capable of being increased whenever an energetic clergyman appears on the scene—still adhere to the Established Church. In the purely agricultural parts of England the proportion of churchgoers is larger, and the strength of the Anglican establishment greater; in Scotland, too, religion has, even in the towns, a stronger hold on the mass of the people than in the manufacturing or mining districts of England. To return, however, to these last-mentioned districts, their condition is a very disheartening one. To what extent atheism, or secularism, as it is now usually called, prevails among them, cannot easily be determined, though the small support which Mr. Bradlaugh and other lecturers of his type receive seems to show that the secularist organizations do not count many members. But there is a vast section of the working class which, whether or not it has any theological or anti theological opinions, lives practically uninfluenced by religion, and comes in contact with the ministers of religion only on the occasion of baptisms, weddings, and funerals. Add to this that there is also among our poorer classes, as well in country as in town, a vast deal of wretchedness, chiefly caused by intemperance, and a good deal of violent crime directly arising from intoxication.

The various churches, and especially the Church of England, have, within the last thirty or forty years, become much more uneasy and ashamed in the face of this state of things, which they feel that they have failed to grapple with. Constant efforts are being made by religious and philanthropic agencies, by town missionaries, Scripture readers, parochial Bible women, temperance societies, bands of hope, ragged schools, and innumerable other similar means, to get hold of the intemperate or criminal class; but the results, although in some directions encouraging, remain small when compared with the magnitude of the evil. In spite of the vigor of religious life among the upper and middle classes in England, the tendency has of late years been to rely rather on what may be called social and philanthropic than on purely religious modes of action, apparently because people felt (though they did not like openly to acknowledge) that neither the decorous and dignified composure of the Anglican service, nor the dogmatic Calvinism which still, although its sterner aspects have largely vanished, characterizes the ordinary Dissenting pulpit, was well suited for the ignorant and indifferent mass, which is substantially heathen, caring for this world only and the pleasures it affords. It is indeed true that the extremer High Churchmen, those whom it is the fashion to call Ritualists, maintain that the elaborate ceremonies which they have engrafted on, or restored to, the public worship of the Church of England, do succeed in attracting and moving the humblest and least instructed classes, which can be most easily touched through their eyes. But although some of these Ritualistic clergymen have done admirable work among the poor and outcasts of the great towns, it has not yet been shown that they can create large permanent congregations from these elements or bring them into their ecclesiastical fold.

Things being such, it is natural that the rise of a movement which undertakes to reclaim the heathen part of the population should be watched with interest, and even received with sympathy. To be sure, there is nothing novel in such movements. Several of the humbler Dissenting bodies have always used violent preaching, the passionate singing of lively tunes, and other modes of exciting an audience, and under such modes there have often been the physical manifestations of overwrought feelings—women falling into convulsions, men crying out, people believing that they had suddenly freed themselves from the devil and emerged into light and peace. Street preaching, too, is not new among us, but has been pretty common for the last twenty years or so, at least since the days of the Irish revival in 1858. However, ordinary English society has not realized this, and is therefore more surprised than it need have been by the appearance of the Salvation Army, in which there is little or nothing new, beyond the more elaborate organization, with its military titles, and the subjection of all its branches to the dictatorship of one energetic man. The Army first came into notice by the attacks made on its processions—marching in processions with banners flying and the singing of hymns is a main feature in its programme. Whoever joins it must become a total abstainer: its presence is therefore unwelcome to the liquor-sellers, and they are suspected of having in many places organized opposition to it. Whether owing to their action, or to the natural disposition of the British rough to molest any one who looks peculiar, or does anything unusual in a public place, these processions were frequently attacked, the processionists hustled, stones thrown at them, the column sometimes broken and chased off the streets by gangs of vagabonds, while the "soldiers" themselves, faithful to the non-resistance principles which they profess, did not defend themselves, but only sang the louder. When these disorders were brought to the notice of the local magistrates, they, whether from sympathy with the publicans (the brewing interest is often strong among the unpaid magistracy), or, as it is more charitable and more reasonable to suppose, in the idea that the blame of disturbances ought to be laid on those who give occasion for them by parading in an unusual fashion, mostly punished the Salvationists, and tried to stop the processions altogether. The Army, however, found useful allies in some active temperance members of the House of Commons, who, regarding it as a powerful agency on behalf of teetotalism, plied the Home Secretary with questions and remonstrances, and forced him, rather against his will, to admit that the magistrates had been wrong in their view of the law; that Englishmen have a perfect right at common law to parade the streets in any decent garb they please to assume, and are entitled to be protected against assaults by bystanders. Thus the magistrates were pulled up, and the tables have been turned completely in favor of the Salvationists, whose good behavior under great provocation has gained public favor for them. They are rapidly becoming a large and powerful organization, with a "corps" in nearly every considerable town, and are erecting "barracks" for their meetings with the proceeds of the subscriptions they receive, not only from the soldiers, who are of course mostly poor people, but from well-wishers in the richer classes. Their special delight is to purchase some large tavern or music hall, or other questionable place of public amusement, and turn it into a hall for their meetings, since they thus not only establish an agency for good, but extinguish one for bad. And in this way they have recently acquired some valuable properties in London.

It must be well understood that this movement has nothing new in the way of theology to teach. Its idea and purpose simply is to bring religious influences to bear on the English heathen, the people who, living in the midst of churches and chapels, enter neither set of places; and more particularly on those among these heathen who get drunk, beat their wives, and are generally in conflict with the law. This is doubtless one reason why the clergy of all denominations are either friendly or neutral. "General" Booth does not aim at laying hold of people who now attend either the Church of England or any Nonconformist place of worship; and although, of course, a certain number of his followers come from the Dissenting chapels, still the attendance at those chapels is not diminished: one does not cease to be a Methodist or a Baptist by being also a Salvationist. All intention of founding a sect to rival the existing sects is strenuously disclaimed: the object of the Army is to do by its military and aggressive organization what the denominations from the Anglican establishment downward have failed to do; and the converts it most values are those who have hitherto lived in flagrant and outrageous sin.

When I went to one of their meetings in the town of Scarborough a few weeks ago, the chief attraction was an old woman named Jane Johnson, said to be over eighty years of age, and who was announced to have been in prison two hundred and forty-three times (if I recollect aright) for being drunk and disorderly and assaulting the police. The poor old thing, whose age seemed to refute the doctrine that intemperance shortens life, gave a sort of address, which, so far as one could follow it—for she had lost her teeth and spoke an exceedingly strong North-country dialect—was a narrative of various adventures that had befallen her in "getting tight," as she expressed it, and of consequent conflicts with the officers of the law, all of which excited great merriment among the audience. There was also a lady, described on the wall posters as "the Yorkshire Nightingale," who sang hymns in a strong and sweet voice, the Army joining in as chorus; and a good many short extempore prayers were offered, and addresses delivered by various persons, while ejaculations of "Bless the Lord!" and "Hallelujah!" resounded from all quarters of the hall. In fact, it was much like one of your camp-meetings. The most striking thing was the absence of anything that could be called theology or dogma. Although the doctrines of the Army are just those which are to be heard in our Methodist and Baptist pulpits, and which were preached by Mr. Moody when he came here on his revivalist mission, there was far less attempt to set them forth connectedly, much less to prove them out of the Bible, than Mr. Moody made. Considered as a contribution to religious life and thought, the Salvation Army has no importance, and it is one of the most curious symptoms of our condition that when a movement of this kind arises, it should have absolutely nothing new to say. As to its practical value, people's opinions of course differ as they are more or less shocked by its offences against good taste, such as the motto "Blood and Fire," which it has adopted. Some apprehend mischief from the violent physical excitement into which it throws the newly-converted, or hold that by producing antinomianism it may even increase vice. Others think that the reclamation of a certain number of drunkards and criminals, even for a time, is clear gain which may outweigh contingent evils. Meantime the Archbishop of Canterbury subscribes £5 to help it to turn a low theatre into "barracks"; and General Booth, its commander-in-chief, originally a Methodist minister, is one of the most conspicuous figures of our day. Y.

THE COMING PRUSSIAN ELECTIONS.

BERLIN, September 1, 1882.

THE elections for the next Prussian Landtag will take place in the course of October, probably toward the middle of that month. As they are not held under the rule of universal suffrage, but under an indirect system which prescribes three classes of electors, each of which has the same representation, although only a few taxpayers may constitute the first or second class, the agitation of the parties thus far is rather secret and the participation of the people rather small. The candidates of the different parties have mostly been nominated, but their names will not be published before the commencement of the campaign, in September, which measure will shield them a few weeks longer against the calumniations and slanders of the opposite party. Do not imagine that our political elections are carried on with that candor and fairness which becomes an educated people; on the contrary, in this respect we have but too soon imitated the manners and customs of the oldest political constituencies. The tone of a Berlin election, for instance, will not stand much behind a primary of a New York ward, with the sole exception of revolver-shooting, to which the German is not yet accustomed. And what is worse here than with you, if I am permitted to finish the comparison of Berlin with New York, is that here it is not only the small fry, the political rabble, which attends to the mean business of electioneering; but clergymen, like the notorious court-preacher Stöcker, officials, so-called young noblemen and officeholders in high positions,

who wish to draw attention to their patriotic merits, and to be rewarded accordingly, strike the keynote in the Conservative camp. For the last Reichstag election the Conservatives, although they ought to have known beforehand that they could not conquer a single seat in this city, gave free theatrical representations, concerts, public amusements, and free lager to the voters, in order to win them to their side. In the rural districts the parties resort to other means. Thus, in the immediate neighborhood of Berlin the adversaries of a Liberal candidate who was very popular with the farmers as well as in the small towns, and who had been sent to the Reichstag in three consecutive elections, spread and even published the rumor that if the said gentleman were elected for a fourth time, his constituency would have to pay him a life-long pension of 4,500 marks a year (about $1,100). Now, the members of the Reichstag receive no salary, which fact, if there were no other consideration, would prove that a member of that body who serves gratuitously is not entitled to any emolument; but naming the exact amount of the pension, and the positive assurance that it would not have to be paid except after a fourth election, made so great an impression on the minds of the farmers and small-town tradespeople that they defeated their own old candidate and helped to elect a Conservative. The Liberals, on the opposite side, having less means at their command, must raise every cent among themselves, and number less influential persons in their ranks, but they work with greater energy and with more method. Their country press is better organized, and gives the people plain truths, which every voter understands, while the Conservatives' pamphlets, except those which indulge in abuse and personal attacks, are written in a professorial tone, unintelligible to the masses. The Liberals, too, agitate better in the rural districts, and attract greater crowds to their meetings. In consideration of the fact that a successful Deputy has not a single tide-waitership to bestow on his most trusted and energetic friend, and that the Liberal rank and file, who for their positions are dependent on the Government, or even on the Landrath or gendarme, can every day be punished or ill-treated by their superiors, too much praise cannot be bestowed on the great mass of the electors, who risk more than they can gain, very often suffer heavily, but nevertheless stick to the Liberal platform.

To return, however, to the impending elections for the Landtag, there is every reason to anticipate a Liberal victory. While on former occasions the Liberals of all shades marched alone and worked for themselves, thus splitting their votes and weakening their influence, they are this time appreciating the old wisdom of acting harmoniously together. It is the merit of an able parliamentarian, Professor Haenel, of Kiel, to have brought this homely truth to the minds of the leaders and of the masses. "Let us stand by each other, and, without breaking up existing party ties, offer a united front to the Conservatives. Such is the appeal which resounds from all parts of the country. Let the differences which separate the several organizations among the Liberals remain untouched, but let us not lose sight of the main point—*i. e.*, the common fight against the Conservatives, and the creation of a Liberal majority. Do away with the patriotism, or, rather, the particularism, of cliques and factions, ignore or suppress the jealousies of the real or imaginary party leaders, but, in the common interest, help to build up a Liberal party which, if every one does his duty, will and must rule the councils of the nation." This parole will animate the exertions of the Liberals. In the elections for the last House of Deputies of the Landtag, the Party of Progress had lost forty-two per cent., and the National Liberals about the same number. Among 432 members there was a Liberal minority of 145. Now, if the Liberals wish to regain their influential position, they must reconquer some seventy or eighty seats. As under less auspicious circumstances they in the last elections for the Reichstag won some forty seats, there is little doubt that they will succeed if they fully do their duty. If now all side issues be left alone, an honest understanding of all Liberal organizations can easily be realized and their victory secured, the more as they all agree in their opinions on the three leading questions which will determine the character of the next Landtag. These three questions comprise the relation of the State to the Church, the regulation of internal taxes, and administrative reform.

I explained in my last letter the difficulties which the Government has created for itself by its yielding to the Pope. The overbearing tone of the Clerical combatants shows that they even expect more than Prussia has surrendered. The claims of the Church always increase when it is sure to deal with a weak adversary, but they grow very elastic when it must settle terms with a strong and independent enemy. While the Pope, for instance, at present courts and flatters Republican France, which threatens the existence of the Catholic clergy in its foundations, he is cool and arrogant toward Prussia, which, judging from the tone of the Conservatives, he believes unconditionally dependent upon his help.

I do not believe that the unnatural alliance of Centre and Conservatives will last, and I doubt if they will be able to reach any positive results. The Conservatives, certainly, are ready to sacrifice the independence of the school upon the Church, and even the sovereignty of the State, to Clerical insolence. On the other hand, the Liberals of all shades, willing as they may be to conclude peace, unanimously insist on three absolute conditions on which it must be based—viz.: the control of public schools by the Government; the maintenance of the law of civil marriages; and the sovereignty of the State, which, of course, has to prescribe the boundary line between itself and the Church. The Conservatives, even with Bismarck at their head, will never succeed in making our Protestant people accept a total submission to the Pope and his tools. The Liberals, therefore, represent the real feelings of the country, and have a good chance of being elected on such a platform.

The second question, on which all the Liberals agree, and on which a union will easily be effected, is the policy of taxes and internal revenue. While the Government wants the Reichstag to raise an indefinite number of millions from indirect taxes, in order to use them for a tax reform in Prussia and in the smaller States, the Liberals have treated and still treat this demand with the utmost distrust, which has been justified by the experience of late years. The Reichstag granted 145,000,000 marks by increasing duties and passing a stamp act. Of this amount, which was distributed among the several States of the Empire, Prussia obtained 67,000,000, and of these 67,000,000 she has, in two successive years, abated fourteen and six (or together twenty) millions of marks in taxes. These, however, she was forced to raise by a loan, as the new income had been spent for other purposes. In order to conceal the failure of its pet measure, the Government demanded 115,000,000 for the last year but one, and 188,000,000 more for the next coming year; but the one will be refused just as the other has been rejected. Thus far the poorer classes have been saddled with new taxes, while the richer ones have been eased; now it is the purpose of the Government still to increase to an unlimited extent the indirect taxes and still more to reduce the direct ones. The Liberals, like one man, have withstood this measure as well as this other, that the individual States be supported (*alimentirt*) by the Empire, and the towns and communities by the several States—a system which kills personal responsibility and freedom and creates extravagance.

There remains the question of administrative reform. In 1872 a beginning was made with the limited introduction of self-government and other lesser reforms into the counties of the eastern provinces, but it soon came to an end. Instead of starting with the towns and villages, the second step was taken before the first. The consequence is that the partial reform, unsupported by other institutions, hangs in the air; and now that the western provinces ought to be benefited by the same democratic reform, it is found impossible to effect it. It is true, considerable progress has been made in destroying the greatest drawbacks of the feudal composition of county and provincial representation; the participation of all classes of the people in the administration has been achieved, and even legal protection and the enforcement of the law for or against administrative measures have been laid down as a basis for public life. The progress is enormous, if you bear in mind that our eastern provinces were first conquered by the nobility and afterward settled by the people. Whatever political division is found there was created by and in the interest of the gentry. In the newly acquired and western provinces, however, it is different. There, some Roman Catholic districts perhaps excepted, a highly civilized population forms the marrow of society, while the nobility is of not so great importance, so that the people will consequently master the reforms to be introduced much more easily than the farmers and small-townspeople in the East. You have the difference in a nutshell by comparing in this respect the eastern provinces with your former slave States, and the other old provinces with your New England States. The Government appreciates the above-mentioned fact, and for this reason it tries to do away with or cripple the entire progress, instead of extending it over the whole country. With bureaucratical schemes which defy all historical development it tries to introduce a bogus reform, which, in fact, will not do away with the jurisdiction of the law over administration.

These are the most important differences which separate the Liberals from the political tendencies of the Government. The Liberals will insist on and fight for the sovereignty of the State over the Church, the justice and economy of the taxes, as well as the introduction of self-government in town, city, county, province, and State, and they will be supported herein by the people in the next coming elections. A hired press, fed by the so-called "Reptile Fund" (interest of the money derived from the confiscated property of the late King George of Hanover), will not be strong enough to counteract the popular opposition. We are approaching better times. † † †

Correspondence.

DORSEY AND THE PROTECTIONISTS.

To the Editor of The Nation:

Sir: Your prejudice against Western men has, I think, caused you to do Mr. Dorsey an injustice. The manner in which you have often referred to him leads one to suppose that you consider him but little better than a thief, when

he has simply followed the example of men whom you delight to honor. In my business of farming I use barbed fence wire to fence my field, and wire to bale my hay; I have to pay twice as much for these articles as they are worth, because Mr. Hoar, of Massachusetts, has entered into a conspiracy with other officers of the Government to enable some of his constituents to get rich at my expense, by compelling me to pay more for an article than it is worth. This is just what you charge Mr. Dorsey with doing. When three men stop me on the highway and vote that I must give them my money, it is called robbery. When the people vote at an election that I must pay the Massachusetts manufacturer twice what his goods are worth, it is merely protection, yet the result is the same: I do not get a fair return for my money. I confess that I feel more respect for the man who steals openly than for one who gets unjust laws passed to protect him while his hands are in my pocket.

Were it not for your prejudice against Western methods, you would, I think, have taken the ground that Dorsey's "infant industry" was entitled to protection. SUBSCRIBER.

DENVER, COL., Sept. 10, 1882.

THE TRAFFIC IN VOTES.

TO THE EDITOR OF THE NATION:

SIR: Although your readers must be familiar with the general evils of modern political machinery, they may be as startled as I have been to hear of the concrete results of its working as shown in this part of the country. Of the demoralizing influence of the Portsmouth Navy-yard it is hardly necessary to speak. At this moment an election is approaching, and literally hundreds of "doubtful" voters are lounging away their days there, on higher wages than they could get elsewhere. Carpenters, for example, are said to receive $3 a day, when their regular wages are $2, and to pass a good deal of their time "skulking around corners," to use the language of an intelligent mechanic with whom I have just been talking. What is more, the recent visit of the President and of the Secretary of the Navy is thought by the common people to have some connection with this state of things—a pleasing instance of the popular estimate of national dignitaries.

Of all this, however, your readers must have heard enough. Certainly, I have heard of it for some years. But until very lately I was unaware that the country people hereabouts, and the lower classes in Portsmouth, habitually consider the actual sale of votes as a matter-of-course feature of an election. Of actual instances this is hardly the place to speak. A thousand actual instances could not show the extent of the evil so clearly as the common talk of the people, who speak of open bribery in much the same way that they speak of tippling. It is not a good thing, of course; but *que voulez-vous?* It exists, and, provided a man does not do too much of it, it is not remembered against him. In short, the people have grown so used to it that the respectable mechanic of whom I spoke before — who is reputed, and seems to be, an honest man—remarked, with a sage grin: "This election's coming hard on the Democrats. They can't assess for their votes, and I don't see where they'll find the money to get 'em." B. W.

NEWCASTLE, N. H., Sept. 16, 1882.

DUTY ON FOREIGN PUBLICATIONS.

TO THE EDITOR OF THE NATION:

SIR: My attention has been called to an article in your issue of August 31, in which are set forth the arguments used by Mr. Houghton in defence of a high duty on foreign publications, and especially on those the most elevated and influential in their character. Now, without discussing the merits or demerits of Mr. Houghton's reasoning on this question, I am constrained to point out an inconsistency between his precept and his practice. I believe he is the senior partner in the house of Houghton, Mifflin & Co., who have been engaged in importing English editions of leading periodicals, invoiced at about one-half the prices charged by the English publishers to English dealers, and at a proportionately diminished duty, such methods of importation being made all the more easy by the shipment of the publications in printed reams of paper unfolded and unbound. And now, under a late arrangement with the English publishers, the entire duty is avoided by forwarding the periodicals through the post-office instead of the custom-house. If, as Mr. Houghton contends, American literature and American authors would be injured by the admission of foreign publications at low rates of duty, how can he be justified in pursuing a course intended to bring about this result, and in commending to American readers—as he is, in his advertisements, continually doing—this same class of literature for its excellence and its cheapness? L.

TARIFF REFORM AND TEMPERANCE IN OHIO.

TO THE EDITOR OF THE NATION:

SIR: The short editorial comment by the *Nation*, in the issue of September 14, in regard to the Congressional campaign in this district, was read with interest by some Republicans, at least, who are sick of the "iniquities of the existing tariff" and really desire a revenue reform. Of these there are, perhaps, not many; but the uncertainty as to their numbers causes some disquietude to the Republican managers. Party lines on national questions seem hopelessly confused, and it would be difficult to show any very good reason, from a national standpoint, why Republicans in sympathy with the tariff-reform movement should not vote for Mr. Frank Hurd. As the *Nation* remarks, "It cannot be said that the rights of any human being, white or colored, will be put in jeopardy by his election." Doubtless some apprehensions of unwise financial legislation exist, but they are probably more than counterbalanced by the necessity of taking some steps toward the attainment of a normal condition of foreign trade and domestic production.

But, unfortunately, the campaign is so complicated by the importance of the liquor question, which is a leading issue in the State, that the tariff-reform Republican who would be independent is placed in a somewhat embarrassing position. The attitude of the Republican party on this question is strong and decided; that of the Democrats, shuffling and evasive. The recent "Pond Law," heavily taxing the liquor-sellers, shattered on the constitutional provision forbidding any license of the traffic. The Republicans have come out squarely in favor of putting before the people a constitutional amendment striking out this clause, so as to leave the whole matter open to legislation, in which case the Pond law, or something similar, would not be obnoxious to the same objections, and would undoubtedly be carried by a Republican Legislature.

The position of the Democratic party on this point is defined (?) in their platform as follows: "*Resolved*, That the Democratic party . . . is opposed to legislation merely sumptuary." This means, if it has any meaning, that the Democrats are in favor of letting things remain as they are. But to this the great mass of the adherents of "law and order" are strongly opposed.

It is an open secret that the liquor men have furnished funds to the Democratic Campaign Committee, of which Mr. Hurd presumably gets his share. And although the liquor question is local, the feeling on it runs high, and will exert a marked influence on the Congressional vote. Mr. Hurd will probably, on this account, lose more votes among independent and intelligent citizens than he will gain on the score of free trade; besides which, there are some Democrats who are by no means in accord with him on the latter subject. On the other hand, he will undoubtedly gain many German votes. The result of the campaign will of course hinge on the comparative strength of these elements, which is at present purely a matter of conjecture.

Mr. Hurd, while doubtless sincere in his advocacy of free trade, is a thorough Democratic politician; and it is not surprising that Republicans are a little afraid of him, even though they agree in the main with his views on the tariff. Perhaps the best solution of the difficulty would be, remembering that in politics not the best conceivable, but the best attainable, should be our immediate aim, to support Mr. Hurd for Congress, inasmuch as the good he may effect seems likely to overbalance any evil which might possibly result from his election. S.

TOLEDO, O., Sept. 19, 1882.

POLITICAL ECONOMY IN GERMAN UNIVERSITIES.

TO THE EDITOR OF THE NATION:

SIR: The notice, in a recent number of the *Nation*, of Professor Fredericq's report on instruction in history in the German universities, suggests the thought that perhaps a short account of the instruction in political economy in these schools would be of interest to your readers. I describe the work as it is laid out in the University of Halle, both because I am better acquainted with that institution and because, in the opinion of competent critics, the work there is, on the whole, better organized than at any other similar school in Germany.

Instruction in political economy is given, in the first place, by lectures. There are three professors in this department. In the course of a year they offer several series of lectures on the following subjects: History of Political Economy, Theoretical Political Economy, Practical Political Economy (the discussion of the economic problems of modern society), Science of Finance, Statistics, Police Supervision, and Administration. Lectures upon other subjects are occasionally given, especially upon economic topics of current interest.

These lectures are supplemented (1) by the politico-economic *Seminar*, and (2) by the politico-economic debating society. The former is organized as a department of the University; its object is to provide opportunities for those who wish to make a specialty of economics. It is a society of students under the direction of a professor. It meets for two or three hours, regularly, once a week, sometimes oftener. The exercises consist of essays by the students on subjects suggested by the director, followed by discussion and criticism of them. At the beginning of the term the professor prepares a list of subjects, theoretical, practical, and historical, from which each of the members of the *Seminar* chooses two or more which he agrees to present during the term. A programme is made out, and one or two of these essays assigned to each session. The subjects being known beforehand, each member of the society is expected to prepare himself for the discussion which follows the reading. Such subjects as the following are

assigned: Value, Banks of Issue, Double Standard, Income-Tax, State Ownership of Railways, etc. The student is expected to know, for instance, in the first case, the opinions of all prominent economists in reference to the subject, and their definitions of it. He must be able to give reasons for his own view, accompanied with refutation of the views he rejects, etc. It will be seen that the director has an excellent opportunity in his questions to test the thoroughness and extent of the student's investigation and to form an opinion of his ability.

The object of the society is really to promote original work in economics. A liberal amount of money is appropriated to the purchase of all recent publications of value in any language for the *Seminar* library. The society, although not yet fifteen years old, has done valuable original work, and its publications are rapidly acquiring an enviable reputation in Germany. A recent pamphlet by one of the members on "American Competition in European Markets" attracted the attention of the Government, and the young man who wrote it was offered a place on a commission which was to come to America and investigate the whole subject and report to the Imperial Government, but he was prevented from accepting by his election to the Reichstag. All possible assistance is given to those who aim to do original work, and the keen but sympathizing criticism of professor and fellow-student is no small aid in preventing mortifying blunders and mistakes. Professor Conrad, who now has charge of the society, is a really great teacher, able to inspire enthusiasm for his work, and wisely to direct the efforts of his students. There is also a statistical *Seminar* under his charge, which makes a specialty of original work in statistics.

The politico-economic debating society is under the control of the students, and discusses economic questions in the form of resolutions. It occupies itself, naturally enough, rather with practical questions of current interest than with purely theoretical problems. Its work is more serious and valuable than the work of corresponding organizations with us, because each of the members has had a tolerably complete course in political economy before he enters it.

It will be seen that the advantages offered the liberally-trained student who desires to specialize are excellent. Such a system would, of course, be of no value in our ordinary colleges, whose students need the drill and training of schoolboys much more than they do opportunities for original research. E. J. JAMES.

NORMAL, ILL., Sept. 12, 1882.

THE BEGGING OF DRINKS BY POLICEMEN.

TO THE EDITOR OF THE NATION:

SIR: If Mallock ever establishes his "science of human character," it is hoped that one of its effects will be to prevent the *Nation* from publishing such comments on a New York policeman as are to be found in its last number. The case is this: A policeman was detailed to accompany a distinguished foreigner through the low lodging-houses of New York. During the quarter of an hour so occupied, the policeman twice hinted that he would like to be treated. So the visitor treated him to a drink, and he also gave him a dollar, remembering, by way of contrast, that a Parisian gendarme had once refused to accept a napoleon when the service performed was much greater. The *Nation* thinks this performance "is calculated to bring the blush of shame to the cheek of patriotism," and assumes that said policeman expected five dollars.

Now, this policeman certainly is not any credit to the force; but is not the *Nation*, by the sweeping assumption which it makes, doing more to bring the "blush of shame" than the original statement of fact as contained in the book? The extent to which its foreign readers are influenced by the utterances of the *Nation* in regard to Americans has been recently illustrated by the comments called forth by its statement that not one person in one hundred thousand here *ate with a fork*. In the case of the policeman, there is strong evidence that no gratuity in money was expected; for had there been, the hint at a drink would not have been given. "To stand the drinks," although the *Nation* and distinguished foreigners may not know it, is, among the classes from which policemen are drawn, an exceedingly common way of requiting obligations which are so small, or which are of such a social character, that a payment in money seems out of place. It is far more likely that the payment of the dollar surprised the policeman (especially after they had drunk together) than that he expected a larger sum; and yet, precisely because he was a European, M. D'Haussonville probably expected all the time, as a matter of course, to pay the dollar, and, notwithstanding his Parisian experience to the contrary, it was not so much the acceptance of the money as the fact of drinking atrocious Sicilian wine with a common policeman that impressed him. If the Parisian gendarmes, as a class, or any other class in Europe, set the Americans a good example in refusing gratuities, then many Americans who have travelled abroad will be greatly surprised and interested to know it. E. F. S.

NEW YORK, Sept. 26, 1882.

[There is one fatal flaw in our correspondent's argument. He fails to show that among "the classes from which policemen are taken" it is "exceedingly common" or permissible to beg drinks. It is only among the classes which this policeman took M. D'Haussonville to see in their hideous lairs in the low lodging-houses that it is customary to remind a friend or companion that it is time to drink at his expense. In the policeman class, the usual attitude with regard to gratuitous liquor is one of dignified, silent, and, let us add, carefully concealed expectation. Of course a member of it who was craving for a drink from a friend would not avoid taking him past a grogshop, but he would not for worlds direct attention to the grogshop unless he himself meant to be the giver of the treat. This is so elementary a drinking rule that it is almost painful to have to point out its existence to a writer who professes to speak on the subject with a certain authority.—ED. NATION.]

DEFORESTING THE ADIRONDACKS.

TO THE EDITOR OF THE NATION:

SIR: There is probably no writer whose opinion is more highly and deservedly respected, on the subjects he has specially treated, than the late George P. Marsh. His great work, 'The Earth as Modified by Human Action,' is a wonderful exposition of the dangers to which nations are exposed by ignorance or want of a realizing appreciation of certain laws of nature which cannot be violated with impunity, though the penalty may be so long delayed that it is only by such careful examination as he has given that the consequences can be traced back to the original cause. But the course of nature is as certain as the passage of time, and at this day, when results have been so clearly demonstrated, it is disgraceful if we incur punishment which cannot be averted simply because its infliction does not immediately follow the transgression.

It is a remarkable fact that a supposed case cited by Mr. Marsh in the above-named work, the results of which he foretells by comparison with what has actually happened elsewhere, has now been literally fulfilled in its incipient stage by act of the State of New York. After describing the terrible results which have followed the clearing the forests from the mountains of southeastern France—which the Government is now endeavoring, at great cost, not to retrieve, for that is hopeless, but simply to check—he goes on to say:

"It is evidently a matter of the utmost importance that the public, and especially landowners, be roused to a sense of the dangers to which the indiscriminate clearing of the woods may expose not only future generations, but the very soil itself. Some of the American States, as well as the Governments of many European colonies, still retain the ownership of great tracts of primitive woodland. The State of New York, for example, has in its northeastern counties a vast tract of territory in which the lumberman has only here and there established his camp, and where the forest, though interspersed with permanent settlements, robbed of some of its finest pine-groves, and often ravaged by devastating fires, still covers far the largest proportion of the surface.

"Through this territory the soil is generally poor, and even the new clearings have little of the luxuriance of harvest which distinguishes them elsewhere. The value of the land for agricultural uses is, therefore, very small, and few purchases are made for any other purpose than to strip the land of its timber. It has been often proposed that the State should declare the remaining forest the inalienable property of the commonwealth; but I believe the motive of the suggestion has originated rather in poetical than in economical views of the subject. Both these classes of considerations have a real worth. It is desirable that some large and easily accessible region of American soil should remain, as far as possible, in its primitive condition—at once a museum for the instruction of the student, a garden for the recreation of the lover of nature, and an asylum where indigenous tree, and humble plant that loves the shade, and fish and fowl and four footed beast, may dwell and perpetuate their kind, in the enjoyment of such imperfect protection as the laws of a people jealous of restraint can afford them. The immediate loss to the public treasury from the adoption of this policy would be inconsiderable, for these lands are sold at low rates. The forest alone, economically managed, would, without injury and even with benefit to its permanence and growth, soon yield a regular income larger than the present value of the fee.

"The collateral advantages of the preservation of these forests would be far greater. Nature threw up those mountains and clothed them with lofty woods, that they might serve as a reservoir to supply with perennial waters the thousand rivers and rills that are fed by the rains and snows of the Adirondacks, and as a screen for the fertile plains of the central counties against the chilling blasts of the north wind, which meet no other barrier in their sweep from the Arctic Pole. The climate of New York presents even now greater extremes of temperature than that of southern France. The long-continued cold of winter is more intense, the short heats of summer even fiercer, than in Provence, and hence the preservation of every influence that tends to maintain an equilibrium of temperature and humidity is of cardinal importance. The felling of the Adirondack woods would ultimately involve, for northern and central New York, consequences similar to those which have resulted from the laying bare of the southern and western declivities of the French Alps, and the spurs, ridges, and detached peaks in front of them."

In spite of this warning, the deed has been done. A very large tract of the Adirondacks has been sold for the express purpose of stripping it of its wood. It is to be presumed that neither party to the bargain would give a moment's heed to what Mr. Marsh calls the "poetical view" of the subject, and it is evident that those who have thus disposed of the tract are too ignorant to take any but a very limited view of the actual results involved in the issue. There is, however, no excuse at this day for such

ignorance on the part of those who assume such a responsibility. The actual necessity of preserving a due proportion of forest throughout the country, and the ruinous consequences of stripping the woods from the mountain tops and sides, are familiar to every man who has studied the subject; and no man who is not thus informed should presume or be allowed to give a vote on a question of such momentous importance.

There is nothing so difficult as to induce people to think and form an opinion for themselves on any matter outside of their immediate personal interests. And it is for want of the watchfulness which can only come of such thoughtful decision, that such outrages become possible. It is to be hoped that the indignation it has excited in the minds of all who appreciate its practical as well as poetical aspects, will continue to be expressed with sufficient force to prevent the possibility of its repetition or further perpetration. If it should lead to the appropriation of a portion of the same region as an experimental forest for practical illustration of forest culture under proper management, the evil which has been done would not be entirely without compensation. H. W. S. CLEVELAND.

CHICAGO, Sept. 11, 1882.

THE THEATRE OF EPIDAUROS.*

TO THE EDITOR OF THE NATION:

SIR: After the excavations of the Germans at Olympia, and of the French in Delos, it was natural that the attention of archæologists should be turned to Epidauros, the greatest ancient sanctuary of Asklepios, and especially to its theatre, which, in the opinion of Pausanias, was "eminently well worth seeing—for what architect could compete in harmony and beauty of design" with him who planned this theatre, the great Polykleitos?

In March, 1881, the Greek Ephor of Antiquities in charge of the islands of the Ægean, Mr. P. Kavvadias, was commissioned by the Council of the Archæological Society of Athens to explore the sanctuary of Epidauros. Mr. Kavvadias began work at once, and carried on his investigations steadily until the beginning of July, when he was despatched by the Government to superintend the new excavations of the French school at Athens in Delos. During this period of over three months, Mr. Kavvadias laid bare nearly the whole auditorium of the theatre, and part of the remains of the stage foundations. In March of the present year the work was resumed. The exploration of the theatre was soon completed, and that of the other monuments of the sanctuary was begun, and is still going on. Among these monuments were numbered, besides several temples and other buildings described by Pausanias, a remarkable circular building called the *tholos*, designed by Polykleitos, and a beautiful fountain. Among these ruins much that is of interest in architectural, sculptural, and epigraphic remains has been found already; but the work is still too incomplete to demand a comprehensive summary of its results. I propose, therefore, to confine myself to a review of the features of the theatre, which not only was one of the largest and finest of Greek theatres, but is one of the oldest and most perfect in many ways of surviving examples.

Mr. Kavvadias found the site of the theatre covered so thickly with trees and underbrush that it was impossible to force one's way from the bottom to the top of the auditorium. His first week was spent, therefore, in clearing out this luxuriant growth; but even then, merely the general form of the auditorium was visible—the edges of the stone seats appearing only in a few places, in the lower part and at the extremities of the hemicycle, above the thick bed of soil washed down from the slopes of Mount Kynortios above. Henceforth, therefore, the work of exploration consisted almost wholly of excavation. This work has demonstrated the incorrectness of the descriptions and plans of the theatre given by Donaldson, Leake, Blouet, and others, which were necessarily in great part conjectural, on account of the condition of the site described above.

The theatre of Epidauros was situated without the sacred peribolos of Asklepios, upon the northwestern slope of Mount Kynortios, in a wide ravine, which was of such shape that it required but little labor to give it the requisite form of the auditorium. The rows of ordinary seats, and the seats of honor, or thrones, of the κοῖλον, are constructed of the white limestone of the neighborhood, while the supporting-walls at the extremities of the wings, and the surviving substructions of the stage, are built of tufa.

The arc of the auditorium is greater than a semicircle, and its curve deviates but little from that of a geometrical circle. The auditorium is divided by a diazoma into two zones, of which the upper consists of twenty-two rows of seats, according to the interesting topographical drawings of Captain Solomos, of the Greek Army, which are given in the Πρακτικά. According to the text, this upper zone contains only twenty rows of seats, besides a sort of bench above the diazoma, upon which the spectators placed upon the lowest row of seats rested their feet. The lower zone contains thirty-two rows of ordinary seats. Besides the ordinary seats, there are three rows of thrones.

The diazoma which separates the upper and lower zones of the theatre presents an arrangement which has not been found elsewhere. It consists of two passages paved with slabs of stone, one of which is upon a higher level than the other. The lower passage is 1.90 metre broad. On the side nearest the stage it is bordered by a row of thrones immediately above the uppermost row of seats of the lower zone. On the side away from the stage is a supporting-wall 1.36 metre high, crowned by elegant mouldings, and forming a base for the second row of thrones. The upper passage of the diazoma lies between this row of thrones and the bench beneath the lower seat of the upper zone, and is only 60 centimetres wide. The third row of thrones is below the lowest seat of the lower zone, and forms the immediate enclosure of the orchestra. The thrones and seats were constructed of blocks of hewn stone fastened to each other by iron clamps set in lead. Instead of being divided into separate seats for each spectator entitled to a place of honor, as in the Dionysiac theatre at Athens, the thrones of Epidauros extend unbroken, in each κερκίς, from κλίμαξ to κλίμαξ, thus resembling modern sofas. Unlike the Athenian thrones—which are, it is true, of very much later date—they bear no inscriptions designating the privileged persons for whom they were reserved. The three rows of thrones differ in height and in amount of sculptured ornament, those nearest the orchestra being the most ornate and the highest (90 centimetres). The ordinary seats of the lower zone are exactly similar in design and in height to those of the Dionysiac theatre; those of the upper zone are higher, and have square faces. The lower zone was divided into twelve κερκίδες by thirteen κλίμακες, which were continued through the supporting-wall of the thrones of the διάζωμα to the terrace above the upper zone of seats. Between each two of these κλίμακες in the upper zone was another stairway, so that the upper zone was divided into twenty-four κερκίδες by twenty-five κλίμακες. The design of the theatre of Epidauros is thus entirely different from that given as typical of the Greek theatre by Vitruvius, who assigned eight stairways to the lower zone, thus placing the axis of the theatre in the middle of a κερκίς of this zone—not in a κλίμαξ, as at Epidauros.

The κοῖλον was surrounded above by a wall, leaving a terrace 2.15 metres wide beyond the upper row of seats. There was probably direct access to this terrace by doors, and to the διάζωμα by stairways along the supporting-walls of the wings, to facilitate access to the theatre, which would have been difficult if confined to the approaches leading from below through the orchestra. Contrary to the indications of Vitruvius, no remains of a portico exist along this upper terrace, either in the theatre of Epidauros or in any other theatre of purely Greek arrangement.

The orchestra is about 26 metres in diameter. It consists of two parts—a passage paved with stone before the base of the lower row of thrones, and a circle, with a radius of 12.16 metres, extending toward the stage beyond the plan of the κοῖλον. The floor of the passage is 21 centimetres lower than that of the circle, and is so arranged as to collect and discharge outside the theatre through drains the rain-water falling in the auditorium. The periphery of the circle is constructed of stone; its surface, however, is not paved, but is formed of a carefully-laid bed of sand or ashes (κόνις). We have here, without doubt, the explanation of the hitherto doubtful term, κονίστρα, applied by the ancients to the orchestra of the Hellenic theatre as distinguished from that of the Romans, which was paved with stone. At the centre of the circle is embedded a circular stone, in which is a deep, circular hole. This marks the place of the thymele—the altar of Dionysos—in a circle about which the chorus moved, continuing thus the early traditions of worship from which the Greek drama derived its origin.

At a distance of 38 centimetres beyond the circle of the orchestra, and parallel to the chord of the arc of the auditorium, are the foundations, built of white limestone, of the wall of the hyposkenion. This wall was decorated with eighteen Ionic semi-columns of Attic design. The bases of six of these columns remain in position; and one of the capitals has been found (this spring), and some fragments of the Ionic cornice. The foundations survive of the double doors at either side which gave access to the orchestra and to the buildings of the stage, and formed at the same time the architectural connection between the stage and the auditorium. The foundations of the stage seem to indicate that there were only three doors in the wall behind the λογεῖον; nothing, however, remains of the Hellenic foundations, except the lower courses. Above these, the stage buildings appear to have undergone entire modification at several periods—the last probably during the Middle Ages, when they seem to have been adapted to the needs of habitation.

Mr. Kavvadias does not give the general dimensions of the κοῖλον. According to the plans of Captain Solomos, its greatest diameter is about 415 feet, English; and the length of the axis of the theatre, from the centre of the circle of the orchestra to the wall above the upper terrace, 205 feet.

In the course of the excavation of the orchestra and the stage, Mr. Kavvadias found a number of statues of both male and female figures—all headless, and many of them otherwise mutilated.

* Reports of Mr. P. Kavvadias, in the Πρακτικὰ τῆς ἐν Ἀθήναις Ἀρχαιολογικῆς Ἑταιρίας, ἀπὸ Ἰανουαρίου, 1881, μέχρι Ἰανουαρίου, 1882—ἐν Ἀθήναις, 1882; and in the Ἀθήναιον, τόμος Ι', τεῦχος ς' (March and April, 1882).

Some of these are of fine workmanship, but nearly all are of comparatively late date. One of them has been identified as the statue of the Empress Livia, dedicated by the people of Epidauros, of which the base, with its inscription, was found in position. The most interesting artistic discovery made by Mr. Kavvadias, however, is a statue of Hygieia, which, for artistic and critical reasons, he believes to be by the hand of Polykleitos himself. This statue, like the others found, has been deprived of its head—doubtless by the zeal of the Christians in the time of Theodosius or Justinian. Mr. Kavvadias describes this statue carefully in his report, and sets forth at length his reasons for believing it to be a work of Polykleitos. Unfortunately, it has not yet been published, though found more than a year ago; and artistic criticism cannot but be unsatisfactory and inconclusive in the absence of a graphic representation of the object under discussion.

I am, sir, very respectfully,

THOMAS W. LUDLOW.

COTTAGE LAWN, YONKERS, N. Y.

Notes.

WE take from the *Publishers' Weekly* the following supplementary announcements of forthcoming books from the houses respectively named. D. Appleton & Co.: 'Fifty Perfect Poems,' selected and edited by Charles A. Dana and Rossiter Johnson; 'Hours with Art and Artists,' by G. W. Sheldon; Austin Dobson's 'Eighteenth Century Essays'; and Arabella B. Buckley's 'The Great Backboned Family, and How it Has Spread over the Earth.' Harper & Bros.: A translation of Dr. Franz von Reber's 'History of Ancient Art,' by Joseph Thaccher Clarke; 'The Friendships of Mary Russell Mitford,' edited by the Rev. A. G. L'Estrange; 'Travels in South Kensington,' with notes on decorative art and architecture in England, by Moncure D. Conway; 'Highways and By-Ways' (of New England), by W. Hamilton Gibson, with the author's own illustrations; 'The Story of the New York Volunteer Fire Department,' by George W. Sheldon; 'Eras and Characters of History,' by William R. Williams; 'A History of Wood Engraving,' by Prof. George E. Woodberry; and 'New Games for Parlor and Lawn,' by George B. Bartlett. Henry Holt & Co.: Bernhard Ten Brink's 'Early English Literature,' translated by Horace M. Kennedy; Heine's 'Harzreise and Das Buch Le Grand,' annotated by Prof. James A. Harrison, and his 'Romantic School,' translated by S. L. Fleischmann; J. A. Symonds's 'Italian Literature'; the second part of Cory's 'Guide to Modern English History,' and the second volume of Fyffe's 'History of Modern Europe'; J. A. Doyle's 'English Colonies in America'; and 'Political Economy,' by Gen. Francis A. Walker (in the "American Science" series). Charles Scribner's Sons: 'Corea, the Hermit Nation,' by Prof. W. E. Griffis; Lenormant's 'Origines de l'Histoire,' translated by Mary Lockwood, under the title, 'The Beginnings of History According to the Bible and the Traditions of Oriental People'; 'Idyls of Norway,' poems by Prof. H. H. Boyesen; and Sidney Lanier's 'The Boys' Percy.' A. S. Barnes & Co.: 'Anatomical Technology,' with reference to the domestic cat, by Professors Wilder and Gage, of Cornell University. Dodd, Mead & Co.: A new historical series, "The Minor Wars of the United States," beginning with the War of 1812 and the Old French War, by Rossiter Johnson; 'Cradle Songs of Many Nations'; Schaff and Gilman's 'Library of Religious Poetry'; and Hesse-Wartegg's 'Tunis.' George Routledge & Sons: A new illustrated and complete edition of George MacDonald's novels; 'Pan-Pipes,' a book of old songs arranged by Theodore Marzials and illustrated by Walter Crane; 'Randolph Caldecott's *Graphic* Pictures'; and 'Little Ann,' Jane and Ann Taylor's rhymes, illustrated by Kate Greenaway. Fowler & Wells: 'Traits of Representative Men,' by George W. Bungay; and 'Forty Years in Phrenology,' by Nelson Sizer, a "practical examiner." Fords, Howard & Hulbert: A series of reprints from *Our Continent*, including E. C. Gardner's 'The House that Jill Built after Jack's had Proved a Failure'; and 'Bullet and Shell; or, War as the Soldier Saw It,' by George F. Williams. Ginn, Heath & Co., Boston: 'Elements of Geology,' and 'Geology,' text-books by Prof. N. S. Shaler; a 'Spanish Grammar' and 'Readings from Spanish Literature,' by Prof. G. Knapp; 'Reader's Guide to English History,' by Prof. W. F. Allen; 'A Science of Mind,' by President Seelye; and 'Introduction to the Study of Philosophy,' by G. Stanley Hall. Little, Brown & Co.: 'A Treatise on the Principles and Practice of the American Law of Patents for Useful Inventions,' by Prof. W. C. Robinson, of Yale, a work much needed since the decision of the Supreme Court in the case of Miller *vs.* the Bridgeport Brass Co. Estes & Lauriat: A juvenile 'History of New York,' by Mrs. Martha J. Lamb. S. E. Cassino: New editions of Goethe's works, revised and edited by Dr. F. H. Hedge and Prof. Leopold Noa, and of Schiller's, uniform with the foregoing; Fergusson's 'History of Architecture in all Countries'; and 'Flowers of the Field and Forest,' by the Rev. A. B. Hervey. J. B. Lippincott & Co.: An illustrated edition of 'New England Bygones,' by E. H. Arr (the late Mrs. Ellen H. Rollins); and a new illustrated edition of T. Buchanan Read's Poetical Works. Robert A. Tripple: 'Historical and Biographical Sketches,' by Samuel Whitaker Pennypacker. S. C. Griggs & Co., Chicago: 'A Practical German Grammar,' by Prof. Wesley C. Sawyer; and 'The Development of English Literature and Language,' by Prof. A. H. Welsh. Rand, McNally & Co.: The second volume of Lalor's 'Cyclopædia of Political Science, &c.'; and 'American Etiquette and Rules of Politeness,' by Profs. W. R. Houghton, J. K. Bach, and P. J. A. Woodburn.

The *Publishers' Weekly*, on its own account, announces several handy little books uniform with its 'Reading Diary' and 'Books of All Time,' such as, 'Readers and Libraries,' by W. E. Foster; 'Schools and Libraries,' by S. S. Green; 'A Descriptive Catalogue of Historical Novels and Tales,' by H. Courthope Bowen; 'Books for the Young,' by Miss C. M. Hewins, etc., etc.

Harper & Bros. have brought out in the Franklin Square Library (No. 271) Mr. Smiles's 'Self-Help,' which might naturally have come somewhat earlier upon the list. We hope, by the way, that the "two-column edition" (8vo) of this Library, with neat yellow paper covers and no increase in price, will commend itself so as to encourage a reversion to ordinary book form.

Macmillan & Co. have issued at a reduced price the third revised and corrected edition, with fresh notes, of Butcher and Lang's prose version of the Odyssey.

Three poems of Bryant's, "Thanatopsis," "The Flood of Years," and "Among the Trees," heretofore issued separately, with illustrations, by G. P. Putnam's Sons, have been united in a single holiday volume. The designs of the first two are by Mr. W. J. Linton; of the last, by Jarvis McEntee.

'The Charles Dickens Birthday Book,' of which T. Whittaker is the American publisher, is not only peculiar in having been compiled, edited, and illustrated in the author's own family, but in the neglect to indicate the source of the numerous extracts. No great names are inserted under the several dates, and some odd juxtapositions may ensue, as when a young lady inscribes her name under December 4, and reads opposite—"I like your appearance, old fellow."

Ginn, Heath & Co. publish a new edition of Wentworth's 'Elements of Algebra.' The first 380 pages are a reprint of the first edition, which was reviewed in the *Nation* of September 22, 1881. To this second edition ten new chapters, comprising 130 pages, have been added, treating of "Continued Fractions," "Imaginary Numbers," and other subjects which are usually considered as belonging to the higher algebra. The general execution of these additions is in keeping with the previous part of the work. They perhaps justify the title of 'Complete Algebra' stamped on the back and sides, though the original title-page remains unaltered. We can only repeat the opinion expressed in regard to the first edition, that it is a very practical and usable book for a school.

R. G. Hutchinson, No. 44 Maiden Lane, sends us a convenient index for a small private library of say 2,000 works. It is a bound volume, crown 4to, of 240 pages, with ruled spaces for title, author, particulars of publication, size, binding, etc. It is available for either author or title-indexing, but not for both.

From L. W. Schmidt, 7 Barclay Street, we have the catalogue of the Johannes Paul art collection to be sold at auction at Cologne on October 16. Following a most practical custom, the catalogue is provided with numerous comprehensive heliotype views of plates, vases, tankards, keys, cups, flagons, coffers, etc., etc., which speak for themselves.

B. Westermann & Co. have received parts 2-5, of Düntzer's illustrated edition of Goethe's works, already described by us. The engravings show no falling off in quality, and are so abundant as to meet the needs of even the most indolent imagination.

Griffith & Farrar, says the *Athenæum*, owning most of Bewick's wood blocks for 'The Looking-Glass for the Mind,' will complete the set, and shortly bring out a reprint of the edition of 1792, under the editorship of Mr. Charles Welsh.

Mr. Christern sends us the prospectus of *Oud Holland*, a journal of researches in the archives of Amsterdam made by Drs. A. D. de Vries and N. de Roever. It will be illustrated in a manner to please the historian and antiquary. The publishers of this quarterly review are Frederik Muller & Co., Amsterdam.

M. Tamizey de Larroque, says the *Revue Critique*, has made a curious discovery. In a hitherto unknown pamphlet which he found in the library of Carpentras and published in the *Revue des Bibliophiles*, called 'Entrée de Charles IX. à Bordeaux,' it is said that the livery of the King was "blanc, pers, et rouge"—that is, white blue, and red, or that very tricolor which now is to Royalists like a red flag before a bull's eyes.

Mr. E. Steiger, 25 Park Place, with characteristic energy and earnestness, has reprinted his letter, on the abolition of the duty on books, to the *Evening Post* last August, together with Mr. Houghton's argument in a contrary sense before the Tariff Commission and the *Nation's* comments upon it, and sends them broadcast with a petition, returnable to himself, praying Congress to remove the duty in question. No better employment than obtaining signatures to this petition could occupy any one's leisure during the next two months.

—The large and valuable library left by the late Mr. George P. Marsh, United States Minister to Italy, has been sold by the Rev. Dr. Nevin,

on the part of the executors of Mr. Marsh's estate, to Mr. Frederick Billings, whose residence is at Woodstock, Vermont, Mr. Marsh's birthplace. It is said to be the intention of Mr. Billings to present this library to the University of Vermont at Burlington, of which he is himself an alumnus, and of which Mr. Marsh was for some time one of the Trustees, while his home was at Burlington. These facts lend a special interest and fitness to this gift. Mr. Marsh had at one time made a will by which he left his library to the University of Vermont, but later his circumstances were so impaired by what he spent in the public service that he was unable to carry out his original intention. Mr. Billings has done a generous and delicate act in thus securing the library for the institution with which Mr. Marsh himself had wished to place it.

—Mr. John Bigelow's "Railway Invasion of Mexico" in *Harper's* for October contains a mine of information for the investor who is now putting his savings into the hands of the financiers engaged in "developing the resources" of that country. Mr. Bigelow's facts amount to a demonstration that the railroads now under construction cannot for years and years pay large dividends or a heavy interest, because there is not enough business for them to do, and a future increase cannot be relied upon as it has been in our Western States, because there is no flow of emigration into Mexico, and no reason to think that emigrants will want to go there as long as they can come to the United States. The mere building of railroads will not bring them. What is being done in Mexico is very like what was done years ago in Peru and other South American countries; and the results must be the same, except that the state of society in Mexico is now peaceful and settled, and there is reason to believe that her internal improvement will not be interfered with in the future by revolutions. The emigration of which we have heard as "pouring" into Mexico during the last year or two, has chiefly consisted of 5,000 or 10,000 Italians or negroes, who have been brought in by the railroad contractors themselves to work on the new roads. To Mexico the construction of a number of lines with foreign capital is a great thing; to the contractors and the capitalists who place the bonds on the market it is a great thing; but the investor ought to understand that the scheme as a whole is a speculation of which the profits are less likely to come to him than to any one in the wide world, and that if he wants to see what is probably in store for him, he has only to recollect what the early investors in "Peruvians" and "Egyptians" found in store for them.

—M. E. W. Sherwood contributes an illustrated article on "Certain New York Houses," the interiors of which show the pitch of luxury and taste at which we have arrived, and suggest to the pessimistic reader that the palaces of New York differ from all the palaces which have preceded them in other countries, or now rival them, in being inhabited, to a large extent, by a class whose occupations are not naturally associated with palace life at all. A life of money-getting in the United States is now usually wound up by the construction of a palace in which a successful dry-goods man, or pork-packer, or operator in stocks drags out the evening of his days in the midst of taste and splendor for the enjoyment of which he has neither a natural or acquired capacity. He knows that it is his duty to have an æsthetic interior, and he likes to beat his neighbor on the opposite corner by having a little more æstheticism in it than he; but in his secret soul he must feel that these are rather things for "the girls" and artists, and that the place for him is in his counting-room or watching the tape of the stock-ticker. Mr. W. H. Bishop, always a good observer and describer, writes on "Southern California," and those who are interested in the once much-talked-of "Symmes's Hole," as well as those who never heard of either Symmes or the hole, will find B. F. Madden's paper on the subject a curious bit of reading. The Rev. D. Stevenson contributes to literature Chief-Justice Marshall's "Eulogy upon his Wife," which has never seen the light before; and we may take this opportunity to say that the eulogies on wives by their husbands, even when distinguished men, though they pander to a morbid curiosity, are seldom of any real interest, because they are all alike utterly uncritical, and, as they are the products of affection rather than intellect, ought to be sacred, at any rate unless, as in Mill's case, the survivor himself insists on taking the world into his confidence. All that can be said of the Chief-Justice's eulogy is that it shows Mrs. Marshall to have been very like Mrs. Mill in the estimation of her husband; but that she was so in fact is improbable, to say the least.

—The *Century*, as usual, is full of illustrated articles, the best of which, perhaps, are "Life in a Mexican Street," by S. G. W. Benjamin, and Charles H. Farnham's "Gibraltar of America," the illustrations of the latter being by Henry Sandham and F. Hopkinson Smith, who have managed to reproduce the main Quebec "effects" with great success. David C. Barrow, jr., describes in an entertaining manner a Georgia "corn-shucking," one of those plantation institutions which have flourished and expanded since the war, and the survival of which shows that the hilarity and gregariousness of the negro have not been so much affected by the possession of civil rights or the suffrage that we need yet dread his losing the power to amuse us. Mr. E. E. Farman, who, as American Consul-General, conducted the negotiations with the Egyptian Government which led to the gift of the Obelisk, makes a detailed statement of what he did in the matter, and publishes the letter he received with regard to it from Sherif Pasha. This shows that the latter regarded the Obelisk as given to the city of New York, and not, as seems to be the belief of those who have charge of it, to the United States. It is a matter of small consequence, however, as it is evident from Mr. Farman's own account that the Khedive in giving it hardly cared to know to whom the title was to be transferred. A good many people wondered at the time the negotiations began why, if the Khedive wanted to give us an obelisk, there should be so much delay over it; but it appears from what Mr. Farman has to say that the Khedive never had any intention of giving it at all. We sent out and asked for it, and the Egyptian Government finally gave it because they found that we wanted so much to have it. An enterprising journalist started the negotiations by announcing that the Khedive was all ready to give an obelisk "upon a proper application," all of which shows that good things may often be got by insisting on having them, though in the intercourse of nations the procedure described by Mr. Farman is certainly novel. There is something rather funny in his account of the persistent way in which he argued to the Khedive that we really must have an obelisk in New York, because then our entire population of 50,000,000 could see it, whereas only a small proportion of them would ever be able to visit Egypt. The *Century*, which is now perhaps the most judiciously edited magazine in the world, has a few words said for it by its editor in this number, and it will surprise no one who is accustomed to look through it to learn that its circulation during the past year has been larger than ever, and that it has a large circulation in England.

—The *Atlantic* contains a pleasant description, by Mr. F. H. Cushing, of a curious tribe of Indians who inhabit a cañon of Rio Colorado Grande. The "Nation of the Willows" is a tribe very unlike, in many of its characteristics, any of the Indians that we know anything about in the East, and among other peculiar traits has an abnormal sense of humor. They find humor, it seems, in all sorts of out-of-the-way places, where it is often hard for the Caucasian, even when gifted with more than a Scotch capacity for the comprehension of a joke, to follow them. A dead horse, and the difficulties in which his death placed his owner, were enough to set them wild with merriment; and many were the jests that they extracted for the owner's benefit from this unpromising subject. They are great mimics, as well as great wags, and liked to watch and imitate the motions of Mr. Cushing's hand and pencil in writing, though they had not the slightest comprehension of what he was doing, and could only produce as the result of their efforts a meaningless scrawl, of which their love of a joke led them to "read off a ridiculous, usually obscene, rendering." Mr. Cushing, who is an Indian by adoption, will, we presume, collect the Indian articles he is now contributing to the magazines in a book, as they have a permanent anthropological as well as literary interest. "Storm on Lake Asquam" is a poem by Whittier, which is characteristic of him, and, it is hardly necessary to say, true to nature as he sees it—that is, to nature seen with the eye of faith, and never as an indifferent spectator. Mr. Harrison's "Studies in the South" is continued, and contains this time some rather good negro stories. One very curious effect of emancipation is seen in the antics the negroes now play with their old names, for the purpose of magnifying them and making them more like white names. "Thus Romeo Jones of the old times now signs his name Romey O. Jones; Pericles Smith writes himself down Perry Clees Smith; and a boy who was always known as Polly's Jim, having learned to read the New Testament, is now Mr. Apollos James." To a Northerner, however, the Southern whites are often as amusing as the negroes. The story of a Kentucky election dispute, told by Mr. Harrison, throws a flood of light on those queer "affairs of honor" which are always coming off in the South, and which are called there "tragedies" or "duels," and elsewhere are looked upon as murders. The disputants were editors of rival newspapers, and were rival candidates for the nomination to the Legislature. They began the canvass with a bargain not to use money or whiskey "as a motive power"; but, as a leading citizen said, in the course of the canvass there were "some very serious developments." One candidate published a card, in which he charged the other with the use of whiskey as a motive power; upon which the other made a careful reply, beginning with a full biographical notice of himself, and concluding with the following remarks upon his opponent: "I desire to say, clearly and explicitly, that his course towards me has been the result of delirium tremens, or of the most fiendish and vicious feeling of jealousy and envy. He is a liar and a cowardly puppy. He is not in my way, and is hereafter welcome to do whatever the promptings of a soul which professes to believe there is no God, may suggest." Now, the curious part of all this was that the place in which it happened grew wild with excitement about it, and it was generally believed that

blood would flow like water. One of the editors, who were both arrested, shrewdly refused to give bail, and was sent to jail, and it was generally conceded that his "incarceration" would give him a decided political advantage over his opponent.

—*Lippincott's* opens with an illustrated article on "Norfolk, Old and New," by Charles Burr Todd; and Annie Porter writes of her escape from the Mississippi floods of last spring, with that ready sort of descriptive power which is perhaps the most marked gift of feminine authorship. "Bark Canoeing in Canada," by "Kanuck," is a readable article; and there is the usual supply of fiction and poetry. *Lippincott's* of this month can hardly be compared with the other magazines, because in it little or no attempt has been made to give serious literary or social articles, or to discuss or criticise. The pabulum provided is of a lighter sort than that furnished by its rivals.

—Mr. Rose's corrections of the Census, which have been published in the past five issues of the *Nation*, have not received from the press the attention which they merited. No doubt this has been partly owing to their want of "quotability," for in the nature of the case they did not lend themselves readily to the scissors. Confining himself to the Population volume, Mr. Rose has demonstrated in general such a contradiction between the tables (with the text) and the corresponding maps that if either be taken as a standard, the other is not to be trusted. Further, that the tables abound in errors, many of them huge and palpable, and all highly discreditable to the editing of this delicate and important work. He has shown that many of these errors recur in various combinations without detection, and he makes it seem probable that if his tests were protracted an indefinite number of errors might still be unearthed. Now, the journalist may pass this exposure by, but the Census Bureau itself cannot afford to be silent, even if there is no help for the botchwork of the volume already issued. The Baltimore *American* says: "Mr. Walker, the Superintendent of the Census, should at once take steps to correct what is wrong: at least, he should in some manner refute the charges made, or endeavor to explain how they could have occurred." We do not, for our part, know who is responsible for the defects pointed out, but considering the extent to which they vitiate the entire work, one recalls the epithets "gross and ridiculous" applied to the Census of 1840. It must not be forgotten that the results now given to the world will be used for comparison by the makers of the eleventh and of each following Census, and will thus become endlessly misleading. With the earlier and cruder Censuses nothing could be done but to take them as they were, and contrast them one with another and with subsequent returns; but there ought to have come a time when we could rest with absolute confidence in the statistics, not only as gathered but as printed, and make them the sure basis of deductions as to the national growth and development. Improved methods of taking the Census are of small account if the figures are to be subject to careless compilation, computation, and typography. Perhaps it will appear that we have undertaken too much for our imperfect statistical organization, and that a large number of the tabulated phases of the returns have rather a curious interest than a practical value; while all will agree that a minutely accurate and trustworthy, even if meagre, Census is far better worth the enormous outlay of each decade than a multitude of faulty or suspected manipulations of data not fundamentally called for. On this last head at least we are sure General Walker could speak inteligently and with authority.

—The American Commission has just issued "Instructions for Observing the Transit of Venus, December 1, 1882, prepared by the Commission authorized by Congress, and printed for the use of the observing parties by authority of the Hon. Secretary of the Navy" (Washington: Government Printing Office). The parties organized by the Secretary of the Navy are invested with naval character, and subject to naval rules, regulations, and discipline. The command of each party is assigned to the Chief Astronomer, the order of rank and authority in each party being as follows: Chief Astronomer, Assistant Astronomer, Chief Photographer, Assistant Photographer. The instructions were prepared primarily for the use of the parties organized by the Commission, but as the Transit will be visible in this country, they have also been adapted to the use of amateur observers who desire to be made acquainted with the methods by which they may make observations of value. Detailed directions are given for the selection of observing stations, and for setting up instruments. The success of the American system of photography, on the occasion of the Transit of 1874, has led the Commission to rely chiefly on this method of observing the coming Transit. A very considerable portion of the 'Instructions' is therefore devoted to the photoheliograph, the instrument by which the pictures of the Transit are taken. The pamphlet of instructions contains explicit memoranda regarding the photoheliograph and its adjustments, the heliostat, the exposing-slide, the photographic tube, the plate-holder plumb-line, the batteries and electrical connections, the measuring rod, errors of the photoheliograph, fittings of the photographic house, care of the sensitive emulsion, selecting and marking glass, cleaning and albumenizing glass, coating plates, exposure of plates in the photoheliograph, the development, fixing and varnishing, blistering and lifting of the film, spots and other defects, preliminary practice, preparation for the Transit, photographing the Transit, development and packing the Transit-plates, wet emulsion-plates, bath wet-plates, and general precautions. Other sections treat of time-observations and chronometer-comparisons, exchange of time with other parties, latitude and longitude of station, the employment of the equatorial telescope, and the observation of occultations of stars by the moon for finding the longitude of stations not otherwise determinable.

—Under the head of general instructions respecting observations of contacts, it is said that, with regard to the determination of time, arrangements will be made with the Western Union Telegraph Company to transmit time-signals from the Naval Observatory to every part of the country. The aperture of telescope to be preferred in the observations is from five to six inches. Apertures as small as four inches may be used without serious detriment, and three inches may be regarded as the smallest with which observations of real value can be made. The eyepiece should have a magnifying power of not less than 150, nor much more than 200. An equatorial mounting is nearly indispensable to accurate observation, and a clock-motion is desirable. A regular filar micrometer will not be of any use as an instrument of measurement. If shade-glasses are used, they should be made of three thicknesses of glass, the piece next the eye being thickest and darkest in color, all being fitted loosely into their cell so as to allow free expansion. An aperture of five inches may then be used without danger of splitting the sunshade. The observer must attend carefully to the firmness of the telescope, to his ability to move it so as to keep any part of the sun's edge steadily in the centre of the field, and to the accuracy of the focal adjustment. The degree of brilliancy of the sun's disk as seen by the eye is to be particularly attended to; and the American instructions suggest a simple modification of the method of reducing this brilliancy recommended by the Paris International Conference. The conditions necessary to the making of a really good observation of external contact of the planet and sun are such that but few observers will be able to secure anything worth recording. From the time of external contact to that of internal, a period of about twenty minutes, the observer should have little or nothing to attend to, in order that he may be prepared, optically and mentally, for the important observation of internal contact. All the confusing difficulties attendant upon this observation are specifically dealt with, and mention made of every precaution which may lead to a successful and valuable observation. The final sections of the pamphlet relate to methods of recording contacts, measures of the diameter of Venus, data required in reducing the observations, the records of observations and operations, and the transmission and publication of observations. Appended are four lithographic plates showing (1) the lines of synchronous internal contact at ingress, (2) egress; (3) the illuminated hemphisphere of the earth at the middle of the Transit, (4) paths described by several stations through diurnal motion, as seen from the sun during the Transit.

—We have received from Dietrich Reimer, Berlin (New York: L. W. Schmidt), several admirable maps, of which we will first name one physical and one political of the British Isles. These are both wall-maps, for school use, edited by Richard Kiepert, and are published in four sheets. The scale is one inch to about sixteen miles (1 : 1,000,000), and the elevation of the surface, the depths of the neighboring waters, the population of towns and cities according to the census of 1881, etc., are all clearly represented without excessive detail. Ireland is given entire on one sheet in each series. A map useful not only for schools of the higher grades, but also for merchants, students, and statesmen, is Dr. Heinrich Kiepert's "General Map of South America" (Mapa general de la América Meridional). This beautiful production is on a single large sheet (folio by doubling), and on a scale of 1 : 10,000,000, with numerous side maps for almost every country and for the outlying Galápagos archipelago, forever associated with the triumphs of Darwin, whose nominal monument, however, is a peak in Tierra del Fuego. Nothing is more impressive than the longitudinal way in which South America, in contrast with our own continent, has been settled and politically split up. Chili's snake-like extension bids fair to reach the equator, and there is a prospect of endless wars over disputed boundaries among every one of her neighbors to the north: Ecuador, for example, between the claims of Colombia and Peru, being reduced to a mere wedge. But as regards not only boundaries but natural features like the course of rivers, the glorious uncertainty of South American geography is well exhibited by the broad differences between Kiepert's delineation and that of the larger-scale maps in the new Stieler's Atlas. Between two such eminent authorities the layman cannot undertake to decide. We have finally to mention this learned cartographer's editing of Professor C. Haussknecht's journeys in Northern Syria, Southern Armenia, Mesopotamia, Kurdistan, and Central and Southern Persia. These journeys were made at private expense in the interest of botany, but advantage was taken of the

opportunity to add to our knowledge of districts heretofore little visited and therefore most promising for botanical research. Prof. Haussknecht's intelligent observations and second-hand information have been supplemented and checked by Dr. Kiepert from various sources, public and private, and are mapped under the auspices of the Berlin Geographical Society, with the aid of the Carl Ritter fund. The Turkish portion is the most original and valuable. The work fills four sheets, on a scale of 1 : 6,000,000 and 1 : 8,000,000 for each pair respectively. From the traveller and his editor we have short introductions explaining the circumstances of the undertaking, in a small quarto pamphlet accompanying the maps ; but Prof. Haussknecht promises a detailed description of the interesting region traversed by him as soon as possible.

—Dr. von Reber, the celebrated archæologist and art-historian, publishes in the Augsburg *Allgemeine Zeitung* for August 10 a highly complimentary notice of the investigations at Assos of the expedition of the Archæological Institute of America, as described in Mr. Clarke's first report. Dr. von Reber notes the beauty of the representations of animals among the temple sculptures, and the comparative inferiority, in general, of those of the human figure. He calls attention, however, to the head of a sphinx from the epistyle frieze, which is in a remarkable state of preservation, and which approaches very nearly the type of the Apollo of Tenea and similar monuments. All earlier students have placed the date of the temple of Assos before 500 B. C. —some of the most eminent of them even before 600 B. C. The earlier the date the more important is the building in the history of Doric architecture, as thus its influence upon the later and fully developed style may have been considerable. Mr. Clarke, however, thinks that the building of the temple was due to the art-impulse which followed the Greek victories over the Persians in the first quarter of the fifth century, and that it is contemporary with the temple of Ægina. He accounts for its many archaic features by the position of Assos, remote from the centres of Hellenic thought, and by the strong Oriental influences of the neighborhood. Mr. Clarke's opinion has great weight, as his knowledge of the temple is necessarily far greater than that of his predecessors ; and certain confirmation of it will be received with much interest. Dr. von Reber thinks that the exploration of the Street of Tombs of Assos, now in progress, promises especially important archæological results. He mentions with much satisfaction the recent discovery there of a Doric stele-column, provided with a base like those of Egyptian models, and resembling closely the proto-Doric shafts of Beni-Hassan. He looks upon this stele as an important evidence in support of his theory that the want of a base is not an original characteristic of the Doric column, but that it resulted from the use of stone in the place of wood in the epistyle, and the consequent closer placing of the columns. This, he thinks, caused the bases, extending out beyond the shafts, to lie so inconveniently near each other that the old architects preferred to give them up, or, rather, to combine them with the stylobate.

—Americans who were ashamed at the conduct of the audience at the Guiteau trial may derive an unsatisfactory consolation from the accounts of the *procès Fenayrau* at Versailles. The crime was a hideous murder, for which one of the accused was condemned to death and his wife to imprisonment for life ; a piece of the victim's skull was exhibited in court, as the President's bones were, and yet, just as in the American trial, we read of *hilarité prolongée, rires, hilarité générale, on rit.* Thackeray has described in one of his sketches the intense popular enjoyment of a hanging, and intimated his belief that such scenes encouraged rather than deterred men from crime. Public executions have been in a measure abolished. Can anything be done to render trials for murder less hilarious? With many of the spectators laughter is only a necessary unbending after strained attention, a reaction from pity and horror ; with others it is part of the amusement which was their object in coming to the trial. In either case it ought to be deferred till they are outside of the court-house. But how ? The audience can no more be gagged than the prisoner.

ENGLAND AND IRELAND.

A Short History of the Kingdom of Ireland, from the Earliest Times to the Union with Great Britain. By Charles George Walpole, M.A., Barrister-at-Law. London : Kegan Paul, Trench & Co. ; New York : Harper & Bros.

Mr. Walpole's 'History of the Kingdom of Ireland' is about as melancholy and as instructive reading as any book one can take up. The annals of that country are, from beginning to end, the record of failure and misery. Their special sadness consists in the fact that calamities spreading over centuries appear on a first view to be caused solely either by human folly, selfishness, and stupidity, or by the special perversity and unkindness of fate. The kingdom of which Mr. Walpole tells the story seems, on cursory observation, the one spot on earth where no system of government has been able to produce anything but misery. The vigor of Wentworth, the despotism of Cromwell, the energy of William, achieved at least as little permanent good as the enlightenment of Grattan and all the attempts at improvement made by statesmen who believed that the evils caused by oppression and intolerance could be removed by freedom and religious equality. It is natural enough for any one who realizes the failure of statesmanship to remove the hundred evils under which Ireland has suffered, to assume that if energy and policy have failed to bear good fruit, the cause of this want of success lies in the special wickedness either of the Government or of its subjects. Hence Irishmen are apt enough to believe, and not without considerable show of reason, that the misfortunes of their country may be ascribed to the wickedness of England, in the same sense in which a definite crime may be charged upon an individual criminal. We have known men who, in other respects possessed of sense and judgment, could not get quit of the feeling, if not of the belief, that the Englishmen of to-day — Mr. Gladstone, Mr. Bright, and others—were, in spite of their endeavors to do justice to Ireland, constructively responsible for "the curse o' Crummell," the breach of the Treaty of Limerick, the cruelties of 1798, and the corruption which procured the passing of the Act of Union. Englishmen, on the other hand, assume that the most conspicuous of England's failures is due to the innate folly, indolence, or crookedness of Irish nature. Which of us has not heard that the calamities of Irishmen are due to the vices of the "race"? How many of us have reflected that the formula which attempts to explain everything by reference to blood is, in ninety-nine out of a hundred cases, no better than a restatement of the very fact which requires explanation, or that the reference to "race" is singularly unsatisfactory when applied to a country which has been planted and colonized more than once with men of Scotch and English blood ? If "race" be the solution of the problems presented by Irish history, it were well to consider the question why it is that the descendants of Cromwell's Puritans have furnished even more than their due quota to Irish discontent.

The plain truth is, that if the melancholy history of the kingdom of Ireland is to yield any instruction to the philosophic investigator into the course of human affairs, his first step must be to get rid of the delusions caused in the domain of history, as elsewhere, by personification. He must cease to think of England and Ireland as persons who may be charged with individual and continuous responsibility for the crimes or follies of the past. He must also carefully check the natural but delusive tendency of the human mind to conceive that when anything goes wrong you can always lay your finger on definite, assignable wrongdoers—that is, upon some man or men who can be held responsible for faults and errors as a murderer may be held guilty of murder or a robber of theft. No one who reflects on the profound truth of the dictum (attributable, by the way, to an Irishman) that "history is at the best but an old almanac," can hope that investigations into the past will do much to guide the future relations of England and Ireland. One thing, however, the careful study of history may perhaps achieve—it may slightly modify the historical animosities which still divide Ireland from the rest of the United Kingdom. It is at any rate worth while for serious students to turn their minds away from hopeless and interminable disputes about individual responsibility for the errors of the past, and to examine how far the miseries of Ireland and the failures of England may be the effect of causes too general to be in any way identified with the intentional wrong-doing of given persons. Whoever looks at the facts recorded by Mr. Walpole, and as far as possible neglects the color which that author's natural feeling or sentiment gives to these facts, will be able to draw from the events with which he deals several conclusions of considerable speculative importance.

First. England and Ireland have from the beginning of their ill-starred connection been countries standing at a different level, or a different stage, of civilization. This has been the fruitful source of a thousand ills. Hence has arisen (among other evils) the whole crop of difficulties connected with the tenure of land. When James I. determined that the "old Brehon law was to be utterly abolished, and the means of appealing to English law brought within the reach of every one," he and his ministers really meant to introduce a beneficial reform. They hoped that out of the old tribal customs a regular system of landholding according to the English tenure would be developed. In forcing on this change, English statesmen probably felt convinced not only that they were carrying out a reform, but that they were promoting the cause of justice. To men trained under the teaching of lawyers like Coke, and accustomed to regard the tenure which prevailed in England as something good in itself, it must have appeared that to pass from the irregular dominion of uncertain customs to the rule of clear, definite law, was little less than a transition from anarchy and injustice to a condition of order and equity. They acted in precisely the spirit of their descendants, who are absolutely assured that the extension of English maxims of government throughout India must be a blessing to the population of the country, and are at this moment shaping their Eastern policy upon their unwavering faith in the benefits which the European Control must of necessity confer on the Egyptian peasants. If, however, it is probable that King

James meant well to his Irish subjects, it is absolutely certain that his policy worked gross wrong. His "scheme only provided for the more powerful members of the tribes, and took no account of the inferior members, each of whom in their degree had an undeniable, if somewhat indefinite, interest in the tribal land. . . . It never occurred" to Sir John Davis, who carried out the plan, "that the humblest member of the tribe should, if strict justice were done, have received his allotment out of the common territory; and the result of his settlement accordingly was that the tribal land was cut up into a large number of freehold estates, which were given to the most important personages among the native Irish, and the bulk of the people reduced to the condition of tenants at will." An intended reform led to injustice, litigation, misery, and discontent. This case is worth notice, for it is a type of a thousand subsequent English attempts to reform and improve Ireland. The rulers of the country were influenced by ideas different from those of their subjects. Ignorance and want of sympathy produced all the evils of cruelty and injustice.

The history of the religious reformation of Ireland is in principle much the same as the history of the reform of Irish land tenure. The singular inappropriateness, not to say absurdity, of attempting to impose Anglican Protestantism upon a people who had not reached the stage of development which was absolutely essential for even the understanding of Protestant doctrine, conceals from us the strength of the pleas which may be urged in excuse of a policy which to critics of the nineteenth century seems as iniquitous as it was absurd. Till very near the end of the seventeenth century, it was the all but universal belief of the best and wisest men of the age that the religion of a country was the concern of the Government, and that a king who neglected to establish and enforce the "truth"—or, in other words, his own theological beliefs—neglected his obligations to his subjects and incurred the displeasure of Heaven. From this point of view, the conduct of the Tudors and their successors must appear to us as natural under their circumstances as to themselves it appeared wise and praiseworthy. That England should have been ripe for Protestantism at a time when the majority of the Irish people had hardly risen to the level of Roman Catholicism, was to each country a grievous misfortune. That English Protestants of the sixteenth and seventeenth centuries should have believed that toleration of Papists was a grievous sin, and should have acted on the belief, was the cause of immense calamities. But inevitable ignorance or prejudice is not the same thing as cruelty or wickedness.

Secondly. The virtues no less than the vices of Englishmen have rendered them singularly incapable of conciliating the good-will of dependencies. It will always remain a curious paradox that the nation which has built up the British Empire has combined great talent for legislation and government with a remarkable want of power to consolidate its subjects into one state. The explanation of this paradox lies, it may be plausibly conjectured, in the aristocratic sentiment which has given the tone to the policy, and to a great extent moulded the institutions, of England. An aristocracy is far more prone than a despotic or democratic government to respect the rights of individuals; but an aristocracy identifies right with privilege, and is essentially based on a belief in the inequality of men and of classes. "Privilege" is the key-note of English history; the tendency to cling to privileges has preserved English freedom, but it has made England slower than almost any other civilized country to adopt ideas of equality. This love for privilege has vitiated the English government of Ireland in more ways than one. The whole administration rested, avowedly down to 1829, and unavowedly to a later period, on the inequality of Catholics and Protestants; and Protestant supremacy itself meant (except during the short rule of Cromwell), not Protestant equality, but Anglican privilege. The spirit which divided Ireland into hostile bodies prevented Englishmen who dwelt in England from treating as equals Englishmen who settled in Ulster. When the Protestant Volunteers claimed Irish independence, and the American colonists renounced connection with the mother country, the same cause produced the same effects. In each case English colonists revolted against English sovereignty because it meant the privilege of Englishmen who dwelt in Great Britain to curtail the rights and hamper the trade of Englishmen who dwelt abroad; for even the monstrous and iniquitous restrictions on the trade of Ireland, which are morally far the most blameworthy of the wrongs done by England to Irishmen, were not precisely the acts of deliberate selfishness which they seem to modern writers. The grievance under which Ireland suffered was in character the same as the grievances in respect of trade inflicted on the American colonies; yet it is certain that but for the insane attempt to subject the colonies to Imperial taxation, the War of Independence might have never broken out, or would, at any rate, have been long deferred. Even the sufferers from a vicious commercial policy did not see its essential iniquity. It is hardly a subject for wonder that the generation of Englishmen who at any rate supposed themselves to gain greatly by controlling or extinguishing the colonial or Irish trade, should not have realized the full iniquity of a policy which in itself hardly seemed intolerable to many of those who suffered the wrong. English selfishness was masked from Englishmen by English ignorance; but let no one fancy that to palliate the moral guilt of England is in any way to lessen the reality of Irish grievances. Injustice is as hard to bear when it results from ignorance as when it results wholly from greed or rapacity.

Thirdly. The English Constitution has wrought almost as much evil to Ireland as it has conferred benefit upon England. Mr. Froude and others who point to the misgovernment of Ireland as a proof that the Parliamentary system is radically bad, prove something, though what they prove is not the point which they intend to establish. A representative government is in many cases an excellent form of government for the people who are represented. It is a thoroughly vicious form of government for any nation whom it does not represent. The assailants of Parliamentary government do not make out that England has suffered from the power of the English Parliament. They do show that a Parliamentary despotism is a worse government for a dependency than a Royal despotism. This is so for two reasons. Parliament, in the first place, is less capable than a king of compensating for the evils of tyranny by the benefit of good administration. Parliamentary government, in the second place, means, or has always meant in England, government by parties; and whatever the merit of party spirit in a free country, its disastrous effect when applied to the administration of a dependency is patent. Down to 1783 Ireland was avowedly ruled under a Parliamentary despotism. At every turn the interest of the country was sacrificed to the exigencies of English politicians. Between 1783 and 1800 the nominal independence obtained by the Volunteers placed some check on the power of the English Parliament; yet no one can fail to see that in substance the Parliament of England remained the true sovereign of the kingdom of Ireland. If Pitt could have carried the King and the English Parliament with him, he would, we may feel sure, have carried out his policy of Catholic emancipation in spite of any resistance which could have been offered at Dublin by the adherents of Ascendancy. A calm observer may even at the present day doubt whether under the Parliament of the United Kingdom Ireland obtains the real benefits of the British Constitution. A hundred representatives from Ireland sit, it is true, in the House of Commons; but any one who is determined to look facts in the face must feel far from certain whether Ireland is, for any practical purpose, represented at London in the same sense as Middlesex or Midlothian.

The last, the most inevitable, the worst and the least blameworthy, of the evils caused to Ireland by England has been the artificial suppression of revolution. The crises we call revolutions are the ultimate and desperate cures for fundamental social disorganization. The issue of the revolutionary struggle shows what is the really sovereign power in the revolutionized state. The interest of mankind (at least, in any European country) in favor of some kind of settled rule is so strong that civil disturbance will, if left to itself, end in the supremacy of some power which by securing the safety at last gains the attachment of the people. The Reign of Terror begets the Empire. Even the wars of religion at last produce peace, albeit peace may be nothing better than the iron order of despotism. Could Ireland have been left for any lengthened period to herself, some form of rule adapted to the needs of the country would have been established. Whether Protestants or Catholics would have been the predominant element in the state; whether the landlords would have held their own, or whether the whole English system of tenure would have been replaced by one more in conformity with historical traditions; whether the different classes of the community would have established some *modus vivendi* under which individual freedom might have been secured, or whether some despotic form of government would have been sanctioned by the acquiescence of its subjects—are matters of pure speculation. What, however, is certain is, that Ireland would, if left to herself, have, like every other country, arrived at some permanent settlement of her difficulties. The British connection has been fatal to such a settlement. Revolution has been suppressed at the price of permanent disorder, and a nation which has never been independent has never borne the burdens or learnt the lessons of national responsibility. Disastrous as this result has been, it were difficult to say who it was that at any given point was to blame for it. Had France been attached to, and dependent upon, a more powerful neighbor, the governing state must have checked the agonies of the Reign of Terror; but it is almost certain that the forcible defeat of Jacobinism through an external power would have been fatal to the progress and prosperity of France.

A FRENCH VIEW OF GERMAN SCHOOLS.

Excursions Pédagogiques. Par Michel Bréal, Membre de l'Institut. Paris: Hachette et Cie. 1882.

THE total impression produced by M. Bréal's valuable essays is painful. The new France is moving forward, but the progress is slow and every step disputed. The Clericals have the advantage of tradition, of definite method, definite aims. M. Bréal, himself a prominent and able advocate of progress, is too clear-sighted not to see through the wily tactics of the other party,

and the volume is full of facts and suggestions of the highest interest to those who are studying the history of the Third Republic, and not without value for our own present and future.

One can hardly parallel the readiness with which France has set herself to study the methods of her victorious enemy both in civil and in military education. It is easy enough to talk about learning from an enemy, but it is hard to practise it. The defeated would often prefer to stay defeated rather than be successful as the enemy has been successful. Imitation seems to involve assimilation, and assimilation is too high a price to pay. But France defeated did not hesitate to copy Germany victorious, and those French scholars who had long been familiar with German systems pressed this opportunity of introducing needed reforms. In his preface M. Bréal takes occasion to enter a protest against the wholesale introduction of German methods, but he finds, as we should all find, much to learn from the management of gymnasium and university in Germany.

The German gymnasium, M. Bréal remarks, is more simple in its organization than the French lycée; it does not admit so great a variety of studies. In the lycée some follow the regular course, others prepare for the Army, the Navy, the polytechnic school. In the German gymnasium all follow the same curriculum. The French lycée often assumes enormous proportions. In Germany every large town has several gymnasia, several *Realschulen*. Thus, Breslau, with 150,000 inhabitants, has three *Realschulen* and five gymnasia, so that the schools are of moderate size. Provision for lodging and boarding the pupils (the *internat*), which is the rule in France, is almost unknown in Germany, with the exception of a few old foundations, of which Schulpforta is by far the most famous. The specialization of teachers is not so marked in Germany as in France, where specialization has been developed by centralization. The French specialist is despatched by the central authority to any point where his services may be needed. The German teacher covers more ground, and M. Bréal thinks that the instruction is no less exact, no less profound. The gymnasium teacher works harder than a professor in a lycée. Even the highest of them think it nothing extraordinary to give from eighteen to twenty-two lessons a week, the lesson being some forty-five or fifty minutes. But then the gymnasium teacher is better paid; and, as M. Bréal naturally remarks, nothing costs more in the long run than an underpaid faculty. Secondary occupations ever multiply, and consume the time and the strength that are needed for the principal work.

In his chapter on classical studies in the gymnasium, M. Bréal notes especially the thorough drill in grammar, as, for instance, the varied practice in the Greek accidence with the good old fashion of head and foot, classically called *certatio;* and he expresses his amazement at the accuracy of the young students in Greek accentuation. In this respect the French boy is at a sad disadvantage, and, we might add, the English boy as well. The German learns accent by the ear, the French and English by the eye—which is, of course, a pure counter-sense. High praise is given by M. Bréal to the off-hand translations of German into Latin and Greek, but it seems that attempts to transplant the *extemporale* into France have failed. In order that the exercise should be thoroughly effective, the scholars must have had good preliminary training, and the teacher must be a master of the language that he teaches, so as to be ready for any emergency. Under these conditions extemporaneous translation into Latin and Greek is of the highest value. The works on Latin style used in German gymnasia are far superior to the French text-books on the same subject, but M. Bréal, who has found so many points of superiority in Germany, observes at least one in France: the French boy, it appears, far surpasses his German rival in Latin verse. Indeed, M. Bréal goes so far as to say that Latin verse-making has disappeared from the list of subjects taught in the German gymnasium, and it must be confessed by the most enthusiastic admirers of German training that the verses produced on festal occasions are mostly of very inferior workmanship, and that of late years Latin prose has been sinking to the level of Latin verse. Certainly Latin speaking has gone down very perceptibly in the last two or three decades, and it might seem safe to predict an utter extinction of the use of Latin as a vehicle for modern thought if it were not for the multiplication of philological literature in all manner of outlying languages. This will in all probability bring about a reaction, and it is to be hoped that Dutch scholars will continue to write readable Latin, and keep alive the secret of an art which is well-nigh lost.

In his chapter on the character of German teaching, M. Bréal makes a general observation, which is well worth considering in the development of our university life. In France, he says, one is rarely the pupil of a man: one is the pupil of the École Normale, of the École des Chartes, of the École Polytechnique. In Germany one is the pupil of Boeckh, of Hermann, of Ritschl, of Haupt. How is it to be in America? As yet our university life has not been fully developed. We are still in the college stadium, and we must still speak of Harvard, Yale, Princeton. But wherever a great master has arisen, and real university work has been done in this country, the man and not the school is recognized as the teacher. Thus we spoke of pupils of Agassiz; thus we are speaking of pupils of Sylvester. And this will be more and more the case as time goes on, for the type of our higher work is German, and not French, while the tendency of common-school education is rather to excessive centralization and mechanical subdivision, which, as we have seen, are apt to go together.

In commenting on the career of the great men who made German preëminence in the classics possible—Ernesti, Gesner, Heyne, and Wolf—M. Bréal stops to comment on the youth of these professors when they began their work. Wolf was but twenty-four when he took charge of instruction in ancient literature. In France no one can make a beginning as a lecturer until he is twenty-five; no one can become titular lecturer until he is thirty. Practically, matters are even worse than that. The lecturer must have passed his best years, his most fruitful years, in occupations of a different nature and of a different order; and yet one must be young to attract the young, to fire them with enthusiasm. True, youth is not simply a matter of years—it is often a matter of temperament; but the average teacher is himself kept alive by the vitality of his earlier training. The philological world will long mourn for Charles Graux, who died famous at an age when American scholars are scarcely out of their pupilage. The physiologists of England are plunged in grief for the untimely death of Balfour, and we picture to ourselves what these men would have become had they been spared. Perhaps as teachers they were at their best when they were taken, for every teacher of long experience can confirm the statement that the first fruits ripened by the heat of an unchilled enthusiasm are often the fairest of all. And so M. Bréal thinks. The French system assigns to the work of superior instruction men who are already fagged, men who have already given out the best that they have; a striking contrast to the universities of Switzerland, which seek men of rising reputation and give them up to other countries when they have become recognized celebrities.

The German teacher stands nearer to his pupils than are the French professors to theirs, and M. Bréal attributes this, in a measure, to the fact that the German student pays lecture-fees and the French student does not. There seems to be at first something crude in this way of putting it, but M. Bréal goes on to explain: the fee gives the students a right to the services of the professor; the French hearers seem to receive everything from the professor's condescension. Payment for lectures was instituted, not by reason of the professors, nor in their interest, but by reason of the students and in their favor. In America, a few institutions make the remuneration of each professor depend directly and in large measure on the fees paid by the students in his department; but the most important of these institutions, the University of Virginia, has abandoned the plan, and the fees are now merged in a common fund. The Scotch universities follow the German method, and, owing to the large number of students, the Scotch professorships are great prizes. The whole question is one of much complexity, and cannot be discussed in a running commentary on M. Bréal's book. It may be said, however, that if the professor is to receive the fees in his department, a reasonable counterbalance should be arranged in the way of salary. A professor of Hebrew is as necessary to the completeness of a university as a professor of French, and yet the remuneration might be glaringly unequal. The professor of Sanskrit at Edinburgh and the professor of botany—an obligatory medical study—must be in very different financial zones. It is not pleasant to remember that some of the most illustrious men in Europe, at the height of their renown, have had to give private lessons on very modest conditions—for example, the eminent scholar Bopp himself. As human nature is constituted, direct remuneration for direct exertion is stimulating, and until that principle is introduced, M. Bréal thinks that French professors will not exert themselves as do their German colleagues. But it must always be borne in mind that the German fees are low, and that the stimulus of a small increment to the regular income is sufficient to incite a salaried officer to a disproportionate amount of extra work. In closing his account of classic studies in Germany, M. Bréal notes, as every one must note, that mere erudition is far too dominant, and that certain literary qualities which are indispensable for good teachers of youth are kept down too much. "But for the development of special lines of work, for the awakening of the scientific spirit, these four years of university life are of inestimable value." The elevation of university instruction in Germany has had for its consequence the advance of secondary instruction, and so our French reformer desires to see the good work begin in the university life of France.

M. Bréal has much to say about the final examination of the gymnasium, the examination which tests the student's preparation for the university. Among the points in favor of the German method are the absence of cramming and the large share taken by the teachers of the gymnasium in the examination. The French baccalaureate degree is conferred upon the recommendation of outside judges, and the previous faithfulness of the candidate has no influence in determining the result. As for the prevention of cramming, that has been professedly the aim of all teachers, and various devices have been resorted to in order to counteract the

tendency—most of them with as little result as Count Rumford's scheme of leisurely mastication in the Bavarian Army. Some men—and those whose judgment is not least worthy of respect—have maintained that the dead strain of reading up for an examination is not a bad preparation for the work that is often to be done in life—the gathering up of all the faculties for a prolonged effort. To say that learning so acquired does not stick, is a feeble objection. Forgetting has its own use, and, in many things, to have learned how to learn is all that is needed.

A sketch of the origin, history, and constitution of the *Realschule* closes the section entitled "Un Voyage Scolaire en Allemagne," the only portion of the interesting volume that can be considered here. M. Bréal gives a very sad account of the state of things in Belgium, and his excursions in France, to which half the volume is given up, are full of severe criticisms, tempered, it is true, by warm commendations of individuals, and hearty recognition of reforms which have been introduced since these pedagogical rambles were undertaken. For the book, in its substance, is not of yesterday, and in this review only those points have been touched on which are of standing interest.

Records of Later Life. By Frances Ann Kemble. Henry Holt & Co. 1882.

MRS. KEMBLE has almost every gift as a correspondent that a letter-writer of the letter-writing sex can have—a simple, straightforward style; a love of detail, and a capacity for distinguishing between the interesting and the tedious in detail; a knowledge of character, the knack of telling a story, a keen sense of humor and sensitive imagination, and in everything perfect naturalness and freedom from affectation. Her letters present a most pleasing picture of her character, and she has shown a wonderful reserve in suppressing everything which might cause the least pain or even annoyance to persons whose names appear in her pages. Nothing could have been easier for her, with her wide acquaintance on both sides of the Atlantic, than to make her book a storehouse of doubtful gossip and amusing scandal; but with all her humor and love of anecdote, and knowledge of society, she has no malice, and of the many people who must have opened her book (as all such books are opened now) with dread, not one but must have given a sigh of relief in discovering that it is a collection of letters in which nothing that could wound or distress any one is printed.

Yet it is a book filled with "veracity." Mrs. Kemble, for instance, describes life as it existed in the United States forty or fifty years ago without touching up the picture at all; and that the facts which she records do not produce any sense of offence is due not merely to the fact that the American public is less sensitive to foreign criticism than it was, but to the tact and good temper which make it impossible to attribute what she says to a desire to blacken or ridicule. This part of her book, though it is a small part, has considerable value, as it reproduces in very vivid colors the impression made by American society and manners on the mind of a person born and brought up in an entirely European *milieu*, yet really desirous of finding good in everything American. It was a period when there was a vastly greater difference between the European and American way of looking at life and way of living than there is now, when we had no large cities, no wealthy and idle class, no society struggling to be as English as possible. We are not such good democrats as we were then, and if Mrs. Kemble were living in Lenox to-day, she would hardly be likely to record that one of her friends, the son of a much respected New England judge, himself the "owner of a beautiful farm adjoining," had been engaged in mowing her grass.

Turning to the English portion of the book, it is full of entertaining anecdote and criticism of persons more or less well known—Sydney Smith, Rogers, Macready, Rachel, Charles Greville, and a host of others. Some of these may be worth extracting. As to the effect produced by Macaulay's marvellous gift of discourse, she mentions him, while on a visit at the house of a friend, standing, whenever at any time during the day she happened to look into the drawing-room, "always in the same position on the hearth-rug, always talking, always answering everybody's questions about everything, always pouring forth eloquent knowledge; and I used to listen to him till I was breathless with what I thought ought to have been *his* exhaustion." She gives a very good picture of the despotic rule of Lady Holland at Holland House, and tells several stories of her manners which show what a mistake it is to think that having a "pleasant house" always depends on consideration for the feelings of the guests. On one occasion Mrs. Kemble's sister Adelaide was sitting near Lady Holland, when the latter dropped her handkerchief. "Reflecting," continues Mrs. Kemble, "upon her age and size, which made it difficult for her to stoop for it herself, my sister picked it up and presented it to her, when Lady Holland, taking it from her, merely said, 'Ah! I thought you'd do it.'" However, it was very much a case of give and take at Holland House, for we hear of Rogers sneering at his hostess's loss of hair, and causing an "exultant giggle" round the festive board. The manners of Holland House were not the manners of our day, or indeed any day, and it is as dangerous to make general inferences from the remarkable sayings and doings that went on in it as it is to make such inferences from the table-talk of Dr. Johnson as to the general condition of society in his time. Mrs. Kemble knew Sydney Smith very well, and manages in a page or two to give a good idea of the humorous drollery of his conversation, in which wit and humor certainly often received great aid from sheer nonsense. With Rogers she became in later years very intimate, and she used to read to him; in connection with this she mentions the curious fact that she never asked him what she should read without his putting into her hands his own poems, which always lay by him on the table—a trait which recalled to her recollection the fact that Rogers had once declared of Wordsworth that he (Wordsworth), in a visit to a friend's house, had been found daily in the library, but always with a volume of his own poetry in his hand.

Mrs. Kemble's connection with the theatrical and musical world is the source of a good many anecdotes. An encounter of wits between Madame de Metternich and Liszt is rather amusing. She patronized Thalberg, but, having invited them both to her house on one occasion, addressed to Liszt several impertinent questions about a professional visit he had been paying to Paris, winding up with: "Enfin, avez-vous fait de bonnes affaires là-bas?" To which he replied, "Pardon, Madame la Princesse, j'ai fait un peu de musique; je laisse les affaires aux banquiers et aux diplomates." Later in the evening she sneeringly complimented him on his freedom from jealousy of his rival, to which Liszt, who was very sallow, replied: "Mais, Madame la Princesse, je suis furieusement jaloux de Thalberg; regardez donc les jolies couleurs qu'il a!" The musical and dramatic criticism scattered through the book is all interesting, and the reader cannot help wondering, when he remembers Mrs. Kemble's great natural gifts, that she takes such an habitually external attitude toward the stage. Her criticism is acute and impartial; she has no illusions about the profession; she loves it, and is deeply interested in everything connected with it, yet she regards it as a career with something not far removed from loathing.

The correspondence, which is accompanied by a good deal of explanatory comment, makes a very charming addition to the literature of "reminiscences." It is impossible to read ten pages of it without perceiving that we are in the society of a superior mind and character. The letters have just that amount of personal interest which makes us feel that we are taken into the confidence of the writer, and for the time being are even enjoying her friendship.

The State in Relation to Labour. By Prof. W. Stanley Jevons, LL.D., F.R.S. London and New York: Macmillan & Co. 1882. Pp. 165.

No book could better illustrate the period of transition through which the study of political economy is passing than the one which lies before us. Its avowed purpose is to deal with the proper methods and limits of legislation in matters relating to labor. Had an English economist of thirty years ago been asked to write such a book, he would probably have replied: It is against accepted principles that lawmakers should interfere at all in matters of industry, and it would therefore be futile to spend time in considering the "proper methods and limits" of such interference. Indeed, the appearance of this little work upon the 'Relation of the State to Labor' is not only itself a contradiction of the claims of classical economy, but, coming as it does from a successful publishing house, shows that the English reading public is in some degree prepared for such a study. Professor Jevons takes it for granted that his readers will agree with him in denying the character of a principle to free competition. He conceives it to be a maxim, rather, or a general rule which may or may not apply to any specific case. He assumes, what is coming to be regarded as tenable ground, that free play of economic forces may effect evil as well as good, and where evil is observed to result this freedom should be curbed by the only agency capable of exercising that power—namely, the state.

That this correctly represents him may be learned from the first chapter of his book, which is devoted to a consideration of the principles of industrial legislation. The position assumed here is that there is no principle which may be followed in all cases. "The first step," says the author, "must be to rid our minds of the idea that there are any such things in social matters as abstract rights, absolute principles, indefeasible laws, unalterable rules, or anything whatever of an external or inflexible nature." If one ask what criterion then remains for judging of industrial legislation, the reply is, that the legislator is thrown back upon his sense of what is appropriate in specific cases. The rule is, *Salus populi, suprema lex*, and there can be no logic machine for its application. In another place we read:

> "No laws, no customs, no rights of property, are so sacred that they may not be made away with, if it can be clearly shown that they stand in the way of the greatest happiness. . . . I conceive that the state is justified in passing any law, or in doing any single act which, without ulterior consequences, adds to the sum total of happiness. Good done is sufficient justification of any act, in the absence of evidence that equal or greater evil will subsequently follow."

What then becomes of our liberty?

"The liberty of the subject," says Professor Jevons, "is only the means toward the end; it is not the end itself; hence, when it fails to pro-

duce the desired end, it may be set aside and other means employed." (Pp. 12, 13.)

It is from this standpoint—that laws are to be judged by what they effect, and not by any principle they involve, that "restrictions on industry are not good nor bad *per se*," but according as they are imposed wisely or foolishly—that the author proceeds in his study. In this light he considers the Factory Acts, Trades-Union Legislation, The Law of Industrial Conspiracy, Coöperation, and Arbitration.

Of these questions, perhaps the most pertinent is that of the law of industrial conspiracy. This is usually discussed from the standpoint of workmen only, but Professor Jevons shows his appreciation of its extent by treating it in a manner equally applicable to a conspiracy of railroad magnates. Any one acquainted with the history of this question will remember that in the early part of this century combination among workmen to enforce any demand was characterized as conspiracy, and punished as such. These laws, however, have been repealed, and many appear to regard this repeal as furnishing license to unlimited "boycotting." What is now the legal status of a combination among men to effect, in the course of business, that which no one of them alone could accomplish? To arrive at just conclusions respecting this question, one must recognize the fact that the common law, as well as the great majority of legal enactments, rests on the assumption that "individuals will act as individuals, pursuing independent and usual courses of action." "The essence of illegality," says our author in another place, "is injury to other people." If, then, the entirety of a country's laws be drawn upon the supposition that men will act for and by themselves, and if men refuse so to act, but organize and in a body enforce their demands to the detriment of the body politic, there is nothing in the repeal of the Conspiracy Acts which would forbid our calling such acts illegal. The common law still remains. The maxim of McCulloch, that "a criminal act cannot be generated by the mere multiplication of acts that are perfectly innocent," does not here apply, for the simple act of a single person changes its character when becoming the act of a thousand persons organized for carrying through a definite purpose.

We cannot speak further in detail of the various questions treated. The author endeavors to preserve impartiality, but it is doubtful if he will give satisfaction either to interested parties or to publicists. The book itself is somewhat fragmentary and ill-jointed, and does not indicate that grasp of thought or depth of feeling which a consideration of this, the most important of the permanent questions now before the world, calls for. Highly as we esteem Professor Jevons for work done in the past, we cannot refrain from saying that in this treatise he fails from the outset to discern the true meaning of legislative interference. The question is, Why should the state interfere in matters of industry? The answer does not consist in an array of individual cases of misfortune or suffering, as, for example, a workman torn by an unprotected fly-wheel, children working through their tender years, or a set of laborers threatening and coercing their fellow-laborers. These are answers, but not the answer. The answer, which comprehends in itself all cases, is that under the unrestricted play of economic forces, the worst possible, not the best possible, form of industrial society comes to exist. The moral tone imparted to it is that of the worst and not of the best competing elements. The state, therefore, should interfere, in order to raise the plane upon which competition may take place, and render it possible for the moral standards of the better competing elements to realize themselves. Thus, for an example, suppose, in the absence of Factory Acts, ten manufacturers competing for the supply of a market. Nine of these would not wish, could they control affairs, to weave into their fabrics the lives of helpless children, but the moral sense of the tenth is indifferent to the rights of childhood. This tenth man has it in his power to force the nine down to his conscienceless level, or drive them out of the market. Thus the worst possible business tone is realized, though the good is to the evil as nine to one. The state must step in and raise the plane of competition, saying to the few, You must do business as the better elements of society wish it done. Judicious state interference, then, is defensible, because it conserves all the benefits, while permitting none of the evils, which arise from free competition among men of different moral calibre. A book upon the subject of industrial legislation which does not point out this fact appears to us to be incomplete.

It must be a source of satisfaction to those who admire Professor Jevons—and the writer is of that number—that his reputation, now that unhappily he has been taken from us, will not rest upon the merits of this book, which was doubtless prepared hastily and for general reading. There are other works from his pen which exhibit, as this does not, his acuteness and indeed brilliancy of thought. Perhaps nothing has appeared in England since the day of John Stuart Mill which may be ranked in economic literature by the side of Professor Jevons's 'Theory of Political Economy.' This book, it is true, contains but the outline of a theory, but it is a theory which, worked out, will greatly influence industrial thought. Indeed, there could be no more fitting memorial to a scholarly life prematurely cut off than a full development of the suggestions found in the chapters upon Utility, Labor, and Capital.

A Holiday in South Africa. By R. W. Leyland. With maps and illustrations. London: Sampson Low, Marston & Co. 1882. Pp. viii.-362. 8vo.

Mr. Leyland's holiday lasted a little more than three months, during which time, by dint of hard travelling, he was able to pass through a large part of the settled country lying to the north of the Cape. It is hard to conceive, however, of a region less fitted for a mere pleasure excursion than this. Rough roads, execrable food and lodgings the rule even in the larger towns, long stretches of sandy plain uninhabited by man or beast, would seem to offer few attractions for the holiday-seeker, intent on neither business nor sport. Occasionally there are to be found bits of picturesque scenery, and here and there a pretty village with trees, gardens, and running streams, but these are the rare exceptions. Our author's route into the interior was by steamer to Port Elizabeth, "the Liverpool of South Africa," and thence due north by rail and coach. Near this place is one of the largest ostrich farms in the colony, two thousand acres being laid out in "breeding camps," in which are about two hundred birds. Of this industry, which "seems likely to make more radical changes in the pastoral and commercial features of the country than any other discovery or innovation that has been made since the Cape was first discovered, with the exception of the opening up of the diamond-fields in 1867," the author gives many interesting particulars. The average price of a pair of good breeding birds is $750, though there are some which "would be vastly more expensive to buy," as they bring to their owners an annual revenue of over $2,000, "through the number of eggs they produce and by the sale of their feathers." On this farm the eggs are hatched by incubators, and the chickens, when only three days old, are sold for $25 a piece.

Kimberley, the principal town of the diamond fields, proved very unattractive. "Diamonds, Drink, and Dirt appeared to be the chief characteristics of the place," and accordingly Mr. Leyland hastened to leave it. A three-days' and three-nights' ride by stage, during a part of which it was impossible to get food, as the route was new, brought Mr. Leyland to Pretoria, the capital of the Transvaal. "A comparatively small number of houses, and a large number of gardens bordered by hedgerows of roses in luxuriant profusion, oleanders, and willow-trees, gave the town a charming appearance when first seen; and the agreeable impression was materially strengthened by a further acquaintance with the place and its inhabitants." Though he details at some length the causes which led to the annexation of the Transvaal, yet he makes no allusion to the revolt of the Boers, which broke out shortly after his visit. This is the more strange as he refers to a "very interesting conversation" which he had with the Governor on "the condition and prospects of the Transvaal," in which he reports that this functionary "did not appear to attach much importance to the present attitude of the Boers. He regarded their mutterings and threatenings as so much vaporing, which would probably soon die out." Were it not that in describing a steep mountain-pass on the borders of Natal he says, "Though not intimated to me at the time, I presume the portion of the road to be Laing's Nek," we should imagine him to be in entire ignorance of the events which doubtless every Englishman would be glad to forget.

The most interesting part of the book is the account of a visit to Rorke's Drift, where was the hospital and supply camp so heroically defended by a hundred British soldiers during the afternoon and night succeeding the massacre of Isandhlwana. Sheltered behind walls of biscuit-boxes and meal bags, they successfully resisted for twelve hours the attacks of an enemy thirty times their number. Isandhlwana, about ten miles distant, and now the site of a mission station, was still thickly strewn with evidences of the slaughter of the English troops. On his return to Cape Town, Mr. Leyland was enabled, through the assistance of Bishop Colenso, to see Ketchwayo. Among other questions, he asked him, "'Why, when Natal was at your mercy, after the battle of Isandhlwana, did you not overrun the colony?' 'Because I had no desire to fight the English,' replied the King. 'I wished to act on the defensive only, all through, not on the offensive. I was extremely angry with my people for crossing the river to Rorke's Drift house after the battle.'" Considerable space is given to a refutation of the charges of cruelty and hostile intent made by Sir Bartle Frere against the Zulu King; but so little literary skill has been employed in arranging the materials at the author's disposal, that it is well-nigh unintelligible. It seems very clear from his statements, however, that it was a great mistake to hold Ketchwayo a captive. Deprived of their leader, whom they trusted and implicitly obeyed, the Zulus were at that time demoralized to an extent which threatened their destruction by famine and misrule. Very touching are the expressions of love for the King by some of his chiefs given in these pages: "There has never been known one like him among us Zulus before—so good, so kind, so merciful." "Then my prayer was that I might be with him—that, wherever they took him to, I might go and be killed, if he was killed, by the same death with which they killed him. And that is my prayer

still. And, truly, without him, we have no wish to remain above ground." The English Government were finally convinced of the wisdom of restoring the King to his people. First, however, he must be taken to England to see for himself the power of the nation against whom he was presumptuous enough to fight, and even to win a battle. This visit would hardly seem to have been necessary, judging from the following anecdote: A telephone had been put in operation between two places near the Zulu frontier. "When shown to the Zulu chief Usbebo, some short time since, who, of course, could not understand it, he made use of the expression, common among natives, 'Death alone is the white man's conqueror.'"

Beauty in the Household. By Mrs. T. W. Dewing. Harper & Bros. 1882.

THIS little book is not one of which we can speak in terms of commendation. The authoress treats the subject of beauty in the household wholly as if it were a matter of merely external form. Considered in this way, the subject can never, we think, be rightly understood or usefully treated. The pursuit of beauty, as thus understood, inevitably leads to meaningless fancies and ridiculous pretensions. Beauty in the household, as everywhere else, is essentially and strictly an outgrowth and expression of beautiful conditions of life and feeling—not at all a matter of mere external form. That education of the feelings which makes people appreciative of beauty, and capable of producing what is beautiful in their surroundings, is not to be obtained from books of this character, nor through the productions of sophisticated æsthetic movements, but rather by cultivating habits of simple integrity and good sense, and through familiarity with the beauty of nature and of those works of art which are the outcome of true and disciplined feeling. Not clearly and practically recognizing these facts, Mrs. Dewing has—as, indeed, have most other recent writers on household taste—given her book largely the form of a series of mere directions for furnishing and adorning apartments. But such directions must always be useless, since taste is a matter of individual cultivation.

The sentiments of the chapter on small apartments we regard as of decidedly pernicious character, tending as they do to exclude from home life all those humbler domestic employments upon which, in our view, the higher accomplishments should rest as on their proper foundation. Mrs. Dewing would have persons of moderate means relegate the family cooking and washing to the public caterer and laundry. After setting forth the supposed advantages of this arrangement, she exclaims: "How many a woman who now patiently devotes her life to the merely sordid realisms, would feel like a released prisoner under such a system!" The prisoner thus released, both from actual domestic usefulness and even from superintendence of domestic affairs, she would have occupy herself only "with the more ornamental portions of life." We cannot imagine a more unwholesome doctrine of domestic economy than this, nor one more sure to quench, and render for ever impossible, all right and healthful sense of beauty, and all beauty itself in the household. The state of mind, as regards beauty, which such a system engenders is precisely that which "Patience" so keenly satirizes, and which we had hoped it might tend to cure. The fact is, that by far the larger part of what is known as the æsthetic movement, both in England and in this country, is essentially of this quality; and on this account contains nothing to recommend it seriously, and no element of permanence. The forms of so-called decorative art which it produces will be pleasing only as the fashions of the moment, and will soon be thrown aside in their turn like other mere fashions.

Of the illustrations to the book, nothing better can be said. There is not a good line or a good form in one of them. Take the proportions and treatment of the frontispiece—a "Mantel for Nursery"—the design for a glass panel facing page 16, the designs for bas-reliefs facing page 22, the "Tile for a Nursery" on page 157, and others. In no case are those qualities upon which the grace and beauty of a natural object depend laid hold of. In the design for a "Pattern for Cushions for Drawing-room," page 111, for instance, the swan's wing is utterly unorganized. The plumes have no functional arrangement, no power of united action, no elastic grace of curvature, and consequently the wing has no beauty. These qualities are precisely among those which lend themselves to decorative uses, and they are those which all good designers are quick to seize. A comparison of this drawing with any design of a bird's wing on the cheapest Japanese fan will make our meaning clear. It would be a vast gain to the growth of taste, and to all forms of art among us, if the present ambition to write books on æsthetics, and to produce decorative art, might, in some greater measure, give place to more of serious and modest study of nature and standard art, as a means of cultivation and for the sake of cultivation.

La Poésie Alexandrine sous les trois premiers Ptolémées (324-222 B.C.). Par Auguste Conat, Doyen de la Faculté des Lettres de Bordeaux. Paris: Hachette et Cie. 1882.

THE Alexandrian school of poetry, clearly defined as it was in its aims, manner, and even diction—enclosed, too, within a tolerably defined period, which may be stated roughly as from 340 to 200 B.C.—has hitherto found no adequate expositor in any modern language except German. Even in German, no work, so far as we know, deals with this part of Greek literature exclusively, though it is well handled by Bernhardy in his History, and not badly by Donaldson in his continuation of Müller's well-known manual. M. Conat has thus undertaken a task which needed doing, and, on the whole, he has done his task well, even if many points in his book are open to criticism and many grave omissions mar its completeness.

It is natural that the author of a work on Catullus (1875) should be led to the study of the Alexandrian poets. Little as that poetry can be taken as a gauge of the splendid inspiration of the Roman lyrist, and false as is the language of some critics who, on the strength of a splenetic passage of Cicero's letters, rank Catullus as one of the "chanters of Euphorion," it is nevertheless true that in form of every kind—not metrical only, but throughout—in a finish of detail which could not be contented with anything rough, and hated prolixity as the sin of sins, the Alexandrians were the models by the close study of which the Romans, only after a long struggle with the difficulties of their language and the hard and unyielding temper of their national genius, at last emerged to a really great literature. This it is which makes these poets so important in the history of literary development. Callimachus and Apollonius of Rhodes were, as compared with the great names of Greek literature, very minor geniuses indeed; but Callimachus was the model of Catullus, of Propertius, of Ovid; Apollonius, more than any single author it would be possible to mention, moulded the diction and the cast of thought of the 'Æneid.'

M. Conat begins with an Introduction on the foundation of Alexandria, and the Museum and Library, which under the patronage of the Ptolemies became the most celebrated in the world. It is an indication of the peculiar lines which Alexandrian literature followed, that its most typical representatives in poetry were successively librarians in the Museum. Callimachus and Apollonius, master and pupil, rivals in poetry—and jealous rivals—each died holding the librarianship. Erudition was, in fact, at this time an indispensable qualification for poetical success. The poet was, as a rule, also a voluminous author in prose. We learn this from Suidas, but it is quite palpable in the remains of either poet. As M. Conat shows, the Hymns of Callimachus are stuffed with learning; the most recondite stories connected with the cult he celebrates are brought in to set off the power of the god. The "Argonautica" of Apollonius are obviously written partly with the archæological object of recording the local legends associated with the northern coast of Asia Minor, along which the *Argo* sailed; and the nearest approach to simplicity to be found in the poems is the directness with which he adds, at the end of each such legend: "Whence to the present day a custom still exists." This, by the way, was no doubt one cause of his popularity, as it certainly is one cause of the occasional tediousness which at the present day readers of this undeniably fine poem—among them M. Conat—confess to experiencing.

The second chapter of the Introduction examines the chronology of the chief Alexandrians, who are arranged in the following order: Philetas (340-285), Hermesianax, Zenodotus, Theocritus, Aratus, Callimachus, Eratosthenes, Apollonius, Aristophanes, Aristarchus (217-145). Whatever doubts may occur to the reader in perusing this chapter—and if he has read Ritschl's essay on the subject, they will—it would be unfair to deny that the author is independent enough and forms his conclusions on arguments of his own. And this is true throughout. M. Conat is nowhere merely the exponent of the views of others; even Schneider, to whose dull erudition and often perverted judgment, if to any one, he is disposed to bow, is sometimes criticised severely, though we hold our author, on the whole, to be far too deferential to this particular scholar, and, as a corollary thereto, far too little inclined to give due consideration to others as great, if not greater, in erudition, and in judgment incomparably superior—such men, *e. g.*, as Näke, Hecker, and Meineke. There is more of substantial worth in one page of Meineke's 'Analecta Alexandrina'—an admirable work, which philologists would do well to read over and over again—than in six of Schneider's verbose and windy 'Callimachea,' with its conjectural stitchings of scattered fragments and its miserable *supplementa*, recalling an extinct period of philology.

The bulk of M. Conat's volume is divided into five books, discussing severally the Alexandrian elegy as represented by Philetas, Hermesianax, Phanocles, Alexander Aetolus, and, lastly, Callimachus; the hymns of Callimachus (191-291); the epics of Apollonius and Rhianus, and the epyllion "Hecale" (294-390); the pastorals of Theocritus (391-444); the didactic poems of Aratus and Eratosthenes. A chapter on the literary quarrel of Callimachus and Apollonius, which produced the 'Ibis' of the former poet, concludes the volume. We have learnt a great deal from all these chapters, and they are written in a sufficiently good style to interest more than the special student. It is, however, only fair to say that the author is unduly biassed in some particular directions, notably in favor of Callimachus against Apollonius. This, indeed, is

quite patent from the disproportionate space assigned to each, but it betrays itself unequivocally in the criticism of the "Argonautica." This poem contains four books, averaging 1,500 or 1,600 lines each. The language is terse and condensed; the pathos of the Medea episode is great, far beyond Catullus's "Ariadne," approaching the tragic heights of Euripides and Virgil; the metre is elaborately varied with all the artifice of the school, whose efforts had, as M. Conat excellently shows, concentrated themselves particularly on the hexameter; the incidents follow each other with remarkable rapidity; and the total effect is always pleasing, and sometimes profoundly moving. Yet M. Conat can talk of this *chef-d'œuvre* of Alexandrianism as a "vaste récit," and declares that some of its most interesting episodes may be removed without seriously affecting either the poet or the reader. In the same spirit, he devotes many pages to the reconstruction not only of the "Αἰτια" and "Hecale" of Callimachus (of which only some fragments remain), but of the highly unimportant "Messeniaca" of Rhianus, which he assumes to be practically identical with the account of Pausanias of the second Messenian war. Surely this is mere wilfulness, and wilfulness of a very provoking kind. To turn from the rich banquet of Theocritus and Apollonius to the crumbs of Callimachean and Rhianic fragments; to exhaust ingenuity in conjecturing what a dull but lost poem *may* have been, instead of analyzing what a great but extant poem really *is*, is no healthy sign of philological activity, or rather, it is a sign of the inordinate influence of Germany—of that restless, speculative spirit which delights in impalpable food, and in that combination of the fragment of fact with the vast superstructure of hypothesis which produces so endless and so resultless a literature. How thankfully would we accept from M. Conat, in place of these unsubstantial possibilities, a single well-considered chapter on Lycophron. Of him and of his "Alexandra," a unique phenomenon in the literature of Greece and Rome, not one word. And yet the poem and the scholia which elucidate its "deep and dreadful night"—for surely even India cannot surpass the profundity of its obscurity—contain a fund of mythological, and even historical, allusion unsurpassed by any poem of antiquity. Moreover, it has been excellently edited, and it raises critical problems of the greatest interest. If our author would make his valuable labors complete, we would suggest to him a careful study of this. No task could be a better training in Greek, and it is a task which the tyros in this literature have a right to claim from their instructors.

BOOKS OF THE WEEK.

NEW LAW BOOKS

PUBLISHED BY

Little, Brown & Co.

Robinson's Elementary Law.

ELEMENTARY LAW. By William C. Robinson, LL.D., Professor of Elementary Law in Yale College. 12mo, leatherette, $2 50, *net*; law sheep, $3, *net*.

This work is intended to serve three purposes: (1) To form a text-book for the use of students in law schools, and of others who are under competent instruction; (2) To guide private students in their investigation of the rules and definitions of the law; (3) To render students familiar with some of the leading treatises upon the principal topics of the law.

It contains a statement of the principles, rules, and definitions of American Common Law, both civil and criminal, arranged in logical order, with references to treatises in which such definitions, rules and principles are more extensively discussed.

"This little volume covers the entire field of theory and practice, both in law and equity. Its purpose is to answer, simply and intelligibly, the thousand elementary questions which perplex a student at the outset of his work. The plan of the book is admirable, and its execution correspondingly good. It satisfactorily meets a want that has long been felt by law students and long recognized by thoughtful practitioners."—*Boston Courier.*

SCHOULER ON THE LAW OF DOMESTIC RELATIONS. Third Edition. 8vo, $6.

WALKER'S INTRODUCTION TO AMERICAN LAW. Eighth Edition. With Notes by Hon. M. F. Force. 8vo, $6.

GENEVA AWARD ACT. With Notes and References to Decisions of the Court of Commissioners of Alabama Claims. By Frank W. Hackett. 8vo, cloth $2 50.

HEADQUARTERS FOR

School-Books & Stationery.

The Nation.

NEW YORK, THURSDAY, OCTOBER 5, 1882.

The Week.

HUBBELL'S campaign text-book appears to surpass in absurdity all the other productions of his pen, and is very abusive, and in fact vituperative, of all Republicans who do not agree with him about free trade and political assessments. He singles Mr. G. W. Curtis out for such epithets as "bulldozer," "wilful libeller," "hypocrite," "ballot-box stuffer," and friend of "the Southern oligarchy," "Joseph Surface," "Bois-Guilbert," and "Front de Boeuf," and classes free trade with slavery and secession, denounces all civil-service reformers as "noodles," and ascribes the passage of the act forbidding assessments to a conspiracy of Confederate brigadiers. The fact that this amazing stuff is issued ostensibly by the Congressional Committee, makes it imperative, we think, on all Independent and Civil-Service Reform organizations to send it or extracts from it to all candidates for Congress, and ask them whether they approve of the volume, and whether they are prepared to justify the use of assessments levied on clerks for printing it. Categorical answers to these questions ought to be promptly obtained before the election, for it is quite certain that any one who is prepared to stand by Hubbell in this little publishing enterprise is not fit to sit in any legislative assembly—certainly not as a Republican.

The Albany *Evening Journal* says that "a coterie of small men, with mental horizon not wider than the field of ward primaries, and impudent ambitions as broad as the possibilities of the purse, have usurped the management of the party in this State," and that "their effrontery, their unscrupulousness, their selfishness disgust all thinking men, and their leadership deters thousands on thousands of young men from joining the Republican party." This is all true; but the *Journal* would have added to the effect of it if it had given even a partial list of the statesmen in this city with and through whom mainly the President acts when he tries to influence nominations and elections in this State. We place apart, as *facile princeps*, John F. Smyth, whose son received a paymastership in the Army the other day, from civil life—as a special mark of Presidential favor and friendship, we presume, for the father. The others are Tom Platt, Clint Wheeler, Steve French, Jake Patterson, Barney Biglin, Mike Cregan, Bob McCord, Jakey Worth, Jake Hess, and Mike Dady.

The present canvass, odd as it is in many of its features, has called forth nothing more grotesque than the suggestion of Mr. John F. Smyth, the Chairman of the Republican State Committee, at the conference of the Administration Republicans at the Fifth Avenue Hotel on Monday, that the difficulties of the hour should be met by "an active stump canvass with such men as George William Curtis and W. M. Evarts as speakers." Smyth, we believe, is a Scotchman and not given to joking, but there must have been a twinkle in his eye when he pictured Mr. Curtis stumping the State, under his (Smyth's) direction, in behalf of the Machine ticket, and elucidating the civil-service reform and anti-monopoly planks in the platform.

On Tuesday he appears to have touched the joke up a little, as most great humorists feel at liberty to do—Sheridan, for instance, carefully elaborated all his best jokes—by proposing Mr. Curtis as Congressman-at-large on the same ticket, vice Hepburn declined in disgust. But even as it stood, with this addition, the joke was really far better than Smyth thought it was, for while he was humorously preparing Mr. Curtis for the stump, Mr. Curtis was writing an indignant letter repudiating an article in *Harper's Weekly* which endorsed the ticket, and announcing his own intention to vote against it, as "the only effectual way of overthrowing the corrupt and debasing rule of a Machine." This article was one which Smyth had had struck off and distributed at the door to the Young Republicans in Brooklyn at their meeting last week, by way of warning against "the designing men" who have been leading them astray, of course in the belief that it was Mr. Curtis's. Now that it has come out that Mr. Curtis did not write it, and regrets its appearance, Mr. Smyth must really feel that, when he announced Mr. Curtis as one of his probable stumpers, he "builded better than he knew," as a humorist. He was laying the foundation-stones of an immense Scottish joke, with wings and towers and a Mansard roof, and curious winding passages leading to little secluded chambers filled with laughter.

The public will hardly appreciate as they should the quality of the performance involved in the election of Mr. Smyth as Chairman of the Republican State Committee without recalling the facts of his remarkable political career, and particularly the manner in which he came to grief in 1880, while Superintendent of the Insurance Department. He narrowly escaped conviction on impeachment during his first term. When it expired, therefore, people were amazed to see Governor Cornell nominate him for a second; but this was too much for the Senate, particularly as he (Smyth) had just been enraging the local Republicans by a peculiarly audacious (even for him) attempt to "fix primaries" by issuing a call late in the evening for a meeting the next day at noon, so that none but his own confederates would receive it in time. His name accordingly had to be withdrawn, and it was freely charged against the Governor that he had sent it in mainly to give Smyth an opportunity to replenish the Machine chest for the coming campaign by extorting money from the insurance companies. Smyth held over, of course, pending another nomination, and, nothing daunted, he sought to improve the time by calling on three of the leading insurance companies of this city to submit to an "examination" of their assets (a process which in the ordinary course of things would have taken months), but informed them significantly that if they retained Mr. Chester A. Arthur's law firm as "counsel," and employed Mr. William A. Laimbeer and Mr. G. H. Henry, two of Smyth's henchmen, as "valuators," the report of these gentlemen would be accepted by him "as correct." What this meant may be inferred from the fact that "Tom" Murphy, when employed as a "valuator" the previous year, under similar circumstances, had sent in a bill, which the State Comptroller refused to pass, on a scale which would have given Laimbeer $186,000 for "valuing" the assets of the Mutual Insurance Company alone. The insurance companies, to their honor, resisted, and refused to have their assets "valued" by any such persons, and their correspondence with Smyth, which was printed by order of the Legislature, was one of the most instructive bits of reading of the Grant "boom" in 1880. Mr. Arthur's firm, too, repudiated complicity with Smyth.

It is pleasant and hope-inspiring to see the gloomy view that ex-Senator Theodore M. Pomeroy, of Auburn, takes of the Republican field on account of the low moral tone of the Saratoga Convention, considering the part he played in saving John F. Smyth, the Chairman of the Republican State Committee, from punishment in 1880. Smyth was then impeached for malfeasance in office on charges which it seemed impossible to gainsay, and of the truth of which Senator Pomeroy was at first convinced, and his vote for conviction was confidently relied on. But he suddenly changed his mind. The result was that Smyth got off. Had he been convicted and removed from office it would undoubtedly have put an end to his political activity, and we should not now have the shame of seeing him elected Chairman of the Republican State Committee, as a piece of the preparation—heaven save the mark!—for the conflict of 1884. However, it shows how true is the saying of the poet that

> "Men may rise on stepping-stones
> Of their dead selves to higher things"

when we find Mr. Pomeroy exclaiming:

> "Look at John F. Smyth and B. Platt Carpenter. What kind of men are they to inspire confidence? They are regarded in the country as the representatives of everything in politics that is mean and detestable. Their very names are laughed at, when mentioned politically, even by their own side, and yet here are these two unpopular men at the head of the whole business, instead of being at the tail or out of sight altogether."

The Massachusetts Prohibitionists have just held a Convention, to which resolutions were submitted on Thursday condemning the license system, and asking for a constitutional amendment prohibiting the manufacture and sale of intoxicating liquors. The passionate enthusiasm with which the Prohibitionists devote themselves to the pursuit of prohibitory legislation, and the indifference with which they treat the question of enforcing it

after it has been enacted—which experience has shown is the chief difficulty of all attempts to put down drinking by law—is a very singular phenomenon. We believe it is strictly true that out of every three men who vote for a prohibitory law, or a constitutional amendment, two will do nothing to execute it, and laugh over evasions of it. The result is that wherever such a law exists it is openly and shamelessly disregarded in the very places in which there is most abuse of alcoholic drinks. Now, what does this prove? Simply that public opinion is not ready for prohibition in any country in the world, and that until it is ready prohibitory legislation will be mere child's play and worse. It follows, therefore, that Prohibitionists are still far from being ready to ask for legislation. Their business, if they have any, still is to operate on public sentiment. They have got enough converts to procure legislation in some places, but even in those places it would be wise not to ask for it until they get enough converts to put breakers of the law in the category of thieves and gamblers.

The application for a habeas corpus in the case of Mason, the sergeant who shot at Guiteau, was denied on Monday in the United States Circuit Court at Utica, by Judges Wallace and Coxe. General Bigelow, for Mason, contended that General Swaim as Judge-Advocate-General had reviewed or reversed the findings of the court-martial, but Judge Wallace observed that this was an impossibility, as Congress could not have intended that a mere staff officer should have power to reverse the sentence of a military court approved by the Department Commander. It would not be possible for anybody but General Swaim to think anything of the kind either, but he thinks in a way of his own. As he has declared that Mason is not guilty of an attempt to kill Guiteau because the latter was not in the line of his fire, or, in other words, because he did not succeed, there is no saying why he should not believe anything that he may think it convenient to believe about his own powers.

A very encouraging account is given of the operation of the new tax law of Vermont, which, in imitation of the Massachusetts statutes, requires appraisal at a full cash valuation and compels the taxpayer to declare his property on oath, under a penalty of double taxation if he fails to do so. Since the passage of the law, real estate has come up on the tax books from $71,000,000 to $106,000,000, and personal property has risen from $15,000,000 to nearly $47,000,000. If these figures represented an actual increase of wealth, of course everybody would rejoice at the prosperity of Vermont, and all other States would do well to copy the law at once and get rich; but the fact is that the increase of real estate is nominal, and is caused by appraising it at its full instead of a nominal value; while the increase of personal property is merely a disclosure of wealth which previously existed. There is no sort of doubt that such a law will make a taxpayer show his hand, but it is an irritating law, and some of the rich men of the State propose to contest its constitutionality. Curiously enough, they have the rather important support of the Chief Justice of the State, who has refused to comply with the law. The reformers are now going to work to get him off the bench, and this would seem to be very necessary for their purpose.

The Supreme Court of Pennsylvania, which in its day has done as much to protect the rights of corporations as any court in the country, on Monday rendered a decision of considerable interest to passengers. The case arose out of an attempt on the part of the Pennsylvania Railroad to break up the sale of tickets by unauthorized agents. The Legislature of the State passed a law in 1868 making it the duty of every railroad company to provide its ticket-agents with certificates of authority duly signed and sealed, and making it a misdemeanor, punishable by fine and imprisonment, for any one not possessed of such authority to sell tickets at all. In the case just decided, a passenger bought a ticket from an unauthorized agent, and the company refused to recognize his right to use it in Pennsylvania, on the ground that it was sold in violation of the law of the State. The ticket was sold in New York, where the criminal laws of Pennsylvania are not in force. But it was contended by the company that the Pennsylvania courts could not enforce a contract arising out of a transaction which the Legislature had declared criminal. The Court, however, took the view that the passenger was not affected by the seller's act in any way; he bought what was on its face a perfectly good ticket, and he was not bound to inquire into the authority of the agent. His act, says the Court gravely, "had no savor of illegality or immorality. It was a mere purchase of the obligation of a common carrier to carry the holder according to its terms."

The singular thing about the case is not the decision, but that the right to use the ticket should have been contested by the railroad company at all. A decision that a passenger is bound to ascertain whether a ticket-agent has authority, under the laws of the State which charters the company, to sell tickets, would involve the most monstrous consequences. A passenger, before taking a railroad journey, would first have to consult a lawyer as to the nature of the authority required by the local statute; and would then have to ascertain, as a fact, whether the agent offering him a ticket possessed it. Not only would this be a serious inconvenience to travellers, but it is hard to see how it could possibly be for the interest of railroads, as the embarrassments it would create in the purchase of tickets would necessarily diminish the volume of travel. With the eternal quarrel between railroads and "scalpers" passengers have nothing to do. A corporation like the Pennsylvania Railroad must protect itself against loss through "scalping" by the ample punishment for the crime which the laws of the State seem to provide for the scalper himself; and an attempt to break up the business by repudiating its contracts with passengers is almost grotesque. With a community as continually occupied in travelling as ours, the easy purchase and sale of railroad tickets are matters of necessity, and the one thing that would do more injury to railroads than any other would be the creation of a feeling of doubt in the minds of the public as to whether tickets good on their face were valid or not. Putting a passenger on his inquiry at every point, and surrounding the authority to sell with uncertainty, would in its way be followed by consequences something like what would follow the passage of laws putting the purchaser of an apparently good promissory note on his inquiry as to the circumstances under which it was made and put in circulation, and holding him responsible in case there was anything wrong.

The Supreme Court of Connecticut has decided that women may be admitted to the bar of that State, taking a different view of the rules of interpretation to be applied to the question from that adopted by the Supreme Court of Massachusetts. The Connecticut judges rely a good deal on the fact that women are appointed to the charge of post-offices under the laws of the United States, although the word descriptive of their office is "postmaster." On the whole, women are making some progress in breaking down the barriers which exclude them from practice, but we believe the opening made for them in two or three States has brought few into actual jury practice. One of the common arguments against women-lawyers is the dangerous effect that they might have as women in biassing and clouding the intellects of juries and witnesses and even judges. But the fact seems to be that women who have great skill in thus affecting the masculine mind do not practise law, but confine their exertions to domestic life, and the few women who appear in court do little to strengthen the argument. At any rate, the evil cannot yet be said to be a crying one.

The public debt was reduced during the month of September by $14,805,948, making the total decrease since June 30 $44,794,238. During the week the Treasury payments were heavy, and were sufficient to strengthen the reserves of the New York banks to a moderate extent. The prepayment of called bonds not having been as rapid as was expected, the stock-jobbers took hold of the money market late in the week and advanced the rate for call loans, which had been 7@9 per cent., to 20 per cent. This rate was only maintained for a short time, but was sufficient, with other influences at work, to help to demoralize the stock market. The decline in stocks during the week ranged from 2 to 16¾ points, the latter having been in the Louisville and Nashville stock, the finances of which company were found to be in a surprisingly unsatisfactory condition. The break-down in this stock helped to depress the whole market, which, however, closed at some recovery. Railroad earnings continue large, and the outlook for the winter's business is good. The foreign exchange market was very weak throughout, and rates for bills on London fell to within 2 cents to the pound sterling of the rate at which gold coin can be imported. This decline was due to the increased exports, particularly of

cotton; to the shipment of railroad securities, chiefly to London, and to the high rate for money here, which induced practical transfers from the markets where it is cheaper. It is expected that the Bank of England will again advance its discount rate, now 5 per cent., to prevent, if possible, the shipment of gold to New York.

The movement in England for an improvement in dramatic education seems to have come to a standstill, not owing to any want of enthusiasm, but from the difficulty of securing an efficient corps of instructors. There is in France a class of competent actors, well on in years, but out of engagements, which is drawn upon for this purpose; but in England this class does not seem to exist. Most leading actors in England and America are self-made; and no one who has listened with care to the most eminent tragedians and comedians of our time can have helped observing that many of the most distinguished among them do not merely lack dramatic education, but instruction of a more elementary kind. We frequently meet, at least on the New York stage, with actors of great histrionic powers who use their own language, to say nothing of the French expressions with which they are so frequently called upon to struggle, in an extremely original manner; but we are bound to say that as a rule these blemishes attract but slight attention from the audience, and as long as this is the case, it is hardly reasonable to expect much improvement. Still, we must say that in the present condition of the drama in this country, grammar and pronunciation are what need reform quite as much as elocution and gesticulation. Mr. Boucicault's attention does not seem to have been called to this.

The National Liberal League had a meeting on Monday, and its Secretary, Mr. Leland, read a report detailing the progress of the Liberal movement in its various endeavors. The League transacted some important business in adopting a new calendar as a substitute for that now in use, with the year 1600 B. C. as the starting point. For the letters A. D. the letters E. M. are to be used, meaning Era of Man. This action seems to be hasty; for, however poor an opinion he may have of Christianity, even a Liberal must admit that, if the performances of the human race are to be taken as a basis for the new calendar, man had not distinguished himself in the year 1600 B. C. nearly as much as he had at the opening of the Christian era. And as every Liberal must believe in continuous human progress, even by 1600 A. D. man had not reached the proud position he occupies in the current year. Indeed, there can be no point at which the Era of Man can be said to begin, unless it is when our primeval ancestor parted company with his simian congeners and set up for himself as a human being. The difficulty about this as a starting point is that it was before historical times, and the precise year in which it took place has not as yet been ascertained. But since that time, whenever it was, there has been continuous progress year by year and month by month, and therefore, while it is perfectly fair for Christians to maintain a calendar based on what they believe to be an important religious date, no Liberal without unfairness to Man can possibly have the right to fix upon an arbitrary date and assume that as the starting point of progress; and Liberals, of all people, ought to remember that Man's unfairness to Man makes countless thousands mourn.

Judge Lawson, who committed Mr. Dwyer Gray for contempt of court a month ago in Dublin, inflicting the very heavy penalty of three months' imprisonment, a fine, and security afterward for good behavior, has liberated him, remitting the bail, but retaining the fine of £500. The reasons he gives for this clemency will, we fancy, increase the scandal caused by the sentence. The offence was the publication in Gray's paper, the *Freeman's Journal*, of a charge that the jury, which was legally in his own charge as High Sheriff, was drunk when considering its verdict in a capital case. If the offence called for such a sentence a month ago, it calls for it still. But the Judge now says he mitigates it because there is a better state of things in the country at large, and because there is an improvement in the tone of Gray's paper. His remarks may of course have been misreported in the telegraphic summary, but if this rendering be correct, we fancy it must greatly stimulate the feeling, of which the sentence called forth much expression, that the power of judges to punish for contempt of court should be curtailed and regulated by statute. A judge has no more right to punish a man severely for contempt by way of improving the condition of the country or improving the tone of newspapers he does not like, than to punish him for the purpose of influencing an election. To remit part of the sentence, therefore, because the political situation has improved, or because the Judge likes the articles in the prisoner's paper better than he used to like them, is to confess an abuse of power of a very gross kind.

The Radicals and Bonapartists in France are passing through a period of great perturbation. A few weeks ago a duel between ten editors of one journal and ten of another was proposed, in imitation of the famous fight of Beaumanoir. Why it never came off we do not know, but the mere proposal shows what the condition of the editorial mind must be. More recently, a large armed band visited a Radical newspaper office, and compelled the foreman of the composing-room to remove certain obnoxious matter from the form before the paper went to press. He had to comply, but he did not go to press, and, giving notice to the subscribers of his paper, they arrived, in arms, also, in the composing-room, when another attempt was to be made to get the paper out. They found the foreman—who is perhaps the editor also—entrenched behind one of his imposing-stones, with a cocked revolver, and waiting for succor and exchanging bad language with his assailants, who had returned to the assault. These were speedily expelled by the relieving force, who mounted guard over the office till the publication was complete, and then marched in a column of twos through the streets, with no molestation from the enemy, who were waiting outside, except cries of "To-morrow!" Radical meetings, too, are very boisterous. Dissidents, who in France are very numerous, because they entertain there the extinct Anglo-Saxon notion that meetings are held for discussion, usually speak up in opposition to the regular platform orators, but, far from getting a hearing, are threatened with expulsion, and are expelled unless they have a following strong enough to hold the room. At a meeting at Bordeaux the other day the forces were so equally divided that they fought for a good while and filled the hall so tightly that the police could not get in, and the row was brought to a close only by turning off the gas. It ought to be said that the high Conservatives are as ferocious in their temper as the low Radicals. One of their editors has recently said that in journalism he belonged to the school of Marat—that is, that he would like to cut the throats of editors who differed with him—but this did not prevent his belonging in politics to the school of Bossuet.

The *Temps*, which is one of the soberest and best of French journals, has lately been moralizing over this state of things in an article entitled "American Manners," in which it draws the conclusion that these goings on are proofs that French manners, of which in their natural state it makes a beautiful picture, are being rapidly "Americanized." But the truth is that French journalistic manners have always been as bad as bad could be. Editors have always abused each other in vituperation which differed mainly from the American article in being more careful, elaborate, and ingenious. But it has always drawn a little dignity from the fact that the opponents winced under it, and that it made almost any of them fight. In fact, the conditions of French journalism have resembled those of Southern journalism, except that quarrels in France do not end in street fights, and are almost always settled with swords, and are consequently seldom deadly. In the earlier days of American newspapers at the North, coarse abuse of rival editors was much more common than it is now, but never have any editors, however bellicose, been successful in getting their subscribers to espouse their quarrels, much less to go to the office of a rival sheet, revolver in hand, to exercise a censorship over it. To American readers, and let us add juries, editorial quarrels always have the air of a farce, or of professional by-play, like the invectives exchanged by opposing but friendly lawyers before a jury. And then the practice of breaking up meetings is one which has no longer any place in American political manners. It prevailed during the abolitionist days, and has probably been not uncommon during the "outrage" period at the South, but in normal peaceful times it is not one of the things which an excited American partisan thinks of doing. In fact, if French political manners were really Americanized, what Frenchmen fond of the old times would have to mourn over would be the growth of excessive patience under insults and abuse, not an increase of irritability or of readiness to resort to force.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, Sept. 27, to TUESDAY, October 3, 1882, inclusive.]

DOMESTIC.

THE Republican dissatisfaction over the result of the Saratoga Convention has increased and become very outspoken. The election of the notorious ex-Insurance Commissioner John F. Smyth as Chairman of the Republican State Committee has given great offence. It is found, also, that in addition to the vote of "Steve" French in the State Committee at Saratoga, on the question of giving the organization of the Convention to the Stalwarts, two other fraudulent votes were cast. Ira M. Hedges took the place of F. Tomkins, without any proxy, but with the understanding that he would vote with the Cornell men; but he voted for Madden. W. J. Montanye voted in place of A. P. Smith, being allowed to do so on the strength of a telegram purporting to come from Mr. Smith, but which Mr. Smith never saw. Ex-State Senators Woodin and Foster have declared their intention not to support the head of the Saratoga ticket. United States District-Attorney Stewart L. Woodford has declared that the fraud and forgery resorted to at Saratoga vitiated all the Convention did, and that "the short, direct, and honorable way out of it is for Judge Folger to refuse to accept a nomination made under the circumstances. His associates on the ticket would be in honor bound to follow his example. The Republican Convention can be reconvened, and, with the prestige the party will secure in standing for the right, the ticket then nominated will be elected." The Rev. Dr. Theodore L. Cuyler, pastor of the Lafayette Avenue Presbyterian Church in Brooklyn, has announced that he will not vote for or support Secretary Folger for Governor. He says: "I stood by the cradle of the Republican party, and I have been proved to be one of its members. But when it is shunted off on the wrong track, I cannot follow it, and I will not go over the precipice with it." Hon. Sherman S. Rogers, of Buffalo, has come out for Cleveland. The Rev. Henry Ward Beecher preached a sermon on Sunday night, denunciatory of the Saratoga proceedings and the ticket, in which he said, "And when Cornell went out, Avarice and Revenge kissed each other." Mr. George William Curtis has written a letter denying that he has advised Republicans to support Judge Folger, and saying: "Every good citizen is bound to resist to the utmost such a wrong to free institutions, and the only effectual way in which the voters can emancipate themselves from the corrupt and debasing rule of a Machine is to defeat its candidates." The Brooklyn Young Republican Club, which took an active part in securing the election of Mayor Low, has passed resolutions denouncing "the interference of the Federal Administration with the free action of the people of this State in the selection of candidates for Governor and Lieutenant-Governor," and declaring that "nominations obtained by such methods are entitled to no respect, and impose no party obligations upon Republicans to support them; but it cordially approves and heartily endorses the nominations of the Hon. Charles Andrews for Chief Judge of the Court of Appeals, and of the Hon. A. B. Hepburn for Congressman-at-large, and the Brooklyn Young Republican Club hereby pledges them its most earnest and active support." There has been considerable talk about Secretary Folger's declining the nomination, and the Executive Committee of the Kings County Republican General Committee, at a secret meeting last week, passed a resolution, by a vote of 17 to 6, that a committee be appointed to lay before Secretary Folger the situation in Kings County. It is understood that he was told that many influential Republicans considered his withdrawal the wisest course.

All doubts about Secretary Folger's intentions were set at rest by the publication of his letter of acceptance on Tuesday. In it he asserts that the delegates to the Saratoga Convention were freely chosen in the usual manner, and, noticing the reports of fraudulent practices there, he says: "No one claims—no one believes—that I had lot or part therein, or previous hint or suspicion thereof. I scorn an end to be got by such means. I will not undertake to measure the truth of all these reports; that of one is beyond dispute." He says that there is no time to call another Convention, and he must accept the nomination in order to save his party, even if the result is his own political ruin. He goes over the platform at great length. At the same time a letter was printed from Mr. A. B. Hepburn, declining the nomination for Congressman-at-large, because he believes that a new Convention ought to be called.

The State Committee of the New York Anti-Monopoly League has issued an address favoring the election of the entire Democratic ticket.

A Free-Trade League has been formed in Kings County, N. Y., to promote free trade by direct political action, especially by furthering the election of freetraders to Congress.

Among the Congressional nominations of the last week are the following: S. J. Randall (Dem.), Third Pennsylvania District; S. Z. Bowman (Rep.), Fifth Massachusetts District; C. R. Skinner (Rep.), Twenty-third New York District; J. W. Wadsworth (Rep.), Twenty-seventh New York District; N. W. Nutting (Rep.), Twenty-fourth New York District; E. Wemple (Dem.), Twentieth New York District; W. W. Phelps (Rep.), Fifth New Jersey District; J. H. Brewer (Rep.), Second New Jersey District; T. M. Ferrell (Dem.), First (Robeson's) New Jersey District.

There was a fatal political riot at Lancaster, S. C., last Wednesday. From Democratic accounts, a negro procession came into town and a negro threatened a white man with a pistol. Several shots were fired, resulting in the killing of four negroes and the wounding of several others. The Greenback candidate for Governor, whom the Republicans supported, was prevented from speaking at Winnsboro last week by threats of rotten-egging.

Chairman Ramsey, of the Utah Commission, says: "The Commission completed the registration of the voters of Utah—35,000 persons, men and women—and 1,000 polygamists of both sexes were disfranchised. The people generally received the Commission very cleverly, and we had no trouble in carrying out the provisions of law with reference to registration. So far as elections are concerned, they will, of course, be carried by the Mormons. Politics in Utah are not represented in any degree by parties—Republicans and Democrats—but by Liberals, composed of the entire anti-Mormon class, and the People's party, as the Mormons style themselves. The common interest of all Gentiles is directed exclusively against Mormonism. Of course, the Mormon vote, which is at least two and a half to one, will elect the delegate to Congress, and the polygamists, knowing that their men and officers generally will be chosen, can well afford to acquiesce in their own disfranchisement."

The Anti-Monopolists of Nebraska have nominated E. P. Ingersoll for Governor.

In accordance with the Act of Congress, Secretary Chandler has appointed the following Board of Naval Officers to investigate the circumstances of the loss of the *Jeannette*: Commodore William G. Temple, President; Captain Joseph N. Miller and Commander Frederick V. McNeir; Master Samuel G. Lemly, Judge-Advocate.

The gross receipts of the Post-office Department for the fiscal year ended June 30, 1882, were $41,265,317 10, against $36,217,511 55 for the previous year, an increase of $5,047,805 55. The net surplus will be about $1,500,000.

The annual report of Chief Dallas of the Dead-Letter Office shows that of the letters and parcels opened in the office during the year ended June 30, 1882, 19,989 contained money; that 24,575 contained drafts, checks, notes, etc.; 44,731 contained receipts, certificates, paid notes, etc.; 39,242 contained photographs; 52,463 contained postage-stamps; 90,842 contained merchandise, books, etc.; and 3,406,577 contained nothing of value.

It is found that the new State Department building in Washington is so poorly built that the expensive copper roof leaks and the plastering in the upper story drops off constantly.

Stephen W. Dorsey, of Star-route notoriety, has been elected Chairman of the Arkansas Committee for the Garfield Memorial Fair in Washington.

Jay A. Hubbell is said to be preparing a third assessment circular to officeholders who have not paid, as well as a special assessment for this State.

President Arthur is fishing among the Thousand Islands.

An analysis of the bouquet handed to Guiteau by Mrs. Scoville the day before his execution shows that one large bud contained more than five grains of arsenic.

United States Judges Wallace and Cox have refused to grant a writ of habeas corpus in Sergeant Mason's case, holding that a Judge-Advocate-General is simply an advising officer of the War Department, and that Congress never intended to give him power to reverse the findings of a court-martial.

The trial of five men in Philadelphia charged with fraud in connection with Star-route bids has resulted in the acquittal of four and the conviction of one, Joseph R. Black, with a recommendation to mercy.

The Tariff Commission have held sessions in Charleston, S. C., Wilmington, N. C., Richmond, Va., and Baltimore, and are again in session in this city. At Wilmington they heard an argument in favor of a duty on peanuts and chalk.

An expedition sent out by the United States Fish Commission to the edge of the Gulf Stream, in search of tile-fish, has returned unsuccessful in this, but reports the discovery of a new food fish which resembles sea bass.

The public debt was decreased $14,805,948 83 in September.

The Supreme Court of Connecticut has decided that women may be admitted to the bar there.

A bill has been filed in the Court of Chancery at Trenton, N. J., to prevent the Monmouth Park Association from holding any races or permitting gambling upon its premises. All open betting was prevented at the Jerome Park races, near this city, last Saturday, and several "book-men" who attempted to take bets quietly were arrested.

A suit is pending in this city to decide whether the elevated railroads can be required to carry freight.

The Superior Court of Illinois has decided that Railroad and Warehouse Commissioners of that State have authority to regulate freight charges from points in Illinois to points outside the State.

The Edison electric light is giving good satisfaction in this city, the only complaints coming from persons who expected a stronger light than the ordinary electric lamps give. Outside the city, the Edison Company now have 16,976 lamps run by isolated plants. Of 120 lamps in use in some mills in Holyoke, Mass., only five have broken since last April.

The American Steam Heating Company has four miles of main pipe laid in this city. The new method of supplying heat is said to be very popular.

The steamboat *R. E. Lee*, perhaps the finest boat on the Mississippi River, was burned last Saturday morning, thirty miles below Vicksburg. Many lives were lost—twenty-one, it is thought—including several women. A very valuable cargo was also destroyed. The cause

of the fire is unknown. The vessel burned with astonishing rapidity. The pilot stood by his wheel, almost enveloped by the flames, until the boat was run ashore.

A train on the Atchison, Topeka and Santa Fé Railroad was stopped one mile west of Grenada, Col., by armed men, last Saturday night, and the express car was robbed of $5,500 in money.

A man named Rhodes, who brutally murdered an old man and his wife, near Charlottesville, Va., last February, was lynched near that town last Monday morning. After the murder he fled to Tennessee, where he married a reputable young woman.

A very bold robbery was committed in the Exhibition Building at Cincinnati last Wednesday. Just after the doors were opened two men opened a show-case and removed $12,000 worth of diamonds and jewelry, with which they walked away.

Much excitement has been caused at Yale College by the arrest of a Senior, on a charge of obtaining money from under-classmen by false pretences. He has confessed the crime and been fined.

Eleven Sophomores have been sent from Lafayette College, at Easton, Pa., for hazing Freshmen.

The yellow fever is subsiding at Brownsville, Texas, and at Matamoras.

Several shoe-manufacturing firms in Maine are preparing to move their factories from that State, because of the strikes among their employees.

The Trustees of the Newton (Mass.) Theological Institution (Baptist) have voted—13 to 9—that Dr. E. P. Gould's chair (concerning New Testament interpretation) be declared vacant, on the ground of differences of opinion in theological matters between him and President Hovey.

FOREIGN.

An important resolution was adopted at Gotha on Sunday by the leaders of the three great sections of the German Liberal party. The National Liberals joined the Secessionists and Progressists in declaring that Liberals should unite in a more closely organized association against all other political parties, without prejudice to the minor differences which exist in the party.

The only exciting event of the week in Egypt has been a disastrous explosion and fire which occurred at Cairo last Thursday afternoon. A shell on a loaded car exploded, scattering other shells all over the station. A train of cars was ignited, and the fire spread to the railroad depot, which was quickly burned. The flames next reached the commissariat depot, and thence extended to some of the magazines, which exploded. It was found impossible to save the reserve ammunition. The whole of the commissariat stores, the main ordnance stores, the greater part of the forage, all the hospital necessaries, and a large quantity of clothing were destroyed. The loss is estimated at £100,000. There was also some loss of life. It was supposed at first that the explosion was caused by a spark from a passing train, but incendiarism is now suspected. Many natives went about the city afterward, shouting with delight over the explosions, and crying: "This is the people's bonfire, lit by the people in honor of the Khedive's infidel friends." During the fire, two men with torches were seized while endeavoring to fire an adjacent quarter of the town.

The Egyptian Ministers have agreed upon the wording of three decrees, which the Khedive has signed. The first institutes a special commission for the prosecution of all acts of rebellion committed by the military or by civilians. The second orders that a court-martial with eight members, Rauf Pasha presiding, shall be held in Cairo, and that it shall give judgment according to the military code, without appeal, in all cases submitted by the above-named commission. The third directs the assembling in Alexandria of another court-martial to try all cases submitted by the tribunals recently appointed in Alexandria and Tanta. The proceedings of both court-martial will be public, and the accused persons will be permitted to employ counsel. The Khedive will soon issue a decree granting amnesty to all officers, from captains downward, engaged in the late rebellion, excepting those who directly participated in the riots or joined the Army after the beginning of the campaign.

There have been riots in several towns in Upper Egypt, owing to the efforts of officials to enforce demonstrations of loyalty to the Khedive. Flags and devices have been torn down by mobs, and Christians have been insulted and maltreated. A correspondent at Alexandria telegraphs that he is assured that the Egyptian Government has possession of a telegram from Prince Ibrahim to Arabi Pasha congratulating him on the supposed Egyptian victory at Kasassin, and hoping that at the next Feast of Bairam Englishmen would be sacrificed instead of sheep.

A grand review of the British troops was held on Saturday afternoon in the square in the centre of Cairo, where the troops assembled after marching through the streets. Arabi Pasha and Tulba Pasha watched the review through the bars of their prison windows.

Alexandria is daily becoming crowded with people, and rents are greatly increasing.

General Wolseley will not leave Cairo until urgent questions awaiting solution in connection with the courts-martial, the withdrawal of a portion of the British troops, and the reorganization of the Egyptian Army, are settled. He has been ill, but has recovered.

Baker Pasha has tendered his resignation of his post of aide-de-camp to the Sultan, and gone to Egypt to reorganize the Egyptian Army. He has presented to the Khedive a scheme for the reorganization of the Army, making a portion of it consist of gendarmerie, probably to be recruited from the Albanians. The scheme provides for the formation of municipal police for the towns, to be drawn from the most trustworthy native elements.

M. de Lesseps, writing to the London *Times*, says, regarding a proposed second Suez Canal, that his company possesses for ninety-nine years the exclusive privilege of maritime communication between the Gulf of Pelusium and the Bay of Suez. The *Times* says it entertains grave doubts of the validity of this claim.

Lord Dufferin, the British Ambassador, has communicated to Lord Granville, the British Foreign Secretary, a note from the Porte thanking Great Britain for reëstablishing order in Egypt, and expressing hope that the bonds of friendship subsisting between Turkey and England may be drawn still closer. Lord Granville has replied, expressing satisfaction with these sentiments.

The Right Hon. Henry Fawcett, Postmaster-General of Great Britain, speaking at Hackney a few days ago, said: "England has no selfish object. Her chief concern is to secure to the Egyptians the best government and the greatest amount of liberty possible. The abuse connected with the late Control will be avoided in future. The Egyptians will not have to submit to the injustice of an unduly large part of their revenues being appropriated by foreign officials."

Mr. Gladstone, replying to an address presented to him on Monday, referred to the question of procedure in the House of Commons. He said the House could never meet the tremendous calls upon its energies unless it could shake off all timidity and fear of cant phrases, and set itself resolutely to the task of bringing procedure into harmony with the calls upon it. Referring to Egyptian affairs, Mr. Gladstone said he thanked God for the success of the British in Egypt; he thanked the army there and its skilful General. The war had proved that the army was composed of men as brave as their forefathers ever were. The war had been carried out from love of peace and on principles of peace. In concluding, Mr. Gladstone said he trusted that Egypt would again be prosperous and happy.

In Dublin, Judge Lawson on Saturday ordered the release of Mr. E. Dwyer Gray, on the payment of a fine of £500. Mr. Gray's bail was remitted. The Judge, while defending his act in imprisoning Mr. Gray on legal grounds, said he felt that justice had now been vindicated, a better state of things being observable. Another farmer has been murdered in Ireland.

Archbishop Croke writes to the *Freeman's Journal* that he is authorized to state that Mr. Dillon will not press his resignation of his seat in Parliament just now, but will continue to represent Tipperary until his constituency has had ample time to select his successor, in the event of the continuance of his illness. It is stated that, in order to show his accord with Mr. Parnell, Mr. Dillon will attend the conference of the Parnell men at Dublin on October 18.

The Dublin police now believe that the murderers of Lord Frederick Cavendish and Under-Secretary Burke numbered ten, and that they are still in Ireland, but that unless the aid of an informer can be secured, the crime cannot be brought home to the guilty persons. The weapons used in the commission of the murders were found some weeks ago.

There is a report that the Czar of Russia has been secretly crowned, in order that if he should be killed at the public coronation there might be no difficulty in proclaiming the Tzesarevitch Alexander the lawful successor.

The Russian officers at Kilia, near the mouth of the Danube, are taking soundings, notwithstanding the remonstrances of the International Commission, and the Russian Government has arranged that Russians shall perform police duty instead of the employees of the Commission. In consequence of these infringements, a meeting of the Commission has been summoned.

M. Condouriotis, the Greek Minister at Constantinople, has told Said Pasha, the Turkish Prime Minister, that Greece will not renounce an inch of the territory ceded to her by the Porte.

Serious anti-Jewish riots have occurred at Pressburg and Blumenthal, Hungary. Houses of Jews were mobbed, and the district was put under martial law. Six hundred Jewish families have left Pressburg. Herr Tisza, the Hungarian Prime Minister, has addressed a letter to the municipal councils, in which he expresses his conviction that every Council feels indignant at the anti-Jewish excesses in Pressburg. He says a renewal of the outrages must be prevented. Immediate action must be taken against the aggressors.

There is a hot quarrel in Paris between the two factions of the Bonapartists. The Jeromists declare that the recent duel between M. Dichard, editor of the *Petit Caporal*, and M. de Massas, editor of the *Combat*, in which the latter was killed, was virtually an assassination. The Republicans are delighted at these dissensions among their opponents.

A treaty has been signed by the Mexican Secretary of Foreign Affairs and the Guatemalan Minister to Mexico, definitely establishing the boundary lines between the two countries.

The Chilian Government has completed all arrangements for selling the Peruvian nitrate deposits at auction.

Three members of the Salvation Army who recently arrived at Calcutta have been arrested, in order to prevent a riot which was imminent.

There is a terrible epidemic of smallpox at Cape Town.

The Japanese Envoy has had an audience with the King of Corea, and full agreement has been accorded to Japan's wishes. The chief Corean rebel has been carried to China.

MR. FOLGER'S ACCEPTANCE.

JUDGE FOLGER'S letter of acceptance is not a cheerful or inspiring document, nor could it well be, under existing circumstances. A man who feels himself obliged to make an elaborate apology to the people for being a candidate, and who virtually asks them for a suspension of judgment as to the conscientiousness of his conduct in accepting a nomination, cannot be expected to be quite free from a certain depression of spirits when speaking to the public. The first part of Judge Folger's letter is really an appeal for sympathy, or commiseration rather, for an aged gentleman who finds himself in a very disagreeable situation from which he is not able to escape. This appeal would be more touching and effective had not Mr. Folger, when repelling the imputation of any personal connection with fraudulent practices, passed over that important subject rather lightly, satisfying himself, and trying to satisfy the public, with the remark that "on the face" of the "methods of the Convention" everything was "fair, honest, and aboveboard." Mr. Folger knows very well that the worst of those "methods" became known only after the adjournment of the Convention, and that the "fairness" of the "face" of the proceedings was no criterion at all of its true character. He would, therefore, have gained more, for himself at least, by a straightforward avowal and vigorous condemnation of all that has happened, than by utterances which almost look like a timid attempt at palliation.

The fact that Mr. Folger, as he tells us, did not really desire to be a candidate, but was rather pushed into it against his liking, would under ordinary circumstances be calculated to strengthen him in popular sympathy. But in his case it only reveals the real trouble of the situation. Mr. Folger is a man of good repute, whom nobody thinks capable of resorting to or approving of dishonest methods to advance his political fortunes. When he says that he did not desire to be a candidate, we are bound to believe him. How, then, did his nomination come about? It was pushed by the Administration, and put through the Convention by such politicians as the notorious John F. Smyth, Steve French, Mike Cregan, Clint Wheeler, and their gang. With politicians of that class a man like Mr. Folger would not naturally be a favorite candidate. They would not spontaneously take him up merely to promote the cause of good government. That is not in their line at all. But when that class of politicians compass the nomination of a man who really does not like the part he is playing, and when all sorts of dishonorable practices, including forgery, are resorted to for that purpose, it is evident that there is some other power behind the whole scheme, of which these persons are the instruments, and that, although a man like Mr. Folger may not be willing to do all their behests, still his election would preserve the prestige of that power and keep it in healthy condition for further conquests and triumphs. Mr. Folger, the unwilling candidate, the candidate pushed forward by others, is, under such circumstances, a more unsympathetic sight than Mr. Folger heartily desiring power for the purpose of carrying out his views of the public good would be. It is the men, the circumstances, and the influences surrounding him that make his election unacceptable to a large element in the Republican party, and the confession of his personal feelings with regard to his candidacy is, therefore, rather calculated to strengthen than to weaken their objections to him.

What he says about the different points of the platform is in great part by way of definition and interpretation. His remarks about municipal self-government are strong and to the point; also those on the matter of primary elections. Civil-service reform is treated in that vaguely sympathetic way to which political platforms have of late years accustomed us. When he speaks of "some revision of rules already adopted to render them less scholastic and more practical," he only shows that he has listened mainly to the opponents of those methods. Had he taken the trouble to investigate those rules himself, he would have found that they are already eminently practical and not "scholastic" at all. About the question of "free canals" he only repeats the recommendation of the platform that people should think about it. And as to the "anti-monopoly" question, he simply promises to do all he can, if elected, to give the Railroad Commission a fair trial, without expressing any further opinion upon a subject which certainly deserved more attention. It is not surprising, after what has happened, that Mr. Folger should not have been able to give us an address a little less perfunctory in tone.

Together with Mr. Folger's letter of acceptance, covering several newspaper columns, appears Mr. Hepburn's letter of declination, occupying only a few lines. Mr. Hepburn simply says that as, "owing to the unfortunate circumstances that have come to light since the adjournment of the Convention, a very large portion of the Republicans of the State are not disposed to accept its conclusions as an authoritative utterance of the party," he does not think it proper to accept the nomination offered to him. Mr. Hepburn being a man who has some elements of popularity about him, his withdrawal of course seriously weakens the ticket. Mr. Folger will probably in the course of time come to the conclusion that, had he written Mr. Hepburn's seven lines instead of his own three columns, it would have been better for himself and probably for his party, too. As he stands now, he is "in the hands of his friends." But it is those very "friends" in whose hands many thousands of Republicans do not want to place the State of New York and the future of the Republican party.

MR. HENRY WARD BEECHER ON THE REPUBLICAN NOMINATIONS.

MR. HENRY WARD BEECHER delivered a discourse on Sunday, on the Saratoga nominations, which was full of the excellent sort of wisdom which makes expediency the handmaid of virtue. He proposes to vote for all of the Republican ticket except the Governor and Lieutenant-Governor, and we presume means in these two cases to vote for the opposing candidates. He will do this, he says, first in order to rebuke the manner in which the nominations were made (and he happily ascribes these nominations to the union of "revenge and avarice"), and secondly, in order to present a protest, that cannot be misunderstood, against Federal interference in State politics, against the use of money in elections, and against open disregard of personal character in the conduct of party organizations—an insinuation which Mr. Beecher openly levelled at Mr. John F. Smyth and Mr. Steve French. In fact, the sermon—for we suppose, being delivered in a church on a Sunday evening, it was a sermon—was full from beginning to end of the soundest of sound doctrine. It was a little lesson on the application of morals to politics, by which every voter who reads it at this crisis cannot but profit.

Those who remember Mr. Beecher's defence of the operations of the Machine in this State three years ago, when Mr. Cornell was up for election as the instrument of the Machine, which he called "perhaps not the best thing you can imagine, but the best thing that in the present state of human nature you can have," and when he ridiculed the Young Scratchers (who were doing then the work the Brooklyn Young Republicans have since taken up), and denounced bolting as the product of conceited indolence, will probably profit most by his remarks last night. In fact, we recommend all those who wish to profit thoroughly by these remarks to read also the speech delivered at the Brooklyn Academy of Music on the 8th of October, 1879. They will thus see the effect of increased experience and increased knowledge of his subject on an able man in a prominent public position, who is not prevented from avowing a change of opinion through fear of the charge of inconsistency.

The Machine in 1879 was precisely the same Machine which has nominated Judge Folger. It was in the hands of the same men exactly—not one of them has died, repented, or retired into private life. They had then precisely the same designs and standards they have now. They were then, however, trying to carry out their plans under cover of General Grant's name. They were eagerly seeking to get him back into the Presidency, both for the sake of his prestige and for the sake of the patronage he would place at their disposal, and the resolution with which he would support them against public criticism. They were putting Mr. Cornell into the Governorship of this State in the belief that he would continue to be the faithful partner he had previously been; and the Young Scratchers opposed him, and, but for Kelly, would have defeated him, in this same belief. For a while his course seemed to justify it, for he actually began by nominating Smyth, then fresh from impeachment, for a second term in the office of Superintendent of Insurance. The hostility of the Machine to him now is due to the fact that it believes itself betrayed by him. He refused to stay pliable, and they have had, therefore, to "slaughter" him, not only through revenge, as Mr. Beecher says, but in the interest of discipline. The Greek brigands always kill a prisoner who does not pay his ransom, even though they are perfectly satisfied that it is impossible for him to

pay it, because they cannot afford to let it go forth that an unransomed man has left their hands unscathed. It would ruin the business. In like manner the Machine cannot permit one of its own nominees to take up with impunity what it calls "Sunday-school methods," and begin to prate to it about honesty, or conscience, or the public interest, when it wants a bill passed or a henchman nominated. It would break up the Machine.

Mr. Beecher did not see all this in 1879. His observation of Machines was then limited or fitful, like that of most men who have passed their lives in sentimental politics. He did not think of the tendency to abuse of all unrestrained power. He thought that this New York Machine, though perhaps not a very perfect thing, would not grow any worse, and that it had better be let alone. He forgot, minister though he be, that everything human is only prevented from growing worse by constant effort and vigilance, and that Machines are no exception to the rule. Our Machine was not warned by its narrow escape in 1879, because it found that it could still get the support of men like Mr. Beecher, and was assailed by nobody but a handful of young and obscure men. So it took courage, and went on in its old ways, and became more and more audacious and unscrupulous and indifferent both to private and public morality, until, like Tweed, it provoked the "rising" we are now witnessing, and which Mr. Beecher, greatly to his credit, is stimulating.

We trust the lessons of the occasion will not be lost on him and all others who, three years ago, refused to give any countenance to revolt. One of these lessons is that the time to reform is when the abuse first shows itself, and that nothing is gained by waiting till it becomes unbearable. The price of liberty is not occasional vigilance, but constant vigilance. Another lesson is, that in politics there is no such thing as what is known in religion as "conversion." We believe there is no case on record in which a political knave really experienced for political purposes a change of heart. Bad politicians never grow good. They often affect goodness for a brief period, but it is only—like Josh Billings's mule, which behaved like a good mule for six months in order to throw the owner off his guard—for the purpose of diverting observation. There is, therefore, no use in praying for them, or watching them hopefully. If you are once satisfied that Steve, or Jake, or Barney, or Mike is engaged in tricky or dishonest games for the accomplishment of his objects, time spent in expecting him to turn out better than he promises, or to perceive that it is good policy to earn the praise of the righteous, is simply time wasted. We might as well wait for a weed to grow into a flower. A weed never grows into anything but a bigger and more noxious weed. The only thing to be done with him is to extirpate him.

THE CONDITION OF THE BAR.

THE account given by Mr. Rogers, the President of the State Bar Association, of the condition of the profession of which he is a member, is far from encouraging. He does indeed express the opinion that there are signs of improvement visible, but he does not mention many. The removal and punishment of the Ring judges in this city, and the increased severity of the tests for admission, are pretty nearly all, and against these is offset a formidable list of abuses, and a very depressing picture of the connection between the profession and politics.

Judgeships are, he says—and we know how true it is—distributed more and more every year as spoils. If you want to know who is likely to fill a vacancy on the bench, "you do wisely not to inquire of the lawyers who lead the bar," but of "the local political managers and 'the boys' who do the hard work of the caucuses and conventions." "If among these you find one specially active and facile, and can learn that he rejoices in the distinction of being an attorney and counsellor, so that when he votes in the convention he has, *prima facie*, the appearance of casting the vote of a lawyer, to him you may be confidently recommended as able to give an intelligent answer to your inquiry touching the personnel of the new judge." It is these active legal "boys," of whom there is a sprinkling in every convention, who dictate the judicial nominations, and it is inevitable that their work should be of a very poor order. They will not nominate distinguished lawyers as such; they nominate men who are not too far above their own legal level. Mr. Rogers says that if Marshall, Kent, or Story were to-day living in a Republican district, and was known as a Democrat, he could not be elected to the Supreme Court. Even if they were Republicans, we doubt whether they would be either nominated or elected, for they would belong to a class of lawyers between whom and the nominating body there is little or no connection. Moreover, the "boys" would feel the same sort of antipathy to them that they feel in the field of pure politics to "doctrinaires" and reformers. A lawyer of Judge Westbrook's standing would have a far better chance with them than any one of the three.

The only practical remedy that Mr. Rogers suggests for the evils by which the profession is afflicted, is that the association of which he is president should have authority to discipline and punish members of the bar throughout the State for misconduct in their professional relations. Perhaps the most immediate objection to this proposal is that the State Bar Association has hardly the standing which would make the plan of vesting it with such powers worth considering. Mr. Rogers himself makes a very pointed reply in expressing a doubt whether this body "has made itself felt very sensibly, either upon the profession or the State at large." It certainly has not, as a reformatory agency. Besides, a censorship much more elevated than such as is exercised by the bench itself is out of the question. Judges are naturally vested with the discipline of the bar, and it is the judges who are primarily responsible for any want of discipline that may exist. With a political system that produces such judges as we have, a body like the State Bar Association, which is a sort of professional club with no very severe tests of admission, is not likely to do the work any better.

At most such a remedy as that proposed by Mr. Rogers is a mere palliative. The disease, of which he gives a very accurate diagnosis, remains. Until judicial nominations can be taken out of the hands of the legal "boys" who run the machinery of the nominating conventions, the causes which produce the present low condition of the bar will still be in active operation. The bench must be elevated if the bar is to regain its old standing. Of course, judges must be appointed through some sort of political machinery, and the old system of appointment was better than the new, mainly because the machinery was better. Election means virtually appointment by the "Mikes" and "Toms" and "Bobs" who run conventions, with the advice and consent of the political lawyers described by Mr. Rogers, instead of appointment by the Governor, with the advice and consent of the Senate. Now, however poor a Governor we may have, it is impossible that his nominations—for which it must be remembered he is responsible—should not be better than those which are the product of this system. History is, of course, full of instances of bad judicial nominations, but they have been made by Executives who were not responsible to anybody for their acts. The "Mikes," "Toms," and "Bobs" of our politics really are less responsible than any persons ever charged with the duty of selecting judges. The worst sort of a king can always be driven into exile, or even beheaded if he becomes too bad to endure; but we have not this crude means of redress against Mike and Tom. They are shielded from pursuit by the fact that they are only members of an indeterminate body who, by a pleasant fiction, represent the public at large or an entire political party.

A return to the method of appointment is for the present out of the question; but it ought to be kept in view that the existing system is at the root of all the evils which afflict the profession, and that all efforts for reform which stop short of affecting this will result in no permanent cure. Meantime, there is nothing that such bodies as Bar Associations can do to keep the bar pure and honorable half so effective as by seeing that no really bad judicial nomination is allowed to pass without exposure. They may not be able to have much voice in the selection of the candidates, but they can at least pronounce—and pronounce plainly—upon the unfitness of a candidate when once nominated. The Bar Association here has done some good work of this kind, and certainly the State Bar Association would be more likely to effect something in this way than by undertaking a general censorship of the bar throughout the State.

PIEROLA'S RETURN.

IT is some months now since the Administration abandoned its attempts to discover the de-facto Government of Peru; Mr. Trescot, who carried his researches as far as anybody could, having come home without any greater success than Artemus Ward had in his effort to find "monarchy" in Canada. Meanwhile the country has remained in the occupation of the Chilians, and little or no progress has been made toward a settlement of the terms of peace. The report now set afloat that they are about to resort to the aid of Pierola to set up some

sort of a government with which to treat, is not improbable in itself, and seems to be confirmed by the fact that he is on his way back from Europe. Pierola, it will be remembered, was, down to the time of the surrender of Lima, in full possession of the Government, so that his return to power would merely restore the state of affairs which existed before the invention of the Calderon Government.

The return of Pierola would of course be regarded in many quarters as a curse to Peru; but it is by no means certain that reëstablishment of his dictatorship is not the best thing that could happen to the country. It is perfectly obvious that Peru is now governed by Chili as a military conqueror, and that all the attempts at self-government have proved ridiculous failures. There are four or five patriots now contending for the position of President or Supreme Chief, and in the interior of the country a complete state of anarchy exists.

But the most important fact to be borne in mind, in considering the future of Peru, is the character of its civilization and its people. Mr. Blaine conducted his diplomacy with it much as if Peru was inhabited by a race of Yankees, accustomed to town meetings and constitutional government. The Peruvians are, however, as he ought to have known from information furnished by Mr. Christiancy, at a great remove from this. That minister, in a letter which will often bear quoting, written a year and a half ago, gave a vivid picture of Peru as he found it. It is in the main in a condition of barbarism. A mixture of Spanish, Indian, and negro blood has produced a half-caste population, there being in all Peru not over 200,000 pure whites. Labor is looked upon as a disgrace and degradation, and as only fit for a servile race. Three-fourths of the inhabitants were slaves down to 1856, and, though nominally emancipated, have hardly risen above the condition of slaves, and are still treated as such in many quarters. Wages are in many cases fixed by the authorities, and manual labor, where it is paid, commands no more than ten or twenty cents a day. To turn to the governing classes, "every man naturally looks only to what he deems his own immediate interest, or elevation to power, and, when placed in power, he seeks only to enrich himself by the opportunities which his office gives him to appropriate the public funds to his own use." In the case of claims against the Government, the way to get them allowed was "by giving a fair share" "to the President and Cabinet officers." In the conduct of the war precisely the results followed that might have been anticipated from such a state of society. The Peruvian soldiers were Indians or half-castes, driven into the ranks, and then marched up to Lima as "volunteers," while the officers (whites) were worthless, and, guided by what they deemed their "immediate interest," fled by scores when the fighting began to go against them, leaving their men to look out for themselves. This description, it should be said, was forwarded as a confidential communication to Mr. Blaine, and, as Mr. Christiancy had no ulterior object to serve, and warned the Department that if his letter was published he should go in fear of his life, it may be regarded as gospel truth.

Peru is rather worse off now than when Mr. Christiancy wrote this letter, and it is a mere dream to suppose that in such a country self-government, as we understand it, is possible. The question really is whether any government at all except through absorption in Chili is possible, and Chili can have no desire to annex Peru as a whole, because she would have to assume her enormous liabilities. But, at all events, to treat for peace and to secure the terms of it, some man is needed who is supported, not by the imaginary "character and intelligence" of Peru, for which Mr. Blaine ordered search to be made, but who is backed by money and bayonets. Pierola will have both, and he will, if once installed in power, have the motive of self-interest to maintain any government that is set on foot. But he in all probability represents foreign creditors of Peru, and has been repeatedly charged with being in the pay of the Dreyfus house. And thus we are brought once more face to face with the fact that the political question in Peru is primarily a question of a division of its assets among its creditors. Pierola is probably put in as a sort of receiver.

NEW DATA ON THE GULF STREAM.

THAT "there's a tide in the affairs of men" has long been recognized by other than hydrographers. How completely the elucidation of many terrestrial problems is dependent upon a tide of concurrent events which must be taken at the full is seldom realized, even in the midst of success. Undaunted resolution, daring courage, brilliant invention—all have repeatedly failed in their object, which later, though by no bolder or wiser endeavor, has been attained, as it were, on the fulling tide. In no department is this truer than in Hydrography, especially in relation to its wider problems—the oceanic circulation, the conformation of the sea-bed, and the distribution of life and sediments by the one upon the other. Thus, it is certain that Sir John Ross, in 1818 must have had protected thermometers essentially similar to those now in use, in principle if not in form; but, on the revival of deep-sea hydrography caused by the introduction of telegraph cables, such thermometers were found to be a necessity, and were independently reinvented. In 1850 Lieut. Walsh, of the U. S. Navy, introduced and used wire for sounding in the Atlantic sea-bed. The detaching apparatus of Brooke was yet to be invented, the necessity of steam in navigating and working hydrographic expeditions was not yet realized, and so it was reserved for Sir William Thomson, twenty-two years later, to bring wire again into notice. This, with Thomson's new and ingenious application to sounding-reels for determining the contact of the weight with the bottom of the old principle of the brake, together with the employment of seagoing steamships for hydrographic service; the invention of the Miller and Negretti thermometers; the improvement of the Brooke sounding apparatus, and the commercial demand for cable surveys, formed the flood-tide on the utilization of which our present success in deep-sea exploration depended. Instead of exhibiting Sir William Thomson's originally impracticable machine to occasional visitors as the curious failure of an eminent man of science (as is said to have been done on a more pretentious expedition), Captain Belknap and the officers of the *Tuscarora* set their American inventiveness at work perfecting appliances and correcting defects, with what success the world knows. Since the voyage of the *Tuscarora*, hydrographic science has profited largely by new inventions of Thomson, Siemens, Sigsbee, Agassiz, and others, and hydrographic work, in a strict sense, has been prosecuted in American seas as never before.

Naturally, the first attention in these investigations was given to the study of the Gulf Stream and the region whence it is derived. Since the time of Franklin, this subject has had special attractions for American science, from its important bearing on our commerce and climate. The United States Coast Survey, almost from the time of its organization, has devoted much of its means and time to the investigation of the characteristics of this current. The work has enlisted the sympathies of successive Superintendents to an unusual degree, and has been faithfully carried out by officers of the United States Navy, acting under the direction of the Survey, in accordance with existing laws. Much has been published in official reports, much still remains in bulky manuscript, but all that was done previous to the application of the improved methods above mentioned is of less importance than the results of the work of the last five years. In fact, the investigations carried on by Commander J. R. Bartlett, under the direction of the Survey, during the last two years, have overturned entirely many old theories still to be found in all text-books, and rendered necessary an entire remodelling of our notion of the Gulf Stream itself.

The question of the origin of ocean currents, properly so called, appears to be definitively settled in favor of the reaction of the atmospheric upon the oceanic circulation—that is to say, they are caused by the winds, and modified by the differences of rotational diameter of the earth between the equator and the poles, which, as shown by Ferrel, tend to deflect to the right any moving body in the northern hemisphere, and to the left any such in the southern hemisphere. In speaking of ocean currents, it is to be understood that reference is made to bodies or streams of water having a motion in a given direction sufficiently rapid and constant to be taken into account as a regular factor in navigation. Were the general diffusion, due to differences of specific gravity, of warmer water northward and colder water southward included (as they often are) in the definition of a current, the case would be confused without any corresponding gain. The differences of opinion as to whether the Gulf Stream reaches Norway are chiefly due to such confusion of terms. As here understood, the Gulf Stream does not reach Norway, nor extend even as far as Great Britain, and the necessity for a clear definition will presently appear.

The Gulf Stream has been known in the past as a "river in the ocean," starting from the Caribbean Sea, making the circuit of the Gulf of Mexico, issuing with enormous rapidity and high temperature from the Straits of Florida, and continuing to about latitude 45° N., with banks and a bottom stratum of cold water everywhere "providentially" interposed, like a cushion, between it and the earth's crust. Without mentioning sundry vagaries of Maury which have been widely copied, it has been described as composed of warm and cold longitudinal bands, alternating with one another, and as running over, if not in, a great trough or depression of the sea-bed, extending from the Straits of Florida along the Atlantic coast of the United States as far as Hatteras, or to an undetermined distance. Many of the discrepancies between these views and the latest investigations have been the subject of recent comment in scientific circles, but naturally have not yet obtained a very wide general circulation. In contrasting the erroneous ideas deduced from

imperfect methods of work and faulty results in the past, with the achievements of Sigsbee in the Gulf and Bartlett in the Caribbean Sea and Gulf Stream, it must not be taken for granted that the labors of the earlier workers were any less energetic or conscientious than more recent attempts. On the contrary, in small, ill-fitted vessels, sometimes without steam-power, with small crews, and with experience all to gain, the first investigators dared the tempests which breed in the steaming current, the yellow fever which lurked in the ports where they were obliged to recruit, and difficulties of less important kinds in great variety. The differences of value in results are simply due to the differences of method now rendered possible by the combined use of several recently-constructed tools for the purpose.

In brief, the following is the general conception of the Gulf Stream as at present understood, subject, of course, to modification in minor details hereafter: The north equatorial current of the Atlantic striking against South America is deflected northward, and as much of it as can passes between Grenada and the north shore of South America along the Spanish main. Much more of it, however, is deflected by the islands in a more northerly direction between Barbadoes and the Grenadines. A part of the water which thus enters the Caribbean emerges again between Guadeloupe and Hayti, with a higher temperature than it had before. A large portion of equatorial water proceeds westward between the Bahama banks and Hayti, and enters the western Caribbean through the Windward Passage. Another portion continues on along the northern shores of Cuba to the Straits of Florida. The temperature at the Windward Passage is several degrees higher than it is when the equatorial water reaches the Windward Islands, from Trinidad and Barbadoes to Guadeloupe. This is because it has been passing over a series of shoals and banks, and has been thoroughly warmed by the sun. It is to be borne in mind that the bottom water (at 2,000 fathoms) in the enclosed basins of the Caribbean and Gulf is no colder than the water of the outside Atlantic at a level with the rim (700 fathoms) of these basins (*i. e.*, 39.5° Fah.), while at 2,000 fathoms outside, the Atlantic waters are two and a half degrees colder. This suggests a speculation as to whether if the enclosed water had once been any colder it could have become warmed to its present temperature, which seems improbable, and leads to the inference that the rim of these basins has perhaps existed ever since the general temperature of the colder Atlantic water was much higher than now. As has been pointed out by Superintendent Hilgard, the current entering the Gulf of Mexico from the Caribbean does not make the circuit of the Gulf as formerly supposed, and has no necessary connection with other currents around the Gulf. On the contrary, it passes to the northward and eastward in the same general trend as the Yucatan plateau, and issues from the Straits of Florida with such reinforcements as it may receive from between Cuba and the Bahama Banks, as above mentioned.

The temperature of the Gulf Stream, now individualized and defined, in the early part of its course according to most careful observations by Bartlett, rarely exceeds 83° in June and July, except under a hot sun in very calm weather. The temperatures of the stream at corresponding depths are the same as those found between the Windward Passage and the Gulf of Mexico. The width of the Straits of Florida between Jupiter Inlet and Memory Rock on Little Bahama Bank is forty-eight miles, the greatest depth 439 fathoms; the area of the cross-section about 430,000,000 square feet, and at three knots (the average velocity) the delivery here would be about 436,000,000,000,000 tons per diem. This is evidently much less than the amount called for by the volume of warm water which spreads over the greater part of the Atlantic Ocean, from Cuba to Norway, and which by certain philosophers is ascribed to the outpour from the Gulf.

The width of the stream varies from fifty to nearly one hundred miles, the velocity and temperature of the axis being greater than that of the lateral parts. Its average rate may be two and a half miles an hour, in many places is less, and in some reaches five miles an hour. A delineation of the stream in tints corresponding to its varying surface-velocities, shows that broad-off Tybee Light and Okacroke the velocity of the whole stream over a considerable area is diminished, and in each case a little later (off Charleston and Hatteras) is suddenly increased. The inference from this would be that in these localities the current receives a temporary check of some kind, overcoming which it starts with renewed vigor. At Hatteras this check is due to the Labrador current, which is met and overrun, but the observations do not show any water of Labrador temperature off Charleston.

Instead of running over a trough, the stream passes over a tolerably even plateau, or area of very gentle slope eastward, which extends off the coast from the Bahamas to Hatteras, narrowing northward. The "trough" was due to the rapid current running away with the slack of the sounding line when in its grasp, and consequently registering too great a depth—an error common to all soundings with ropes in a current, not excepting those of the *Challenger*.

Instead of having a cushion of other water to glide over, Bartlett found the bottom of hard coral rock in the path of the stream, at 400 fathoms, swept as clean of slime, ooze, or living things as the bed of a mountain torrent. Instead of bounding "cold walls" and intercalated "cold bands," the water inshore appears to be a mere overflow of Gulf-Stream water, and the temperature from the stream landward or seaward is but little cooler than the stream itself, which is known chiefly by its motion. Indeed, a two mile per hour southwesterly current of nearly equal warmth was observed east of the Gulf Stream off Charleston on several occasions. The "cold bands" appear to have been due to rain-squalls or other causes producing accidental inequalities of temperature, which disappear a few feet below the surface.

The Gulf Stream, in passing over the continental plateau, has its inner edge near but not rigorously continuous with the line of 100 fathoms in depth, and extends to about the curve of 500 fathoms. The edge of the continental plateau drops suddenly to about 2,000 fathoms, and makes its nearest approach to the coast at Cape Hatteras. The cold Labrador current runs outside of and along this bank, and, when the Gulf Stream pours over it, causes a tumult in the waters. Whether the entire Labrador current underruns the Gulf Stream, and follows the 2,000-fathom curve to the equator, or whether a portion of it passes over the continental plateau inside, rising in temperature, but retaining its motion and causing the tumult off Charleston and the southwest current outside the Gulf Stream (after passing under it), are questions which thorough serial temperature observations will be required to determine. It is at least not improbable that some of the cooler water may creep southward as the Gulf Stream itself is swayed off and on the coast by more or less opposing gales. But Commander Bartlett appears to have disproved, among many other old notions, the idea that the arctic current, as such, underruns the Gulf Stream to the Gulf itself, or even to the Straits of Florida.

THE TOMB OF HARVEY.

BIRMINGHAM, Sept. 1, 1882.

IT was my good fortune to go down into Essex not long since, with a party made up by several Fellows of the Society of Antiquarians; so that some things came in my way not often seen by strangers. Our headquarters were at Saffron-Walden, an old borough town, as yet little modernized. As we alighted at the Rose and Crown, on Saturday morning, the sheep were bleating in the market place close by. It sounds absurd to say, "By permission of the Empress Maud," but it is the actual fact that the weekly market is still held under a grant from her to Geoffrey de Mandeville, the Earl of Essex. The main object of the expedition was a visit to Audley End, one of the finest of the old Jacobean mansions left in England. Lord Braybrooke had most courteously thrown it open to us, so that we saw it with a leisure and a completeness seldom enjoyed in a "show house." To tell the story of the place is almost to tell the history of England from the days of the De Bohuns and the first great Howards to the time when, under the generous direction of the last Lord Braybrooke, Pepys's 'Diary' was deciphered and given to the world. To an American nothing of the treasures the house contains is more interesting than the portraits of the Cornwallis family which the present occupants now represent. A marble bust of *our* Lord Cornwallis stands at one end of the state drawing-room, and a magnificent portrait of him in his robes as Governor-General of India hangs at the other, while a copy of the monument in St. Paul's stands on one side of the chapel.

Yet it is, after all, not so much the grand things that give the stranger the keenest pleasure of his journey—those he expects; but it is in the little bits of history and association which start up unexpectedly everywhere. By the wayside (it was the road to Newmarket) stands a broad, light-yellow stone house, with a golden crown over the door. Nell Gwynne lived there. In the fine brick mansion at the head of a long, sloping park still lives a godson of Pitt, an old man of eighty. His father was Pitt's private secretary. Here is the house where Dick Turpin was born. Opposite is the old bull-ring—when we saw it, happily filled by a quiet group listening to open-air preaching. After tea, the hostess takes us to see a veritable old-fashioned bowling-green, in which her children play. Next morning we go to the spot where, just below a beautiful garden, a Saxon burial-ground was opened a few years ago. One hundred and seventy men, women, and children were found, each in the little bed hollowed out of the chalk. In church, on Sunday morning (Saint Mary's, by the way, is called the grandest of the Henry VII. churches in England), close by us was the monument to the Chancellor Audley, and in the vault under our feet, with Audleys and Howards, lie the remains of the Countess of Essex, of the ill-fated Sir Thomas Overbury story. All this is within a radius of five miles. Does it seem a crowded catalogue? It is nothing to the reality: that piles itself up till, at the end of a few weeks, one is ready to ask, not, What is there to see next? but, Is there any corner of England which has nothing to see in it?

On Sunday afternoon we drove out across the country to a spot rarely visited in this generation, even by Englishmen—the last resting-place of the great William Harvey. To a New Englander, Essex County is the land of his forefathers. It is now a quiet land, broad and flat, and scantly wooded—a land of malt-houses and of barley, of Quaker thrift and wealth. Nine miles east of Saffron-Walden is the little village of Hempstead. The cottages crowd the southern

slope of a low hill, and beyond stands the church looking out to the west and north—or rather, one should say, so much as is left of the church; for last February the tower fell, carrying with it the larger part of the roof of the nave. The walls were known to be cracked, but no serious fears were entertained till, one Saturday evening, Mrs. Ford, the old woman in charge of the church, came in to tell the curate that the cracks about the tower had opened wider. He went out with her to look at them, and both of them went up to the belfry, and Mrs. Ford, as was her wont on Saturday evening, wound up the clock. Returning to his study, the curate wrote to the rector that, owing to the unsafe condition of the walls, he had given orders that the bells should not be rung for service the next morning. Hardly had he finished the letter when a rumbling crash was heard, and the servants rushed in to say that the tower had fallen. It is a very humble parish, and no attempt at rebuilding has been made further than to board in the two upper bays of the nave which remain. The mass of stone lies nearly as it fell—much crushed and crumbled; but the fall was so slow and so even that the chime of bells, which the county history of fifty years ago described as "five very musical bells," came down unhurt, and they stand a melancholy row by the churchyard wall. The little congregation was just coming out as we arrived. The church is almost bare within, but over the pulpit is the Harvey crest—a helmet and an outstretched hand above it. The Harvey Chapel is on the north side of the chancel: it is perhaps 18 x 24, but looks smaller than it really is, being crowded by monuments of the heavy classic style. There are Harveys of all ages, from the old Eliab of 1698 (in his day a much greater man to the common world than the doctor), and the Sir Eliab of Nelson's time, Admiral of the Blue, K. C. B., and the member for Essex, to "two daughters, Mary and Philadelphia, who died infants, and lie by their father." To their memory are inscribed two medallions in white marble by Roubillac.

The monument to the great physician is not in the chapel, but at the corner of the north aisle. The white marble bust of himself stands in a deep niche of dark stone. The head and face are more massive than in the common portraits, but it is the opinion of experts who have examined it, among them Woolner himself, that it was copied from casts taken after death. Beneath it is a long Latin inscription, recounting his discoveries in science and his benefactions to the College of Physicians in London: "*Orbi Salutem, Sibi immortalitatem Consequutus. . . . Professor Assiduus et Felicissimus*," and this conclusion:

Tandem
Post triumphales
Contemplando, Sanando, inueniendo
Sudores,
Varias domi forisq. Statuas Quum totum circuit
Microcosmum Medicinæ Doctor ac Medicorum,
Imporles obdormiuit.
III° Idvij. Anno Salutis C.IDIDCLVII. Ætatis
LXXX°.
Annorum et Famæ Satur.

A far greater interest attaches to the monument from the fact that all the contemporary memorials in London perished in the great fire—the *illustrem bibliothecam*, which, in the words of this very inscription, he *Construxit, Dotauit et Ditauit suo Patrimonio.* Under it there was "a fair large parlor," also his gift, in which the college should hold its convocations. Aubrey describes the statue erected by his colleagues, "in his Doctorall robes at the Physitian's Colledge." *Viro, Monumentis suis immortali*, was written under it.

Beneath the Harvey Chapel is the vault, which is entered from the outside by steep, narrow brick steps under a trap-door. There is a pretty large window, now iron-barred, but one of our party well remembered that forty years ago it was all unprotected, and any two resolute men could easily have walked off with the body of Harvey. An elderly woman in decent mourning, the same Mrs. Ford who wound up the clock on that memorable evening, unlocked and lifted the door for us. Below we found the place dry and clean—a simple cellar, with stone walls and brick floor. It was a curious spectacle, as in the dim light we made out the forms of the coffins. As I said, it is a simple room, with no arrangements for enclosing the coffins. They have simply been left there, as in any quiet, vacant room. There are fifty-four of them, all Harveys or their wives. The oldest of them are of that ghastly shape which takes the outline of the human body, and the head is stamped with a grim likeness of the human face. The later ones have wooden cases outside of the lead (the sides of several had dropped off), and were once covered with cloth, and handsomely decorated with steel or silver. The Admiral's coffin is in one corner by itself. Those of several children are piled upon the large ones, four and five in a row, the very small ones being probably those of the infants already mentioned. The last coffin was placed here about thirty years ago, and contains the body of a young man of nineteen, who died somewhere in the tropics. Its size is enormous, there being five coffins, one within the other. The body of the great Harvey lies upon the floor close under the window. It faces the east, as it is noticeable they all do, and Mrs. Ford said it had never been moved in the sixty-five years that she remembered it, which goes to prove that from the first his fame was so specially recognized that no other coffin was placed upon it. It is of that semi-human shape as his friend Aubrey wrote: "He is lapt in lead, and on his *brest* in great letters—*Dr. William Harvey.* I was at his funeral, and helped to carry him into the vault." In the deep shadow the inscription was invisible, but by lighting a succession of matches we made out: "1656. William Harvey. Deceased June 3rd, aged 80 years." The lower part of the coffin had shrunk and fallen in upon itself, with a crack at the bottom of the hollow, which showed it was full of water, left from the winter no doubt, for the vault was dry enough on the warm July day.

The last of the Harveys is now a childish maiden lady of ninety, and the future of this strange resting-place of one of the greatest of Englishmen has become an important question. The College of Physicians has considered many plans—none more than that of removing the body of Harvey to Westminster Abbey and placing it beside his great compeer, Hunter; but, taking into consideration the traditions of the selection of this place at the time of his death (a committee of the College attended the body when conveyed hither), and the long time it has lain here, they have at last concluded to enclose it in a costly sarcophagus and place it, with suitable surroundings, in the old Harvey chapel above. So much is a definite plan already in course of execution. (This vault will then be put in order and permanently closed.) There is a further expectation that the whole church may be rebuilt and restored, as a memorial to Harvey.

Coming out again into the sunshine, we were invited to visit a fine old farm-house in the neighborhood. Walking thither over the stiles and across the fields, we passed the site of the old manor house, once the home of the Harveys. Nothing is left but the grass-grown moat and the "immemorial" elms, but the place still keeps the name of Winslow Hall. It was owned once in that name, and still earlier by the Cottons. At the farm-house we found one of those fascinating old English gardens, with box hedges breast-high and turfed alleys, all in a tangle of vines and flowers, with the York and Lancaster roses perfuming the air, all so sweet and soft and still. Afternoon tea was spread under a giant elm, and little children ran laughing about. The names were Muriel and Kathleen, but they spoke only Hindustani.

As an appendix to my story, I may add one or two anecdotes of Harvey found while looking for something else among books at the British Museum which, though not rare, are at least infrequent. Hobbes said of him: "The only man, perhaps, that ever lived to see his own doctrine established in his own lifetime." The following has a different sound from what it had two hundred years ago: "He was wont to say that man was nothing but a great, mischievous baboon." Above his autograph in the album of a young man, he wrote: "Dii laboribus omnia vendunt. —GUL. HARVEUS." In 1643 he was summoned to a consultation about the alarming illness of Prince Maurice. Prince Rupert gives this account of his advice: "Concluding the disease to be venomous, they doe resolve to give very little physick, only a regular diett and cordyall antidotes." Prince Maurice recovered. M.

ON THE EVE OF TEL-EL-KEBIR.

PARIS, Sept. 13, 1882.

THE events in Egypt are watched all over Europe not only by those who wish to form their opinion of the state of the English Army, but also by those who feel that the real nucleus of the Eastern Question has for the moment been transported from Constantinople to the Isthmus of Suez. The silence of Europe is full of meaning. Nobody speaks yet: all the Powers keep their sentiments to themselves. England has no avowed enemies, but the number is large of those who envy her great naval preponderance, her wealth; who are irritated at her constant good fortune, at her pride, at her ill-concealed contempt of what is not herself. She has with her all those who believe that, with all her defects, she still represents the highest interests of civilization and the greatest traditions of civil and religious liberty. Between her open partisans and her foes is the great mass of men who feel only instinctively what Le Rochefoucauld so cynically said: "There is always something pleasant in the misfortunes of a friend."

In a few weeks, perhaps in a few days, all these hidden feelings will either come to the surface or sink under the weight of what are called accomplished facts. The feelings of Germany, of Austria, of Italy, and of Russia are all a little different from each other. Germany is now such a colossal Empire that she aspires, and not unjustly, to become a maritime power. She has few ports, but she may hope at some distant time to bring Holland within the circle of her influence, and to be united to her by a sort of Zollverein. The Germans individually do not much like England; they respect and admire her, but their press shows conclusively that with those sentiments are mingled some others which savor more of antipathy than of sympathy. In England there is not much love felt for the Germans: recall the sayings of Lord Palmerston about Prince Albert. The English aristocracy is always inclined to consider the Court as too German. The Duke of Connaught, who married a daughter of Prince Frederick Charles, is considered too German in the Army. In short, the friendship between the two nations resembles more a *mariage de raison* than a *mariage d'inclination.* But the ties of the German and English Courts are so close that it seems almost an impossibility that there should be any serious

and dangerous misunderstanding between the two countries, whatever may be the personal sentiments of influential politicians. A daughter of Queen Victoria will some day wear the Imperial Crown of Germany ; and there is in this simple fact an eloquence which defeats all the arguments of discontented diplomats.

Austria feels a great interest in the Eastern Question. Prince Bismarck has consoled her for the loss of her position in Germany ; he has taken her on to the mountain and shown her the provinces of the peninsula of the Balkans, and, far away, the shores of the Ægean Sea. The ports of the Mediterranean have a new life since the commerce of the world has returned to its old channels and abandoned the Cape of Good Hope. Austria must be very anxious for the complete independence and neutrality of the Isthmus of Suez, as she imports now directly, and sends all over Germany, many goods which used to go by the Atlantic to Bremen and Hamburg. Italy is prompted by the same feelings. She will in a few years become a great maritime power; she has a number of fine ports which are now connected with Port Said by lines of steamers. Besides her commercial interests, Italy has to defend her political situation. She never feels big enough ; her ambition has been so gratified that it has become insatiable ; she has always a dim consciousness that she is only looked upon as a second-rate power, and she pretends to be a first-rate power. The pride of old Rome fills her ; she still looks upon all *forestieri* as mere barbarians. She was, in the time of the Renaissance, the cradle of our modern civilization ; she took the world out of the night of the Middle Ages and of the barbarism of the tribes which had conquered Europe. She is so proud and so sensitive that she could hardly bear the presence of French troops on the site of ancient Carthage. She is looking eagerly toward the East, seeking for something to devour. She was tempted at one time to join England in her expedition ; but she is prudent, and she thought it better for her interests to remain tied to the policy of the great Continental Empires. She regrets at times having taken this passive attitude ; she is afraid that England will be so successful that nobody will quarrel with her ; she asks herself if she would not have done better to go boldly forward, as she did at the time of the Crimean War, when she sent the small Piedmontese army before Sebastopol.

Is it necessary to speak of Russia? Russia is now so completely resigned as to have hardly any thoughts at all. She can do nothing ; she feels helpless ; she can only vaguely say that when the war is over there must be a European settlement, and then she will make her intentions known. She feebly threatens to do something when the hour comes ; but she cannot even say what she would like to do. The Nihilist agitation seems to have completely crippled Russia ; her sovereign has but one task before him, which is to live. Somebody asked Sieyès : "What did you do during the Terror?" "J'ai vécu," was his answer. It is difficult enough to live when you are surrounded by maniacs and irrational beings. Russia can form no plans; she can only modestly place herself behind the two German Empires, and offer to be their reserve in some great Continental war. She has looked on the mosques of Constantinople, and turned her back on them ; she can now only hope to have her share of Turkey if there is a new partition like the partition of Poland. The hands of England, in face of all these elements, are really free ; she must show what she can do ; she has never been so completely before the eyes of the world.

Correspondence.

A QUEER MISTAKE OF HUBBELL'S.

To the Editor of The Nation :

Sir : During the summer vacations of the university with which I have for some time been connected, I sometimes assist my father, the postmaster of the village where my home is. Sometimes I take the place of a clerk absent on vacation ; sometimes I do writing. In no summer have I so occupied myself during more than three weeks, and seldom more than three hours in any day. Of course, I have been sworn in, and my name has been returned as a clerk, I suppose ; but I do not receive a cent of pay, and the pay-roll shows that I do not.

I have, therefore, been much interested by a circular received yesterday, at the bottom of which is a facsimile of the rather illiterate signature of some person called D. B. Henderson, while in the upper left-hand corner are printed the names of fifteen persons, who, as I learn from letters before their names, are honorable gentlemen. Over them is the name of one Hubbell, to whom that epithet is not applied.

Now, I had received a similar circular before. This previous one expressed it as the unanimous opinion of all these gentlemen that I would "esteem it both a privilege and a pleasure to make to their fund a contribution, which, it was hoped, would not be less than $——." They were right. I esteemed it a privilege and a pleasure to contribute just that amount, being two per cent. of my salary, mentioned above. So I made no reply. But this, I learn from the second circular, "is noted with surprise," and an excuse is kindly suggested. It states, further, that we have "a conflict before us, this fall, of great moment to the Republic." This fact I note with surprise. I am sure I had not known it before, though much interested in national affairs. So the circular requests "two per cent. of your annual compensation." Now, it isn't that the sum is so great, but I fear that it is all a mistake, and that the circular doesn't mean me ; for it does not seem to demand money except from "those most directly benefited by success" (which I evidently am not), nor in case I "think our grand old party ought not to succeed," on which I am at least doubtful. So, until I learn that my interpretation is a wrong one, I shall cling to the spoils of office. I am going to keep the circulars, for I hope to live to see the time when they are regarded as curiosities.—I remain,

A Pampered Placeman.

October 1, 1882.

THE RESPONSIBILITY OF CABINETS.

To the Editor of The Nation :

Sir : Can you afford room for this echo of your interesting discussion with Mr. Bradford? In that social function to which, as a whole, we give the name of "government," there are really two elements between which we must distinguish if we are to avoid confusion. One of these is the *administration* of the law as it already exists at the given time, and the other is the *changing* of the law so as to improve it in some particular, whether of principle or of detail. Now, it seems to be almost exclusively with reference to their attitude as to proposed changes of the law—the "reforming" department of the governing function—that modern "responsible" cabinets ("governments," as they are called) are created or unmade. That is to say, they are judged only or chiefly in their legislative character, though with that character they in fact combine that of the chief administrative officers. In this country "administrative" responsibility is directly to the people as electors, instead of, as in Europe, indirectly to the people, through their representatives in the legislature. Whether our institutions (and our use of them) do all that might be desired toward making the direct responsibility a real and efficient one, is a question of fact upon which opinions differ. But it is certain that, however this may be, the question is at any rate entirely distinct from that whether our system is better or worse than its European rival.

To this latter question the answer would seem to depend on our decision between the plan of letting the people's control be exercised exclusively through their election of an assembly (such as the House of Commons) which is to be responsible for both legislation and administration, and the plan of letting the people itself make the distinction between legislature and executive, and directly elect the incumbents of both departments, each department being of course "responsible" directly to the people (not one to the other) for its own performance of its own function—and for that only. It is claimed by some that the former is the preferable plan, on the ground that the electors of small local constituencies are more likely to be able to choose wisely a representative of the district through whom they may best exert all their governmental influence, than they are to be able to participate wisely in directly choosing from out the whole nation, and afterward watching and criticising, the specific varieties of officials needed in the actual work of government. In a word, the theory is that the average citizen, inasmuch as he cannot be a specialist in government, had better confine himself to selecting from among his neighbors some one whom he can rely upon to be his political attorney-in-fact, just as for other purposes he "puts himself in the hands" of his solicitor, his physician, or his man of business.

In England it is only through the House of Commons that the electors govern. Accordingly, as the House need not be dissolved save once in seven years, it is legally, though of course not practically, possible that government should be carried on for years in direct contravention of even the unanimous will of the electorate, as distinguished from the existing "House."

We have heard much, and are likely to hear more, of the growing instability of cabinets, owing to the division of legislatures into more and smaller parties, no single one (or stable group) of which can give a cabinet that majority without which the system assumes that a cabinet cannot be allowed to exist. The serious practical inconvenience thus resulting may perhaps lead to a criticism of this last-named assumption, far more searching and severe than any degree of theoretical absurdity would by itself have ever been likely to draw upon it.

If reform (or, as we have termed it, legislation) were the only function of these "governments," then, indeed, one could understand that they should be allowed to hold office only so long as they had a majority party behind them ; for, obviously, any given reform or change in the existing law ought not to be carried out before it has commended itself to at least a majority. But, as we have seen, these cabinets are, not only also, but in point of fact chiefly, administrators. Now, in administration, properly speaking, there should be no question of partisanship at all, but only of integrity and capacity. Except when there is, in fact, a "majority" united in support of some proposed reform, it is not only senseless, but demoralizing and inconvenient, to insist on considering leadership of a successful party (a term having then no legitimate meaning) as the sole and essential ground

for taking or retaining office. That basis for the tenure of office fails utterly (as we see it failing now) whenever, and in proportion as, the legislature happens not to be enduringly bisected by any one issue (surely the normal and desirable state of things, and that which is more and more likely to be the actual one, as fundamental questions are settled, one after another). The fact is, that a cabinet which is responsible to the legislature is nothing else than the executive committee of that body. Why not frankly recognize this fact, and make *election by the legislature* the source or ground of membership of the cabinet? Unlike the other, this basis of official tenure would be available in either contingency. If at the given time a majority were united on some given policy, then an election by the legislature would put (or retain) in the cabinet men who, to their fitness for the position in its administrative aspect, added the further qualification of favoring the policy of the majority. If, on the other hand, there happened to be no division into majority or minority on any specific policy, a stable and competent cabinet could still be counted on for administrative purposes; for, under such circumstances—office depending, not on membership of the leading group of any one party, but on the given individual's own personal command of enough votes to elect—the places would be secured by the most influential members of the assembly, and each would retain his (presumably) until—either through a majority's coming to insist on some policy to which he would not assent, or through his losing the support of some of his personal following (a sort of support which is far more stable than is the ascendancy of parties, where party is not simply a name for a "side" in the game for the spoils)—he, the cabinet officer in question, should be ousted by the election, to succeed him, of a rival who had come to control the majority of votes. Instead of the whole government retiring simply because of their not being (what, indeed, nobody else is, either, any more than they) the "leaders of a majority party," each individual officer would remain until some other person should, as candidate for his place, have managed to obtain against him a majority of all the votes.

To base governments on the balancing of parties is, in the words of Goldwin Smith, to give them a "foundation which must inevitably be weakened by every advance of the public intelligence, and which the attainment of truth on the great political questions will bring utterly to the ground."

"But [under the elective system] the legislature and the executive would be set free each of them to perform its proper functions. The legislature would no longer be hampered by the fear of overturning the executive; the executive would be stable, and would discharge the duties of administration and police steadily and without fear about its own existence. No longer would half, or more than half, the public men of the country be employed in propagating discontent, or a moiety of the nation be in a state of moral insurrection against the government which ought to be the object of its united loyalty and support. It is true that the criticism of an organized opposition would be withdrawn; but that criticism is always passionate and unjust—it is, in fact, not criticism, but attack; and the fullest opportunity of *fair* criticism in an open legislature would remain. . . . There would be no majority to vote black white under a false sense of honor, for the purpose of shielding a criminal of its own party. . . . Ministers [could be chosen] with reference to their departmental aptitudes, in place of the pitchforking system which the necessity of finding places for all the leaders at present entails. . . . The state would not be deprived, as it is now, of the services of a first-rate administrator—say, of finance or of foreign affairs—because he happened to be in the minority on some legislative question."

CHARLES FREDERIC ADAMS.

70 WILLIAM STREET, NEW YORK, Sept. 23, 1882.

Notes.

MRS. MARTHA J. LAMB is preparing a 'New York Biography,' which will be a sort of sequel to her 'History of New York City,' and comparable to it in bulk. It will be fully illustrated, and published by A. S. Barnes & Co.

A. Williams & Co., Boston, announce 'Towhead: the Story of a Girl,' by Miss McLean, author of 'Cape Cod Folks'; 'Holiday Idlessee; and Other Poems,' by James H. West; a new and enlarged edition of 'The Poems of Alonzo Lewis'; 'Poems,' by Annie L. Angier; 'A Study of Maria Edgeworth,' by Mrs. Joseph P. Oliver; and 'Emerson: an Estimate of his Character and Genius,' by A. Bronson Alcott.

A new edition of Mrs. A. D. T. Whitney's 'Mother Goose for Grown Folks,' enlarged and illustrated by Augustus Hoppin, will be shortly published by Houghton, Mifflin & Co.

'American Hero-Myths: a Study in the Native Religions of the Western Continent,' by Daniel G. Brinton, M.D., is announced by H. C. Watts & Co., Philadelphia.

International copyright is clearly foreshadowed in the invasion of England by *Harper's* and the *Century*, and now by the simultaneous publication of a new *Longman's Magazine* on both sides of the water, though edited in London. It will cover the usual field of our magazines, except that religious topics will be absolutely eschewed. Its contributors will be both English and American. More interesting still, its price will be but twenty-five cents, a challenge to its higher-priced American rivals. It will not, however, be illustrated, so far as appears from the prospectus. The International News Company is the agent for *Longman's Magazine*, and will bring out the first number on November 1.

G. P. Putnam's Sons have brought out a supplement to their 'Best Reading,' by Lynds E. Jones. It consists mainly of classified lists of the most important works published during the past five years, with critical indications affixed. Lists like Biography, Fiction, Juvenile, etc., possess an obvious interest and utility.

A flood of publications concerning shorthand is just now worth remarking. We do not mention all of them when we cite Mr. and Mrs. D. L. Scott-Browne's 'Text-Book of Phonography' (New York); 'The Modern Stenographer,' by George H. Thornton (D. Appleton & Co.); 'Eclectic Shorthand,' by J. George Cross (Chicago: S. C. Griggs & Co.); 'Eclectic Manual of Phonography,' by Elias Longley (Cincinnati: Robert Clarke & Co.), and the same author's 'American Phonographic Dictionary,' a most laborious production, for the several words are accompanied by their actual phonographic outlines, instead of (as in Munson's pioneer dictionary) by a conventional literal representation. Using either book, the learner has a great encouragement to proceed, for he can constantly check his outlines.

Harper & Brothers have published, in their two-column edition of the Franklin Square Library, Norris's 'Heaps of Money,' already reviewed by us in connection with the "Leisure-Hour Series."

The great Index-Catalogue of the library of the Surgeon-General's Office now has a third volume in print—Cholecyanin—Dzondi. According to Surgeon Billings's prefatory letter to the Surgeon-General, "this volume includes 9,043 author-titles, representing 10,076 volumes and 7,386 pamphlets. It also includes 8,572 subject-titles of separate books and pamphlets, and 28,846 titles of articles in periodicals." *Cremation* has two pages assigned it; *Diphtheria*, twenty-nine; *Dysentery*, thirty; *Cholera* (Asiatic), one hundred and forty-eight. A department of Medical Directories and Registers (a French one as early as 1802) has considerable personal value and interest, but yields, however, in this respect, to the remarkable collections of portraits, medical and scientific, of which the solid lists fill twenty-one pages, and enumerate some 3,000 prints of all kinds. Few works that issue from the Government Printing-Office redound more highly to the credit of American science, scholarship, and patience.

Out of a request to enumerate historical novels illustrating successive periods of English history has grown Prof. William F. Allen's 'Reader's Guide,' just published by Ginn, Heath & Co. No scholar in the country is more competent to do what is done here. In four parallel columns are set down (*a*) the genealogical tables of English rulers; (*b*) "good historical reading, whether histories, biographies, or essays"; (*c*) novels, poems, and dramas relating to each period; (*d*) "the same class of works illustrating contemporary history." Class *b* is not a mere list, but is expressly discriminated according to the bias or ability of the respective authors. Some blank spaces are utilized for Spanish and French genealogies; and on pp. 20, 21, the descendants of Edward III. are displayed with special reference to Shakspere's historical plays. This handy pamphlet merits implicit confidence, and cannot fail to be widely acceptable.

With somewhat less than its usual punctuality, we believe, appears the Proceedings of the American Association for the Advancement of Science, at Cincinnati, in August, 1881. This was the Society's thirtieth meeting, but the papers read, though presenting the usual variety, do not possess any special distinction.

Prompter, because of much smaller size, is the Proceedings of the American Philological Association at Cambridge in July, 1882, its fourteenth annual session. We have already noticed the circular adopted by the Association with a view to suppressing the abuse connected with the bestowal of the degree of Ph. D. Among the papers here reprinted we signalize for its popular interest Prof. March's on the locutions "first two" and "two first."

The lay reader of the current number of the *American Journal of Philology* (Vol. iii., No. 10) will be apt to turn first from the table of contents to Mr. H. E. Shepherd's brief account of "Thomas Jefferson as a Philologist," in which character the father of the Democratic party held views concerning the relation of Anglo-Saxon to English that gave much pleasure to Mr. Freeman on his recent visit to this country.

The four leading articles in the October number of the *Magazine of American History* relate to William Penn and the bi-centenary of the founding of Pennsylvania. An engraving of a supposed portrait of Penn, by Kneller, serves as a frontispiece. Mr. George Bancroft contributes the proceedings of a Hartford convention of 1780 in aid of the Government, with the credentials of the several commissioners (from New York and the New England States).

A biographical sketch of the late Col. James Florant Meline, a frequent contributor to the *Nation*, among other periodicals, during the years 1869-73, and author of 'Mary Queen of Scots and her Latest Historian,' will be found in the *Catholic World* for October. Colonel Meline was of Swedish-French descent.

An exceptionally interesting paper for the *China Review* (Trübner) appears in its issue for May and June, volume x., No. 6. Mr. G. Jamieson abstracts some "Cases in Chinese Criminal Law" from a native work called 'A General Review of [Decided] Criminal Cases,' and which "is regarded as supplementary to the

Code," although it bears little resemblance to the collections of Leading Cases in English law. "Here, all is detail; we get no general principles." One of the cases cited by Mr. Jamieson recalls the "marriage with a deceased wife's sister" controversy, and the decision seems no more rational. It is thus designated: "Marriage with a Woman who has been Betrothed to one's Brother illegal and void." In the given circumstances, betrothal (the man having disappeared) would not have been a bar to marriage with a stranger.

The conclusion of Paul Lacroix's story of his literary relations with Balzac overshadows all else in the September number of *Le Livre*. It is a curious revelation of character on both sides. The two men quarrelled, became reconciled, and then fell away from each other. "I have known many charming talkers in France," says Lacroix, "but none that approached Balzac." For Dutacq's posthumous edition of the 'Contes Drôlatiques,' Lacroix (with Madame de Balzac's leave) corrected conscientiously the "fautes grossières et souvent impardonnables" which betrayed Balzac's insufficient knowledge of the French language of the fifteenth and sixteenth centuries. This he did "sans en parler à personne." An etched portrait of Madame de Balzac is *the* illustration of the current number. A sister of hers married Jules Lacroix, the writer's brother.

The leading etching in the *Portfolio* for September (J. W. Bouton) is by Stephen Parrish, one of our foremost American artists in this branch. It is characteristic, though not one of his best performances. The editor has some appreciative words for Mr. Parrish's genius. Mr. Hamerton continues his interesting papers on Autun, where he has been summering, giving sketches of the Lapidary Museum and of the Paris and Besançon gates.

The fifth annual black-and-white exhibition of the Salmagundi Sketch Club will be opened at the National Academy of Design on December 2, and close on December 22. Notices of intending exhibitors must be sent by November 21 to Mr. Frank M Gregory, Corresponding Secretary, 19 University Place.

The Art Students' League of this city, just reopened for its eighth school year, has removed to No. 38 West Fourteenth Street.

'Croquis Américains,' by Bret Harte, translated by M. Louis Despreaux, has recently been published in Paris by Calmann Lévy. This is the fifth or sixth volume of Mr. Harte's works now accessible in France.

The sixth volume of M. Guillaume Guizot's translation of Macaulay, containing part of the Essays, has just appeared in Paris.

We lately mentioned the foundation by Edmond de Goncourt of a *naturaliste* Academy. The *Vie Moderne*, perhaps by way of preparation for it, rallies the present Academy on having arrived in forty years only at the article *coupole* of its famous dictionary, and goes into a little statistical calculation, by which it appears that at the present rate of progress the dictionary may be completed about 2181, and that, supposing the academicians to have no other work, each has spent so far on every syllable as much time as Littré took for six pages of his work.

A new edition of Henschel's Du Cange's 'Glossarium Mediæ et Infimæ Latinitatis,' edited by Léopold Favre, will be published by C. Reinwald, Paris, with M. Didot's permission. It will make ten quarto volumes, of 600 pages each, and will be five years in making its appearance. Mr. Christern has received the prospectus.

The Royal Library of Belgium keeps account of the books "refused," or not given out on application. This happens either when they are already "out" (which is particularly apt to be the case with Jules Verne's writings, Larousse's Dictionary, etc.), or when the pupils of the Athenæum naughtily ask for "ponies" of the classics, or for novels. In the latter case, the rule is that they shall not be delivered unless for use in a literary exercise (*étude littéraire*), of which the applicant must state the object. This is a hint for trustees of our public libraries.

With part 45 of the "chromo edition" of Brehm's 'Thierleben' (New York: B. Westermann & Co.) the division of 'Birds' comes to an end, and is accompanied by a very full and useful index of names, as well as by title-page and table of contents for vol. i. This volume consists of nearly 700 pages. Vol. ii., 'Mammals,' opens with part 46, and the monkey tribe furnishes the first illustrations. Some of the woodcuts in this series are marvels of engraving.

Nos. 1 and 2 of the *Bolletino* of the African Society of Italy at Naples lie before us. They contain the constitution and proceedings of the Club, fragments of travellers' experiences, and considerable news concerning the Dark Continent.

A map of Egypt from Ismaïlia to Tanta, and southward to Cairo, comes to us from Justus Perthes (New York: Westermann). The scale is large—about four miles to the inch—and the names of places abundant. A side map shows the full course of the Suez Canal, and there is a plan of Cairo on ten times the scale of the main map. The area thus delineated will certainly be the focus of interest in the new development of Egyptian affairs.

—We have to call attention to a very gross case of "journalism" on the part of the Cincinnati *Gazette*. Answering Mr. Gamaliel Bradford, who advocates the appearance of members of the Cabinet in Congress, in order to secure greater power and responsibility for the Executive, the *Nation* said (Sept. 11):

"We must remind Mr. Bradford that the expiration of a Congressional term by legal limitation cannot possibly be made to mean in the popular eye an appeal to the people by the Executive as a dissolution does. To attract popular attention, and put popular judgment in motion on a particular point, the President has to say or do something to indicate that he desires a popular decision between himself and his opponents, either about his policy generally or some part of it. To suppose that the people would pronounce this decision at the ordinary biennial election, is to suppose that they pay that close and constant attention to the work of government on the absence of which Mr. Bradford's demand for increased Executive responsibility is based. A dissolution in France or England calls them to the polls because it is a veritable appeal to the voters, the answer to which will decide who shall administer the Government. The ordinary Congressional election would decide nothing unmistakably. It might be a condemnation of Presidential junketing, of Congressional corruption, or of half-a-dozen things besides, and every newspaper would be able to put a different interpretation on the result; so that the President would be no wiser after it than before."

The *Gazette* (Sept. 30) rendered this as follows:

"The *Nation* thinks that if the President could dissolve Congress, when he comes to an issue with it, and order a new election on that issue, as the Government may do in England, it would be a tremendous power to reform Congress. Your dilettante reformer generally thinks that anything English is learned statesmanship, and he prescribes it with as little knowledge of its nature and applicability as a wild Indian has of the mariner's sextant. In England the Government may appeal to the country by dissolving Parliament, but if the verdict goes contrary the Government must go. This is a pretty heavy restraint on the Government. But in this amateur application of Parliamentary government to our system, the President is to stand against the verdict of the country. One would suppose that biennial elections of Congress made a frequent appeal to the country; but the *Nation* says that is no appeal at all, but it must be taken on a specific bill. This is a specimen of 'them literary fellers.'"

It is hardly possible that any one intelligent enough to write in a newspaper can have blundered in this way. The author of the above has, therefore, almost certainly concocted it knowingly, and "with naked intent to deceive," as Horace Greeley used to say; and if the editor be the good man he is said to be, we feel sure he will not permit such a thing to occur again.

—The founder of the *Courrier des États-Unis*, M. Gaillardet, who died August 14, in Paris, was not so much known to the Parisians on account of the journal by which he made his fortune as from his authorship of "La Tour de Nesle," an historical play (*lucus a non lucendo*) which fifty years ago had a great success at the Théâtre de la Porte-Saint-Martin, and within ten years had been played 480 times; a prodigious success for those days. Gaillardet took his plot from 'L'Écolier de Cluny,' a sensational novel by Roger de Beauvoir, just published, in which Marguerite of Burgundy, Queen of Navarre, entices the passers-by into her tower, and when she is tired of them as lovers completes the resemblance to a siren by drowning them in the Seine. The director of the theatre was not satisfied with the play as offered by the inexperienced playwright, and gave it first to Janin and then to Dumas. After the latter's manipulation it was put upon the boards with the success above-mentioned. But Gaillardet was displeased that his name was not printed on the posters in as large type as that of "mon collaborateur." They went to law about it, and Dumas, whose capacity for getting fame and money out of other men's work fills seventy-eight pages of Quérard's 'Supercheries Littéraires,' was obliged for once to do justice to his fellow-worker. But as he had sworn that Gaillardet's name should not appear with his, the play appeared after this as "par Gaillardet et ***." The affair made a great noise, but, as in many another case of literary parentage decided by legal investigation, the public remained undecided. Some things were, however, plain. There had been a preliminary romance by a successful author, there had been a play more or less good by Gaillardet, not previously a successful author; this play had been retouched by Janin, who had added at least three scenes (two hundred and thirty words); for so much Dumas acknowledged. It had been further retouched by Dumas—how much no one, not even he perhaps, knew exactly. Yet acute critics maintained that sufficient traces appeared of the great romancer's hand to enable them to distinguish a large part of his work, as one distinguishes the Elohist from the Jehovist in the Book of Genesis. The first scene, they said, is undoubtedly by him, for it is taken from Goethe's 'Goetz von Berlichingen,' and M. Gaillardet probably does not possess that extensive knowledge of the foreign drama of which M. Dumas has given repeated and convincing proof. He must, too, be credited with the scene in the prison, in which *Marguerite* listens to and little by little unties *Buridan*, for that is taken from Lope de Vega's 'Amor y Honra'; his, too, is the scene in which *Buridan* says to *Marguerite* that *Philip d'Aulnay* has written that she is his murderer with his blood on Buridan's tablets, for that is taken bodily from Schiller's 'Robbers.' So many proofs, if they did not show the public how much of their enjoyment they owed to Dumas, at least appear to have persuaded him that he need no longer conceal his name under the modest three stars, and the play is now published in his works. Gaillardet, who for a time would not speak to him, became reconciled in 1860; and the great public, who dislike the

trouble of learning many names, and had much rather connect all that interests them with one famous name, whether it be founding a nation or saying good sayings, victories in war or success in literature—the public still thinks Dumas the author of "La Tour de Nesle," as it imagines him the author of 'Monte Cristo,' 'Les trois Mousquetaires' and its continuations, 'Sultanetta' and the rest, and even of 'Les Deux Diane,' which he confessed he had never even read.

—Some time ago the *Atlantic* gave us in its "Contributors' Club" a number of accounts by its writers of their making, or failing to make, a living by literature. This may have suggested to Signor Ferdinando Martini, editor of the *Domenica Letteraria*, the idea of asking his collaborators to relate their early experience in the literary career. The book so formed is called 'Il Primo Passo: Note Autobiografiche' (Roma, 1882). Among the names of the contributors we notice few that are known to the American public—D'Ancona, Bartoli, Mantegazza; but then we fear that the American public is not very familiar with the modern Italian writers.

—M. Zola has complained of the "train-train bourgeois et évangélique" of English novel writing. M. Arvède Barine, in examining a couple of late English novels (Murray's 'Joseph's Coat' and Gibbon's 'Heart's Problem,' of which latter, by the way, he gives a very favorable account) to see if Zola was justified in his sarcasm, remarks on one advantage which the English romancer has over his French rival, which we think has not been pointed out before. The English legislation is such that secret unions are possible. Hence the scandalous or criminal consequences which in France can accompany only illegal ties are the results of a legal act, and the romancer is "moral" though he write of secret rendezvous, concealing children, elopements, and the like.

—A number of French, English, and American journals have given an account of the discovery, at the Château Chanteraine, of a manuscript on the margin of which were notes written by the Dauphin during his captivity at the Temple. *Polybiblion*, with a laudable desire for details, made inquiries at Mans, where the manuscript was said to have been deposited in the Museum. It turned out not only that no such manuscript had been found, but that the story is an old one which recurs periodically, like the discovery of the sea-serpent. It is time for some one to investigate the connection of these intermittent stories with the sun spot period.

—A revival of astronomical activity at the Dearborn Observatory is the most noteworthy feature of the recent report of the Board of Directors to the Chicago Astronomical Society. The chief instrument of the Observatory is the equatorial refractor, of eighteen and one-half inches aperture, built by the Clarks about twenty years ago, and which for ten years was the largest refracting telescope in the world. With this instrument Professor Hough, the Director of the Observatory, has specially studied the great comet of 1881, the planet Jupiter, the satellites of Uranus, and, with Mr. Burnham, has observed difficult double stars. A compilation of all his double star observations made during the past three years is in progress by Mr. Burnham. One appendix to the report of Director Hough contains an historical review of the Chicago Astronomical Society, and another the observations of Jupiter made chiefly for determining the rotation period of the planet. The photoprints accompanying the report exhibit the exterior of the Observatory, and the interior of the great dome; and twelve views of Jupiter drawn at irregular intervals from September, 1879, to March, 1882. Two of these are especially interesting as showing, the one the transit of a satellite, and the other the transit of a satellite's shadow, across the great red spot which has been visible on the disk of the planet a number of years.

—The Deutsche Gesellig-wissenschaftliche Verein, of this city, has printed (in German) a lecture delivered before its members this winter by Mr. T. Bleecker Miller, of the New York bar, on English and Roman law considered as the product of Indo-Germanic nations. The author shows with great clearness that the English "common law" is a system with principles and a development of its own, and that the similarities between it and Roman law are not the result of imitation, but of the common origin and nature of the two nations. His conclusion is that Mr. Field's Code, which he describes as being a bad imitation of the Civil Code, and as faulty in construction and entirely wanting in all national elements, ought not to be adopted. Further study of the nature and history of our existing law must, according to him, precede any attempt at a general codification. This last assertion may be readily conceded, but only on the condition which Mr. Miller, and with him many other opponents of codification, seem to be too apt to overlook, that the study be carried on in a critical spirit, and not with a view to discover "the sublime simplicity and completeness of the common law." The tendency in the last fifty years has been to emancipate ourselves from the tyranny of the common law. In many particulars the change has been complete, as, for instance, in the greater part of our real-estate law. This reform has not been effected by slow and gradual development, but by direct legislation, as revolutionary as any codification could have been. In other points the progress is still going on, and it is here that a knowledge of the nature and origin of the doctrines will be most useful to us, as helping us to decide what to reject and what to retain. The old common law has not the completeness which its advocates claim for it, and it is senseless to speak of applying its principles to the manifold interests which have to be protected in our age, such as railroads, insurance companies, and innumerable other organizations. Society is radically changed, and the law has to be changed with it.

MOZLEY'S REMINISCENCES.—I.

Reminiscences, chiefly of Oriel College and the Oxford Movement. By the Rev. T. Mozley, M.A., formerly Fellow of Oriel, etc. 2 vols. London: Longmans; Boston: Houghton, Mifflin & Co.

MR. MOZLEY'S 'Reminiscences' do not possess the kind of interest which readers might expect from the title and from the known facts of the author's life. There is, therefore, a danger lest the true value and importance of a very singular book should be overlooked. If any one expects from the author an account or history of the Oxford Movement, he will be utterly disappointed. The Rector of Plumtree might, indeed, seem to have been created by fate for the historian of the theological reaction inaugurated by Newman and Pusey. He was, at Oxford, an early pupil of Newman; he was a Fellow of Oriel at the moment when Oriel was the centre of the intellectual life of the University; he was the follower, the helper, the friend of Newman when the celebrated Tracts were exciting all the religious world of England either with admiration or with indignation; he became connected with Newman by a close family tie; he edited the *British Critic* when that now forgotten paper was the organ of militant Tractarianism. To Mr. Mozley every celebrated man connected with the earlier history of Puseyism was well known, either as a friend, an opponent, or at any rate an acquaintance. Hampden, Blanco White, Robert and Henry Wilberforce, Hurrell and Anthony Froude, Golightly, Charles Marriott, Dean Hook, Ward—every man, in short, whose name the public connects with the movement headed by the author of the 'Apologia,' and a host more of persons, such as Anthony Buller, Blencowe, Rickards, who, if they influenced their generation, never gained anything like public recognition, were intimate with the writer of the 'Reminiscences.' He shared their hopes and fears; he labored with them in the promotion of Tractarianism; he went as far with his companions on the way to Rome as any one who did not ultimately renounce his allegiance to the Church of England. He has remained to the last in full sympathy with the cause for which he fought and (as any one can see who reads his book) for which he has suffered. He looks back with nothing but admiration on the heroes of his youth:

> "Now for a long time," he writes, "I have seen with more and more sadness that a period which in my memory is as a golden age has been vanishing from common mortal ken like a dream. The characters themselves, even to those of a less relation and a humbler degree, have to me an unearthly radiance, and I grieve to think that they should be forgotten: *carent quia vate sacro*. To do them justice would require much more history and much more biography than will be found in these volumes, which are but planks saved from a great wreck of time."

Nor were the literary talents needed by an historian of the Oxford Movement wanting to Mr. Mozley. His two volumes, oddly enough, rather conceal than display to the reader their writer's reputation as a man of letters. Twenty years ago the former Curate of Moreton-Pinckney and Rector of Cholderton was known to the world rather in a lay than in an ecclesiastical character. The solid, silent, reserved gentleman, whose appearance suggested sound common sense and interest in the affairs of the world, rather than participation in any kind of ecclesiastical or religious cause, was acknowledged to be a leading writer in the *Times;* and the *Times*, it should be remembered, held at that period a preëminence among English journals which it has for years ceased to possess. Yet Mr. Mozley, in spite of his knowledge, his sympathies, and his gifts, has not narrated, or tried to narrate, the history of the Oxford Movement. It can hardly be said that he has made known any new facts which will be in themselves useful to any future student who undertakes to trace the course of religious opinion in England during the nineteenth century. A "legend" has been described by some old writer as a tale which is not worth reading; and an inquirer in search of mere facts will be inclined, after reading Mr. Mozley's pages, to define "reminiscences" as "things not worth remembering" nor, in fact, "remembered." For Mr. Justice Stephen, Mr. Herbert Spencer, and others, have shown that Mr. Mozley has done himself no injustice when he reminds us that "reminiscences are very suspicious matter," and when he again and again (as we must in fairness to him remember) calls attention to the uncertainty of his own recollections. His book is neither a history nor, properly speaking, a contribution to history. To a student anxious to collect or verify facts it will have little or no value. But, for all this, it is, as we have said, a book which has an importance, a value, an interest, and even a pathos of its own which no careful critic ought to overlook.

The 'Reminiscences' are in fact a fragment of autobiography. If the word "confessions" had

not an ill sound, we should call them "Mr. Mozley's Confessions." As it is, we had rather term them self-revelations. The writer went through, in common with hundreds of his generation, a strange series of religious and moral experiences. A clergyman of the Church of England, he approached the very line which divides the highest of high Anglicans from the Church of Rome; and having gone so far, he in fact went no further. The true, if to a certain extent the unconscious, aim of the 'Reminiscences' is to explain to himself, perhaps as much as to others, the real history of a career which has the tragic element of every career that ends in something like failure. Looked at in this point of view, the very literary defects of the book become merits. The ceaseless digressions, the prominence given to petty details, the little personal anecdotes about the writer's own life—such, for example, as the history of his early admiration for the *Country Spectator*, and the very innocent piece of equivocation by which he led the Provost of Oriel to believe that young Mr. Mozley's style had been formed by reading the *Spectator* of Addison—the stories about men such as Frank Edgeworth, whose lives have no connection with the ostensible scheme of the book—all the petty details, in short, which are historically worthless become biographically of untold value. We learn from them that Mr. Mozley possesses the essential quality of an autobiographer. He broods over his own past feelings; he recalls every detail which is fixed in his memory by connection with sentiment. Hence we get from him a far truer picture of his own experiences than can be derived from autobiographies composed with the literary skill, say, of Newman or of Mill. The 'Apologia' of the one and the 'Autobiography' of the other are as narratives or compositions incomparably superior to the 'Reminiscences' of the former Fellow of Oriel, but they are, we suspect, far less true pictures of the "experiences" of the writers. Literary art inevitably conceals an author's true personality, and, moreover, both Newman and Mill, though differing in almost every other respect, agree at least in this, that each of them looks upon his own life as a course of complete moral and intellectual development. In neither case can you (from the writer's own point of view) speak of failure. Each stage in his life is, whether under the guidance of Providence or of reason, the appropriate preparation for its successor. The Cardinal, like the philosopher, feels, and makes his readers feel, that from beginning to end his life was a consistent whole. Neither of them was a man to indulge in the folly of triumph, but neither of them reveals the hesitations and uncertainties through which they must each at times have gone, or betrays any consciousness of having, after every effort, missed the mark of life.

With Mr. Mozley, as with most of us, it is otherwise. His tone from beginning to end is that of a person who feels that he has failed to hit upon or to keep to the path which he ought consistently to have followed. He was involved early in life in a great and, in his judgment, noble ecclesiastical movement. With the theories, the aspirations, the efforts of his Tractarian friends he completely sympathized, as we presume he still sympathizes. He believed, as he certainly still believes, in the preëminent virtues, nobility, and honesty of Newman.

"Young people," he writes, "are said to be physiognomists and judges of character. They know a true man. During the whole period of my personal acquaintance and communication with Newman, I never had any thought than that he was more thoroughly in earnest and more entirely convinced of the truth of what he was saying than any other man I had come across yet. This conviction, I have to say, was to a certain extent unconscious on my part, for I cannot remember ever to have entertained the question whether Newman did really believe everything he professed to believe. There never occurred anything to suggest the contrary."

While still combating for the cause of which he was a partisan, while still under the full weight of Newman's influence, Mr. Mozley, in common with scores of other clergymen, came at last face to face with the question whether he was not bound to go over to Rome. He was on the point of turning Roman Catholic; a word of encouragement from Newman would have decided the question. Newman pointed out to his follower that in his case delay was a duty. Characteristically enough, the teacher put the duty partly on the ground that Mozley had not finished rebuilding the church at Cholderton which he had undertaken, at great loss and labor to himself, to restore. The disciple obeyed his teacher, and the two years' delay decided the course of Mr. Mozley's life. He remained a clergyman of the Church of England. The matter for explanation is, Why he went so far toward Rome and no further? Two causes for hesitation in leaving the Anglican communion, which suggest themselves, may be at once dismissed. It must be as clear to any one who reads Mr. Mozley's 'Reminiscences' as any fact about another man can be, that the Rector of Cholderton was influenced in his course by no sordid or pecuniary motives. It is equally clear that Mr. Mozley was not kept from Rome by any strong speculative objections to the dogmas of Roman Catholicism. Mariolatry, the worship of the saints, transubstantiation, all the doctrines which not only zealous Protestants but many High Churchmen feel it hard to swallow, present, we gather, no special difficulty to Mr. Mozley. The course of argument by which he justifies his own beliefs or half-beliefs is difficult to follow. The one thing which is clear is, that he could easily have overcome any theoretical difficulties in the way of reconciliation with Rome. Yet with Rome he has never been reconciled. Mr. Mozley's leader and friend after friend passed over from Anglicanism to Romanism, but he himself did not follow. What was the explanation? The answer is best given in his own words:

"But why did I go so far, and why did I not go further? Why enter upon arguments, and not accept their conclusions? Why advance to stand still, and in doing so commit myself to a final retreat? The reasons of this lame and impotent conclusion lay within myself, wide apart from the great controversy in which I was but an intruder. I was never really serious, in a sober, business-like fashion I had neither the power nor the will to enter into any great argument with the resolution to accept the legitimate conclusion. Even when I was sacrificing my days, my strength, my means, my prospects, my peace and quiet, all I had, to the cause, it was an earthly contest, not a spiritual one. It occupied me; it excited me; it gratified my vanity; it soothed my self-complacency; it identified me with what I honestly believed to be a very grand crusade; it offered me the hopes of contributing to great achievements. But good as the cause might be, and considerable as my part might be in it, I was never the better man for it, and, not being the better, I never was the wiser. *In fact, it was to me, all or most of it, an outside affair.*"

The words we have underlined contain a solution which is clearly true, as far as it goes, of the puzzle presented by Mr. Mozley's conduct. The religious movement was to him "an outside affair." We may, perhaps, go a step further, and say that while education, position, and the force of circumstances had made him a clergyman, and while he had a sincere interest in clerical matters, he was not by nature well fitted for a clerical career. As an active combatant in an ecclesiastical crusade, he was in a false position. If error he made, the mistake lay in accepting a leading position in a movement which did not interest the whole of his nature. The extreme and melancholy candor with which he confesses or reveals his own real or supposed errors would of itself disarm hostile criticism. But the truth is, that a critic can be fairer to Mr. Mozley than he is to himself. His virtues were at least as much the cause of the apparent failure of his life as were his deficiencies. Had he seceded to Rome, his career would have presented an appearance of moral consistency, but he would not really have been true to himself. With a secular turn of mind, he had also a fund of common sense which was lacking to some of his associates. Like most Englishmen, he tested the reasonableness, and therefore the rightness, of conduct by its obvious results. A logician might prove that, granting premises which Mr. Mozley probably still holds to be true, the Rector of Cholderton ought to have followed or to have preceded Newman to Rome; but we may feel pretty sure that Mr. Mozley's judgment, which is but another name for conscience, made him rightly unwilling to act upon premises which led, however logically, to a practical conclusion opposed to his common sense. "It is difficult," it has been said, "to keep Englishmen up to the dogmatic level." In other words, Englishmen are prone to verify theories by practical results. If Mr. Mozley could not keep himself up to the "dogmatic level," he followed the dictates of common sense. Of the enthusiasts who assumed the cross and then turned back from the crusades, hundreds were, we may believe, influenced neither by fear nor by self-interest, but by the silent and only half-conscious conviction that to perform the duties of parents, of husbands, and of citizens at home was better than to satisfy religious emotion by the sight of Palestine. Of such men, their thoughts and their struggles, the world hears far too little. It is no small gain to have the confession of a modern crusader who turned back from the war without reaching his Jerusalem.

MR. RUSSELL'S latest nautical venture consists of a collection of short tales of the sea, relating to almost every sort of ship and voyage. The stories are too loaded down with description, though the description is very good; but no one can look through the volume without finding something to his taste. For those who like

tales of acute suffering, endurance, and bravery, we can recommend the "Wreck of the *Indian Chief*," while, at the opposite extreme, nothing could be better than the "Flying Dutchman," a yarn spun by one of the crew of the *Sallie G.*, an American bark, which not only sighted the phantom ship, as many other vessels have done, but was actually boarded by her commander, and boarded her in return. The conversation which takes place among the crew on sighting her is perfect in its way:

"I saw the mate working away at the brig's starn with a spyglass, and then he turns to the captain, who had come on deck, and says, 'Captain,' says he, 'I can't see no name.' 'Here, give me hold,' says the captain, and he took the glass and looked himself, and then says, 'No; there's no name. But I'll tell 'ee what, Mr. Anderson, there's *bin* a name there, but the water's washed the letterin' away.' 'Well,' says the mate, 'I reckon she must be a diving job. They've fished her up out o' deep water, and ye may take her to be a showman's speculation, sir.' The cook was standing near the pumps looking at her, and he says to me, who was anigh him, 'Bill,' he says, 'd'ye notice her deck-house is green?' 'Yes,' says I, 'I see that, cook,' I says. 'That means, Bill,' says he, in a slow way, and looking strange, 'that she's a Dutchman.' 'She ought to be,' says I. 'I don't know that we ought to be glad that we met her, Bill,' says the cook; 'I'd as lief be shipmates with a Fin as keep that wessel company.' 'Why, what ails ye, cook?' says I; 'what's the matter with the brig?' 'Look at her,' says he, shaking his head and speaking hollow like. I thought he wasn't worth while paying attention to. The cook, sir, was a man as believed in ghosts, and was a werry ignorant person. He couldn't read nor write, but he was extraordinary positive."

The beauty of this story is that it is absolutely impossible to tell at the end whether the sailor himself believes any part of it, or whether he simply regards the spinning of such yarns as the proper tribute to be paid to superstition, or whether he is really an agnostic humorist, who regards the invention of such a yarn merely as a joke. Superstition must die out on sea as it has on land, and possibly the present generation of tars are beginning to take the same views of legends like that of the Flying Dutchman as are taken by landsmen.

If Herbert Spencer's law of economy in style were the only one to be attended to, Charles Reade would be one of the greatest masters of style in English fiction. He has always prided himself on not wasting words, and in his 'Multum in Parvo' he advertises the fact in the title. The stories which he tells in it are three in number, but the first, the "History of an Acre," is not so much a story as an article designed to show up the wickedness of attempting to "improve" Albert Terrace, Knightsbridge, in London, and the manner in which the dastardly attempts that have been made have been foiled by the author and others. "The Knightsbridge Mystery" is a short murder story, and "Singleheart and Doubleface" a tale of true love, blackguardism, desertion, and bigamy. Sarah Mansell, the heroine, is married to a man who first takes to drink, then wastes, and finally steals her money, and in the end robs her of the savings of several years, in order to carry them off to another woman with whom he has made a pretended marriage in New York. Sarah is true to the wretch through everything till she discovers the existence of the second wife, when she suddenly turns to stone, gets back the money, and sails for England, waving the notes, which he supposes to have been stolen from him, from the deck of an Atlantic steamer. This plot illustrates one of Mr. Reade's peculiarities, his belief that the key to woman's character is always sex. His women are all very much alike because they are generally guided by those qualities of mind and heart which all women possess in common. They are capable of much fidelity, they are unintellectual, they have a strong instinct of maternity, they can endure cruelty, lies, abandonment, and imposition and outrage of all kinds from a man they love; but the passion of jealousy once roused, they are changed, and all their affection is turned into coldness, into bitterness and hate. His women are not at all given to subtleties, or analysis, or introspection. Their business is to love, and round this all their traits revolve. It is very much the same at bottom with his men, though as his men are less interesting than his women, less attention has been paid by critics to this. But all his men are masculine types rather than individuals. They behave, either as villains or good men, wonderfully naturally. Yet we do not often remember their individual traits. We can hardly form a picture in our mind of any of his heroes or heroines. This may be partly owing to the rapidity of style to which we have referred, and which never seems to leave him time for any of those details which make us really familiar, at least for the time, with the characters of many less powerful writers of fiction. We rush at lightning speed through his books, and feel often as if he not merely liked to economize words, but hated the waste of time occupied in telling the story, and would if he could resort to algebraic symbols and formulas. His fondness for the dramatic form is closely connected with this. He sees a scene before him, which he has not the patience to describe, but must bring out as fast as possible with theatrical verbal *coups*. Notwithstanding this blemish, 'Multum in Parvo' shows that he retains his power as a story-teller, and many a reader of "Single Heart and Doubleface" will find an added pleasure in the memories it calls up of the fascination produced by 'Never too Late to Mend' and 'Christie Johnstone.'

The author of 'A Tight Squeeze' appears to have made a study of tramp life in the United States, and his story, if it does not throw much new light on this subject, furnishes sufficient entertainment. It abounds in tramp slang, a dialect which most readers will find new to them; and the adventures of Mr. Benjamin Cleveland on his way from New York to New Orleans involve, besides a full account of the difficulties and dangers of tramp life, a story of love and romance which, if improbable, is wild and exciting. As a novel, the book is, however, hardly good enough to merit notice. Its value consists in its picture of the class in which Mr. Cleveland temporarily enrolled himself. The tramp was hardly known in the United States till the close of the war; in fact, the word itself was not included in our vocabulary. Within the past fifteen or sixteen years the type has become common over most of the United States, and in some parts of the country the species has become a social pest, and has been legislated against as such. If "Staats's" account of the matter is true, though he does not suggest this explanation himself, the tramp has become common in the United States because the temper of the people offers him opportunities for an easy existence such as he could hardly find anywhere else in the world. A taste for liquor is mentioned as being in most cases what leads to tramp life; but that is clearly not what enables the tramp to get along so well, after he has acquired it. His real capital is the easy-going good-nature and benevolence of the people which insures him a night's rest and a meal, sometimes money and clothes, no matter how degraded he may be. He never starves, and he has many opportunities for getting a comfortable night's shelter, and even on many railroads no very serious efforts are made to prevent his stealing rides. In Pittsburg, if "Staats" is to be believed, the benevolent have provided a "Home" where any tramp may get a comfortable housing and meals, and this place is said to have a nightly attendance of from 250 to 400 all the year round. This is undoubtedly an extreme case, but if such an institution exists in any city, it of course affords a premium on vagabondage. The objection to punishing tramping as a crime is that it leads to the punishment of honest men who are merely temporarily out of work; but to compulsory labor there can hardly be any objection. A man really in search of work will not object to such a punishment, and the true tramp will receive a treatment which will do him more good than anything in the world. "Staats's" idea seems to be that tramping will never cease till the liquor trade is put down. Like all Prohibitionists, he looks forward to the suppression of the liquor trade as sure to lead to the cessation of crime, vagabondage, and all forms of misery throughout the world. But, as we have said, the desire for liquor is only a symptom of the disease; and, besides this, we cannot afford to wait for the prohibitory millennium. We have the tramp with us already, and we must take his liking for liquor as an unfortunate concomitant of his condition, over which we have little or no check, and proceed to impose on him those restraints of incarceration and labor which, for the time being, at any rate, bring his tramping to an end.

Mrs. Alexander seldom writes a dull novel, and she has the art of making use of the improbable in such a way as to make it seem natural, and yet not lose its interest. Her tenderness of heart will not permit her to bring her characters to bad ends, and 'Look Before You Leap' is far from being a tragedy. Yet there is suffering enough in it to bring a tear to the eye of a sympathetic reader; in fact, the description of poor Marie Delvigne's distress and misery when, on her wedding-day, her husband falsely accuses her of imposing upon him and leaves her, is heartrending. The women are good throughout, and the men are far from bad, though as a woman Mrs. Alexander understands, and is able to describe, better the operations of the feminine than the masculine mind and heart. But the ingenuity with which the improbable incidents of the tale are worked together is really its most remarkable feature. That Marie should be able to hide herself away in London, notwithstanding the active search that is going on for her, is probable enough, but what shall we say of her actually falling in with, and being protected and sheltered by, her own husband's half-brother, without either discovering who the other is? And yet, owing to the fact of the quarrel between Neville and Watson, all this seems natural enough in reading it.

There can no longer be any doubt that a change has come over the French, and that they are showing a far greater interest in literature. Not long ago 10,000 was considered an enormous sale for a novel. Now, one novel of M. Zola's has sold nearly 120,000, and another has sold nearly 100,000 in two or three years. M. Claretie's 'M. le Ministre' has sold 50,000, and M. Halévy's 'Abbé Constantin' 30,000 in barely a year; and now 'Le Million' comes across the water to us, and though in reality it is "just ready," it is already in its tenth edition. Nor are these greatly-increased sales caused by any scandal or any meretricious attempt to enforce attention — except in M. Zola's case, of course. 'M. le Ministre' has but little "Frenchiness," and the 'Abbé Constantin' none at all, nor have any of Mme. Gréville's pleasant novels, which average a sale of 10,000 each. Indeed, there are many encouraging symptoms of a clearing of the moral atmosphere in French fiction, and of these perhaps the success of 'Le Million' is one of the plainest. Like 'M. le Ministre,' it is a novel of modern life in Paris,

and it is constructed on the same lines as its predecessors, although the subject is less striking and less strong. It has the usual brilliant sketches of certain aspects of modern Paris, but the story itself is purely domestic, and its interest lies chiefly in the study of two or three feminine characters. There is a curious similarity in the machinery of the plot in 'Le Million' with that used in Mr. Norris's 'Heaps of Money.' But in both the English story and the French the interest of the plot is secondary to the development and transformation of the heroine's character under the sudden accession of wealth.

Georg Horn's 'Count Sylvius' was well worth the trouble of translation, although it does not contain anything very novel in its plot or very subtle in its analysis of character. It does not belong to the realistic school, inasmuch as all the good characters are persistently good and clever, and all the bad persistently bad, while at the end the former are rewarded by prosperity and a triple marriage, and the latter either killed or routed. But as these results are not brought about in the manner of an operatic finale, but as a legitimate outcome of the narrative, the reader is kept in pleasant suspense till the end. Good use is made of the three familiar types of a Jesuitical intriguer, a count who has gambled away his fortune, and, having turned lawyer, displays remarkable acuteness of intellect, and an aged naturalist, whose laborious researches among old monastic manuscripts provide him with a hint which leads to the discovery of vast treasures among the ruins of a monastery. One of the heroines is a young girl of aristocratic descent, who is thrown on her own resources, struggles bravely against the temptations which surround her, and ends as heiress to the discovered treasures. The other is a proud, wayward society belle, whose inordinate vanity induces her to make secret use of the juices of a poisonous plant to improve her complexion. The discovery of this plant in her room leads to her implication in a trial for an attempt at poisoning, from which she is rescued by the astuteness of the Count. Although the description of this trial is the most exciting thing in the book, it does not subject the author to the suspicion of being a professional detective. The oddest thing about this work is an occasional naïveté in the style and the dialogue, which gives rise to the conjecture that they were written by another hand—probably the author's wife or his amanuensis; almost equally odd is the confession of one of the girls that she would never wish to marry a so-called handsome man, because such a man is "more unendurable than a woman who smokes cigars." The translation is good.

Nine stories of peasant life in Norway, of which "The Bridal March" is the first and longest, make up the volume bearing this title. In them Björnson does for Norway what Auerbach did for the Black Forest or Daudet for Elsass. Half pastoral, half idyl, they have the true poetic charm, and one finds in them the whole range of experience of a still primitive people. The sketch of the horse Blakken, "the greatest wonder of the diocese"—"Bear Blakken" they called him for his prowess in defending the mare and her foal—and the little story of "A Dangerous Wooing" are in a sort parallel passages. Leif, who dies in his attempt to reach the eagle's nest, is in spirit the elder brother of Thorvald, the priest's son, who carries off with him the whole school to meet the victorious bear-hunter and his booty.

"'Let us go,' said he, as he pulled open the door, so excited that he could scarcely speak.

"'But the schoolmaster?' asked some of the children.

"'The deuce take the schoolmaster! The bear! The bear!' cried Thorvald, and could say no more.

"'Hurrah!' shouted all, both girls and boys, and up from their seats, and out through the door, they sprang, and off they ran over field and wood to Boën, as though there was no such thing as a schoolmaster in the whole world."

They are strange men, strong as giants, bold to recklessness, but withal of an obedient fidelity that silently accepts authority. A widow is left with six little sons. The eldest two promise, over the father's corpse, to take care of the others—a promise they consider fulfilled only when the youngest brother is confirmed. Then they marry and go away. Later the mother decides that two shall stay with her, and two shall have half the farm to themselves. "But of the couple that left home, one must marry—for they would need help about the house and the cattle; and the mother named the girl whom she would like to have for a daughter-in-law." But which son shall marry?

"Finally they agreed with the mother that the girl should be allowed to decide the matter. And up at the summer stable one evening the mother asked her if she would be willing to come to the plains as a wife, and the girl proved to be quite willing. Well, then, which of the boys would she like to marry? for she could have whichever one she pleased. . . . So the next to the eldest married the girl, and the eldest moved with him into the new home."

Still later the mother's health began to fail, and there must be more help at the farm. The youngest brother goes to engage permanently a girl who had sometimes worked for them.

"Now the youngest must for some time have had a secret liking for this girl, for when he came to speak to her he did it in such a singular manner that she thought he was asking her to marry him, and she said, 'Yes.' The youth was frightened, and going at once to his brothers told them what a mistake had been made. They all four became very grave, and none of them dared utter the first word."

But the mother grows suddenly ill, so, "The youngest proposed that as long as the mother lay in bed no change must be made, and this was agreed to; for the girl must have no more to care for than the mother. Thus it remained." It lasted for sixteen years; "the sons met every evening for devotions, at her bedside," and one day this was for the last time. "And when the body was laid to rest, and the six sons had filled the grave, the whole procession repaired to the church, for there the youngest son was to be married; the brothers would have it so, because this funeral and wedding really belonged together." The other extreme is vividly and beautifully sketched in the second half of "The Bridal March," "when the wonder and rapture of love burst upon Mildred and Hans in a moment, in a single look."

As to the translation, though there are passages which might be improved, Professor Anderson has performed the very difficult task before him with much skill. An original so low in tone, so simple in drawing, is ten times harder to reproduce adequately than a more highly colored picture. On the one side is the danger of exaggeration, on the other the constant tendency of simplicity to fall into flatness.

'Vice-Versâ' is the most successful extravaganza which has appeared in English for many years. This is not, perhaps, saying much; for extravaganza-writing, though often attempted, generally fails in English, from a certain clumsiness of imagination which is apt to produce mere grotesque exaggeration in the place of genuine humor. Mr. Trollope, in his 'Fixed Period,' and the author of the 'Revolt of Man' have tried their hands at satirical extravaganza, and have succeeded in producing only extravagant satire. 'Vice-Versâ' recalls, in a way, some of About's best stories—'The Nose of a Notary' and 'The Man with the Broken Ear'—but it is thoroughly English in conception and in execution. By the accidental aid of an Eastern talisman, a father and his son exchange bodies, without any change of mind or character being effected. Paul Bultitude, the father, a sober, practical, money-getting merchant of advanced years, a stern parent who has no sympathies with youth or its follies, becomes, in outward appearance, the counterpart of his son Dick, a high-spirited, good-humored, and irresponsible boy of fourteen, who is just on the point of being sent back to school. Dick, seeing that the opportunity is too good to be lost, invokes the powers of magic to produce a corresponding metamorphosis in himself, and, *presto!* he becomes an exact copy of his late father, whom, in the most unfilial manner, he packs off to school in his stead. The father, of course, cannot resist; but at school he has a considerably worse time of it than Dick ever had, as his character bears no resemblance to Dick's, and at once attracts the very unfavorable attention of his school-fellows. They, of course, think him to be Dick, and cannot understand the change which has come over his whole character. Instead of being bold and courageous, as he had been at the last term, he is practically non-resistant, and shows no fight, no matter how hard pressed, except on one occasion, when, exasperated beyond endurance, he hits one of his persecutors a foul blow—this, however, making his case worse than it was before. He takes no interest in the sports in which Dick was most proficient, neglects and outrages the feelings of the little girl to whom he had been attentive, and, more horrible than all the rest, turns out to be a sneak and tell-tale. His conversation is not that of a boy at all, and, altogether, the popular Dick Bultitude is converted into a monster, to be alternately persecuted and shunned by his former friends and companions. Meanwhile the real Dick is playing his father's part quite as badly, but with much more satisfaction to himself. He proceeds to lead the life which, as a boy, he regarded as the natural privilege of advanced years—that is, to do exactly what he pleases, to fill his house with a society congenial to his tastes, to attend to his father's business by simply taking what money out of it he needs for his somewhat lavish mode of life, to make love to his cook, and, in fact, to scandalize his friends and neighbors in a variety of ways which have a serious effect upon his reputation as a business man. How the knot is untied and Paul and Dick restored to their respective bodies, we shall leave the reader to find out for himself. In the end, no mischief has been done, but Paul has been taught a lesson as to the proper treatment of children by their fathers.

The stern and unsympathetic father is so rare a character in American life that Mr. Anstey's "lesson" will be rather wasted upon parents on this side of the Atlantic; but the picture of Paul Bultitude at school is of universal interest, and explains completely the success of the book. The contrast between the boy way of looking at life and the mature way, as illustrated by the false Dick's adventures at Dr. Grimstone's school, is as good as it could possibly be; and Mr. Anstey has managed, by means of his thorough comprehension of boy character, to give a wonderful effect of naturalness to an apparently impossible situation. He has a great gift of humor, and his boy dialogues are wonderful. The school (a private one) is evidently taken from life, but so true is it to the universal traits of all private schools that Americans will find themselves quite at home in it. The book is too long; after the first surprise and amusement that the situation at the school produces, the reader becomes accustomed to it, and the effect

fades out. But the first third or half of the story is extremely amusing, and it is difficult to imagine any one who has ever been a boy and gone to a boarding-school finding it anything but extremely diverting.

Selected Odes of Pindar. With Notes and an Introduction, by Thomas D. Seymour, Professor of the Greek Language and Literature in Yale College. Boston: Ginn, Heath & Co. 1882. 12mo, pp. i.–252.

Professor Seymour has found and filled a gap in the list of college text-books. Of all the great Greek writers, Pindar is the least read. We have before us the catalogues of several colleges of established reputation in whose "courses of study" the name of the poet does not appear. The mention of two of the many reasons for this fact will be sufficient for our present purpose. In the first place, Pindar is what college-boys call "awful hard." An undergraduate may have completed his Greek course with credit to himself and satisfaction to his professor, and yet, lay before him a copy of Pindar containing the text only, and he will almost certainly stick fast in the first two lines of the first ode. A good commentary and a great deal of it are required. In the second place, we have hitherto had no edition of Pindar, edited in English, which was suitable for a college text-book. Editions with suitable notes of the whole of Pindar's works are too bulky and too costly. A fitting selection, accompanied by the proper apparatus, did not exist. The limited demand and the want of a good edition have tended to prolong each other. Publishers did not like to invest their capital in a text-book for which apparently only a small sale could be expected; professors hesitated to introduce the study of any part of the works of an author of whom no suitable text-book could be procured. Professor Seymour has brought to bear the learning, ability, and good taste requisite to prepare, and Messrs. Ginn, Heath & Co. have had the courage to publish, the needed book.

We have no space for minute criticism, but will endeavor to give a general account of the work and make a few suggestions which would, perhaps, improve the second edition which we hope will be required. The introduction gives an account of the life and works of Pindar, of the manuscripts and editions of his works, and of the great national festivals and games in honor of victories at which the odes were composed. We know of no account which is at once so full, so interesting, and so useful. The reader finishes that portion which treats of almost the only institutions of Greece to which the epithet "national" could be properly applied, with the impression produced by the perusal of an interesting book—not of a chapter in a dry treatise on archæology. Yet he will seldom find so much learning within so small a space. We would, with some hesitation, suggest whether it would not be well to add after the introduction one—perhaps two—of the five Greek biographies of Pindar which have come down to us, and of which Professor Seymour gives us some account—the first as a very favorable specimen of the versification of a Greek grammarian, and the fourth as a specimen of the Greek written eighteen centuries after Pindar's time. After the introduction is a chronological table of such political and literary events as it is most desirable for the beginner in Pindaric studies to know. Then comes the Greek text, occupying seventy-three pages. Fifteen odes are selected—exactly one-third of the whole number extant. The remaining six pages contain the more important fragments of odes which have for the most part perished. With two unimportant exceptions, the text is that of Theodor Bergk's fourth edition (Leipzig, 1878).

The selection includes the fourth Pythian, by far the longest of all the Pindaric odes. We think it would have been well to include the fifth Pythian. The two were written to celebrate the same event, but the fifth is almost certainly the genuine triumphal ode written at the request of the victor Arcesilaus, King of Cyrene. The fourth was a piece of job-work written at the request of a third party for the furtherance of a political object. Whatever may be thought of the propriety of including the fifth Pythian, we are decidedly of opinion that room should have been found or made for the tenth Pythian. That ode, judged solely upon its merits, may not be more entitled to a place than any one of those selected, but it has an historical and literary interest apart from its merits. It is the earliest of the extant works of Pindar. It was written when he was only twenty years old, in honor of the victory in the long foot-race for boys, won by Hippocles, one of the powerful Thessalian family, the Aleuadæ. Notwithstanding some remarks in the introduction of Professor Seymour, we think there is strong evidence, for which we have here no room, tending to show that it was with this ode that Pindar commenced his career as a professional poet and musician; for it must never be forgotten that these odes were intended not to be read merely, but to be "performed." The author wrote the verses, and composed the music and arranged the evolutions of the dance by which they were accompanied. That before the composition of this ode Pindar had already given evidence of his ability is highly probable, but we strongly incline to the opinion that had he been a modern composer this ode is the one which he would have selected to mark as his "Opus 1." At any rate, it is the earliest of his works of which we know anything. It is the composition of a boy in honor of the victory of a boy. As such, it will attract the attention of boys, and deserves a place in a selection made for their use.

Professor Seymour's commentary, which follows the text, gives abundant evidence of minute and thorough scholarship. There is a special introduction to each ode explaining the occasion of its composition, followed by notes on words and passages. We notice one important point in the construction of the notes. Whenever a passage is cited from another author, or from works of Pindar not included in this volume, the passage is given with sufficient fulness for all the purposes of its citation. It is too often the fault of text-books, especially of English text-books, that the student, when he encounters a difficulty, finds a note upon it giving him the interesting information that in some other book, which most probably he has no means of consulting, he will find something which may help him. We called attention to this fault in a recent note on Mr. Jerram's edition of the "Helena" of Euripides. But even to others than college students it is a comfort to be able to read a book without being obliged to have a whole classical library at hand, or, if you have one, being obliged to consult it every five minutes in order to derive any pleasure or profit from the book itself. A chapter on the dialect of Pindar, one on the metres, and three very good indexes, complete the work. The schemes of the metres are constructed according to the principles of Dr. J. H. H. Schmidt, which within the last few years have worked such a revolution in the theory of metrical composition.

To students and professors who may desire to include in their college course some portion of the works of Pindar, this edition offers advantages possessed by no other. Those who may intend to make the works of Pindar a special object of study can do no better than to begin with a careful perusal of this edition, as being at once the shortest and best general introduction and guide to more extensive researches.

Memoir of Daniel Macmillan. By Thomas Hughes. London and New York: Macmillan & Co. 1882.

Daniel Macmillan, one of the founders of the publishing house that bears his name, was no ordinary man. Without a university training, he had yet acquired an extensive knowledge of books and general literature, and he looked upon himself as called upon to share in the great work of the advancement of the world in knowledge and goodness. The selling and publishing of books was only a means to a very high end.

"Bless your heart," he writes to a friend while still a shopman at £80 a year, "you never surely thought you were merely working for bread! Don't you know that you are cultivating good taste among the natives of Glasgow; helping to unfold a love of the beautiful among those who are slaves to the useful, or what they call the useful? I look on you as a great teacher or prophet, doing work just of the kind that God has appointed you to do. We booksellers, if we are faithful to our task, are trying to destroy, and are helping to destroy, all kinds of confusion, and are aiding our great Taskmaster to reduce the world into order, and beauty, and harmony. Bread we must have, and gain it by the sweat of our brow, or of our brain, and that is noble, because God-appointed. Yet that is not all. As truly as God is, we are his ministers, and help to minister to the well-being of the spirits of men. At the same time it is our duty to manage our affairs wisely, keep our minds easy, and not trade beyond our means" (pp. 115, 116).

All his life he was a profoundly religious man, and strove to realize in action the theory of life he had embraced. "Of all men I have known personally," says his biographer, "he was the one who lived most constantly and consciously eye to eye with death"; for the disease of which he died struck him before he was twenty, and he was never a really sound man from that day. His early training, too, had deepened his religious feeling, so that from his earliest years his mind was filled with awful thoughts of life and death. Though poor, he belonged to a race of Scottish peasants of whom Carlyle's father may be taken as the type. Than his father, he writes, "a braver, a more upright man never left this world," while his mother was "the most perfect lady in all Scotland," there being "nobody like her in the whole world." Withal, however, there was in him a perfect sincerity and veracity, and a corresponding hatred of mere sentimentalism and "the great deal of humbug about religious people," whom he wished "to be manly, and frank, and open, and to give up using slang phrases." For, not the least interesting feature of the narrative is its exhibition of the process by which the spirit of the age laid hold of Daniel Macmillan, and the old clothes of his Scottish Calvinism were laid aside in favor of the enlarged ideas of which he himself, as well as his friend Maurice, was a distinguished advocate.

The author has styled his volume a "Memoir." It is in reality a well-written biography, interesting—it might perhaps have been still more so—for many side-lights which it throws upon contemporary life. In an interview with Archdeacon Hare, reported in one of his most characteristic letters, Macmillan writes that, speaking of Wordsworth, "Hare says that notwithstanding his greatness he really and heartily admires very few poets. Milton and Spenser, these he loves and appreciates; scarcely any other. Hare doubts his hearty admiration of Shakspere." And again, subsequently: "He was wrapt up in his own view of things, which hindered him from understanding and even seeing what was

not included in his own world." The following is a graphic sketch of Carlyle as a lecturer in London, drawn by Daniel, who was present once:

"He lectures without notes of any kind, having thrown aside even the piece of paper, like a visiting card, which he used to bring with him. He is very far from being a fluent speaker. Sometimes he rises into eloquence and gets applauded; sometimes he comes to a dead stand for want of a word, quietly looking in the face of his audience till he finds the word; sometimes he leaves his sentences in a quite unfinished state, and passes on to something else. He rarely moves his hands from the sides of his desk. When he does it is to rub his two forefingers along his forehead, just above his eyebrows. This seems to be of great use, enabling him to get on much better—at least I suppose so, because he always said his best things after one or two of these rubs.

"His whole appearance and manner is exceedingly simple. I never saw any one so completely free from anything like pretension. His accent and pronunciation is very broad Scotch; much more so, I think, than Dr. Chalmers's. His dress is plain and simple enough, but no way remarkable.

"It was a great treat to get a sight of such an audience. I never saw so many fine faces—true aristocrats, according to my Radical notion of an aristocrat. There must be great satisfaction to a thinker uttering his thoughts to such listeners. The number, as near as one could guess, was about three hundred. From the lecture-room door to Portman Square was quite lined with carriages. This shows that very many of his hearers belong to the 'influential classes'" (pp. 92, 93).

Architecture: Classic and Early Christian. By T. Roger Smith, F.R.I.B.A., and John Slater, R.A., F.R.I.B.A. London: Sampson Low; New York: Scribner & Welford. 1882.

THIS little handbook, addressed, not to students, but to the general public, contains, within its compass of 250 pages, a well-arranged and compendious description of the architecture of Greece, Rome, and of the Early Christians, with brief statements of some primitive Asiatic forms. It answers, for the most part in a satisfactory and intelligent manner, the questions which the reader of general history is constantly asking respecting the development, characteristics, and significance of the greater architectural styles. In supplying this information, the writers have, with good judgment, proposed to confine themselves to the statement of well-ascertained facts and accepted theories, avoiding all open questions and all temptations for brilliant writing. The historical sequence is traced in successive brief chapters, embracing in due order the architecture of Egypt, Babylon, Assyria, Persia, Greece, the Etruscans, and of Rome, followed by their Byzantine, Romanesque, and Mohammedan derivatives, preparatory to the treatment of Gothic and Renaissance architecture, which occupies a separate volume. The only interruption to this natural sequence is a short chapter on Hindu, Chinese, and Japanese architecture, which is somewhat grotesquely interjected between those on Persia and Greece, having no discovered relations with either.

The method pursued in each chapter is to present the historical statement of the style; to describe the progress of its development from previous forms; to define its general characteristics in outline, with illustrations by a very few examples of the more monumental and better-known types; and to close with an analysis of the plan, walls, roofs, openings, columns, ornaments, and architectural character. The comparison of these successive analyses, assisted by the numerous woodcuts, which, though for the most part such as have become conventionalized by long service in similar treatises, are well chosen and clearly executed, cannot fail to justify to the unprofessional reader this system of exposition. But though the plan of the book very properly, as we have said, excludes the discussion of disputed points, and recognizes only established facts, it is to be regretted that, in respect to the all-important hypæthral question, the authors have presented only the theories of Bötticher and Fergusson, without noting that contrary views are held by other writers equally versed in archæological knowledge, such as Prof. Reber and J. T. Clarke. We note also that, in treating of the early Christian basilicas, the interesting question of their orientation is not touched upon, nor the change of the apse from its position at the west end, as in the early basilicas, to the east end, as in the later and mediæval churches. Upon page 219 a woodcut of carving from the Golden Door of Jerusalem is given in illustration of the influence of Byzantine art upon the sculpture of Syria. It is curious that an authority so learned as M. de Saulcy uses this same example in illustration of his ingenious and poetical theory that the art of Byzantium found some of its most characteristic inspirations upon the soil of Judea itself—the birthplace of Christianity. It would not be difficult to quote other statements either of doubtful or not-unquestioned authority, but on the whole this little work presents the essential facts of the case with better scholarship and in better form than any treatise of similar scope with which we are acquainted. As such, we commend it heartily to the general reader.

BOOKS OF THE WEEK.

JUST PUBLISHED.

A NEW WORK BY CANON FARRAR.

The Early Days OF *Christianity.*

By F. W. Farrar, D.D., F.R.S., Canon of Westminster, author of 'The Life of Christ,' 'The Life and Work of St. Paul,' etc.

"It describes the deeply interesting events of the early days of the Christian Church, and the state of politics and society in which the Church grew up. An account is given of the lives and writings of the three pillar apostles, St. Peter, St. James, and St. John, with an explanation of their Epistles and of the Apocalypse. The social and political conditions of the Roman Empire, and the relation of the Church with it, are treated with Canon Farrar's well-known learning and eloquence."

With this work the important series of volumes on the Early Church, commenced with Canon Farrar's 'Life of Christ' and 'Life and Work of St. Paul,' is completed.

2 vols. 8vo, with Notes, Appendix, Index, etc., price, per set, $5. A cheaper edition in 1 vol., with Notes, etc., $2.

The Harmony of the Bible with Science.

By Samuel Kinns, Ph.D., F.R.A.S. With 110 illustrations. 1 vol. large 8vo, over 500 pp., extra cloth, bevelled, gilt top, price $3.

☞ If not for sale by your bookseller, will be sent, prepaid, on receipt of the price.

The Nation.

NEW YORK, THURSDAY, OCTOBER 12, 1882.

The Week.

MR. CLEVELAND, in accepting the Democratic nomination for the Governorship in this State, had the great advantage of not being obliged to apologize for anything. There was in his case no need for an appeal to popular pity on account of his having become a candidate for a high office in a way he was ashamed of. He was at liberty to tell the people without circumlocution what views he entertained upon questions of public interest, and what sort of a Governor he expected to be if elected. This he has done in fewer words than his competitor, Mr. Folger, found himself under the necessity of using. Mr. Cleveland's letter of acceptance cannot be called a brilliant or artistic production. There are no figures of speech and no rhetorical exaggerations in it. Its tone is simple, sober, and direct, with the exception of the paragraph on "free canals," in which Mr. Cleveland, like both party platforms and like Mr. Folger, believing that the people are thinking deeply upon it, abstains from expressing any opinion of his own. He lays stress on the necessity of surrounding the primary election "by such safeguards as will secure the absolutely free and uncontrolled action" of the real public opinion of political parties, and the position he takes on this point is so well supported by argument that he may be expected to give every well-considered legislative measure serving that end an energetic and intelligent support. What he says about the reform of the civil service might have been more specific, but he declares against the levying of assessments for partisan purposes in two sentences which could scarcely be more emphatic. The most striking peculiarity of Mr. Cleveland's letter is, however, that no reader unacquainted with the party standing of its author would, from the principles expressed, the measures advocated, and the language employed in it, be able to form the slightest opinion as to whether it was the letter of a Democratic, or a Republican, or an Independent, non-partisan candidate.

The platform adopted by the Democratic Convention of Connecticut is probably the longest and heaviest production of the kind produced by any party within the memory of this generation. It looks as if the authors of it thought their rank and file to be sadly in need of elementary instruction about the nature of our Government. But in the cumbrous mass of generalities and time-honored platitudes, and among a number of vague recommendations (of which that of a revenue tariff with incidental protection may serve as a sample), we find one paragraph which deals a fair and sturdy blow at a new trick of equivocation which has recently become popular with party managers. The Connecticut Democrats declare that, as "the adoption of an amendment to the State Constitution is a most important exercise of the sovereign power vested in the people," and as "the exercise of that power has been wisely guarded by requiring such amendment to be first approved by the House of Representatives; to be then published with the laws, and submitted to the people; to be then approved by two-thirds of each branch of the General Assembly, and then, and then only, to be submitted to the people for rejection or adoption," therefore no member of the Legislature should vote to submit to the people a constitutional amendment of which he does not approve. In other words, a constitutional amendment is to be put through several stages of careful consideration and discussion, and the vote of a legislator in favor of submitting it to the people should be looked upon as equivalent to a vote recommending to the people the adoption of that amendment. When, therefore, a political party contents itself with the declaration that the subject-matter of a constitutional amendment has passed beyond the cognizance of parties, and that they have nothing to recommend *pro* or *con*, but simply to request the people to think deeply about it, that party is guilty of a cowardly evasion of its responsibilities.

Mr. Dickson, the foreman of the late Star-route jury, like so many people who have had experience of investigations, has a prejudice against them, particularly when they affect his own conduct. He has written a letter strongly objecting to any investigation under the direction of the Attorney-General of the charges of bribery in the Star-route cases, on the ground that they have been made against persons connected with the Department of justice, at the head of which the Attorney-General is. He wants to have the investigation taken out of "interested hands." It should be made, he thinks, under "the direction of the court before whom the case was tried." It seems reasonable that the court should investigate the matter, but then Mr. Dickson is overscrupulous in objecting to the Attorney-General making any inquiry at all. A moment's reflection will convince him that it is his duty to inquire into the doings of his subordinates, as, if they are engaged in bribing juries, they ought to be dismissed. Mr. Brewster may be a terribly wicked and corrupt man, and he may be plotting the ruin of the innocent Dickson, but this is not proved yet, and until it is he must be allowed to investigate the conduct of his own subordinates. What Mr. Dickson is really entitled to is two investigations, one by the Attorney-General and the other by the court.

The Boston *Herald* makes the curious mistake of supposing the *Evening Post* to be responsible for the nicknames or pet names of the local Republican statesmen here, of which it gave a list the other day—"Clint," "Steve," "Jake," "Barney, "Bob," and the like. It had no more to do with originating or applying these names than the *Herald* itself. They are the names by which these politicians are known both to each other and the public, and, more than this, every one who has ever seen one of the owners recognizes the appropriateness of the names at a glance. Nor is there one of the "boys" to whom there would not be a perceptible absurdity in giving the title of "Mr." They would themselves be restive and awkward under it, and if the editor of the *Herald* were to see them, he would himself think it funny. Mr. Bernard Biglin and Mr. Michael Cregan, for instance, are terms which convey no definite idea of a person to any one in New York; but when we say "Barney Biglin" or "Mike Cregan," a vivid picture of a certain kind of man comes before everybody's mind's eye. We, however, despair of giving the *Herald* an adequate conception of the little circle by anything we can say. The best way to appreciate the appropriateness of the members' names is to come on here and see them engaged in a "conference" in the Fifth Avenue Hotel bar-room, when they are giving each other news of a "turning in the tide" or of "the growth of a better feeling within the last three days." The impression they produce on bystanders, we are bound to add, is not always advantageous to the Republican ticket. We have heard of two Republicans who, seeing them at Saratoga for the first time, were panic-stricken, and are going to vote for Cleveland.

The attempt of General Curtis to upset the anti-assessment statute, under which he was convicted nine months ago, by habeas-corpus proceedings at Washington, is chiefly interesting from the fact that it will afford the Supreme Court an opportunity to give its views not only as to the constitutionality, but as to the policy and intent, of the act. Such persistent efforts are made by politicians to confuse the public mind on the subject of "voluntary contributions," and the assumed importance of every employee of the Government being left perfectly "free to help the party" by contributing to campaign funds, that an occasional judicial reminder of the fact that the whole system is illegal, and an analysis of the reasons which have led to its being declared so, is by no means out of place. The three judges who decided the Curtis case below went into this at some length, referred to the assessment abuse as a matter of public notoriety, and interpreted the statute under which General Curtis was indicted as being plainly designed to break it up. The published synopsis of the Government brief looks as if the Attorney-General, whose interest in civil-service reform has never been very keen, meant to confine the discussion in the case to very technical limits. The language of the statute, it will be remembered, is:

"That all executive officers or employees of the United States not appointed by the President with the advice and consent of the Senate, are prohibited from requesting, giving to or receiving from any other officer or employee of the Government any money or property, or other thing of value, for political purposes; and such officer or employee who shall offend against the provisions of this section shall be at once discharged from the service of the United States, and he shall also be deemed guilty of a misdemeanor, and, on conviction thereof, shall be fined in a sum not exceeding $500."

Now, the argument of the Government brief is that this simply prohibits officers of the Government from engaging in a certain voluntary public employment outside their regular duties. The Constitution must have authorized Congress to secure by legislation the devotion by Government employees of all their time and attention to their public duties, and that is what this legislation is intended to do. Any one who receives money for political purposes becomes a trustee for some public purpose. "It seems that the Legislature might prohibit an officer of the United States from becoming a guardian, or executor, or private trustee; and, if it be competent for it to pass upon the propriety of such additional employment, that it may also prescribe the penalty to follow disobedience, so it be not excessive; and may go further and punish other persons who cooperate in procuring such disobedience, especially where, as in the present instance, such person also is an employee of the Government. All such details are matters of a discretion reposed by the Constitution in a coördinate department." This argument, it will be seen, proceeds upon the theory that the anti-assessment statute is similar in origin and scope to the statutes prohibiting Federal employees from engaging in business which may interfere with their duties, the most familiar of which is that which renders it illegal for the Secretary of the Treasury to be engaged in trade or commerce. Very likely this view of the statute will be sufficient to dispose of the case; but as a matter of fact every one knows that the statute grew out of and was intended to correct an evil very different from that of inattention to duty, and it will certainly be open to the Supreme Court to refuse to narrow its consideration of the matter to the limits proposed by the Attorney-General, and to give its view of the real meaning of the law in such a way that we shall have no more balderdash about "voluntary" contributions. The court of last resort can at least go as far as the court below, which said plainly that the system of assessments on salaries was meant to be made criminal because it tended to debauch the public service, and to introduce a corrupting influence among employees, by the payment of what must be regarded as blackmail on one side, or a bribe on the other. This is the real objection to the system, and it is to be hoped that the Supreme Court will plainly say so.

The story of the conspiracy against Mr. Irish, the Chief of the Bureau of Engraving and Printing, is a still clearer and more indisputable illustration of the dangerous effect the spoils system of the civil service has upon mentally or morally unsettled natures, than the assassination of Garfield was. In the Guiteau case the element of inordinate vanity, the greed of notoriety, inflaming the imagination of the baffled office-seeker, played a great part. But in this case, if the despatches from Washington tell the truth, we see a combination of villains who simply want to bring about the disgrace and removal of a good officer for the purpose of opening a chance for themselves; and to this end they steal a quantity of private letters with which they expect to poison the President's mind against that officer, and make a plot to purloin bonds and plates from the Government office in order to demonstrate to the President that the officer whose removal they want to accomplish is careless and untrustworthy, and that it would be unsafe to keep him in his place. It is evident that, if appointments were made strictly on the ground of the ascertained fitness of the candidates for the duties to be performed, and upon no other consideration, the persons engaged in this conspiracy would have had no reason to think that the removal of Colonel Irish would be followed by the appointment of their man, who had the powerful recommendation of Senator Cameron, backed by the Republican Representatives from Pennsylvania, and that one of the conspirators would be his assistant. The spoils system has the effect of creating the impression that it requires only some removals to give every rascal a chance.

The full text of Frank James's letter appealing to Governor Crittenden for a restoration to citizenship furnishes some very extraordinary reading. As he is said to have retained counsel at a very early stage of the proceedings, it may fairly be inferred that the document is not entirely original. It bears a curious resemblance to the documents which politicians often publish, professing a readiness to meet "charges" made against them. He begins by declaring that "time has demonstrated that however carefully I may follow the path of good citizenship, and however successful I may be in gaining the confidence and respect of those who associate with me daily and know my every act, the work of heaping infamy on the name which my children are to bear goes steadily on and on as it began so many years ago." The work of defamation has reached the point at which, whenever a crime is committed in the West, it is laid to him. A politician, under such circumstances, generally declines to go into details, asks for a "suspension of judgment," and professes an entire willingness to meet his accusers at the "proper time." Frank goes one step beyond this by suggesting that instead of an investigation he should receive a full pardon without any—a way out of his difficulties which would commend itself to many of our most notorious statesmen. The curious part of the matter is that Frank's letter has won him a widespread sympathy in all classes of society, and a leading judge is quoted as saying, "If I were Governor, I would pardon him right away."

The Rev. J. P. Newman preached a sermon on Sunday on "The Moral Responsibility of Citizens—Let New York be Delivered," but we are bound to say he fell short, as Stalwart clergymen so often do, of making it quite clear how the deliverance is to be effected. He described the men who "rule this city" as "these uncouth creatures, these men who need to be washed first before they are handled, these men who can scarcely sign their names to the pay-roll, who make their mark; these men who have still the brogue upon their lips and the brogans on their feet, still waving the shillelah, forced by circumstances to be the rulers over this beautiful city of New York," and inquired how these creatures would compare with Samuel, who is recorded as having said, "Show me where I have taken what is not mine, and I will restore it." The comparison would probably be greatly to the advantage of Samuel, but then it does not help us to deliver New York. Voting seems to be considered by Dr. Newman the only sure cure for the evils with which we are afflicted; but we are not aware that the citizen is inclined to neglect this duty. If going to the polls were all that was needed, New York ought to be one of the best-governed cities in the world. Besides "voting," Dr. Newman would have us "elevate" and "purify" the caucus, but he does not tell us how, probably because the caucus is made up not of the "uncouth creatures," but of friends of his own. Experience shows that this cannot be done by voting, and therefore Dr. Newman's exhortation to citizens "to be unified on one thing—the redemption of the city"—is, in the present crisis, of rather small value.

It is a notorious but lamentable fact, which, however, has nothing in it discreditable to religion, that nearly all the worst characters in finance and politics are the earnest supporters of some ecclesiastical body, giving both time and money to its interests, and faithfully attending its worship. Even Jay Gould is said to be a liberal upholder of a Presbyterian church up the Hudson, and we dare say has got to the point of making the minister believe that he is becoming concerned about his spiritual interests. Nearly all the great defaulters, forgers, and embezzlers, too, of the last twenty years have been active church-members or goers. These unhappy truths ought, it seems to us, to impose caution on clergymen about vouching for or eulogizing members of their flocks when accused of some financial or political immorality. As a general rule, ministers know nothing of the doings of their hearers, when down in Wall Street, or among "the boys" at the ward meetings, and cannot, therefore, answer for them at all in what the religious newspapers call their "secular department." For these reasons we hold it to be highly injudicious for the Rev. J. W. B. Wood, "a former pastor" of Mr. Steve French, to vouch for him as "upright, honest, straightforward, incapable of aught save what becomes a gentleman and a good citizen." We think it would be imprudent for Steve's present pastor to do so; for a former pastor to attempt it is positive rashness.

There is very great perturbation among members of the Land League, owing to the conduct of Mr. Ford, the editor of the *Irish World*, and the main instrumentality in raising the money, in declaring the subscription list closed in his paper, and the Land League defunct. The news appears to have created a sensation in Ireland, too, as well it may, for most of the ways and means comes from this side. However, there is no doubt that whether Mr. Ford be right in pronouncing the Land League dead or not, if he means that the time for it to die has arrived, he is not far wrong. It has accomplished, or something has accomplished, the objects for which it contended, and indif-

ference of the home Irish to its doings increases with every extension of the operation of the Land Act. Mr. Parnell evidently appears at a loss for a cause at this moment, so that this would appear to be a good opportunity to give the poor contributors to the funds a year or two of financial rest. The clearing up of the accounts will probably be a painful process, in which many patriots will suffer, but this is the inevitable consequence of mixing up agitation for remedial legislation with preparations for a political revolution. The disposition of funds subscribed for such hybrid objects has to be kept secret, and where secrecy about money begins malversation sets in.

The money market during the week, from being "stringent" became "easy," and the rates for loans fell from 8 to 9 per cent. to 5 @6 per cent. The banks gained $2,559,250 in their reserve, principally because the Treasury disbursements were so large. When the rates for money were high, early in the week, the rates for foreign exchange declined rapidly to within about two cents to the pound sterling of the gold-importing point; but later the market for foreign exchange became stronger, and all thought of an early importation of gold was abandoned. At the Stock Exchange, weakness and depression were the features of the early part of the week, while later there was a recovery in the tone of the market as well as in prices. Railroad earnings continue large, and all the leading roads show an increase over last year.

There appears to be as yet no settled or dominating opinion in England as to what is to be the Egyptian settlement, owing probably to the fact that nearly all the politicians are taking their vacation. Lord Granville some time ago laid down the doctrine that the Liquidation Law could not be disturbed, being of an international character, but Mr. Chamberlain has recently said that hereafter the bondholders must take care of themselves, and Mr. Gladstone intimated a year ago plainly that it was his desire, and we presume his design, that the affairs of Egypt should be henceforth managed as far as possible by the Egyptians themselves. The *Pall Mall Gazette*, which perhaps represents the ultra-Liberal view of the matter better than any other paper, while acknowledging that the British Government could not help intervening to suppress the military revolt and restore order, says that it is its duty now to "return as soon as possible to the principle of non-intervention and leaving other countries to manage their own business"; and it asks whether matters cannot be so arranged as to leave the Egyptian creditors face to face with their debtors to make their own arrangements, even if it is necessary to have another Conference of the Powers and abrogate or modify the Liquidation Law. The fact is, that if the bondholders make any money — or rather are saved from loss — through the war, it will leave a great stain on Mr. Gladstone's Administration. A war in the interest of the bondholders would, every impartial person admits, have been a crime, and now, if they profit by it—that is, get out of the Egyptians more than they would have got without it—it will be useless to declare that it was undertaken either in the interest of order or for the protection of the Canal. There ought to be a new arrangement with the Khedive's Government, under which it should make a provision for the debt bearing some reasonable relation to the amount of cash received for the loans, and to the surplus of revenue available for debt-paying after the maintenance of a decent administration.

Mr. Forster's Coercion Act has just expired in Ireland, and it would be amusing, if it were not melancholy, to read the admissions of the English press of its total failure. Even the *Quarterly Review* declares that "it did no sort of good." Its passage, however, was fought for by the majority of the House of Commons and by the Ministry with the most intense bitterness, as an essential preliminary to the passage of the Land Act, and the opinions of the Irish members were treated as of absolutely no value in the matter, and the result was the disgraceful scenes of last winter on the floor of the House. It is now admitted that "most of the persons arrested under the Act were politicians, respectable shopkeepers, and farmers, who were actually the persons of the greatest influence in repressing crime." The Act, it must be remembered, was mainly the work of Mr. Forster, who administered it, and it never appeared that there was any better reason for supposing him to be an authority about Ireland than that when a young man, in 1847, he had visited the country as the agent of a relief association. The Arms Act, disarming everybody, was passed about the same time, and it is now admitted that that, too, has been a failure. The belief of the police is that the country contains plenty of arms of the best make, and it does not appear that any crime or outrage has been averted or delayed for one hour by the want of a good gun. The reason is obvious. Peaceable, well-disposed people gave up their arms, the criminal class kept them; concealment of them being the easiest thing in the world. The general result is that good Irishmen have now no weapons, and are much irritated, while bad Irishmen are as well armed as ever they were. The suspension of trial by jury in the present Repression Act was fought for in the same manner, by the English majority, with the same fierce tenacity. The opinion, even of the Irish members of the moderate school, that it was unnecessary and unwise, the opinion of the Irish judges that it would destroy popular respect for their office and popular confidence in their impartiality, was long and almost contemptuously disregarded. At the eleventh hour an alternative was inserted in the bill giving the Crown the right to special juries and a change of venue. This has been tried, and with perfect success. Conviction follows conviction without any more difficulty than in England, and, what is more remarkable, there is much less difficulty in getting testimony than there used to be. But it must not be supposed that there will be any lesson in these things for the House of Commons. If the question of restoring order in Ireland should come up again ten years hence, a Coercion Bill like Mr. Forster's would probably have just as good a chance of success as it had last year.

According to a Washington despatch, the Peruvian Minister has received a despatch from Ecuador advising him that Calderon, who has been for nearly a year a prisoner in Chili, has arrived at Arequipa, and is there "treating for peace," not with the Chilians, who are hundreds of miles away, but "with Dr. Logan, the newly arrived United States Minister." Mr. Elmore declared that "the news did not surprise him much, because he had been expecting something of this kind, in view of the solid union of the Peruvians under the provisional government of Calderon, of the loyal attitude of Bolivia as Peru's ally, and of the firm position occupied by the United States during the whole war as an impartial friend of all the belligerents." Arequipa is a town in the extreme southern portion of Peru, where Montero, Calderon's Vice-President, has established himself during the absence of the head of the Government. The news that Calderon is "treating for peace" with Dr. Logan does not cover the ground. All writers on international law are agreed that it requires at least two belligerents to make a treaty of peace, and hence when the "treating" begins it will have to be with the Chilians and not Dr. Logan. When Hurlbut was in Peru the idea undoubtedly prevailed in that country that peace could be made by him; but the attempt resulted in the recall of Hurlbut and the incarceration of Calderon in a Chilian "dungeon," from which he has no doubt come back a sadder and wiser man.

The latest news from Peru seems to confirm the story that Pierola is going to set up his Government again before long. Yglesias, who was formerly his Minister of War, has revolted against the Calderon-Montero Government, and is to convene a new Congress in Pierola's interest. Pierola himself has written a letter denying the story that he is to be used by Chili as a tool, and declares that he never, never will take the Presidency unless he is called to it by the suffrages of his countrymen. In other words, he professes to act on the well-known principle that "the office should seek the man, not the man the office." His enemies of course doubt his sincerity, because he has already once seized the Government by a *coup de main*, and they maintain that a man who will do this once will do it again. On the other hand, his friends point with pride to his disclaimer as an evidence of the steady progress made by Peru in the art of self-government. In order to guard against any public wrong of this kind, however, Montero, who is Calderon's Vice-President, is said to be preparing to set up for himself at Arequipa. In this news, which comes by cable, nothing is said of Calderon's escape or reported negotiations for peace with Dr. Logan. Meanwhile, the Government of the country in the more civilized parts of it remains in the hands of the Chilians.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, October 4, to TUESDAY, October 10, 1882, inclusive.]

DOMESTIC.

ELECTIONS were held on Tuesday in Ohio and West Virginia for Congressmen and minor State officers In Ohio the Democrats elected their State ticket by a majority estimated from meagre returns at 15,000. They also claim to have been successful in fourteen of the twenty-one Congressional districts. A tolerably heavy vote was polled, and a great amount of "scratching" done. The Republicans attribute their defeat largely to the prominence of the liquor question in the campaign. In West Virginia the Republicans are reported to have made large gains, and elected one of the four members of Congress.

The Society of Independent Citizens of Cincinnati, which is composed of two delegates each from sixty-six different German organizations, met on Wednesday night and decided to support the Democratic State ticket at the coming election, but there was a tacit understanding that those who wished to, might vote for the Republican candidates for Congress and the Republican county ticket. The liquor question was the cause of this determination on the part of the Germans.

The election in Georgia on Wednesday resulted in a sweeping victory for A. H. Stephens, who was elected Governor by a majority of about 60,000. A heavy colored vote was thrown for Stephens. There is reported to have been little, if any, "bulldozing," and the absence of party feeling everywhere in the State is said to have been unparalleled since reconstruction. On Friday Mr. Stephens sent in his resignation of the office of Congressman from the Eighth District. It was accepted, and an election to fill the vacancy was ordered for November 7. It is understood that Mr. Gartrell, the defeated candidate for Governor of Georgia, will contest Mr. Stephens's election, not with the hope of getting in, but to show fraud and intimidation. Mr. Gartrell says he will summon many witnesses, including Senator Brown, and asserts that the charges made will be fully sustained.

Mr. B. Platt Carpenter, the Republican nominee for Lieutenant-Governor of New York, sent in his letter accepting the nomination on Friday.

On Wednesday the letter of Judge Charles Andrews accepting the nomination for Chief Judge of the Court of Appeals was received by the Republican State Committee.

On Tuesday the New York Republican State Committee nominated Mr. Howard Carroll for Congressman-at-large, to fill the vacancy created by Mr. Hepburn's refusal to accept the nomination of the State Convention.

The letter of Grover Cleveland, Democratic nominee for Governor of New York State, was published on Tuesday. Mr. Cleveland heartily approves of the platform of the Democratic State Convention; desires primary elections to be "uncontaminated and fairly conducted"; condemns the interference of "officials of any degree, State or Federal, for the purpose of thwarting or controlling the popular wish"; approves of tenures of office in the civil service dependent upon "ability and merit"; denounces the levying of political assessments upon officeholders; opposes "interference by the Legislature with the government of municipalities"; thinks that the same authority which creates corporations should restrain them "when by combination or the exercise of unwarranted power they oppress the people"; and is of the opinion that "the expenditure of money to influence the action of the people at the polls or to secure legislation is calculated to excite the gravest concern."

The New York State Temperance Convention met in Syracuse on Wednesday, and pledged themselves to vote for no candidate for the Legislature who will not publicly pledge himself to vote for the submission to the people of an amendment to the State Constitution prohibiting the manufacture and sale of intoxicating liquors.

The Executive Committee of the Civil-Service Reform Association met in New York on Wednesday, and resolved to hold weekly meetings during the State campaign, and to prevent, if possible, the assessment of officeholders by politicians. Printed circulars are to be issued to the candidates for State offices and for Congress, questioning them on the subject of assessments and competitive examinations for office.

Gen. B. F. Butler has written a letter accepting the Democratic nomination for Governor of Massachusetts. He says he is reluctant to accept the nomination, but that he has decided that it is his duty, "waiving all considerations of personal sacrifice," to do so. He discusses at length the leading issues before the people, and says that to test his own sincerity in the matter of civil-service reform he is anxious that the experiment of competitive examination should be tried in Massachusetts, and is willing that competitive examinations should be made of candidates for the highest offices. He is in favor of such a revision of the tariff that there would be no tax whatever upon the necessaries of life, and that the highest duties up to the point of possible collection would be laid upon luxuries. No taxes whatever, he says, should be laid upon American shipbuilding.

It is stated that General Butler is to be the counsel for the Navy-yard employees of the United States, who ask for extra pay on account of having done ten hours' work for an allowance lawfully intended for eight hours. It is said that the total amount of the claim is $1,500,000.

John L. Barstow was inaugurated Governor of Vermont on Thursday. In his inaugural address he stated that the debt of the State is $209,583. He recommends the appointment of a joint standing committee on phraseology to examine and correct the language of all bills presented to the Legislature. He also recommends the creation of the office of Attorney-General for the State. He favors the vesting of the powers of the State over railroad corporations in a board which, under proper restrictions, shall have full control of them.

The Connecticut State Democratic Convention met at Hartford on Wednesday, and nominated for Governor Thomas M. Waller; for Lieutenant-Governor, George G. Sumner; for Secretary of State, D. W. Northrop; for Treasurer, A. R. Goodrich; and for Controller, Thomas R. Sanford. The platform restates "Democratic principles as applicable to the conditions of to-day and the political issues of the immediate future." This "restatement" is lengthy, and contains the usual platitudes and generalities. The platform then goes on to call for "strict economy in the expenditure of public moneys, and the restriction of appropriations from the National Treasury to objects clearly of a national character"; a tariff for revenue only, with incidental protection; civil-service reform, and "legislation to secure a most careful selection of all public officers, both State and Federal, by providing an appointing power for each class of officers, with special reference to the duties to be performed"; legislation to secure a free ballot and a fair count. It approves the veto of the River and Harbor Bill; denounces "oppressive legislation on the liquor question," while approving of "wise legislation" on this question, and expressing the belief that it can "most safely be left to the individual conscience, free from the blindness of party prejudice"; denounces the squandering of public lands as gifts to great railroad corporations; and calls for "complete and vigorous protection" by the Federal Government of all our citizens—foreign-born as well as native—when travelling abroad.

In California the Republican, Democratic, Greenback, Prohibition, and Granger parties have all made nominations for the State offices.

Defiant talk was indulged in by the members of the Mormon Conference at Salt Lake City, which adjourned on Sunday. President Taylor said: "Any man or set of men who curtail or deprive us of our constitutional rights are tyrants and oppressors. We intend to lawfully contend for our rights inch by inch." The returns of the registration have been published, showing 34,000 names, four out of nine being of men, and three out of four Mormons.

Gen. Newton Curtis, who was convicted of a misdemeanor under the United States statute forbidding any officer of the Government to collect political assessments, will contest the constitutionality of the statute before the Supreme Court of the United States.

Two men—W. F. Salter and Wilmot H. Ward—were arrested in Washington on Saturday night for complicity in a conspiracy to bring discredit upon the present administration of the Bureau of Engraving and Printing of the Treasury Department by purloining dies, plates, and other material. The object of the conspiracy was to bring about the removal of Colonel Irish, the Chief of the Bureau, and thus secure offices in the Department for Salter and Wilmot.

Ex-District-Attorney Wells, to whom the Government has entrusted the investigation of the bribery charges in the Star-route cases, has begun work in the matter. It is understood that the Government has secured important evidence against at least one member of the jury. Foreman Dickson has filed a protest with District-Attorney Corkhill against the transfer of the investigation from the District Attorney's office to the care of special counsel.

A new and stringent order, rigidly fixing the rules of conduct during working hours, has been issued in the Treasury Department at Washington. Secretary Folger directed this step, as he is satisfied that the discipline of the Treasury Department has been so lax as seriously to impair the efficiency of the force.

Statistics for the fiscal year ending June 30, 1882, show a large increase in the money-order business of the Post-office Department. The increase in the amount received for domestic orders over the amount for 1881 was $8,324,449, and the increase in the amount received for foreign orders was $1,852,588. The annual report of the free-delivery service of the Post-office Department will also show a large increase over the business of last year. The aggregate number of pieces of postal matter handled by carriers during the year exceeds 1,143,158,000.

It is estimated at the Signal Office that at least $13,000,000 of property and many persons remained safely in harbor on account of the warnings given by the Signal Office before the cyclone of last month, and that the saving in this one storm pays the expenses of the Signal Service for at least ten years.

Commissioner Price has notified the Indians whose support is not provided for by treaty stipulations that they will be expected to labor for a livelihood.

More than $20,000 have been collected for the Garfield Memorial Hospital. The officers are selecting a site, and the foundations will soon be laid.

The Longfellow Memorial Association has issued a circular to the "Children of America," inviting ten-cent subscriptions toward the fulfilment of the plan of the Association for the erection of a memorial statue in front of the poet's residence.

The New York agency of the Irish Land League has been closed, and the balance on hand has been transmitted to the Treasurer in Paris. This is generally looked upon as winding up the Land League in America. But it is

announced from Chicago that this is not so, since there is another "powerful branch" of the League in Chicago and Boston, supported by eminent champions of the cause.

The Bostonian Society formally assumed the custody of the Old State House, in Boston, on Tuesday. The object of the society is to "promote the study of the history of Boston, and the preservation of its antiquities." Mr. Josiah Quincy, jr., delivered an address.

Arrangements have been completed for two lines of steamers to run between Boston, Antwerp, and Rio de Janeiro. They will be run by a French company established more than a year ago under subsidies from the Governments of Canada and Brazil for carrying their mails, but sailing under the French flag.

The steamship *Herder*, of the Hamburg-American Packet Line, with mails, passengers, and general cargo, from New York bound for Hamburg, ran ashore at the head of Long Beach, about three miles west of Cape Race, Newfoundland, on Monday morning, in a dense fog. All of the 261 passengers and crew were landed without an accident.

Despatches from Pensacola, Florida, show that the yellow-fever epidemic has not abated. Within three days ending Tuesday, 175 new cases and ten deaths have been reported. The total number of cases to date is 1,350, and of deaths 115. Great distress prevails in the community, especially among the negroes, and the demands upon the Board of Health are incessant and increasing. The Board has made a formal appeal to the country at large for aid.

Frank James, the brother of Jesse James, the outlaw, surrendered to Governor Crittenden at Jefferson City, Mo., on Thursday. Frank held a reception at the McCarthy House, in Jefferson City, on Thursday evening, and "many prominent citizens were there seeking to shake hands with him."

FOREIGN

It is said to be settled that the brigades of General Wood and General Alison will form the army of occupation in Egypt. The rest of the troops have commenced starting for home. On Wednesday General Wolseley issued a general order complimenting the troops on their endurance, courage, gallantry, and good behavior. The organization of the gendarmerie is progressing, several hundreds of men having been already enrolled in Alexandria. The Governors of the Provinces have been ordered to send to Alexandria all natives suspected of complicity in the June massacres.

General Wolseley, in his detailed despatches published Friday evening, took occasion to defend the present constitution of the Army. He says he never wishes to have command of better infantry. The corporation of London has decided to present an address of congratulation to General Wolseley, and the freedom of the city and a sword of honor to Admiral Seymour.

A despatch from Cairo says that Arabi Bey demands a trial by Englishmen, declaring that he surrendered to them and would have escaped had he known he was to be tried by Egyptians, from whom he expects no mercy. M. de Lesseps has telegraphed to the President of the court-martial at Cairo by which Arabi is to be tried, testifying that during the war Arabi exerted himself to maintain the neutrality of the Suez Canal, and that he protected the lives and interests of several Europeans in Egypt. It is said that no genuine documents connecting Arabi with the outrages committed in Alexandria have yet been discovered. It is believed that the English counsel sent by Sir Wilfrid Blunt to defend Arabi will be denied access to him, the Egyptian Government being of the opinion that legal assistance from such a quarter will be of no avail, since the pleadings will be heard in Arabic. Meanwhile Arabi is treated as a condemned convict by his jailers, which is considered in Cairo to be unnecessary harshness.

The special commission, under the Presidency of Ismail Pasha Eyub, which was appointed by the Khedive to prosecute all acts of rebellion committed by the military or civilians, held a sitting at Cairo on Monday, and interrogated M. Gaudel, late Prefect of Alexandria, who denied the charge made against him of having distributed bludgeons to the Arabs.

Of the two commissions to fix the amount of indemnity due to foreigners for losses during the late rebellion, the first will examine and decide in regard to all claims; the second, which will be appointed later, will decide regarding the means of raising funds, as the Egyptian Government insists that the revenues especially assigned shall remain untouched.

The important question in Egyptian affairs now is, What is to be the government there? Both the European residents and the natives regard a return to the system of joint control as the worst possible solution of the difficulties of the situation, and the report that joint control is likely to be abolished has produced an excellent effect. This report is based on the rumor that Sir Edward Malet, the British Consul-General, told the Khedive that the Joint Control would be abolished. A despatch from Cairo on Tuesday said that Sultan Pasha, President of the Chamber of Notables, looked upon Turkish intervention in Egypt as meaning anarchy; while, on the other hand, he maintained that the cost of the Joint Control was extravagant, and that £400,000 might be saved annually by the substitution of efficient native for foreign officers. He admitted that the mass of the population was unfit for representative government.

Lord Dufferin, in reply to the Porte's letter in relation to the withdrawal of the British troops from Egypt, says that a portion of the British force has already left Egypt, and that the remainder is to follow as soon as possible; but that as England has made great sacrifices to pacify the country, she must take measures to secure the permanency of the pacification, and the temporary presence of a certain number of troops will therefore be necessary.

A despatch from Vienna on Tuesday said that the breach between the Sultan and the Khedive was widening, and seemed likely to lead to open rupture. The Sultan is said to have forbidden recruiting for the Khedive's future body-guard.

While the annual caravan, which recently departed from Cairo with imposing ceremonies, was journeying to Suez, on the way to Mecca, the canopy over the sacred carpet was overturned and the sacred emblem exposed to view. The Dervishes in charge were greatly excited by the accident, and it is probable that the caravan will have to return to Cairo and perform the ceremony accompanying the departure over again.

Signor Depretis, Prime Minister of Italy, addressing his constituents at Stradella, said that the relations of Italy with France and England were excellent; that Italy had always remained faithful to the concert of Powers; and that the acceptance by Italy of the invitation to intervene in Egypt would not have been consistent with her international duties.

The man Overdank, who was recently arrested for planning the assassination of the Emperor of Austria, has been brought before a court-martial on the charge of desertion from the army and high treason.

At a meeting of the Irish Conference Committee in Dublin, it was decided to invite a much wider circle of representative men to the Conferencethan was at first contemplated.

Mr. Davitt, speaking at Wexford on Sunday, said that he was disappointed at the outcome of the Land League agitation. He said that the English Government had been furnished with a pretext for action by outrages committed by some of the Irish people. Pleading at Westminster, he said, was useless. The people should rely upon Irish determination at home to arraign landlordism before the civilized world as the cause of crime and disorder.

Mr. Dillon, in reply to a resolution of the Liverpool Land League requesting him to reconsider his intended resignation of his seat in Parliament, writes that he will give the matter his earnest attention, and says that nothing but ill-health could have caused him to quit politics.

The closing of the Land League fund has caused a great sensation in Dublin, many persons being anxious to know how the money was spent.

A man named Flanagan and his wife, who are suspected of having been connected with the murder of Lord Mountmorres at Clonbur, County Galway, on the 25th of September, 1880, have been arrested.

The weapons used by the murderers of Lord Frederick Cavendish and Under-Secretary Burke have been found concealed in the rafters of a stable in the rear of a house in Dublin. The weapons found were four knives, nine inches long, with blades three-quarters of an inch wide. There were discolorations on them which, on chemical analysis, proved to have been made by human blood. It is hoped that the murderers will yet be captured. Meanwhile the authorities observe the strictest secrecy.

A despatch to the *Pall Mall Gazette* from Dublin says that, owing to the alarming increase of pauperism in the south of Ireland, the Dublin Union proposes to send 1,000 able-bodied men and women to Canada, at a cost of £7,000.

A conference of coal miners, representing nine counties of England, will meet at Manchester on Friday next to decide upon the time at which notices shall be given of a general stoppage of work. The North Staffordshire coal-mine owners have acceded to the demand of the miners for an advance of ten per cent. in wages. Twenty thousand men are affected by this decision.

A despatch from Berlin says that Herr von Puttkamer, Minister of the Interior, was present at an electoral meeting of Conservatives on Wednesday. This fact has excited comment, as Prussian Ministers have hitherto invariably held aloof from such meetings. The various sections of the Liberal party count with some confidence on gaining seventy seats from the Conservatives at the forthcoming elections.

The Spanish Minister of Marine has drafted a bill asking for a grant of 30,000,000 pesetas, to be devoted to purchasing two iron-clads to be constructed in England. The bill will be presented to the Cortes at the opening of the session. Señor Comacho, Minister of Finance, has informed the Council of Ministers that the expenditures for the first half of the present year balanced the revenue for that period, and that the receipts exceeded the expenditures in several of the provinces. The Council of Ministers has decided to refuse the offer of the Sultan of Morocco of a strip of territory around Ceuta in return for the cession by Spain of the island of Santa Cruz de la Mar, on the Atlantic coast of Morocco.

Marshal Serrano finds difficulty in carrying out his plan of the formation of a new party, owing to differences which have arisen between the Democrats and the Liberals. The latter desire the Constitution of 1876 modified by the introduction of the principles of the Constitution of 1869, but the Democrats, though willing to form a new party, are unwilling to support the proposal for the re-establishment of the Constitution of 1869.

A despatch from Manila on Monday said that the fatal cases of cholera in that town now average from thirty to forty daily, and the deaths from the disease in the vicinity of the town average twelve daily.

GENERAL BUTLER'S ACCEPTANCE.

GENERAL BUTLER'S letter of acceptance of the Democratic nomination in Massachusetts, which has at last appeared, is in many respects the most cheering political document which we have seen for a long time. As every one knows, the General had somehow managed to incur the reputation of persistent office-seeking, and, indeed, was freely accused of having left the Republican party in Massachusetts because they would not nominate him for the Governorship. He has accordingly been accused of "laying pipe" during the past year for the Democratic nomination. It is pleasant at this time of great political demoralization to hear from himself that this was all a mistake; that he had not thought of being a candidate at all, owing to business and professional engagements; and that it is only after "conference with friends and clients" that he has consented to make the necessary sacrifice and take the nomination.

It has been whispered about, too, for some years, not only that the General had no conscience himself, but thought that nobody else had, and that he changed his party whenever there was anything to be gained by it. We are happy to be able to state that this, too, is an error. He says that he does change parties occasionally, but he never "changes the principles on which he acts"; and though he "discards errors" now and then, he does so only under the direction of a "riper judgment and an instructed conscience." It is of course open to cynical cavillers to find fault with him here for not describing the principles on which he acts, and to insinuate that the principle known among plain people as "the care of No. 1" has been the great guide of his chequered career. But this odious insinuation is, we think, effectually met by his subsequent statement about his conscience. He says in substance that whenever he does anything novel it is under the control of an instructed conscience. This shows two things: first, that he has a conscience, and, secondly, that he cultivates it. This we call moral growth. Many would call it spiritual growth, but we do not care to exaggerate, or to draw any picture of the General's character which any one will call highly colored. The mere fact that he has a conscience which he trains is enough for us, and it ought to cheer some of the ministers who preached on Sunday on the degradation of politics.

There is one thing more in the letter which even the most hardened will, we think, not be able to read without a slight moistening of the eyes. Many are impatient about the slow progress of the civil-service reform movement, and discouraged by the indifference to it of the politicians, from the President down. Now, it has long been popularly believed that General Butler used to be one of the most contemptuous of its foes, and that, in fact, when his conscience was in the early stages of its growth, he used to speak of the reform as humbug of a certain extremely unfortunate character. He has exploded this delusion in a few well-chosen words, to which no paraphrase or summary would do justice:

"The public mind is exercised, if not enlightened, upon the subject of the tenure of office and mode of selection of persons for public employment and trusts.

"Integrity, capability, and efficiency in the incumbent have always seemed to me to insure to the occupant the best tenure of office. This in a public life of more than a score of years, wherein I had influence more or less potential and sometimes controlling, has always been my guide. So that I can assert that I have never asked an officer so qualified to give way to any appointee of my recommendation. Indeed, upon the desirability of this tenure I can hardly believe there is not a substantial agreement in the minds of all good men."

As to competitive examinations, too, as a mode of selecting candidates, he not only approves of them, but he advocates their application to candidates for all offices whatever, including the Governorship of Massachusetts. "To attest my own sincerity in this regard," he says, "I am quite willing that competitive examination should be made of candidates for the highest office." In other words, he offers to compete with Mr. Bishop on a set of questions calculated to test their comparative fitness for the duties of the Governorship. No civil-service reformer, be it remembered, has ever dared to ask for anything like this. In fact, they all timidly protest that they would not apply their system to the offices now elective at all. But here is a candidate for one of the highest elective offices in the country who goes further than any of them, and offers himself as the first subject of the test. He does not, like other politicians, say he is in favor of the reform, but thinks it is surrounded with great difficulties; or say that he is in favor of it, but is not sure about "this particular measure." He says, in substance, that this particular measure has only one fault in his eyes, and that is that it does not go far enough. And yet this is the man whom our press has been denouncing for about thirty years as a national disgrace. What a commentary this is on the perspicacity of our editors. And what a lesson it teaches regarding the danger of judging men by externals. Even the personal appearance of this excellent person has been treated as an indication of a depraved nature.

One great source of anxiety to the Bostonians will be removed by this letter. One of their chief reasons for dreading Butler's election was the scandal they thought would be caused by the spectacle of his going out to Harvard College on Commencement Day to receive his LL.D., followed by a roaring mob of vicious and illiterate followers. Many old Bostonians have felt as if this scene, if they ever beheld it, would kill them. They will now feel easier, for they see that, if elected, his appearance at the old University will be simply the triumph of a cultured conscience over the temptations and trials of American life, and of the application to public affairs by an elderly lawyer and soldier of the loftiest principles of private morality. If he has a large following of "the boys," too, it will certainly be a hushed and deeply-moved crowd, for these rude natures are not insensible to the influence of openly-avowed spiritual regeneration.

MEDITATION IN POLITICS.

THE planks adopted by the two parties in this State with regard to the canal question do not seem to have attracted the attention they deserve. This cannot come either from the nature of the subject or the disposition of it made by the two parties, because the subject is one of great importance, and the treatment it has received is novel. There is nothing in New York politics which in the past, from the time of DeWitt Clinton to that of John Kelly, has caused more discussion and excitement than the canals. The canals have made and unmade Governors of the State; have convulsed the Legislature with investigations of charges of fraud and corruption; have even affected the election of judges of the Court of Appeals. Owing to the competition between them and the "trunk lines" to the West, vigilance about the canals is frequently spoken of by good Anti-Monopolists as a part of the Price of Liberty. It is only a few years ago that, in order to preserve these highways of the people more effectually, they were "taken out of politics" by means of constitutional amendments devised by Mr. Tilden; and hardly had they been taken out when Mr. Silas B. Dutcher felt it necessary to put them in again. In fact, the canals, ever since they were dug, have been one of the centres of politics in this State, and never probably in their history has the canal question assumed a more momentous shape than this year, when the question to be submitted to popular vote is whether the canals shall be free.

On this subject both parties have adopted resolutions, evidently prepared by some of the ablest minds in the two conventions, with great care and deliberation. The Republicans declare that "we urge the people of the State, without reference to party, to examine with intelligent care the constitutional amendments submitted to them, and to give full expression at the polls to their judgment and wishes thereon." Considering the fundamental differences which exist between the two parties on other subjects, and which have heretofore existed as to the canals, it is wonderful how closely what the Democrats say resembles this: "We approve the submission to the vote of the people of the constitutional amendment in favor of free canals, and we have full confidence that they will dispose of it in such manner as to promote all the great interests of the State—agricultural, manufacturing, and commercial." There is really, it will be seen, no practical difference between these planks. The real question is whether the voter ought to vote for free canals or not, and on this point what the two planks urge upon the voter is to meditate thoughtfully upon the question before voting.

It must strike the most casual and unreflecting voter that there is something new about a recommendation of this sort coming to him simultaneously from two great historical parties. Hitherto it has been the custom for party platforms to recommend action one way or the other. To tell him that he should proceed to meditate on what action he ought to take, seems to mark a new phase in platforms, and one which promises to prove of great interest in future.

The value of meditation as a preparation for the discharge of duty has always been recognized in the religious world, but the application of religious methods to politics is a novelty. Some thinkers have maintained that

there is a close connection between morals and politics, but even this idea has never gained a strong foothold in New York, and the notion that religion and politics are in any way connected has been distinctly repudiated, in at least one party, by the undisguised hostility so currently expressed to the introduction of "Sunday-school methods."

Whatever the real explanation may be, the value of meditation to party managers cannot be doubted. The great trouble with them ever since the close of the war has been to find some method of dealing in a safe manner with questions in which the public is interested but in which they are not. Hitherto they have only tried two ways, neither of which has proved a success. One may be called the alternative method, which involves the construction of a plank, on any question about which the public is divided, in such a way that it will appear to commit the party to whatever shade of opinion the voter favors. This method has been often adopted in dealing with the questions of prohibition and protection, and great skill has been attained in its use. We find, for instance, a very fine specimen of the alternative plank in one of the Ohio platforms this year: "Resolved, That we favor a tariff levied to meet actual needs, and so adjusted in its details, with a view to equality in the public burdens, as to encourage productive industries and afford labor just compensation without creating monopolies."

The other method, which might be called the bluffing method, and which has been frequently applied to civil-service reform, not only in platforms, but even in letters of acceptance and inaugural addresses, consists in the construction of a plank professing that the managers themselves take the deepest interest in the very idea of reform they are believed to oppose, and insisting that it ought to be dealt with vigorously and without delay. A civil-service plank constructed on this plan has often appeared to take the wind out of the reformers' sails completely, for it makes the agitation for reform, when the leaders of the party are so earnestly in favor of it, and determined to carry it through, look ridiculous. Why should any one in New York, for instance, go about saying that the Machine is opposed to civil-service reform, when it has just declared, exactly as Mr. Curtis or Mr. Eaton might, that "we pledge President Arthur our earnest support in favor of every effort for the enforcement of civil-service reform"?—especially when President Arthur's language on the subject is as follows: "The rules which should be applied to the management of the public service may properly conform in the main to such as regulate the conduct of successful private business. Original appointments should be based on ascertained fitness. The tenure of office should be stable. Positions of responsibility should, so far as practicable, be filled by the promotion of worthy and efficient officers." Is not this what Mr. Curtis wants?

But the trouble is that neither the alternative nor the bluffing method seems to be a complete success, for notwithstanding their long use, large bodies of voters show an increasing disposition to regard them as fraudulent devices to gull the voter. It is obvious that this objection cannot be raised against planks calling upon the voter to meditate upon subjects as to which disagreeable and dangerous differences of opinion exist. Meditation can be applied without fear, not only to the canals, but to protection, prohibition, civil-service reform, and every other current question. To call upon any one to meditate upon these topics cannot be considered fraudulent or deceptive, because it is the duty of the good man to meditate before acting; and if both parties call for meditation, neither can possibly lose votes, so far as the question meditated upon is concerned. No Republican will be made less likely to vote for Folger, no Democrat less likely to vote for Cleveland, by meditating on free canals. It is important, however, that both parties should call for meditation simultaneously, for if one does, and the other calls for action, great confusion might be introduced. As the managers of both parties, however, would much rather have the voter meditate on the subjects we have mentioned than dispose of them in any other way, an arrangement or "deal" for mutual convenience might, we should think, be made, by which the method of dealing with the question of free canals should be applied universally to all political questions as they now exist, or may hereafter arise.

"SPOILING THE EGYPTIANS."

A PAMPHLET on Egyptian affairs, entitled "Spoiling the Egyptians," by Mr. Keay, has produced a good deal of impression in England, having already run through four editions, and it has been reprinted in this country. It purports to be a narrative of the circumstances which led to the deposition of the late Khedive Ismaïl and the rebellion of Arabi and the Army, extracted almost textually from the official correspondence in the British Blue Books presented to Parliament. As told by the author, it is perhaps the most disgraceful tale of modern politics. It may be summed up by saying that it is the story of enormous usurious loans contracted by the Khedive with English and French bankers, and spent part in costly public improvements, and part in riotous living; of cruel pressure by these bondholders for payment of their coupons, backed up by diplomatic threats, and resulting in frightful oppression of the people, in the personal intimidation, humiliation, and final deposition of the Khedive because he could not comply with their demands, and in the continuance of the tyranny and extortion under his son, the bondholders' puppet, until the Army, expressing the popular despair, rose in insurrection.

The pamphlet is very ingeniously constructed, because, as we have said, nearly every assertion in it seems to rest on a quotation from official papers. We have, however, been inclined to distrust it from the first ourselves, owing to the finish and completeness of the charges. The villany of the bondholders and the Government was too clearly made out. It seemed incredible that they should have been so barefaced in their operations, should have taken so little pains to conceal or put a good face on them, and that any Christian government in our day, much less one making such professions as Mr. Gladstone's, should lend the aid of the public force to the consummation of such a series of crimes and atrocities. The whole story reminded us a little of some of our "campaign charges" in the Presidential canvass, and particularly of that one in which the Republican candidate has a one-armed soldier driven from his door by an insolent lacquey, who, after having asked him for his card on a silver salver, reports that his master is "sick of soldiers." It seemed astounding, for instance, that a man who stands as high, both in public and private life, as Mr. Goschen, should have gone to Egypt as the agent of the bondholders, one of whom he was himself, and, while intimidating the Khedive to the best of his ability, should have procured, as Mr. Keay says he did, the deportation of an estimable man, Ismaïl Sadyk Pasha, who stood in his way, to the White Nile, or, in other words, to certain and speedy death.

In the last *Contemporary Review* there appears an article from Mr. Sheldon Amos, the well-known Professor of Jurisprudence, who has resided in Egypt, and has contributed many letters to our own columns on the condition of that country, which confirms these suspicions. He accuses the author of the pamphlet, Mr. Keay, both of practising a deception on the public in professing to have before him in the Blue Books a connected narrative of the course of events in Egypt, when he must have known it was very disjointed and imperfect; and of having grossly garbled the documents from which he actually quoted. Both charges seem to be proved. The whole of the diplomatic correspondence is never produced by the Government in England until the transaction to which it relates has been completed. The gaps in that relating to Egypt are unusually large, owing to the partnership with France, and the delicacy of the situation in which the interference in Egypt placed both England and France toward the other Powers. There is consequently a large body of facts which had a powerful influence on the conduct of the British Government of which there is no mention in the Blue Books at all.

But this is not all. Mr. Amos shows that Mr. Keay has either wilfully or through carelessness failed to quote letters which tell against his theory, or which put a different face on the transactions he describes, and this on some most important points. One of these is the evasion of taxation by foreigners resident in Egypt, which he distinctly charges the British Government with having connived at or encouraged, quoting only one sentence of a despatch of Colonel Stanley to Lord Tenterden, and omitting all mention of a most important one from Lord Derby to Mr. Adams, in which this evasion is emphatically condemned, and pronounced legally indefensible except as regards the capitation or poll tax. As to the case of Ismaïl Sadyk Pasha, whose judicial murder Mr. Goschen is accused of instigating, Mr. Amos quotes Mr. De Leon, the American Consul-General, who says Ismaïl Sadyk was banished because, after having for years played the part of a remorseless and ingenious tyrant

and torturer of the peasantry, a "cry went up to earth and heaven against his oppression," and at last, "seeing in the financial scheme proposed by Messrs. Cave, Goschen, and Joubert the end of his power and his illicit gains, he fought desperately against them, and rendered his own removal necessary to the Khedive, through the revelations he made and threatened to make, whether true or false, equally embarrassing to his master's credit."

Mr. Amos, however, throws more of the responsibility for the financial troubles of Egypt on the folly and extravagance of Ismaïl than he apparently can be made to bear, if we are to trust the statement of the situation made in an article in the same number of the *Review* by Mr. Mulhall, the well-known statistician. According to Mr. Mulhall, although the Egyptian debt amounted in 1879 to $500,000,000, the three last Khedives have only received half this amount in cash, and Ismaïl only $210,000,000 of it. The various loans were issued at all the way from 90 down to 73. In the Oppenheim loan he gave bonds for $160,000,000, and only received $55,000,000 in cash and $45,000,000 in depreciated scrip. The most important question, however, as regards Ismaïl's blameworthiness, is, What became of what he did receive? The Anglo-French theory has all along been that he spent the most of it in "toys and lust and wine," palaces, and ironclads. With regard to this, however, Mr. Mulhall makes a very good showing for him, for he credits him with useful public works costing over $230,000,000, including railroads, canals, docks, harbors, and lighthouses, and charges him with only $5,000,000 for palaces and opera-houses. The conclusions he reaches are:

"1st. That the original cause of bankruptcy was the excessive charge for sinking fund, which should never have been more than 1 per cent.

"2d. That Ismaïl Pasha was not so black as Lord Salisbury thought, or as the bondholders painted him.

"3d. That the net product of nine loans since 1862 was only 50½ millions, and that the public works done by Ismaïl Pasha cost 46 millions.

"4th. That European contractors charged 80 per cent. profit, and European bankers sometimes 28 per cent. interest.

"5th. That the Liquidation Law of 1880 first put the finances on a sound footing, and that its effects have been just and beneficial."

MR. GLADSTONE'S PROSPECTS.

Mr. Gladstone has been making a speech, in which, besides expressing his gratification at the Egyptian success, he proclaims the absolute need of a change in the procedure, to enable the House of Commons to transact the business it is called on to do. His words on the subject now, it is hardly necessary to say, have a weight and significance which before the Egyptian success they would have been far from having, and still further from having before the surrender of the Lords on the Irish Arrears Bill. It is safe to say that immediately before the latter event his Ministry was considered doomed in the eyes of nine observers out of ten of both parties in England. The Tories were confident that a dissolution was impending, and equally confident that the election would either leave him in a minority or without a working majority. He was saved on this occasion partly by the timidity of some of the Peers, but in a greater degree by the necessities of the Irish landlords, with whom the Peers naturally felt considerable sympathy. The bill promised a large sum in cash to men who had received no rent for two or three years, and whose margin of rent, over and above liabilities, has really been swept away by the reductions which the Land Act Commissioners are making. On a very large proportion of Irish estates the life tenant has not much over twenty-five per cent. for himself after he has met the charges, and this twenty-five per cent. has been knocked off in the very cases in which it was of most importance, because the needy landlords were generally those exacting the highest rents. Consequently the arrears came as a sort of bonus in cash to a large body of men having the strongest claims, both social and political, on the consideration of the Tory party, and these claims furnished a convenient excuse, and probably one that enabled them to preserve their self-respect, to Lord Salisbury's followers for deserting him, without laying themselves open to the charge of simple cowardice.

Whatever the cause, however, the gain to Mr. Gladstone was great, because it accomplished in the eyes of the public the ruin of the only Conservative leader who has the dash which the traditions of the place somehow call for. It is almost a rule that the Tory chief in our time should be an audacious man. Since Sir Robert Peel's day he has always been audacious. Lord Derby was audacious; Beaconsfield was audacious; Lord Salisbury is audacious, and Sir Stafford Northcote is not, and therefore, *pro tanto*, disqualified for the leading position. Since the collapse on the Arrears Bill, however, Lord Salisbury has practically ceased to lead, for the Tory Peers, in refusing to follow him, confessed publicly that they did not trust his advice. This would have renewed Mr. Gladstone's lease of power even if the Egyptian success had not occurred. But the Egyptian success has really made him master of the situation. There has been a neatness about it which, for political purposes, it would be impossible to surpass. The victory of Tel-el-Kebir was very brilliant, and would have been a very good thing to meet Parliament with when it opens on the 20th of this month, but its Parliamentary usefulness would have been greatly diminished if the war had been protracted by Arabi's keeping the field, even with shattered forces, or by anything like fanatical insubordination on the part of the population, entailing great expense, and promising to make Egypt a troublesome conquest like Afghanistan. As things have gone, the situation could hardly be better, if Mr. Gladstone had had the power of arranging it all as a little *coup de théâtre* to restore his shattered prestige, and suppress the mutinous discontent of his followers. It is, indeed, very much what Beaconsfield thought the situation in Afghanistan was, after General Roberts had set up Yakub Khan in Cabul, and before Cavagnari had been murdered. Of course there is a possibility that the pacification of Egypt may still turn out a troublesome job, but it is quite certain that the troubles will not become serious before Parliament meets, and that they will not be military in their character, as those of Afghanistan were. The Egyptian is a foe of a very different temper from the fierce barbarians whom Lord Beaconsfield tried to turn into "strong and friendly" dependents of the British Crown.

It is fair to expect, therefore, that when Mr. Gladstone now asks for the *clôture*, he will get it. That Irish legislation is out of the way, all are agreed. Even Mr. Parnell is now only trying to find out what more he wants. He and his followers will not be able to formulate a fresh grievance before the coming session. The English Radicals are, therefore, well aware that nothing but the rules of procedure stand in the way of the English legislation with which Mr. Gladstone evidently means to crown his political career; and there are not many Liberal members who will venture to stand in the way of it by any squeamishness about the rights of minorities. Part of this legislation will, by setting up representative county government, drive the Tories from their last stronghold and intensify hatred of Gladstone, which has already assumed in some of the members of the party the character of a mania.

FROM MEXICO TO ACAPULCO.—I.

Having to make the journey from the city of Mexico to Acapulco, I considered it fortunate that my companion was to be a colonel. He was a veritable colonel. He had seen twenty years' service in the different wars of his country, beginning with that called of the Reform, against the Church and aristocratic party, including that called of the Second Independence, against Maximilian, and coming down to the resistance to Porfirio Diaz, to whose side, however, he had now become converted. He had just fought a duel with sabres (the Government having kindly set apart a vacant portion of a barracks for the prosecution of this ceremony without interruption), and slashed his opponent, a brother officer, so that the latter lay in a grievous state in hospital. Army duelling, it may be said, here, as in France, is winked at. The situation seems to be, that if a man fights he is reprimanded; if he does not fight, he is apt to be cashiered. And the Colonel had bullet-holes through various parts of his body, as I had occasion to see further on. He was now going to assume an important command in a disturbed section of the country, and would take, to reach it, the same steamer as myself. Not that he was the most amiable of travelling companions—at least, in the earliest stages of the way; on the contrary, he began by being much wrapped up, probably in thoughts of his mission, and indulged also in some examples of naïve selfishness. But it is a journey against which one is warned as being of a difficult and dangerous character. It is rarely travelled nowadays. There are perfectly authentic instances of Mexicans in good circumstances who, rather than encounter its inconveniences, though it be but 300 miles, have gone to Vera Cruz, sailed thence to New York, crossed the continent by railway, and taken the Pacific Mail steamer southward from San Francisco. This may have been done in the rainy season—from August to December—which is naturally the worst for travellers. The route is a mere trail, a footpath, full of the most eccentric variations, for horses and mules. No wheeled vehicle ever has passed, or could by any possibility pass, it. Three large rivers cross it, and over these there are no bridges. "Supposing they are swollen by the floods, as they may very well be," said informants, putting the case in that bold and alarming way in which inform-

ants about unusual things delight; "you may be tediously delayed on their banks so long as to miss your steamer." The steamer touches at Acapulco only once in two weeks. "Again," they said, "portions of the route lie in ravines and the dry beds of streams for days at a time; but when the waters occupy their natural bed themselves, what room remains for travellers?" It seemed to be implied that in the rainy season (and it was now the first days of August) the journey was not possible at all. If to all this were to be added some dangers to life and property—as the novice entering upon so wild a section would hardly be American, at any rate, if he did not suspect—it can easily be seen that one might feel more comfortable with a military man of standing as a part of the expedition. The journey, under favorable circumstances, consumes ten days on horseback or muleback, besides the day devoted to going down in the stage-coach to the small provincial city of Cuernavaca, where the trail really begins. This is time enough for study of character, if one chance to have a character worth the study, and for the obtaining of more or less confidential opinions, and there were many confidential opinions about the country which I still wished to obtain. I could think of numbers of others, therefore, whom I had less rather have as travelling companions than so dignified and intelligent a person as a colonel in the Mexican army.

A decision to go was precipitated, while dallying with the idea, by the sudden arrival of the rainy season in town itself. Down came the rain one afternoon while I was reading in the National Library, and in an hour the streets of the right-angled city were canals, with the rare cabs and some men on horseback wading hither and thither and giving friends a lift, serving as gondolas. One could exclaim, under these circumstances, with distracted Macbeth: "There is nor flying hence nor tarrying here." I hurried to the street called Parque del Conde, and closed with the arriero Vincente Lopez. I was to have a horse to ride and a mule to transport my trunk, each animal to cost $20 for the trip; all personal expenses besides to be defrayed along the way, which makes the 300 miles come higher, as will be seen, than so much railroad travel. Vincente Lopez came in due season to the hotel to collect the baggage, and be paid the full amount of his charge in advance. He was a plausible person, but there seemed to me objections to this last proceeding. I thought it equitable that one-half should be paid on the spot, and the remainder on the safe completion of the journey. Vincente Lopez admitted that it was equitable so far as other arrieros were concerned, but for a person of his peculiar probity, who was in the habit of watching over his clients with a tender solicitude which he meant in the present instance to increase, and who had never known what it was to have an annoyance or delay, he was deeply wounded. There were arguments in his favor. He said that the Colonel had paid in full, as was indeed the case. Whatever money was carried must be in the heavy silver coin of the country, sixteen dollars to a pound, since there are no bank notes and no possibility of cashing drafts along the way; and it would be a relief to be rid, so far as possible, of its weight and jingling in the pockets. Still, by the advice of the clerk of the Iturbide Hotel, a contract was drawn upon this general basis; and cruel as it was at the time to be thus formal with so good a man, the small sum reserved proved the means later on of partially checking serious aggressions against the safety of the expedition.

My Colonel was accompanied down to Cuernavaca in the *diligencia*—in which we were all extremely jolted, dusty, and uncomfortable together—by two generals. They had apparently come to give him parting directions upon his mission. One of them, a thick-set, black bearded man, with a husky voice, had a conspicuous scar upon his face. I must not branch off into too many side issues, but the history of it was this: While commanding in Yucatan, he had ordered to be shot, on some of the ordinary revolutionary pretexts, a member of the powerful family of Gutierrez Estrada, which had commercial houses at Paris, Mexico, and Merida—a family noted among other things for the beauty and intelligence of its women. A brother of the victim came over from Paris as an avenger, sought out the executioner, met him in a duel, and left upon him this mark, which, at the time of its infliction, brought the recipient almost to death's door. The city of Mexico is some 7,500 feet above the level of the sea, and the way to the sea is one vast downward slope. It abounds in bold points of view, from which the prospect is spread faint as a vision at a vast distance below. Cuernavaca is one of the most thrilling of these prospects. What is yonder singular detail in the valley, as we go down to it? A hacienda set in the open side of a small extinct volcanic crater, of which it has brought the whole interior under smiling cultivation. And yonder yellowish spot? The sugar-cane field of the Duke of Monteleone. He is an Italian nobleman, resident in his own country, who inherits, by right of descent from Hernando Cortez, a part of the estates which were chosen here for himself by the Conqueror after the termination of his labors. There is nowhere a quainter group of old rococo churches than that to be found in the solid little city. They have flying buttresses of two arches in width descending to the ground, domes and inlay in colored porcelain tiles; and they are all clustered into one, with tombs and a battlemented wall about them. A student of architecture coming this way with his sketch-book in his hand (I am not sure that the trip could not be made enjoyably, as it certainly could economically, on foot, with an attendant to carry a knapsack, after the manner in which we later met some German naturalists and prospectors for ore making it) could find material for a month; and Mexico is full of such. Close by is a garden on a great scale, the Jardin Borda, to which one obtains admittance for a fee. It has a stone fishpond like a lake, terraces, urns, and statues, and is worthy of the most luxurious prince of Europe, yet I was told that it could be bought for $5,000. I asked the custodian if the owner was remarkable for anything in his country. He replied that he was remarkable for *altos pesos*, which is Spanish for saying a big pile of money. From its outer terrace you look down into the barranca which Alvarado so brilliantly crossed when sent by his indefatigable general to quell a rising of the disaffected Gonzalo Pizarro. Here are guavas, the delicious mango (which is like peach, pear, melon, and pine-apple combined), bananas, and plenty of other tropical fruits, but not the cocoanut, which only grows lower yet in Tierra Caliente.

But now behold us ready to start. Vincente Lopez, strange to state, is not present to extend to us the fostering care he has promised. He has sold out his contract, and quietly gone back to the street of Parque del Conde with his profits. We are in the hands of a new muleteer, one Marcos, who has never made the journey to Acapulco before, and a fourteen-year-old boy, Vincente, who has made it, and is to be depended upon to find out the way. Every cavalcade in Mexico is bizarre, and ours, ordinary enough there, would attract attention elsewhere. First rides the Colonel, a tall, spare man in military boots, a wide hat with silver braid, and a linen blouse through which project the handles of his revolvers, upon the dun mule Venado. He was not aiming at display, but comfort. Of my own aspect I need say nothing. It is a privilege the narrator has of letting it be supposed that it is always gallant, imposing, and adapted to the circumstances. I rode the rather large bay horse Pajaro. "Don" Marcos, as Vincente called him—a deprecating, tricky person, with a purpose, soon evident, of making up as far as possible his bad bargain—wore a crimson poncho with a hole for his head, and bestrode the small white horse Palomito (Little Dove). He thought good thus appreciatively to name the animals, though he had but come on the instant into possession of the whole outfit. The Colonel's trunks, sewn up in cocoa-mats, were securely tied with ropes upon the back of the mule Niña, and mine upon Aceituna. Vincente, the boy, ran barefoot most of the way to Acapulco behind the mules, crying, "Eh! machos!" and cracking them with a combination whip and blinder, with which they were blindfolded four times a day, when their loads were being put on and taken off.

There was a bit of wagon-road at first, as there is outside of each of the more important small places along the way, soon merging in the trail, however, and this becoming wilder and wilder. The huts and hamlets were of cane well thatched. There were fields of cane, trains of mules laden with sugar-loaves, and an occasional great, stately-looking sugar hacienda—now and then, one ruined in the wars. At noon the mules were unpacked at some favorable point, and the expedition rested several hours for a siesta during the extreme heat of the day. At night there were occasional *mesons*, or rude inns, but generally our stopping-places were the accommodations offered by the inhabitants of the villages to travellers along their trail. The baggage was piled under a thatched pavilion. Beds, consisting of a mat of stiff canes resting upon a couple of trestles, were arranged for us alongside or in the open piazzas. It has a rude sound, but these in the warm nights were by no means disagreeable. *A la guerre comme à la guerre!* Sleeping thus almost under the *belle étoile*, one looked out at the constellations and the outlines of strange, dark hills, heard the dogs bark (and enjoyed the more the novelty of his situation) down at remote Sacocoyuca, Rincon, and Dos Arroyos. At the gray of dawn we were off. The people, all of the Aztec blood, were gentle with us, honest, and not much less comfortable in their circumstances than farmers might be, say, newly established in the West. The promised difficulties of the undertaking, as they were encountered, largely melted away. It rained chiefly at night; there were but one or two showers in the daytime, though one of these was a very hard one. In Mexico, as in California, the rainy season means that in which rain falls, while in the dry season there is none. The food obtained along the way was of a rustic quality, occasionally scanty, but often excellent. Chickens were generally to be had; fried bananas were the most frequent vegetable accompaniment. The national dish of frijoles (black beans) was always palatable. There was milk in the morning, but not at night, the cows being milked but once a day. We foraged more or less ourselves. The Colonel demanded a couple of eggs under the off-hand formula of *un par de blanquillos*, which cannot be translated, but is much as if one should say, "A pair of little white'uns." He declared it "a miserable population" if they were not to be had.

On the very first day out Don Marcos came to say that he had no money with which to buy feed for the animals. It was with the reserve I had retained, doled out day by day, that this rather necessary purpose was accomplished, and

the arriero perhaps kept from leaving us in the lurch on the way. It was apropos of this incident that my first glimpse into the nature and inclinations of the Colonel was obtained. It was now evident that it would have been better not to pay the man in advance; but the Colonel refused either to regret that he had done so or to seem to regard it as a lesson for the future. "I am a philosopher," he said, "who makes little of annoyances." This philosophy he professed on other occasions also throughout the journey, and seemed, with a kind of bravado, almost to go in search of inconveniences. "But," I said, "philosophy is rather to avoid such troubles as one can by a moderate amount of forethought, and then to endure such as are inevitable without complaining." "No," he returned, "that is the civilian, not the military, point of view."

This trail of ours, though called in the country only a good road for birds to fly over, was travelled, neither better, and certainly no worse, than now, nearly a hundred years before the Pilgrims landed at Plymouth Rock. It was the sole highway between Acapulco, the only really excellent port on the Pacific Coast, and the capital. It has seen the transit of many a convoy of treasure, slaves, silks, and spices from the Indies, part bound for old Spain. A regular galleon used to sail from Acapulco to supply the country with Oriental goods. It has seen the march of royalist troops, under the long reign of the sixty-four viceroys, and of wild insurgent bands. By one of the rivers still lies the massive cut stone-work for a bridge abandoned at the War of Independence seventy years ago. Most momentous of all the processions that passed it, however, were the forces of Iturbide, who returned along it with a new tri-colored flag, called of the Three Guarantees—viz., Religion, Union, and Independence—to overthrow the Spanish power in the capital and make himself briefly Emperor. This brilliant figure, who came to such an ignominious end, is still greatly honored in Mexico, and there is something rather typical of Mexico, or at least of Spanish America, in his history. Taking the position which would have been that of a Tory here, he fought against the earlier insurrection in his country from its outbreak in 1808 till 1820. Sent, however, in command of an army against the great rebel chief Guerrero in the latter year, he united with instead of overthrowing him, seized a convoy of treasure as sinews of war, and drew up, at Iguala—a charming little city on our route—a plan of independence of his own, which he thereupon proceeded to put into execution. The Viceroy, in despair, tried to buy him back with promises of pardon, money, and a higher command, but without success. He made a triumphal entry into the capital in September, 1821. In May of the following year a sedition, which he had without doubt artfully set on foot, roused him in his hotel at night with clamor that he should be Emperor. He appeared upon his balcony and affected to consent reluctantly to the popular will. I have lived some months in the curious large hotel which was occupied as his palace at this time. He modelled himself upon Napoleon, who was nearly his contemporary. There is a portrait of him in the National Palace in the gorgeous coronation robes affected by the latter, though his whiskered countenance more resembles that of the English Prince Regent of about the same date. In August he imprisoned deputies, and in October, still following the model named, put his troublesome Congress out of doors. But in October the country rose against him, and he was obliged to leave it and take refuge in England. He returned again in July the next year, like Napoleon from Elba; but instead of sweeping the country with a new enthusiasm, like his distinguished prototype, he was seized instantly upon landing, and ordered to prepare for death within two hours. Four days were finally given him, and then he was shot.

Iturbide was a person of a highly politic turn, as is seen. He was a thorough devotee of expediency. He maintained (and there was not a little truth in this) that a people made up so largely of Indian serfs suddenly released from tyranny was not ready for self-government. He said that he meant the Empire to be only temporary. He showed no personal valor in the service of his country, as there had been no occasion for it; all his actual fighting being against it. Yet he is commemorated in the national anthem,* and a certain hold, in the Napoleonic way, which he must have upon the popular imagination, was relied upon by the French when they endeavored to establish Maximilian in Mexico. There is a grandson of Iturbide still living. Maximilian, in order to give his new dynasty a more traditional and indigenous aspect, adopted this boy and declared him the heir to the succession. The boy's mother, however, who at first acquiesced, repented later of her concession to the usurping order of things, and endeavored to get him away; and this was finally effected through the mediations of Secretary Seward and Mr. John Bigelow, who was then our Minister to France. W. H. B.

* "Si á lo lid contra hueste enemiga
Nos convoca la trompa guerrera,
De Iturbide la sacra bandera,
Mexicanos valientes, seguid!"

THE LATE GEORGE P. MARSH.

ATHENS, September 20, 1882.

THOSE of us Americans who have lived in the East, especially on the basin of the Eastern Mediterranean, during the last twenty-five years, will have heard more, and measured better, the personality of the late George P. Marsh than his countrymen at home. His public services are matter of public record. Those who have access to his despatches to the Department of State can tell better than I how he constantly studied whatever might be turned to the advantage of his country, and perhaps may read between the lines what he never made ostentation of—his love for it; an ardent, never-faltering, watchful devotion such as few public men have ever given their native land, and few governments have so poorly acknowledged and recompensed as ours. An Englishman, Mr. Marsh had been a peer, and long ago in the enjoyment of a pensioned leisure to follow up the studies in which he was the most widely distinguished American. That he had been a public servant, even ill-paid and hard-worked, to the loss of his country and his kind, so many years, is due, not to any element of good in our wretched diplomatic service, or any good sense or sound policy in our Government, but, as is well known, to the tenacity and fidelity of his relative, Senator Edmunds. I remember his writing me, at Lincoln's second election, when the usual scramble for offices was to begin: "I hear the cheep of the axe which shall lop my official head from my shoulders" (I quote from memory), "and I should not regret my removal were it not that I have no other source of income left; and were I to return to America I should not know how to get a living."

It has been my fortune in a varied and adventurous life to make the acquaintance of many distinguished men, and of all I ever knew George P. Marsh was the noblest combination, *me judice*, of the noblest qualities which distinguish man—inflexible honesty, public and private; the most intelligent and purest patriotism; ideality of the highest as to his service in his official career; generosity and self-sacrifice in his personal relations; quick and liberal appreciation of all good in others, and the most singular modesty in all that concerned himself; unfaltering adherence to truth at any cost; an adamantine recognition of duty which knew no deflection from personal motive; and, binding the whole in the noblest and truest of lives, a sincere religious temperament, in which the extreme of liberality to others was united to the profoundest humility as to himself. A man on whom his country or his countrymen might repose any trust, or impose any worthy service, and whose modesty alone prevented him from acquiring the highest honors human intellect can win, all that the great Republic, the richest country in the world (the only one at least rich enough to pay its debts), could do with him was to keep him in second and third-rate legations, wearing out his life in the futilities of a diplomacy which has neither value nor meaning, and the anxieties of an insecurity of position which no intelligent merchant's clerk in one of our great cities is liable to. A diplomatic service which has had drunkards and gamblers in its highest positions; whose tenure of office is regulated by the claims of bar-room politicians and the recompenses due to electoral frauds and corruption; which dismisses a Motley and menaces a Lowell because they are too well bred to suit the tastes of our average politician, or because they are not pleasing to the lowest dregs of the cosmopolitan populace of our States, may be proud of having retained even unwillingly such a man as Mr. Marsh in its service so many years. But to me it seems a wilful waste of what in America we have a woful want of: the culture of which he was one of the highest results. What any man could do to increase the respect of the representatives or individuals of other nations for the United States he did. I knew no European who had met him who had not a higher esteem of our country from having known him. I have often heard European men of letters speak of him as a splendid result of American institutions—which perhaps in one sense he was—and an example of the sagacity of our Government, which he certainly was not. As with Lowell at present, his place was continually fought for by all the Greeks and Trojans of our politics, and it was due purely to influences which, unfortunately, are rarely present in our politics, that in the one case, as in the other, the better man kept the place.

It was my misfortune to spend eight years of my life in the consular service of the United States. From the first post, that at Rome, I was removed to silence my remonstrances against the disgraceful state of our legation there; and, after our usual shopkeeping system, I was sent to a distant station at my own expense, after having been financially ruined by my official countrymen at Rome. Mr. Marsh was then Minister at Florence, at which place I was stopped by the cholera blockade which almost suspended travel in the Levant, and when he learned that I had exhausted my means and was stranded without resources, he came to my hotel in the quietest manner and insisted on my accepting a thousand francs. I did not know then, what I learned afterward, that he had to restrict himself to give me the money, and though it was six years before I could pay the last instalment of the loan, he never made an allusion to it. Nor am I the only American who has been benefited by his unostentatious benevolence; and I fear that in all cases his confidence was not even as well justified as in mine. His generosity was only limited by his means.

Mr. Marsh could never have been a popular man, except among students. His high, unbending sense of justice; his aversion to and contempt for anything that savored of duplicity, disingenuousness, partiality, or favoritism; his intolerance of anything that resembled corruption, unfitted him for American politics, while

the same justice in personal matters, coupled with a singular want of egoistic ambition and rare humility, seemed to prevent that display of personal preferences which contributes so largely to the creation of individual enthusiasm. If anybody loved him, it was for the sake of the truth and the justice he himself so revered; he was so broad in his humanities, so uncompromising in his judgments on his own failings, so free from vanity of any kind, or ostentation, that he seemed almost impersonal. He seemed to me to shrink from anything that looked like personal admiration with the sensitiveness of a pure and modest woman, and in his relations with his surroundings he was as tender, as loving as any woman, and all his experience in the world had not in the least affected the unworldliness of his nature or diminished his intense enthusiasm for pure and wild nature. He loved children, the Alps, the glaciers, the woods and fields and trees, with an untiring devotion, and the only complaint I remember his making of his own losses and decay was of his being unable to climb as he used to do; and, indeed, his only failing in power was physical, for to the very last his mind seemed endued with an immortal childhood; his speech became indistinct, but only as all his physical forces yielded. His attention never flagged, nor his appreciation of passing events.

There were some questions of Eastern politics in regard to which I differed from Mr. Marsh, and on which I still feel disposed to maintain my own views; but I never differed from him without feeling that I was more likely to be wrong than he, and being disposed to review my opinions. The most serious of these differences was on a personal question relating to the late J. P. Brown, dragoman and Secretary of Legation at Constantinople, to whom Mr. Marsh was much attached and whom he greatly respected. My own experience was contrary to Mr. Marsh's, and I had attacked Brown with what I considered justifiable vigor, and in retaliation for open hostility to me in my official capacity as well as to the then representative of the United States of America at Constantinople, Mr. Morris, whom he attacked in the press. The end of the conflict was that Mr. Brown was deprived of the Secretaryship, though retained as dragoman, and soon after died. This was a great shock to Mr. Marsh, who felt it almost as a personal injustice, but it never seemed to affect our friendly relations. He accepted even what he believed injustice without resentment, and he probably gave me credit for intending justly. He expressed his pain in one of his letters of the time, but not one word showed that he held me culpable in the matter. He held the opinions of those who differed from him in such respect that any unfairness of discussion was impossible, and I venture to say that no one could, even in small matters, differ from him without regretting the difference and wishing to go over to his side.

So round and full was his character, so free from any one-sidedness or eccentricity, that it will require a long and complete review of what he was and did to enable the nation to realize how great a man it has lost, and then it will be seen that with all his intellectual greatness his moral dignity was greater still. I never visited him without going away ashamed of my moral shortcomings—he seemed to have none. W. J. S.

THE INFLUENCE OF JOHN BRIGHT.

LONDON, Sept. 30, 1882.

MR. BRIGHT has said of himself with truth, "I am not a statesman." It is not as a politician, not as a party leader, not as an administrator, that he ought to be judged. He has been the consistent preacher of political Quakerism. Critics who wish to understand the nature and the value of the influence exerted in his generation by the Member for Birmingham ought to weigh both the worth of the doctrine which he has preached and the mode in which he has applied it. With Mr. Bright's political sermons, as with other sermons, the important thing is to understand the text, and still more the preacher's application thereof. The basis of political Quakerism is twofold: it rests on a combination of religious convictions and of economical doctrines. It is, at any rate as it appears in Mr. Bright's exposition of it, a union or reconciliation of the morality of the New Testament with the economical dogmas of Adam Smith. The advantages of peace; the necessity of doing justice to all men; the absolute and universal truth of free-trade dogmas; the wastefulness, no less than the sinfulness, of war; the folly and the iniquity of intervention in the affairs of our neighbors—views, in short, which are half religious and half economical—are, in Mr. Bright's teaching and in Mr. Bright's own mind, so mixed or blended that they can hardly be separated from each other. He has rarely, if ever, realized the possibility of conflict between his economical and his religious faith, and a good deal of his influence has been due to the perfectly honest, if not quite satisfactory, combination in his thoughts, speeches, and policy of two different classes of conceptions. His economical convictions have given an air of solidity and of common sense to views in the main dictated by religious sentiment, while the moral fervor and impressiveness of his oratory have been in the main due to the intensity of moral feeling.

That Mr. Bright's economical beliefs have played a considerable part in moulding his political course, he would be the last man to deny. They have preserved him entirely from all the various delusions which, under one form or another, connect themselves with socialism; and they have also, it must be added, kept him entirely out of sympathy with every kind of democratic movement which had the least tinge of communism. But it may be suspected that Mr. Bright's early connection with free trade and his position as a manufacturer have led him, no less than his opponents or his admirers, to overrate the influence of economical views on his general political convictions. At bottom, he is a man influenced far more by sentiment than by intellectual convictions. He is much more of a Quaker than of an economist. The theoretical objections to the commercial treaty with France, the grave criticism to which both the Irish Land Acts were, from a purely economical point of view, obviously open, never affected Mr. Bright's judgment or course of conduct. Mr. Cobden's commercial diplomacy appeared likely to secure peace. Mr. Gladstone's Land Acts promised to mitigate Irish discontent. To attain these moral results, Mr. Bright was prepared, whether wisely or not, to throw economical dogmas to the winds. Mr. Bright's political Quakerism is, therefore, though colored by his economical creed, mainly to be considered as a moral doctrine, or rather as an attempt to apply a certain view of morality to national life. If you take Quakerism (as Mr. Bright no doubt would take it) to be a fair representation of Christianity, Mr. Bright's teaching is in reality an endeavor to apply Christianity to political, and especially to international, transactions.

Of the speculative defects of Mr. Bright's doctrine this is not the place to speak at length. Two difficulties immediately present themselves to the minds of any one who considers fairly whether it be possible to conduct political affairs on the principles of Quakerism. It is, in the first place, a bold assumption to take for granted that a view of Christianity held by a small and diminishing sect—a view radically opposed to the historical development of the Church—is the true representation of Christianity, or, what is politically of almost equal consequence, that it will ever be admitted to be the true representation of Christianity by the majority of the Christian world. It is, in the second place, questionable whether the religious principles enunciated in the New Testament, and meant for the guidance of individuals, can be directly applied to the affairs of states. The existence of the Roman Empire made it absolutely impossible that any early Christian should have considered what was the relation between Christianity and international—we may almost say political—transactions. Add to this that the political life of the world has, as a matter of fact, been based upon a complex combination of feelings, beliefs, or ideas which, if partly due to Christianity, are also due in great part either to heathen or to Jewish influences. A consistent Quaker must condemn both war and capital punishment. He must doubt the morality of institutions based in effect on warfare. His theories seem applicable only to a state which has neither army nor police. Such a state, we all know, could not exist for a week. No doubt even the most sincere Quakers in some way or other modify their theories so as to make them compatible with the necessities of life. To do this is, however, to concede that Quakerism cannot form anything like an adequate code for the guidance of political action. It were futile to dwell on matters which must have occupied the attention of every defender or critic of Quakerism since the days of George Fox. The reason for here noting rather than discussing the impossibility of applying Quaker doctrine to public life is, that this inherent difficulty has in more respects than one injuriously affected the teaching and the influence of John Bright. He has, like every leader of men, been forced to deal with actual facts. His religious theory has been found incapable of consistent application to the facts with which he had to deal. Hence he has more than once been forced to take up an attitude which even to himself can hardly have appeared satisfactory. All through Mr. Bright's attack on the policy of the Crimean War, every one must have felt that the great orator never made it quite clear whether he objected to all war, or whether his objection lay against the particular war which he denounced. He had, it may be conjectured, on this point never quite made up his own mind. It would be difficult, we believe, to find in his speeches a passage which absolutely condemns war in itself; his attitude throughout the War of Secession is hardly consistent with the belief on his part that every form of warfare is open to condemnation. But the latent feeling that all war is wrong has certainly made him a singularly unfair critic of all particular wars, and a very unjust judge of statesmen who, like Palmerston, felt no more scruple in using the Army in what they thought a legitimate cause than in employing the police to arrest a burglar.

To the natural dislike of a Quaker and an economist to anything which disturbs the peace of the world, may in great measure be attributed Mr. Bright's singular indifference (to use no stronger term) toward the efforts of Continental nations to secure liberty or independence. From the beginning of 1848 to the outbreak of the War of Secession, Mr. Bright was completely out of sympathy with the strongest and the most generous Liberal feeling of the time. He deplored the enthusiasm excited in England by Garibaldi; he did everything that he could to prevent England from giving any aid to the efforts of foreign patriots. Of the sympathy of Gladstone with the sufferings of the Neapolitan political prisoners, of Palmerston's wish to promote the free-

dom of Italy, of Lord Russell's interest in the independence of Poland, not a trace is to be found in John Bright. Nor can it be said that as regards foreign policy his feelings or convictions have changed with the advance of life. The Liberal denunciations of Lord Beaconsfield's sympathy with Turkey ought to have led to active efforts on behalf of the races suffering from Turkish oppression. Unless the public are greatly mistaken, Mr. Bright did as much as any man to prevent any use of English power which might involve England in war, even if the war were a war against the Turk. Mr. Bright's teaching has undoubtedly tended to encourage the feeling that England is absolutely irresponsible for any oppression which takes place in foreign and distant countries. His zeal for peace has more than once stimulated national selfishness.

Nor have the evils resulting from the errors or incompleteness of Mr. Bright's political and religious creed been limited to the practical results of his teaching. He has, though quite unintentionally, contributed to produce a state of feeling not consistent with what may fairly be called national honesty. He has not converted Englishmen to Quakerism, but he has so far moulded public opinion as to make large bodies of Englishmen think that any policy is wrong which is avowedly based on the promotion of English interests. If the result of this feeling were solely to encourage a high, even if somewhat overwrought, feeling of the obligation lying upon England to respect the interests of other states, no special harm would be done. Unfortunately, the nominal acceptance of a creed in which a convert only half believes, produces a kind of humbug which tends toward hypocrisy. Mr. Bright himself is not responsible for English intervention in the affairs of Egypt, but his influence is, to a certain extent, responsible for the very unsatisfactory and unreal defences put forward on behalf of a policy which can hardly be defended in accordance with the doctrines taught by Mr. Bright. When we are told that the bombardment of Alexandria was an act of self-defence; that it is the duty of England to improve the position of the fellah; that the country is acting with absolute disinterestedness, and the like—we may legitimately regret that acts defensible enough on ordinary political grounds should, under the influence of Mr. Bright's teaching, be excused by most untenable or dishonest apologies.

Mr. Bright's teaching has its weak side, which it were mere flattery for any admirer to keep out of sight. But it were the grossest injustice toward a great teacher to deny that he has, by his acts no less than by his words, produced a most beneficial effect on the tone of English politics. He has, in combination with Mr. Cobden, transformed the whole character of political agitation. Orator Hunt, Sir Francis Burdett, Feargus O'Connor—even, be it said with all respect, Lord Brougham—were agitators who could not divest themselves of the character of demagogues. Something the same may, in spite of O'Connell's transcendant genius and (from an Irish point of view) indisputable patriotism, be said of the hero of Catholic Emancipation. Whatever can be alleged against John Bright, no one who has an eye for facts can fairly allege that the great democratic orator has been a flatterer of the people. He has again and again displayed the noblest trait of Quakerism—namely, the power to stand up on behalf of the dictates of his conscience against all but universal opposition. He ran counter to the whole vein of popular sentiment during the Crimean War, when to be a friend of Russia was held almost equivalent to being a traitor to England. He denounced real or supposed injustice to China when the whole country, and especially the mercantile classes, were prepared to rally round Palmerston as the vindicator of English prestige. He demanded justice for Hindoos when all England was still trembling with indignation at reported Sepoy atrocities. He agitated for the admission of the people to representation at a moment when to appeal to the spirit of reform was (to employ an expression attributed to Mr. Bright himself) like "flogging a dead horse." He resisted the whole sentiment of the well-to-do and influential classes by denouncing the attempt to form a republic based on slavery. He did this, it must be remembered, without any very general popular support, without any encouragement, to say the least, from men like Gladstone, and (what must have been harder still for Mr. Bright to bear) without any energetic sympathy from Cobden. In many of these instances Mr. Bright is now admitted to have been as far-seeing as he was bold. But the point to remark is not the correctness of his judgment, but the moral independence of his action, and the new color given by him to popular agitation through the proof which his own acts afforded that a man may advocate the cause, without flattering the prejudices or passions, of the masses.

If Mr. Bright has raised the tone of politics by separating democratic agitation from the vices generally displayed by demagogues, this is not the only service, great though it be, which he has rendered to his country. His life-long labors have increased, if they have not created, a new sense of responsibility not only as regards peace and war, but as regards every matter connected with the treatment of foreign nations or the government of countries which are, in any sense whatever, dependencies. The eloquence and energy of Mr. Gladstone gave force, point, and effect to the reprobation with which the electors of Great Britain regarded the policy of Lord Beaconsfield's Government. But Mr. Gladstone's harangues would have fallen flat if the opinions of his audiences had not for years been moulded by the moral teaching of Mr. Bright. This is not the occasion to examine how far Mr. Bright or Mr. Gladstone took a fair view of Lord Beaconsfield's policy or (what is of far more consequence) of that Palmerstonian policy of which Lord Beaconsfield's acts were the parody rather than the imitation. The point to be noticed is, not that Mr. Bright's judgment was correct, but that his preaching had created among the English people a perfectly new sensitiveness as to the moral guilt of any wars which could not be justified by palpable necessity. The peace with the Boers marked the prevalence of sentiments among Englishmen which in 1853 had hardly been brought into existence. No political act (unless it be the settlement of the *Alabama* claims by peaceful arbitration) is such a testimony to the moral effect produced by Mr. Bright's life and work as the convention which followed the victory of the Boers.

If any one wishes to measure the influence of Mr. Bright in matters which do not concern peace and war, he can take no better criterion than the attitude of the English people toward Ireland. The disestablishment, indeed, of the Irish Church, though facilitated by the authority of the Member for Birmingham among the people, can hardly in any direct way be ascribed to his action. But on two points he has assuredly effected something like a transformation of English opinion. He has convinced the electorate that the English land laws cannot justly be applied to Ireland. He has made the English people, for the first time in history, listen with patience to Irish grievances under circumstances which, not thirty years ago, would have rendered it impossible for Irish demands to obtain fair discussion or attention. To say this is not to allege that on matters of Irish policy Mr. Bright's ideas or influence have been wholly beneficial. He has never shown sufficient desire to support the law by the whole force, if necessary, of the state. The Coercion Act, which either has expired or is about to expire, was an attempt, and, we may now add a futile attempt, to substitute humane despotism for legal sternness. But the undoubted benefit which Mr. Bright's teaching has conferred in England is to create or evoke a new spirit of patience. Whether the singular calmness which, on the whole, has for the last two years characterized English popular sentiment with regard to Ireland will endure, is a matter on which no one would wish to pronounce a confident opinion. But that the attitude of the nation on the news of the assassination of Lord Cavendish and of Mr. Burke was so utterly unlike the condition of violent passion excited by the no doubt infinitely greater horrors of the Sepoy Mutiny, is a singular tribute to the effect of unceasing protests in favor of humanity and of justice.

Mr. Bright's statesmanship will, we suspect, command in future times but very qualified admiration. His religious—which is with him the same thing as his political—creed is open to speculative objections, and the attempt to make it the guide of national conduct has led, and must lead, to several unsatisfactory results. But candid critics will, when party contests have become matters of the past, admit that Mr. Bright has labored after his lights to import the spirit of morality, of justice, and of humanity into politics, and that few preachers have more effectively taught to their generation the lesson which it was their mission to preach.

A. V. Dicey.

Correspondence.

A FALSE NEWS ITEM.

To the Editor of The Nation:

Sir: In your issue of August 3, 1882, I have observed the following, under the heading "Summary of the Week's News":

"There is great mortality in Alaska from a plague—a combination of scarlet fever and measles. Commander Pearson, of the U. S. S. *Wachusett*, is severely censured for taking both surgeons away from Sitka and leaving no medicine."

Coming from such a paper as the *Nation*, one would certainly conclude that the administration of Commander Pearson in Alaska is censured; that his action in this case at Sitka was inhuman. To correct the impression which your notice gives, and to show that the letter from Alaska, which no doubt is your authority, did not state the facts as they were, I beg leave to submit the following, showing that Commander Pearson did all that could be demanded of him, and that his action could not be censured.

The *Wachusett* arrived at Sitka on July 17, and found that there had been much sickness in the place, and, as you state, great mortality. One surgeon was at once directed to investigate the disease, and to prescribe for the sick. The *Wachusett* was placed in quarantine, not wishing to get measles aboard. On the 23d of July we had coaled and were ready for sea, but before deciding to sail, Commander Pearson again directed the medical officer to examine the condition of affairs ashore, and report whether or not it was necessary to leave a medical officer at Sitka in event of our going to sea. The senior medical officer reported that the epidemic had subsided; there were no new cases. The sick had been seen, and prescribed for, and medicines

and directions left for their use, so that it was not necessary to leave a medical officer at Sitka. The sincerity of this report could be appreciated by knowing the devotion of the medical officers of this ship to the sick of Alaska; and it proved correct, inasmuch as the sickness entirely disappeared. There being no business to detain the *Wachusett* at Sitka, she sailed on the 27th for Wrangel

In conclusion, I would state that what I presume to be your authority for stating that "Commander Pearson is censured," was a letter written by parties in Sitka who seem to be desirous of making themselves disagreeable to Naval authority in Alaska.

If the above could have a place in your valuable paper, the wrong impressions concerning Commander Pearson might be corrected.

Very respectfully,

A. C. DILLINGHAM,
Lieutenant U. S. N.

U. S. S. *Wachusett*, 3D RATE, OFF FORT WRANGEL, ALASKA TERRITORY, Sept. 7, 1882.

THE FREE PLAY OF ECONOMIC FORCES.

TO THE EDITOR OF THE NATION:

SIR: I read, in your review of Jevons's 'State in Relation to Labor': "Under the unrestricted play of economic forces the worst possible, not the best possible, form of industrial society comes to exist. The moral tone imparted to it is that of the worst, and not of the best, competing elements." This strikes me as "strong doctrine." I do not care to enter into any discussion of the illustration by which you enforce it, or the views of state interference which you bring forward. I strongly dissent from them; but I know that they are in fashion. I cannot, however, resist the temptation to call upon you to reconsider the doctrine of the lines which I have quoted, and let us know whether it is the sober conviction of the *Nation* that that doctrine is true. I have heard it said that some people believe that the free operation of economic forces produces the ideally best form of industrial society, and that others believe that the same force produces the best form of society which is possible under the existing conditions. Cobden held something approaching to the latter doctrine, but never formulated it, to my present recollection. There used to be a school of us who held that the free play of economic forces would produce (to judge from all experience) a better form of industrial society than could ever be produced by laws and boards of state inspectors. We held this, not as an "absolute principle," but as a maxim of expediency. I do not know how many of that school are still left. When Jevons could write such a farrago of loose thinking as appears in the book referred to, we may well doubt of others. I am, however, for one, still firm in the old faith, my education in which I owed, in no slight degree, in my younger days, to the *Nation*. The doctrine that industrial society would, under the free play of economic forces, run down to the worst possible form, is entirely new to me. It is an "absolute principle," far transcending in its scope any absolute principle which I have heretofore met with in social science. I should like respectfully to inquire whether the *Nation* has adopted it, and means to teach it to the persons who trust that journal to do their thinking for them. If so, I think that we are entitled to a very careful elucidation of the doctrine.

Yours very truly,

W. G. SUMNER.

NEW HAVEN, Sept. 30, 1882.

[The doctrine is doubtless strongly expressed, but it is nevertheless true that the unrestricted play of economic forces has, wherever tried, produced a bad form of industrial society, if not the worst possible. It has never been completely tried anywhere, but it has been more fully tried in England than elsewhere, and there produced results which compelled state interference through a considerable number of regulating acts. Moreover, some of the best specimens of industrial society on a small scale owe their goodness, not to the free play of economic forces, but to the interference wrought by the benevolence of employers. We are not aware that the *Nation* has ever anywhere absolutely opposed state interference. On the contrary, it has always treated the proper limits of the province of government, on the rule of J. S. Mill, as a line of expediency. It could not maintain this and maintain also that industrial activity should always, under all circumstances, be let alone. But we concede that to say that "the worst possible form of industrial society comes to exist under the free play of economic forces," is going too far, because nobody has seen the worst possible form, or knows what it is. The worst form we know of is slavery, but that cannot be called the product of a free play of economic forces. It is rather the result of the free play of military force. In the last analysis, it may be said to rest on the ability of the employer to give the laborer a good thrashing whenever he asks for wages.—ED. NATION.]

THE NEW YORK CITY REPUBLICAN ORGANIZATION.

TO THE EDITOR OF THE NATION:

SIR: In a conversation on politics, I made the assertion that only a comparatively small number of the Republican voters of New York *City* had a voice in the primary meetings. Am I right? Could you give a short article on the subject?

A CONSTANT READER OF THE NATION.

KEENE, N. H.

TO THE EDITOR OF THE NATION:

SIR: Permit an old reader to remark that he has read what you have published from time to time concerning the non-representation of the great mass of New York City Republicans in the primaries. What I do not understand is the origin and history of this state of things, and the constitutions and rules of the local societies by which the control of New York Republican politics is kept in the hands of a small number of men—say, five or six thousand. It has occurred to me that two or three elaborate articles on the general topic at this time would be of public service. Certainly, they would add greatly to my stock of information.

Respectfully, OLD READER.

CLEVELAND, O., Oct. 6, 1882.

[We last published a very full account of the matter in the *Nation* of December 4, 1879, in an article entitled "New York Primaries Described by a Worker," based on a letter written to Mr. Arthur by one of the local "workers," Mr. George Bliss, who, though by no means a political Puritan himself, was, or professed to be, shocked by the state of things at that date. There is no reason to suppose that it has improved since then, and much for supposing that it has grown worse. His description showed that the rolls of the twenty-four District Associations which elect the delegates to the nominating conventions contained 13,335 names, representing the 50,000 (now said to be 80,000) Republican voters of this city. Of these, however, he said fully one-half were the names of dead men, or of men who had removed or turned Democrats, and that not over 6,000 were entitled to be there. Why do more of the voters not join the Associations? it will be asked. First, because the existing members do not wish additions to their numbers. They are in control; in other words, they are the Machine. They elect the delegates who make the nominations, and it is their interest to confine this power to as small a number as possible. The hindrances to joining them on the part of respectable men are several. In the first place, the meetings are held at night, and in disagreeable localities, and the managers are rough and tricky, and quiet men of business dislike leaving their homes to contend with them, knowing that they will be cheated by preconcerted arrangements, and fearing that they will be insulted and abused. In the second place, a pledge to support all nominations hereafter to be made is exacted as a condition of membership, which, of course, no self-respecting man will take. But, thirdly, supposing him to be willing to take it, and to be willing to incur all the discomfort and inconvenience of attending the meetings, other difficulties arise. According to Mr. Bliss, applicants for admission whose presence the Machine men do not desire are "directly rejected" without reason—admission being by election—but oftener "by a refusal to act on names presented by hanging them up in a committee which never reports." Obnoxious members, too, are got rid of or kept away from the meetings by "dropping" them from the rolls, by "expelling them on frivolous charges," or by sending them notice of meetings by postal-card two hours only before the hour named, and refusing admission to those who cannot show the card.

Why, then, it will be asked, do the respectable citizens not organize primaries of their own, and send up contesting delegations to the Convention? Because the Machine, headed by the Boss, has control of the Conventions, and supports its subordinates in the city, and would reject, as "irregular," delegates produced by a revolt of any kind. The system is thoroughly organized. It is nefarious in all its details, and is based on the assumption, which events have justified for the last twenty years, that the control of the Republican Convention secures the Republican vote, owing to the deep-seated Republican dread of the Democrats. This dread, in fact, furnishes a large band of rascals in this city with their whole stock in trade, and in many cases with their means of livelihood. —ED. NATION.]

A RITUALISTIC VIEW OF THE LATE DR. PUSEY.

TO THE EDITOR OF THE NATION:

SIR: Permit me a few words regarding your editorial in the *Nation* of September 21. It seems to me to give a wrong impression in several particulars about Dr. Pusey and the great

work in the Church of England for which he did so much.

I venture to assert that there are few scholars capable of judging of the merits of such works as 'Lectures on the Prophecy of Daniel,' 'Commentaries on the Minor Prophets,' the last great work on 'Eternal Punishment,' and others, who will agree with you that "Dr. Pusey's scholarship in Hebrew was mediocre." Whatever opinions there may be about his religious teaching, there appears to be but one among scholars in this—that one of the greatest of their number has gone to his rest. This is what Newman said of him: "I used to call him ὁ μέγας. His great learning, his immense diligence, his scholar-like mind, his simple devotion to the cause of religion, overcame me."

Again, Pusey never founded a "sect." It would have been a sin of the gravest character for a man of his belief to do so. "He remained," as you say, "in the English Church." Neither did he proclaim a "new doctrine." He and his few earnest companions showed that the Church of England is Divine in its origin, Apostolic and Catholic. They sought to revive, what was then so much needed, earnestness in the Christian life; to point out the neglected doctrines and practices of the Church, which were taught in the Bible, the Fathers, the Primitive Church, and the Prayer-Book of the Church of England. The last fifty years have shown the wonderful results of the Oxford movement. It has been, as the Archbishop of Canterbury acknowledges, a period of the greatest life in the Church of England. The restored churches, the many new ones built, the work of sisterhoods, weekly communions, and many other marks of true religion are living witnesses, to-day, of the greatness of the work begun by the humble Pusey and his associates. Such scholars as Liddon, such preachers as Knox-Little, and such martyrs as Green, now in Lancaster jail more than a year for being true to the Church and constitutional law, are the men that are now carrying on the work. It is before this school in the Church that the "new set of antagonists" and other foes of the Faith must fall.

As to confession, it seems no more a mark of "weakness" to make use of it, if one desires it, than for one to make known to a physician one's sickness in order to be cured.

Respectfully yours, W. H. Tomlins.

Rantoul, Ill., October 3, 1882.

[No Hebraist of distinction has said that Dr. Pusey was more than "mediocre." The best that has been said for him is, that the chair which he took when no clergyman in the Anglican Church knew any Hebrew did not decline in his hands. He did not found a "sect" in the technical sense, perhaps, but his followers were separated from the Evangelical wing by lines of dislike and distrust and disagreement as strong as those which separate the Church from any sect. About "the sin" of it we know nothing. Denying that he proclaimed a "new doctrine" is, we must be allowed to say, somewhat evasive. The denial can only be maintained by the plea that the Church of England existed in the third and fourth century, and that any doctrine then held is now old Anglican doctrine. But we cannot give our columns up to rattling the dry bones of a dead controversy.—Ed. Nation.]

TRIAL BY JUDGE OR JURY.

To the Editor of The Nation:

Sir: Mr. Edward A. Freeman, in a recent article in the *Fortnightly Review*, entitled "Some Impressions of the United States," makes the following statement, which seems to require explanation:

"New devices, indeed, we sometimes light upon in the New World. When we look at a Maryland judge, who is authorized under certain circumstances to send men to the gallows without a jury, we are divided between wonder at the innovation and awe toward a being who can do what no being that we ever saw before can do."

The innovation in Maryland which creates wonder and awe in the mind of Mr. Freeman is a law which gives to every one accused of crime the right to elect whether he will be tried by a court or a jury, without excepting capital cases. It has in substance been in force ever since 1793, and is entirely satisfactory to the people of the State. It is very seldom that capital cases are submitted to the Court, although instances have occurred, but in none, so far as I know, has the Court found it necessary to pronounce sentence of death.

It is a noteworthy fact, however, that those accused of all other offences generally prefer the Court to a jury. I have before me a list of the trials which took place in the Criminal Court of Baltimore City from the 1st of January, 1880, to the 11th of September, 1882. They were in all 4,417. Of these, many were police cases, which are everywhere tried without a jury, but a large number were crimes of the grade of felony, which, according to the rules of the common law, could only be tried before a jury. In the trial of all these cases only 238 juries were sworn. This Court is presided over by a single judge, and during the last fifteen years the presiding judge has been changed three times, but throughout the entire period the trials by the Court of offences of every grade, less than capital, have greatly exceeded those by a jury. A very onerous, and often painful, duty is thus imposed on the Court, but it is easy to see that much is gained in saving expense as well as the time of all concerned in the trials. If it be right to give to the accused the privilege of election to be tried by the Court or a jury, there seems to be no sufficient reason to deprive him of it in a capital case.

The law of Maryland is at least worthy of consideration by those communities which do not permit any one accused of felony to be tried by the Court, but subject him against his will to the tedious, expensive, and uncertain trial by jury. G. W. B.

Baltimore, October 7, 1882.

SCHWERD ON LIGHT.

To the Editor of The Nation:

Sir: In the review of Mr. Wright's 'Light' (*Nation*, Sept. 14, 1882) is this sentence: "In this connection he quotes an experiment of Schwerd's, but it happens that Schwerd is one of the few names which we are unable to find in any list of physicists." The book from which the experiment was quoted is doubtless 'Die Beugungserscheinungen, aus den Fundamentalgezetzen der Undulationstheorie analytisch entwickelt,' by F. M. Schwerd (Mannheim, 1835, 4to, 18 copperplates). It is referred to in Ganot's 'Physics,' quoted from frequently by Gehler, called by both Müller and Wüllner "a classical work." Daguin says: "We cite particularly Schwerd"; and Billet speaks of him as "cet habile physicien." Surely, Mr. Wright could quote from no better authority.

Yours truly, Charles K. Wead.

Ann Arbor, Mich., Sept. 30, 1882.

Notes.

Charles Scribner's Sons offer at a very reasonable price a neat, uniform edition of the late George P. Marsh's principal works—viz., 'Lectures on the English Language,' first and second series, in two volumes, and 'The Earth as Modified by Human Action.' These works are of a class peculiarly available for self-culture, and are now brought within the reach of every one. No better examples of popularization exist.

Hallam's and May's respective Constitutional Histories of England, covering together the unbroken period from 1485 to 1870, have been handsomely republished in a new "Standard Edition" by A. C. Armstrong & Son, as a uniform series, consisting of four volumes 8vo.

The same firm reduce to the lowest terms the price of a complete uniform edition of the historical and border romances of William Gilmore Simms—seventeen volumes being compressed into ten, and the whole given a very presentable exterior for the library. Of this author it would be curious to learn how widespread is his present popularity in the section of which he was for so long almost the only man of letters. Darley's original illustrations of these novels have been retained.

Bulfinch's 'Age of Fable' having been reprinted till the plates were worn out, the publishers (Lee & Shepard) have wholly remade the book, with additions by the Rev. E. E. Hale, in the spirit of the original, and with a great number of illustrations. It still, at the end of nearly thirty years, holds its own as a clear and readable substitute for Lempriere and the more ponderous and learned classical dictionaries, to say nothing of its copious examples of the mythologic allusiveness of the best English poetry.

Walpole's 'Short History of the Kingdom of Ireland' has been added to the Franklin Square Library of the Messrs. Harper.

Three volumes of "facetiæ" meet on our table. 'Billy Blew-Away's Alphabetical, Orthographical, and Philological Picture-Book' (Boston: Osgood) is a very moderately jocose assortment of white silhouettes on a blue ground. Owen Wister's 'The New Swiss Family Robinson' (Cambridge: C. W. Sever) hits the mark as a satire, but for sustained humor it suffers by comparison with Rollo's Cambridge adventures, that earlier trophy of the Harvard *Lampoon*. On the other hand, 'College Cuts' (White & Stokes), chosen from the Columbia *Spectator*, a college paper with a humorous corner or corners, compares well with the larger and more heterogeneous collection of designs from the *Lampoon*. There is more *chic* and a higher average quality in the drawing. Politics are altogether eschewed in favor of collegiate and social topics. The legends are noticeably good.

Mr. Howard Henderson's recent articles in the *American Field* are to be reissued as a book, under the title, 'Practical Hints on Camping,' with the imprint of Jansen, McClurg & Co. Camp photography is incidentally treated of.

White & Stokes announce a new and elegant edition in 16mo of Charlotte Brontë's poems; and 'The Artist's Year,' illustrated for every month by a design from a representative American artist, and a poem.

Harper & Bros. have issued 'Sterne,' by H. D. Traill, in the English Men of Letters Series; and 'Diddie, Dumps, and Tot,' by Mrs. Louise Clark Pyrnelle—a picture of slave-life in the South from a child's point of view.

Cassell & Co. have nearly ready 'The United States Art Directory and Year-Book,' prepared under the direction of Mr. S. R. Koehler, late editor of the *American Art Review*.

From a circular issued by Mr. Peter G. Thomson, of Cincinnati, publisher of Gen. J. D. Cox's 'Second Battle of Bull Run,' it appears that no unpleasantness exists, as has been alleged, between him and Messrs. Charles Scribner's Sons, on the ground of that volume's having been published in a style similar to that of the 'Campaigns of the Civil War.'

Forestry Bulletins Nos. 19, 20, and 21 of the Census Bureau, issued under the direction of Prof. C. S. Sargent, exhibit graphically in colored maps the timber conditions of the Pacific Coast proper. No. 18 tabulates the fuel value of the more important woods of the United States.

We have received the first number of the *American Journal of Forestry*, edited by Mr. Franklin B. Hough, Chief of Forestry Division, United States Department of Agriculture, and published at Cincinnati by Robert Clarke & Co., and a sixteen-page issue of the Montreal *Herald*, filled with the proceedings of the recent American Forestry Congress in that city.

The first number of the monthly *Decorator and Furnisher* (New York: E. W. Bullinger) promises and contains contributions by men of established reputation, but the form of this magazine is opposed to the best taste, and makes one doubt the authority of its directors.

Tributes to Darwin on this side of the water have not been wanting in number or heartiness. The latest that has fallen under our eye is Dr. Asa Gray's sympathetic "biographical notice," as it is called, in the Proceedings of the American Academy of Arts and Sciences. In a Washington paper we find brief but admiring mention of a lecture on 'The Demon of Darwin,' delivered at the National Medical College, by Dr. Elliott Coues, whose motive seems to have been to indicate what philosophy may be deduced from the Darwinian theory of evolution, with special reference to its bearing upon Platonism and its anti-materialistic tendency. "A dialogue between the disembodied spirits of Darwin and Socrates" formed a portion of the lecture, if that is the right name to bestow on the composition.

Apropos of Mr. Herbert Spencer's visit to this country, the Providence Library's *Monthly Reference Lists* for September has its customary bibliography concerning his philosophy. The second topic is Wordsworth's poetry.

Classes in the subjects required by the Harvard Examinations for Women, which are now identical with those for boys, have been established by the New York Local Committee at Nos. 21 and 23 West Thirty-second Street. The object is "to furnish experienced and responsible teachers, at the lowest possible cost to the student." The instructor in Latin and Greek is Dr. E. G. Sihler, late Johns Hopkins Fellow in Greek, and his charge will be proportional to the size of his class. "Earnest students, not preparing for the examinations, will be admitted to the Classical and Mathematical Courses."

The most promising movement yet made toward the founding of an educational journal worthy of the best culture of the country is announced in a circular issued by Mr. H. S. Ballou, 7 A Beacon Street, Boston. It will be called the *American Teacher*, and "will aim to discuss, in the light of philosophic principles, all questions of education," ranging from the kindergarten to the university. One department alone, if faithfully conducted, would be worth the whole cost of the experiment; we refer to the "critical reviews, by specialists, of school-books and works on education." We cannot reproduce here the list of eminent names embracing contributors and actual shareholders, nor the scheme by which a permanent fund is to be raised for the paper. The circular can be had on application to Mr. Ballou, as above.

—B. Westermann & Co. send us the first portion of an immense work undertaken by W. Spemann, of Stuttgart, under the editorial direction of Joseph Kürschner—'Deutsche National-Literatur.' In brief, this is a combination of general views of the whole course of German literature, with historical and critical editing of its chief monuments. Thus, the *Lieferung* before us contains (without completing it) Goethe's 'Faust,' preceded by an introduction giving an account of the "origins" of that drama, while the text itself is freely commented in foot-notes. Taking a hint, perhaps, from the publishers (Velhagen & Klasing) of Koenig's 'Deutsche Literatur-Geschichte' and Stacke's 'Deutsche Geschichte,' Spemann proposes to embellish usefully the present work with portraits and other illustrations in great variety. Accordingly, we have already facsimiles of a good-sized drawing by Goethe (in 1806) of his 'Faust' MS., and of the playbills for the first representations of 'Faust' at Brunswick and at Weimar. Finally, the index of names and subjects will be made a veritable literary lexicon by the insertion of explanatory notices, biographical data, etc., and will fill two volumes. On such a scale, at least, this last feature has no parallel. Spemann has carried as far as any one the union of good workmanship with cheapness, and he offers each instalment of the 'German National Literature' at about fourteen cents (to the home subscriber, of course). One or two will appear weekly for the space of three or four years, so that we may calculate that the whole work will cost, unbound, from forty to fifty dollars. The body print for the text is large enough; that for the editorial prefix is fine, but as little trying to the eyes as faultless presswork can make it.

—We have just received from the author a volume which is unique in more than one respect. Its title is 'Brynjólfur Sveinsson.' It was printed in Reykiavik, the capital of Iceland, by Einar Thordarson, the leading publisher of that distant land, and composed by Mrs. Torfhildur Thorsteinsdóttir Holm, who resides in Selkirk West, Manitoba, Canada. It is a stout volume of 309 octavo pages, and is, on the one hand, the first historical novel ever written or published in the Icelandic language, and, on the other hand, the first novel ever written by an Icelandic woman. The scene of the story is in Iceland, in about the middle of the seventeenth century, Mrs. Holm having purposed to give a picture of Ultima Thule about the time when the epoch of modern researches in old Norse antiquities began. The hero of the novel is Brynjolf Sweinsson, Bishop of Skalholt, who discovered the manuscript of the Elder Edda in the year 1643, and gave it the title of Sæmundar Edda, believing it to have been written by Sæmund the Wise (born 1056, died 1133), an opinion that has since been set aside. He was born, 1605, at a place called Holt, in western Iceland, and died as Bishop of Skalholt in 1674. He belongs to the brilliant galaxy of learned men whom Iceland produced in the seventeenth century, and among whom we find Arngrim Jonsson, the progenitor of the celebrated Vidalin family, and the so-called "restorer of Icelandic literature"; Thorlak Skulason, the translator of the Icelandic Bible; Ole Worm, the antiquarian and runologist; Björn Jonsson, the annalist; Thormod Torfason (Torfæus), the historian; Arne Magnusson, a remarkable collector of manuscripts, and founder of the Arne Magnæan Library in Copenhagen, and many others. As to the contents of Mrs. Holm's book, we may say that she writes her native tongue well, and that there is a charming simplicity in her narrative perfectly in keeping with the theme she has in hand. But the mere circumstances of its production and publication would entitle her book to be entered among the curiosities of literature.

—Dr. Hans von Bülow, who wields a clever and sarcastic pen, wrote some letters to the *Allgemeine Deutsche Musik-Zeitung*, last spring, descriptive of his concert tour in Sweden, Norway, and Denmark. These letters, which have been reissued in pamphlet form, deserve attention not only as one of the best existing accounts of the musical condition of the countries named, but also because of the side lights incidentally thrown on German music and musicians. Much space is devoted to Gade, the most prominent of the Northern composers. He is still of youthful appearance, although sixty-five years old. He was a pupil of Mendelssohn, but has made persistent efforts to introduce Liszt and Wagner to Copenhagen audiences; and his efforts were crowned with success because he went to work with the *intention* of securing success for them (a hit at some German conductors). Gade has also familiarized his countrymen with those monumental works, Bach's Passion music and Beethoven's Ninth Symphony, and he "has more sympathy for Berlioz's music than all the German conductors taken together." Bülow's manner of interpreting Beethoven with his Meiningen orchestra having been questioned by several German critics, he is delighted to find Gade in perfect accordance with his views. Among the players in the Royal orchestra of Copenhagen, he found artists of the first rank. The audiences were, in spite of their latitude, characterized by a "tropical warmth" and enthusiasm which he had not encountered elsewhere during twenty-five years of concertizing; and their taste was so good that he found he could dispense with the sensational pieces necessary elsewhere. This pleasant state of affairs he thinks is due to the large number of excellent musicians, and, negatively, to the subordinate position occupied by that "bastard-parasite," the opera; for Bülow is of opinion that "a healthy development of musical taste is rendered impossible, or at least is greatly obstructed, by an unhealthy condition of operatic affairs"—a statement which New Yorkers might reflect upon to advantage. During the last ten years Gade has written less than formerly, and his "novelettes" for orchestra, as well as his concerto for violin, have not received the attention they deserve. The same is true of the operas, cantatas, and ballets of the Nestor of Danish composers, Prof. J. Hartmann. Like the Russian Glinka, he is a national composer, and has never written anything that is trivial, thus proving Rubinstein's observation that "music is an aristocratic art." The excellent organist Lindemann travels through the country every summer, at the expense of the city of Stockholm, to complete his collection of Northern folk-songs. In regard to Stockholm audiences, too, Bülow found that "the best that could be offered them was just good enough for them." The two greatest nuisances he observed were the excessive pauper tax levied on amusements, and the fluctuations in the price of tickets. The pauper tax is no less than ten per cent. of the gross receipts, whereas in Paris it is only five per cent. Concert tickets cost three crowns on the day of the concert, four crowns a day in advance, and five two days in advance—a most paradoxical "anti-climax." Bülow is a great admirer of Brahms, and he thinks that a "rational Brahms cultus" introduced among a people so highly gifted would have immeasurable consequences. "After twelve years' study of the great master," he says, "I am somewhat in the same position as that which the painter Cornelius held toward Rome. Being asked by a German guest how much time was requisite to know thoroughly the Eternal City, he exclaimed impatiently: 'You will have to ask some one else; I have only been here twenty-five years.'"

—We expect new kings to be discovered on the bricks of Assyria, and the dynasties of Egypt are not quite definitely settled. It was only the other day that M. Miller introduced us to a hitherto unknown Queen of Cyprus, Demanassa. But who expected that an addition could be made to the royal house of France? Yet so it is. M. Charles Grellet-Balguerie, in a pamphlet called 'Deux Découvertes Historiques; Histoire de Clovis III., Nouveau Roi de France' (672 or 673 to 677), has given reasons for thinking that a young prince who was produced by the Mayor of the Palace, Ébroin, as son of Clotaire III. was really son of Dagobert III. of Austrasia, and should be styled Clovis III., so that the son of Thierry III. will become Clovis IV. It is, after all, a question rather of *hautes études* than of living interest, even less important than will be for posterity the names of the puppets whom Gambetta put forward when he hesitated to take the power which he lost so soon.

—In 1879 it was a favorite argument with the German protectionists that foreigners would be obliged to pay the customs duties; now, as we learn from the *Jahrbücher für Nationalökonomie und Statistik* (a magazine not inclined to misrepresent in favor of the free-trade school), manufacturers themselves are clamoring for rebates on raw material imported with a view to export after being manufactured. The chief cause of this change of attitude has been the experience of the last two years regarding the effect on German mills of the duty on grain. Reports of failures from all parts of Germany show that this important industry is on the road to ruin. Rebates, indeed, were nominally allowed when it could be proved that the flour exported was made of grain which had been imported, and only of such grain, but the proof of identity was in most cases impossible. It was a general practice to mix foreign and domestic grain in grinding, and, for technical and economic reasons, the German mills are to a great extent forced to do so. Of course, when imported grain was mixed with domestic, no rebate whatever could be allowed. What was the effect expressed in figures? In 1879, 200,000 tons of flour and meal were exported; in 1880, 80,000 tons; and in 1881, 50,000 tons. Between 1875 and 1879 the industry of the flouring-mills had increased rapidly, and the quality of the work done had improved. The great mills on the North Sea and the Baltic being unable, as formerly, to export their products to Holland, Denmark, Sweden, and Norway, attempted to dispose of them in Germany, the result being the excessive competition which has ruined so many mill-owners. This injury to the country has been so indisputable that when the Government brought in a bill doing away with the necessity of establishing the identity of the flour exported with the wheat imported, it was accepted in the Imperial Parliament without opposition. Now an exporter of flour is allowed a rebate in proportion to the grain he has imported, without being obliged to prove that the flour exported was manufactured out of the very same grain; but it will take a long time to repair the injury done to the milling industry in Germany. Large mills have been established in those countries which were formerly her best consumers of mill products, and have obtained possession of the market; for example, in Denmark, where Russian grain is ground and exported to England and Holland; in Holland itself, etc. As the prosperity of the farmers is largely dependent on the mills, they also begin to think that protection is not proving the boon to Germany which they hoped.

MOZLEY'S REMINISCENCES.—II.

Reminiscences, chiefly of Oriel College and the Oxford Movement. By the Rev. T. Mozley, M.A., formerly Fellow of Oriel, etc. 2 vols. London: Longmans; Boston: Houghton, Mifflin & Co.

FROM 1836 to 1842 or 1843 (Mr. Mozley is always vague about dates) the Rector of Cholderton was occupied and oppressed by what might be called the chief work of his life. At infinite labor, cost, and anxiety he repaired or rebuilt Cholderton Church. He fell, he tells us, into his task almost involuntarily, and assuredly in total ignorance of the extent of the work in which he was engaged. "My visitors chaffed me on my church," and made invidious comparisons between it and the new rectory. "All the foolish things I had ever said about smug parsons and snug parsonages were now visited upon me. Something must be done, and when I had pupils I could not say I wanted the means. Moreover, the churches all about were in a bad state. I was there to set an example. I can honestly say it was not a spontaneous act." Having once begun his work, the Rector was, he adds, as wild as any other church restorer. He purchased a roof of a highly ornamental character, then lying for sale at Ipswich, but which probably had originally covered "the clerestory of some conventual church destroyed at the Reformation." The covering did not fit the building. "The roof fixed the proportions of the church. It was eighty feet long, and of course I could sacrifice nothing of it. Though we coaxed out of it a few inches more breadth, we could not get more than twenty feet six inches. What did I not sacrifice to this dumb idol?" The church had, in short, to be rebuilt to fit the roof. When the task was accomplished, the builder left his church and betook himself to writing articles for the *Times*.

Of all the details of Mr. Mozley's autobiography, none are more interesting to humane or sympathetic readers than the sort of tragi-comic story of the Rector and his church. It tells us more of the man than any other part of his book. The oddity of the thing, however, is that, as sometimes happens in life, an individual fact becomes a type of something more general than itself. As one reflects on Mr. Mozley's tale of Cholderton Church, the thought irresistibly suggests itself that the whole thing is a clever allegory, setting forth in a figure the history of the early Tractarian movement. It were hard to sum up the history of Newman and his friends better than by the statement that they tried to fit on the Church of England a roof of a highly ornamental character which had originally belonged to the church destroyed at the Reformation. They, too, like Mr. Mozley, felt keenly the contrast between the comfort of smug parsons supported by the state and the condition of the Church of which the parsons were supposed to be servants. With Newman and his friends, as with the restorer of Cholderton Church, the course they took could hardly be called a "spontaneous act." We can see, what neither Newman nor his opponents could be expected to see, that the Tractarian movement itself was a portion of a far wider reaction, and that the actors in it did little more than conscientiously follow out the path marked out for them by their position, their antecedents, and the circumstances of the time. They were undoubtedly as much surprised as their critics when they found "that the roof fixed the proportion of the Church." When their labors seemed all but crowned with success, the ablest of them retreated from the Church which they could not transform into "the Church destroyed by the Reformation." The puzzle for an historical student is to understand the causes both of the great and rapid success of Tractarianism, combined with its total failure to produce that revolution in the Church of England and in the people of England which was doubtless more or less distinctly hoped for by the earlier Tractarians. To solve this enigma fully would be little less than both to record and explain the whole course of English religious opinion during at least half a century. There is not one man in ten thousand who has either the knowledge or the ability for the task, and assuredly the results of his labors could not be set forth in a newspaper article; but an intelligent study of Mr. Mozley's 'Reminiscences' enables a student to perceive what were some of the more obvious and external conditions which account for the rapid progress and for the complete failure (looked at as a whole) of a movement which ought, if successful, to have reunited the Church of England with the Church of Rome.

It is no disparagement to Newman to recognize the fact, which he certainly would be the last to deny, that his own talents and moral influence had probably rather less effect on the course of the Oxford movement than would be attributed to them either by fervent admirers or by strenuous opponents. It is hardly conceivable that if Newman had died young, or had, as it seems might have been the case, devoted his life to the politics of Hanover, the Anglican reaction would not have run its course. Mr. Mozley is perfectly right in asserting that "people who talk about the Oxford movement seldom say anything about the universal movement which immediately preceded it. In the year 1831 the whole fabric of English, and indeed of European, society was trembling to the foundations. Every party, every interest, political or religious, in this country was pushing its claims to universal acceptance, with the single exception of the Church of England, which was folding its robes to die with what dignity it could." Was it to be expected that the greatest, the most ancient, the most powerful association in the country should die without a struggle? To fancy that the Church would simply fold its robes to die, was to ignore both the teaching of history and the real condition not only of England, but of the European world. The eighteenth century, it has been well said, lasted in spirit till 1832; in other words, the reaction against the theories, political, moral, and religious, of which the eighteenth century is the representative had at that date excited a reaction of sentiment which became apparent to the whole world. John Mill was brought up outside the limits of the Christian world, but the autobiography of John Mill sufficiently proves to any candid observer the existence in 1832 of just that state of opinion which generates ecclesiastical movements such as the Tractarianism of England or the Ultramontanism of France. A Church, it may be added, like the Anglican communion, based on endless compromises between Catholicism and Protestantism—compromises which are the result neither of logic nor of religious conviction, but of historical and political considerations—is specially liable to become the field for the unexpected production of religious developments. An impressive preacher or thinker pushes to their logical conclusion one side of the Church's multifarious and not over-consistent doctrines. He means simply to give effect to the Church's true teaching. He, and still more his disciples, become without meaning it ecclesiastical revolutionists. Whitgift and Laud, Wesley, Simeon, Newman, and Arnold each and all believed themselves to be expounders of the true doctrines of the Church of England. They each, as far as their influence extended, disturbed the practical compromise which, if not exactly the

Church's true doctrine, is its true reason for existence.

If there were to be a High-Church revival, any one who knows England may confidently assert that Oxford was in 1832 its appropriate home. The truth is, that the English universities, and especially Oxford, are, whatever their defects or merits, created, so to speak, to be the centre of movements. There are at the universities collected teachers and thinkers who, despite the popular prejudice against dons or professors, are constantly men of great talent, of impressive character, and of that kind of disinterestedness which even more than cleverness or energy enlists the enthusiasm of youth. To any one who has realized how large is the amount of intellect, of learning, and even of originality which lies hid in the English universities, the true difficulty is to account, not for the extent of the influence exerted by Oxford or Cambridge, but for that influence not having become as marked, at least, as the weight exercised in modern Germany by the political and theological teaching of professors. For not only have there certainly never for the last fifty years, and probably for a much longer period, been lacking at Oxford teachers preëminently fitted to impress their hearers, but the college system, with its curious combination of freedom with discipline, of intimate association with individual independence, brings young men together in just such a manner as to render them specially sensitive to the authority of teachers who are, for the most part, still young enough not to be separated by great difference of age from the sympathies of their pupils. A sincere and enthusiastic believer in Mormonism, could such a person become the leading tutor, say, of New College, of Oriel, or of Balliol, would, one may feel well assured, soon organize a Mormon movement, and alarm respectable society by inducing hundreds of young men to set sail for Utah.

But if the institutions and traditions of Oxford favor the growth, up to a certain point, of almost any form of religious faith or scepticism, we must remember that fifty years ago Oxford was far better than at present suited to be the centre of a movement of which the inevitable result was to increase the influence of the clergy, and to bring into prominence clerical views of life, of policy, and of religion. The undergraduates were for the most part sons of clergymen; they were themselves, in many cases, destined to take orders. It is impossible to read Newman's 'Loss and Gain,' or, for that matter, Froude's 'Nemesis of Faith,' without seeing in each book the picture of a world where the questions which interest the clergy have a prominence, and even predominance, which they certainly do not possess in the larger sphere of the general life of England. Mr. Mozley even now looks back on the Oxford movement as a sort of golden age. Can any one wonder if every young clergyman throughout England felt a thrill of new life when called upon as a matter of duty to take part in a great cause, the success of which, by elevating his order, lent new dignity to his own existence? Early Evangelicalism had no such attraction for the clergy. The converted layman stood in the same position as the converted priest—or, rather, the priest was not a priest at all, but, on the Evangelical view, a preacher of the truth, and, as such, on the same footing as a dissenting minister who preached the same doctrine. The liberal or sceptical teaching of the Broad Church may, to a certain extent, lighten the burden of clerical subscription. It may teach clergymen that they have a moral and religious advantage in belonging to a State Church, but it does not tend to raise the dignity or the influence of the clerical order. High Church doctrine, on the other hand, whatever its worth, both increases the dignity of the clergy and, in the mouth at any rate of teachers like Newman and Pusey, invites clergymen to play a prominent part in the moral, the religious, and even the political life of England. "Has not the Church," said Sterling, "in every parish its black dragoon?" There is no need to adopt the description suggested by the intemperate eloquence of the youthful orator, who was haranguing a debating society of youths; but persons who know that the "black dragoon" is generally an excellent gentleman engaged in the earnest discharge of hard and ill-paid duties, may nevertheless admit that Sterling laid his finger on a most important fact. In every parish there is a man who must, from the nature of things, be apt to adopt High Church doctrine. We may fairly say that in half the parishes of England the Tractarians found ready-made missionaries. The instruments for affecting public opinion lay ready to the hands of the Puseyite leaders. They used these instruments (and no blame to them for it) with the energy of men filled with confidence in themselves and in their cause. No one can wonder that the movement spread during its earlier years with astounding rapidity.

What, then, were the reasons which prevented Tractarianism from effecting something like a complete revolution in English opinion? The answers which Mr. Mozley's book suggests are none the less worth consideration because they lie, so to speak, on the surface of the whole matter. Newman and his friends owed their influence in great measure to the fact that they were to the very core a body of university teachers. They were clergymen and college tutors, and they had to a preëminent degree the defects no less than the virtues of priests and professors. Oxford was their world. There is something pathetic in the way in which Mr. Mozley, after his varied experience of life, still appears in feeling to look upon Oxford with something like the veneration with which an enthusiastic Catholic might regard Rome. Much the same is true of Cardinal Newman. Rome commands his reverence and allegiance, but it is impossible to read his 'Apologia' without seeing that toward the end no less than at the beginning of his career his heart remained at Oxford. This concentration of interest on the life of the University, if it increased the immediate authority, was fatal to the ultimate influence of early Tractarians. Mr. Mozley reveals the feeling (and we must add the gross ignorance) of himself no less than of his associates with regard to the world without. His language about Simeon, about Wilberforce, and about the Evangelicals generally, proves plainly that the rank and file of the High-Church army knew next to nothing of the spirit, or even of the lives, of the theological party to whom they were most directly opposed. The notices even of Arnold, who must have been well known to Mozley's Oriel friends, are almost ludicrous, from the absurdly false picture they give of an eminent religious teacher. It is absolutely impossible to suppose that Newman shared the ignorance of his disciple. Still, it is odd to find that if Mr. Mozley's statements be correct, Newman must have thought Thomas Paine to be a fair representative of modern infidelity. In any case, we may fairly assume that even the best informed of the Tractarian leaders—who, by the way, seem to have undertaken to edit the Fathers before reading them—knew for practical purposes little of any part of English life which lay outside the religious interests or controversies of Oxford. They had the power to influence the clergy; they had but very little means of influencing the laity. Of the Dissenters; of the world of science; of the circles influenced by Mill and Bentham; of the men who, like Arnold and Maurice, were intensely interested in questions of the day; of Carlyle, and of men like Carlyle; of the whole world which lay outside the influence of the Church of England; of the movements going on in the Roman Catholic Church; of Roman Catholicism itself as it actually existed, the Puseyites of 1836 seem to have known nothing. That Hurrell Froude should describe the Roman Catholic Church of Ireland as the "Irish schism," is a curious specimen of the contorted and artificial view which the early Anglicans took of the world about them. As you read Mr. Mozley, you feel as if he and his friends had attempted to revolutionize England without ever opening their eyes to the facts of English life. Newman's 'Apologia' itself gives sufficient proof of the fact, which the 'Reminiscences' confirm, that the leaders of the Oxford movement had nearly reached Rome before they clearly saw what was the end to which their path was leading.

This blindness to the facts of English life accounts to a great degree for the curious way in which Mr. Mozley and his friends seem to have underrated, as he apparently still underrates, the strength of English Protestantism. The real gist of the strange series of arguments (if so they may be called) by which he vindicates his qualified belief in the distinctive dogmas of Romanism, is that Anglicanism of a very High-Church type is the creed of English churchmen, and that this creed does not differ essentially from that of Rome. If, as is probable, the men of whom he was the follower and the ally shared the feelings of their disciple, we can understand the failure of the Tractarians to affect the large mass even of churchmen. They did not realize the patent fact that the vast majority of English laymen are essentially Protestants. Mr. Mozley's arguments betray a further and a much deeper source of weakness, which was of itself almost fatal to the success of the Oxford movement. Every one of his reasons for accepting the doctrine of Rome is in reality an application of the well-worn, and to most men by no means convincing, formula, that "you must believe everything or nothing." This mode of reasoning is clearly derived by Mr. Mozley from his teachers. As assailants of prevalent Protestantism, Newman, Ward, and a host of their followers had to adopt the attitude of sceptics. Doubt was to be made the means of producing faith. In particular instances the process gave the desired result; but two consequences also often followed which were certainly not contemplated by preachers who undoubtedly did not intend to propagate scepticism. Some disciples accepted the wrong horn of the proposed dilemma, and preferred general doubt to belief in what appeared to them specific falsehoods. In others there was produced a condition of what may be termed stunted scepticism. Men who saw the difficulties of belief, and who dreaded negation, took up an attitude of semi-belief in doctrines which they could not pronounce to be false without, as they thought, denying the truth of other beliefs which they wished to hold true. Now, such stunted scepticism is, on the whole, favorable to practical conservatism, but is certainly not likely to induce most men to make a complete change in their beliefs, in their mode of life, and in their whole position. Mr. Mozley says, honestly enough, that had he been born a Roman Catholic he would have remained a Roman Catholic throughout life. The influence, in other words, of his teachers tended on the whole to make him remain true to any creed which he had once received by birth or education; but that very teaching indisposed him to leave the community in which he was born. Here, as elsewhere, Mr.

Mozley's self-revelation reveals the thoughts of other hearts. The Oxford movement was arrested because it was based on theories involving something like self-contradiction. Scepticism was used as a means of creating belief, and an appeal to intellectual and moral conservatism was made the foundation of a movement which logically terminated, as in the case of Newman, with a tremendous change. For the most part, conservative instinct was stronger than logic; and Anglicans, like Mr. Mozley, in search of rest rightly enough found such rest as they could in adherence to Anglicanism.

SCHIPPER'S HISTORY OF ENGLISH METRES.

Englische Metrik in historischer und systematischer Entwickelung dargestellt. Von Dr. J. Schipper. Erster Theil: Altenglische Metrik. Bonn: Strauss. Pp. xxvii.–565.

THE want of a systematic treatise upon the origin and growth of English versification has been felt so long that even an inferior work would be sure of a welcome. All the more gladly, then, do we greet the present work, which is in every sense a masterpiece and worthy of a place by the side of Ten Brink's history of our early literature (see *Nation*, No. 667). For twenty years and upward a vain dictum has been in vogue among English and American scholars, to the effect that the Germans, while they might be good enough at special investigations, had little power of generalization, little breadth of view. We ask our readers to note the fine irony of fact. The only two works that have investigated our literature (first its substance, and now its form) as a phenomenon of continuous growth from the obscure early Middle Ages down to the dawn of modern times, tracing its organic relations with the literatures of other peoples, are precisely the works of these two Germans. Not one English scholar has made so much as an attempt.

The present volume covers the ground down to the Elizabethan period, more precisely, to the Renaissance. Dunbar, Gawin Douglas, and Sir David Lyndsay are the latest poets discussed. As the tyro knows full well, this archaic period is not only difficult, but in great part downright discouraging. The maze of irregular, uncouth verse-forms can be likened only to an Indian jungle. We need not be at a loss for the cause. Our poetry began by being the naïve expression of an untutored folk, and its rhythm (alliterative verse) was familiar to all. But through the spread of ecclesiastical training and habits, even before the Norman Conquest, and in consequence of the wholesale borrowing and imitation of foreign themes and metres, to which the Conquest gave a wonderful dynamic impulse, the English folk came gradually to unlearn their native rhythm, and to acquire, by slow and painful steps, the art of composing in Latin-Romance metres. Prof. Schipper is the first, even in Germany, to throw light upon this obscure process as a whole and in all its details.

The first forty pages treat of the general principles underlying all versification, such as arsis, thesis, ictus, quantity and accent, tone, rhyme. This introductory matter might be abridged considerably without loss. Besides, we cannot assent to the author's opinion (§ 25) that rhyme may have been, in Germanic languages, a spontaneous outgrowth. We hold, once for all, that the practice of rhyming is of Latin-Romance invention, and that its use in German and English is a mere borrowing. The real beginning of the work is section 2, pages 39–77, upon Anglo-Saxon alliterative verse. It will be found satisfactory in perhaps every respect but one: section 29, on the "quality" of alliteration—*i. e.*, which sounds properly alliterate and which do not—is altogether too vague and meagre, especially when contrasted with the succeeding paragraph, on the relations of the alliterative sounds to the grammatical character and syntactic position of the several classes of words. We call attention here to the circumstance that Schipper is a firm adherent to the "new" theory, according to which the full line, *Langzeile*, has only four beats (*Hebungen*), two in each hemistich. He has not even deemed it worth while to combat the old eight-beat theory of Lachmann; but the foot-notes cite all the recent literature on the subject. Apparently, the eight-beat theory is doomed.

Section 3 (pp. 78–293) treats of the introduction of foreign metres, such as the Latin *septenarius*, the octosyllabic rhyming couplet, the French *Alexandrine*; also the expansion and modification of the native alliterative verse, its revival, so called, in the fourteenth century, and its gradual extinction. This section is the *crux* of the book, and is bound to provoke much hostile criticism. Already one sharp review, by Einenkel, has appeared in the *Anglia* (Anzeiger, V., 30–53). We have no space for entering into the controversy, and can only indicate the cardinal point. Schipper does not accept for Old English the theory (commonly accepted for *Mittelhochdeutsch*) that an inflection-vowel after a long stem-syllable must be read with a subsidiary accent (*Nebenton*), so as to count for a full verse-measure—thus *lórè*—but asserts that such vowels are usually unaccented (*tonlos*). The point, apparently a trifle, is really wide-reaching in its consequences. If we side with Schipper, we shall regard Layamon's "Brut"—to give merely one striking example—as composed in the old alliterative rhythm, four beats to the full line. But if we side with Einenkel, we shall have to reject its alliterative flow altogether, and read it by four-beat couplets, thus getting eight beats to the full line. Our decision will turn upon the scansion of the "Ormulum." Schipper has subjected this poem to a most searching examination, and has shown that to apply to it such a method of accentuation as *lórè* would utterly ruin its verse-flow. To which Einenkel replies by rejecting the "Ormulum" as a standard. He goes even so far as to assert (*ibid.*, p. 38) that its author "violates the rules of accent of his speech at every turn (*Augenblick*)," and again, p. 47, calls its metre a *Zwitter* between four-beat rhythm and French syllable-counting. When rubbish like this is proffered for argument, we can only hold our breath in amazement. A critic must indeed be at his wits' end when he accuses Orm of violating the rules of English accent; for if there be any one poem between the times of "Beowulf" and the times of Chaucer and Gower that is easy to scan, it is assuredly the "Ormulum." To an English ear and tongue the poem does not offer any difficulty worth noting. In truth, Orm was, for his day, a metrical and linguistic genius in comparison with whom Layamon and all the others were the veriest blunderers. Hence Schipper has done wisely in selecting the "Ormulum" as a standard of utterance. And the choice confirms us in a surmise based upon many other minor indications—to wit, that Schipper is possessed of a thoroughly English ear. He does not, like Einenkel, Trautmann, Jessens, construct impossible scansion on paper, but tests his reading by the actual sound. Thus he is the only German scholar (to our knowledge) that has a clear and sure perception of our Anglo-American fondness for what he calls *Taktumstellung*, what we are in the habit of calling "choriambic" movement—*e. g.*, in the well-known line from Orm:

'After the flĕshes kínde,

rather than

Aftér the flĕshes kínde.

Section 4 (p. 294 to the end) treats of the "strophic" structure of our verse, as borrowed or imitated from Latin, Provençal, and French; of the Burthen, Refrain, Wheel, Bob-Wheel, etc.; and of the iambic pentameter of Chaucer, Gower, Lyndesay. It is by far the most interesting section, and also the most important to students of our modern verse. We can scarcely say that it is less difficult than the preceding section, but it is certainly less dry. Its difficulty lies in the application of well-known principles to an endless variety of forms. The student ought to find here much pleasant reading. Chaucer's iambic pentameter alone gets fifty pages, yet no one, surely, will find in them a page too many, or a word of praise that he could wish abated.

Schipper's style has not the clearness nor the grace of Ten Brink's. In many places his syntax is involved and confusing. But, by way of compensation, he has given us two things that Ten Brink withheld: first, he has appended an exhaustive alphabetical index of authors, poems, and subjects; then, he has cited in his foot-notes the title in full of every book referred to. One has only to copy off these titles to get a complete bibliography of the whole subject. We have not detected a single omission of importance. We earnestly hope our author will complete his noble work as he has begun it, and that right speedily.

History of Woman Suffrage. Edited by Elizabeth Cady Stanton, Susan B. Anthony, and Matilda Joslyn Gage. Vol. II. 1861–76. Fowler & Wells. 1882. 8vo, pp. 952.

THE scrap-book of which we have here a second instalment is not yet exhausted, and the editors are able to announce a third volume, doubtless of companionable size, and possibly, let but a single State meantime concede the ballot to women, of greater interest. As we write, an active canvass is being carried on in Nebraska by both wings of the woman suffragists, to insure the acceptance of a proffered constitutional amendment to that end; and it cannot be denied that the public mind has become much more accustomed, if not reconciled, to the idea than it was in 1867, when a similar effort was made and failed in Kansas. Only a day or two ago, also, the Supreme Court of Connecticut refused to exclude women from the bar, whereas in 1869 Mrs. Myra Bradwell was denied admission to the Illinois bar, on grounds which might, we imagine, have been equally well adopted by the Connecticut court.

The war caused an utter suspension of the woman's-rights agitation, but, if the movement stood still, it did not lose ground. The part played by women in the Sanitary Commission and in the hospital service brought into relief the heroic and patriotic qualities of the sex. On the other hand, the spirit of ridicule and violence was completely allayed. The volume before us does not, we believe, record a single instance of popular disturbance of a woman's-rights meeting. This is attributable not so much to a growth of respect in the community as to the overthrow of slavery, the arch-enemy of free discussion and the chief fomenter of intolerance and mobs. Moreover, in 1864, one woman at least, Anna Dickinson, had taken the stump at the invitation of the Republican managers, with acknowledged effectiveness, and thus emphasized the paradox that while women were fit to help carry elections by giving advice to voters, they were not fit to vote. In 1868 the National Democratic Convention in this city gravely received, listened to, and referred a letter from

Miss Anthony, a *soi-disant* delegate, asking permission to be heard in favor of a woman's-suffrage plank in its platform. In 1872 the National Republican Convention at Philadelphia conciliated the support of this easily-satisfied lady and her friends by a "splinter," rather than a plank, declaring that woman's "demands for additional rights should be treated with respectful consideration." Hollow and insincere as this profession was, it astonishingly marked the progress of public sentiment since the ante-bellum days, when women met only in "hen conventions," amid the jeers of the obscene and the assurances of the good and wise that they were unsexing themselves by their "demands for additional rights."

Strange to say, the greatest impediment to the cause came from the women advocates themselves. In 1869 they divided into two semi-hostile organizations, which have been perpetuated to this day. The causes of this split are neither clearly nor ingenuously set forth in this 'History,' which has been compiled by the faction known as the National Woman Suffrage Association. Its early connection and coöperation with a notorious charlatan of the male sex and an equally notorious blackmailing adventuress are but faintly suggested; and the real character of its policy, begun in 1867, of offering its support to any party ready to cajole it with empty phrases, may easily escape the ordinary reader. Efforts to defeat negro suffrage unless woman suffrage were also accorded (as in Kansas), failed because the American people knew what was the main issue of the reconstruction period. Efforts to wring the ballot from the Federal Constitution by a forced and absurd construction of the Fourteenth Amendment, failed for obvious reasons. The more legitimate attempt in 1867 to induce the New York Constitutional Convention to eradicate the word male from the new charter failed because public opinion was by no means ready for such an innovation—was not even prepared to allow women to vote for delegates to that Convention, as Senator Folger proposed at the time in their behalf. And so, while many advances toward equality and some toward a partial suffrage have been made in the period surveyed in this book, no State has yet set the example of abolishing the distinction of sex at the polls, in the jury-box, in the Legislature.

It is well known that the loose constructionists who held that the Fourteenth Amendment applied to women, manifested their sincerity by sundry endeavors to vote, some with success, like Miss Anthony; and that this led to an indictment of the latter, her conviction, and sentence to pay a fine, as well as to the conviction and imprisonment, till pardoned by the President, of the inspectors of election who permitted her to register. The humor of the present volume must be sought in this episode, or nowhere else:

"During the intermediate period between November 28, 1872 [the date of her being bound over], and January 21, 1873 [the date of the Albany term of the United States District Court], Miss Anthony, in the eye of the law, was imprisoned; but the Marshal, though somewhat uneasy, left her free to fulfil her Lyceum engagements and attend woman-suffrage conventions. A singularly anomalous position for a criminal, travelling about the country as a teacher of morals to the people! Learning that in case the jury returned a verdict of guilty, the judge must declare the costs of the trial against the defendants, she determined to canvass Monroe County, in order to make a verdict of 'guilty' impossible. She held meetings in twenty-nine of the post-office districts, speaking on the equal rights of all citizens to the ballot. Hearing that District-Attorney Crowley threatened to move her trial out of that county, she sent him word that she would then canvass the next with an army of speakers.

"The Court sat in Rochester [Monroe County, where the offence was committed], May 13th, but several days passed without calling the case. Finally, it was moved by District-Attorney Crowley merely to ask its adjournment to the June United States Circuit Court at Canandaigua. Counsel protested, but without avail, and both the women [thirteen had registered along with Miss A.] and the inspectors were again required to answer the charge and renew bail. This motion for change of venue was made on Friday, and the following Monday night Miss Anthony held her first meeting in Ontario County. In the twenty-two days before the convening of the Court she made twenty-one speeches. Matilda Joslyn Gage came to her aid, and spoke in sixteen townships, thus together making a thorough canvass of that county. . .

"The last meeting of the series was held at Canandaigua on the evening before the trial. Strong resolutions against these acts of injustice toward woman were introduced by Mrs. Gage and unanimously endorsed by the audience. Thus the case went to trial with ample opportunity for the District Attorney and the Judge to know the opinions of the people, and for the men of Ontario to be too generally enlightened on the subject to find any twelve men who could be trusted to bring in a verdict of guilty against the women for voting, or the inspectors for receiving their votes." (Pp. 629–30.)

The Judge, however, directed the jury to find a verdict of guilty.

The Philosophical System of Antonio Rosmini-Serbati. Translated, with a Sketch of the Author's Life, Bibliography, Introduction, and Notes, by Thomas Davidson. London: Kegan Paul, Trench & Co.

THE "Latin" races, especially the French and the Italians, are beginning to play an active part in that revival of philosophical activity which distinguishes the recent years of our generation. The reading of Italian is becoming more and more a necessity to every one who wishes his heart to beat in unison with the "best thought" of his time. Mr. Davidson, yielding to this irresistible attraction, has discovered, so to speak, and revealed to our dull English-reading minds the existence of an Italian writer whom he holds to be not only a philosopher but a saint of the first magnitude, and who died as recently as 1855. A perusal of Mr. Davidson's well-written life of Rosmini proves him to have been indeed a man cast in the heroic mould. Of gentle blood, a priest, almost a Cardinal, the founder of a great religious order, dying at the age of fifty-eight, much of his life in poor health, he nevertheless found time to excogitate and write out ninety-nine separate books on an immense variety of subjects, a very large number of which are octavos in more than one volume, treating in the most systematic way of the most arduous subjects — metaphysics, logic, ethics, psychology, and the like. When it is added that in these works the treatment is not only systematic, but invariably original, and that Rosmini's range of reading, embracing as it impartially did the whole range of ancient, modern, and mediæval authors, has probably never been surpassed even by any German professor, it is obvious that whether Rosmini's ideas be true or not, the *type* of his mind gives him no low rank in the not very numerous brotherhood of intellectual giants.

The present work is a sort of compendium of his whole system, written in short separate sections, and elucidated by editorial comments and copious translations of passages from Rosmini's larger and more special works. We may as well say now that the translator's part has been admirably performed. Nothing that learning and care could do has been left undone by Mr. Davidson, who, though far from disposed to swear to *all* the words of his master, has given here most substantial aid to his meaning.

And now as for the meaning. We fear that this volume alone is inadequate to its complete expression. We have read it twice and find that the formulas it applies to the universe, and the answers it gives to ancient problems, evoke a series of new questions as formidable as any it professes to solve. Whether this be because the book pretends to be but an abridgment and a compendium, leaving much out, or whether the minds of both author and editor have failed to take everything into consideration, may here be left an undecided question. We shall not make this newspaper article unreadable by propounding our difficulties, but pass on to shadow forth to our readers, in such feeble words as we possess, what seems the most central and original part of Rosmini's thought.

Some one has said that the art of philosophizing is to see the strange as if it were familiar and the familiar as if it were strange. Now, of all things familiar to the mind, surely mere *being* is certainly the most so. "Is," and "was," and "will be" constitute the very warp of its structure. But Rosmini has been able to take this bare contentless notion of Being, which, transparent, imponderable, impalpable as the imagined ether of the physicist, yet ubiquitous as it, fills continuously all the crevices and crannies of the world; and he has been able so to detach himself from the prepossessions of ingrained habit as to regard it as if it might not have been—to project it from his intelligence as a positive object existing separately by itself; to make it come and go, and act, and illuminate the mind, and change its mode, and mediate between this and that, as if it were a living thing. A casual reader taking up his book for the first time and coming upon all this talk about Being, receives in its intensest form that strange impression that metaphysical books so often give, of a sort of mental vacuum, with no fixed support, and of his own equal readiness to agree with or to dissent from any given proposition, since he never can tell exactly in what "sense" it is meant, or with just what concrete matters it has to do. If power to deal definitely with abstractions be the mark of the true philosopher, certainly Rosmini bears off the palm by his treatment of Being. We, too, end by catching a little of his spirit, and find out what help the notion of bare Being can be made to yield.

From the time of Plato and the Sophists, there has reigned an inveterate philosophic quarrel between two types of mind which may be called sensationalistic and rationalistic, respectively. If we name Mr. Herbert Spencer and the Concord School of Philosophy, it will easily be seen why we call the quarrel inveterate. The reasons why there should be such a quarrel lie deep in the constitution of our mental life. This may, on the one hand, be regarded as a mere part of Nature—a train of feelings and particular conscious events, occupying definite tracts in an outwardly existing time. Or, on the other hand, it may be regarded in a totally different way, as something which stands outside of Time and Nature and *cognizes* them. *What* is cognized may be a past feeling, or a relation of similitude or contrast between a past and a present one, or it may be a reality supposed material or disconnected with the mind altogether, or another spirit like the mind itself. But, whatever it be, it is always something different from the immediate feeling through which its cognition takes place. The latter, in knowing it, transcends its own, so to speak, physical existence. The consequence is that we are entitled to consider the mind in two entirely different manners—physically or transcendentally: we may inquire into its letter, or into its spirit; into its constitution, and the laws that seem to govern the order of its events, or into the purport and meaning of the latter, the objective truth that

each of them reveals. The characteristically English sensationalist school of Locke, Hume, and the Mills has considered the mind in the former way exclusively, and either ignored the mysterious self-transcendent function of cognition altogether, or else tried to deduce it as a sort of collateral consequence from the laws of grouping of the separate special feelings. The transcendentalists, or rationalists, object that this procedure, so far from explaining the function of cognition, proves it impossible, and leads straight to the bottomless abyss of an absolute scepticism and "subjectivism." There is at this day among us and in Great Britain a fervid rationalistic school, professing to inherit the combined mantles of Kant and Hegel; and the Alpha and Omega of its teaching is that the sensistic mode of studying psychology has hitherto massacred the mind in its most essential function and faculty, the power of real objective knowledge, and that this faculty can only be restored to it by dropping sensations and their groupings out of our notice altogether, and treating the whole matter as the case of a *self-conscious ego*, endowed with the mysterious power of Pure Reason. Any one who wishes to see how this modern ego-worship may solve all the philosophical difficulties of a deeply-serious spirit, should read the posthumous essay by Professor Green, of Oxford, which has lately appeared in *Mind*.

Now, for Rosmini, the mere presence of an ego to a series of feelings is as little capable of giving us real objective knowledge as are the feelings themselves. His complaint (ably argued enough) against Kant and Hegel is that their systems lead to a subjectivism quite as bottomless as any they attribute to the school of Hume. The *intuition of Being* is for him the only thing that can confer objective knowledge. With all other categories of Thought abolished, and with the intuition of Being left as the sole function of our Reason in contrast with our sensations; with the facts of sensation in their widest sense, including among them (whisper it not at Concord) the Ego itself, Rosmini builds up his universe, and claims to have satisfied all demands and to have been unjust to neither of the two opposite ways of viewing the mind. Certainly, no philosopher appears to have done more justice to the feelings merely as such. The most rabid Humian is hardly more radical than he. Only he holds with the anti-Humians that each fact of feeling is in itself "blind," having a merely physical or non-cognitive existence, and needing the light of the intellect to appear to consciousness *as* the fact it is. This "light of the intellect," or "ideal Being," is purely *Object*. "By *Object* we understand a term seen in such a way that the seer sees neither himself nor any relation to himself, and that himself remains excluded and forgotten while the term stands by itself and appears as existing in an absolute mode. . . . The essence of Being becomes the form of our spirits simply and solely by making us know, by revealing to us its own natural cognizability. Hence there is no reaction on the part of our spirits. These are simply receptive, and the light, the knowledge they receive, is what renders them intelligent" (pp. 193–195).

No one can fail to perceive how entirely different this absolute object is from the absolute subject of Hegelism. By successively combining our feelings with our intuition of pure being, by weaving the subjective facts upon this vast objective background, we build up, according to Rosmini, a world of experience veraciously cognized for what it *is*. To us it seems as if both Rosmini and the transcendental egoists were making the same mistake, trying to give preëminence each to a different one of two terms equally correlated in cognition, and so to alleviate that metaphysical disease, the unbridled lust after unity. We believe, however, that Rosmini clings a great deal the closer to the actual facts of psychology. But for this and all further matters we must now refer the reader fond of what Miss Edgeworth calls "the not inelegant labyrinths of metaphysics" to the book itself. Such a reader will not find that Rosmini makes all things clear; but if repelled by much that is obscure and scholastic in his pages, he will certainly gain that refreshment that always comes of contact with a master-mind.

Hints and Remedies for the Treatment of Common Accidents and Diseases, and Rules of Simple Hygiene. The two parts complete. Compiled by Dawson W. Turner, D.C.L., late Head Master of the Royal Institution School, Liverpool; sometime Student of Westminster Hospital and of Charing Cross Hospital. Revised, corrected, and enlarged by twelve eminent medical men belonging to different hospitals in London, and by one Right Reverend Bishop of the Established Church, formerly Surgeon to one of the London hospitals and F.R.C.S. With numerous additions from the eighth English edition. New York: Macmillan & Co. 1882.

THE title of this little volume is given in full partly because it is in itself a literary curiosity, and partly in order that the reader may appreciate the reluctance with which anything like adverse criticism is offered; in England, indeed, the requisite hardihood could hardly be found, excepting among those who never need the services of "eminent medical men" and who entertain some misgivings respecting the authority of the "Established Church." Not that all commentary need be adverse. On the contrary, in this, as in all other books of the kind, there is much to be cordially approved as likely to aid the ignorant or thoughtless to avoid disease and to give relief in cases of illness or accident. Especial stress is laid upon the importance of cleanliness and ventilation, the care of the eyes and teeth, etc. Perhaps the pages devoted to "How to Build a Fire" and "How to Make Tea and Coffee" might have been advantageously devoted to other matters; but probably no two persons would agree as to the exact limits of such a work.

The positively objectionable features are: the malarrangement of the entire work; its inadequacy upon some important points; its non-adaptation to this country, and its style of composition. Contrary to the order indicated in the title, the first nine pages are occupied with twenty-four "Rules of Simple Hygiene"; but the Appendix to this Part is interposed between the Second Part and the Appendix thereto. The Care of the Teeth is treated of, under different headings, on pages 1, 2, 3, 8, 59, and 60; and so definite a matter as Bathing is discussed in Rules i., xi., xxii., and xxiii. The order of the leading topics is ostensibly alphabetical, but exceptions are numerous and inexplicable. Even were the order unbroken, it would not atone for the lack of both Index and Table of Contents, in a work supposed to be consulted in haste upon some occasions. Considering that the appendices are more voluminous than the original work, it is to be hoped that future editions may embody a radical readjustment.

Among important matters inadequately treated may be mentioned Drowning. Here, if anywhere, we should look for full and explicit directions, well spaced off for ready reference, and for some distinction between the parts relating particularly to Drowning and those which apply equally to Suspended Animation from other causes, as, *e. g.*, Chloroform Narcosis, under which a reference is made to Drowning. Yet to this common and urgent emergency is given less than a page, about the same as to "Bad Leg," and not much more than to "Corns." There is a single, involved paragraph beginning, "Strip the patient immediately and wipe him quite dry," which under some circumstances would be inappropriate and, even in case of drowning, should not prevent for an instant the performance of artificial respiration. So, too, the injunction, "Do not give up rubbing for four hours," might well lead a single operator to defer, or at least intermit, the more essential manipulations. Of the three accredited modes of resuscitation, only one (Sylvester's) is given, requiring the coöperation of three or more persons. In the early part of the paragraph the patient is to be laid on his face, and nothing is said as to reversing his posture for the movement of the arms; neither is there an intimation of the difficulty—nay, almost impossibility—of keeping the tongue from falling back upon the glottis. Upon the whole, the unprofessional operator would stand a better chance of success if he rolled his patient upon a barrel in the ancient fashion. Perhaps the author meant to admit the insufficiency of his directions by calling them "general," and by referring the reader to the "Directions of the Humane Society and the National Lifeboat Association."

An American edition of such a work ought surely to mention the vicious habit of frying meat, the dangers of kerosene oil, the abuse of patent medicines, and the precautions in regard to icy sidewalks and railroad accidents. What kind of revision can it be which permits the unchallenged publication of the following: "Bear in mind that the administration of chloroform is preferable to, *and safer than*, that of ether, unless this last be given by a medical man"? (The italics are ours.) The New York *Medical Record*, in a recent editorial (July 29), remarks:

> "The conveniences of administration, rapidity of action, and comparative agreeableness of the drug [chloroform] to the patient, are more than offset by the chances of occasionally killing the patient as suddenly and as unexpectedly as if by lightning. . . . Any dental surgeon who would use the drug with fatal result would be indictable for manslaughter, and a surgeon who would do likewise would not be much better off."

To which may be added the somewhat significant facts that chloroform is commonly employed to kill animals for scientific purposes, and has even been suggested as a substitute for the halter in judicial executions. Nor is the mischievous effect of the present recommendation of chloroform for unprofessional anæsthesia adequately neutralized by the clumsy minuteness of the directions for its administration, covering two pages, and embracing the injunctions: "Don't take your eyes off the patient's lips for a moment. . . . In case of any danger or difficulty, open his mouth wide and pull the tongue quite forward. Lastly, and *most important* [then why not firstly?], if any indication of faintness comes on," etc. One is tempted to speculate whether the warnings in the case of the "more dangerous" ether could do more toward unnerving the operator and depressing his patient.

The literary style of the work is almost beneath criticism. Colloquial and commonplace as a whole, it is interlarded with French, Latin, and even Greek phrases, and embellished with cheap witticisms and scraps of doggerel. In particularly bad taste are paragraphs on pp. 8, 35, 49, and 67. What might perhaps be pardoned in an off-hand talk upon hygiene with boys at a boarding-school is wholly out of place in a published book. The unnamed "twelve medical

men" are variously described as "of great experience," "of great distinction," "of the highest authority," etc. This kind of thing may aid the sale of the book in England, but it will not commend itself to the profession here any more than the intercalation of patent medicines and homœopathic "remedies" among regular formulæ, or the following curious remark: "Either of these [formulæ] will pretty certainly help you to get rid of your cold, and, *if you are simple enough to believe it*, will cure you."

The Land of Dykes and Windmills; or, Life in Holland. With Anecdotes of Noted Persons, and Historical Incidents in connection with England. By Frederic Spencer Bird. London: Sampson Low. 1882. Pp. xii.-320.

MR. BIRD touches lightly upon very many details of the daily life, both present and past, of the Dutch middle and lower classes, interspersing his accounts with anecdotes and historical allusions derived chiefly from old chronicles. The impression which he gives us of the people is uniformly pleasant. The Dutchman, as pictured by him, is courteous, sober, industrious, and eminently cautious. Of this latter characteristic he gives several examples: "Druggists are prohibited from preparing and selling the most simple mixture unless the prescription of a doctor be produced." In case there is an infectious disease in any house, the proprietor is obliged to put upon the street-door "a printed notice announcing the fact to the public." No loaded wagon weighing over four tons can pass through Amsterdam without permission "from the chief engineer of the town, who furnishes an order in which is described the exact route to be taken, such order to be countersigned by the burgomaster." A notice posted at the entrance of the village of Broek directs "that riders must dismount and lead their horses when passing through. It further prohibits tobacco-smoking after sunset (a precaution against fire), and states that even in the daytime pipes must be provided with proper covers." Two hundred years ago the taxes were so numerous that Sir William Temple says that in Amsterdam, "before one could be served with a plate of fish with ordinary sauce, thirty different duties had to be paid." Some of these taxes are to be commended to the notice of the temperance advocates of our own day. "A tax of five cents was levied on each person who entered a tavern before noon. In the afternoon the tax was increased. . . . For the privilege of drinking beer in a brewery after two P.M. there was a small tax to be paid. Persons who assembled in a private house after three P.M. for the purpose of amusing themselves, had each to pay a certain sum." A chapter devoted to a description of the festivities accompanying betrothal and marriage in North Holland is prefaced by an account of marriages by proxy. These, it is said, are

"frequently celebrated . . . when the parties reside at such a distance from each other as to make it difficult or impossible for both to be present in the *Stadhuis* where the ceremony takes place. . . . The preliminaries being settled, the gentleman sends one of his gloves, which is worn on the appointed day by a friend or relation, who acts as his proxy, and who is present with the bride, and represents the absent bridegroom while the marriage contract is being completed. The formalities over, the separated lovers are legally as much man and wife as though they had actually stood side by side in the *Stadhuis* to be married, and should either of the parties die before the happy moment of meeting, the survivor would be entitled to claim the estate and effects of the deceased as fully as if they had lived together for years."

Contrary to the general notion, that the Dutch are quiet and sober even in their pleasures, Mr. Bird tells us that at times their mirth can be very uproarious. At the Kermis, or annual fair, for instance, the streets are thronged till two or three o'clock in the morning with bands of men and women who "dance, or rather jump, through the streets, heedless of obstacles, and singing a monotonous kind of song or chant, to which, by their movements, they endeavor to keep time." The following custom is one which must be productive both of comfort and economy, and might well be adopted in our cities during the summer months:

"Many poor persons, in Dutch towns, get a living by supplying *burning* turf and boiling water for making tea and coffee. At breakfast and tea-time, an iron vessel like a coal-hod is brought into the room, having inside a kettle of water placed upon red-hot turf. . . . As the dealer generally lives in some little street close at hand, the boiling water and fuel can be supplied at a moment's notice, and at a trifling charge."

The last five chapters give an account of the escape of Grotius from the castle of Loevestein, and incidents of the life of Charles II. of England while an exile in Holland.

The Faiths of the World. St. Giles Lectures. Charles Scribner's Sons. 1882.

THE collective significance of this book is hardly less remarkable than that of the 'Scotch Sermons,' the publication of which, two years ago, created such a stir in circles theological and ecclesiastical. This book, like that, emanates from a group of Scotch Presbyterians. The authors are identical in but a single case—fortunately that of Principal Caird, who leads off the series here as there, and here as there with two lectures, those who follow him having but one apiece. The 'Scotch Sermons' were a statement of Christian doctrines in terms so novel and so much at variance with the obvious meaning of the Westminster Confession, that the perturbation caused was less considerable than that caused by the famous 'Essays and Reviews' only because of much disintegration in the course of twenty years. The effects of this have been in nothing more conspicuous than in the exposition and criticism of faiths other than Christian by preachers and scholars of the Christian Church. The change of method and of tone has been immense. Twenty years ago, the average Christian apologist felt it incumbent on himself to state the contrast between Christianity and other great religions in the most glaring manner. "The Sympathy of Religions" was a subject left for Christians close upon the verge of infidelity to expatiate upon. To seek out the worst constructions, to write down the Brahman, the Mohammedan, systematically—this was the order of the day: take, for example, Hardwick's 'Christ and Other Masters.' The 'Ten Great Religions' of Dr. James Freeman Clarke, a liberal Unitarian, represents the extreme of sympathy and fairness a dozen years ago. But it is not too much to say that the average method of the book which is the subject of this notice is an advance upon the work of Dr. Clarke in point of general sympathy and catholic appreciation.

It was certainly a happy judgment that assigned the lectures on Brahmanism and Buddhism to Principal Caird. The Hegelianism which was so conspicuous in his 'Philosophy of Religion,' and there made it so easily possible for him to detect the essence of religion under disguises which are baffling to dogmatic eyes, here also stands him in good stead. Thus, in the lecture upon Buddhism, it enables him honestly to discover in the apparent atheism of the Buddhist's creed an element of implicit theism. One's acquaintance with the method of Hegel need not be great in order to discover it in the following bit of exposition:

"But those who thus identify Buddhism with atheism overlook two all-important considerations: first, that the negation of Buddhism could not exist without a virtual affirmation; and, secondly, that all religion, and the Christian religion most of all, contains a negative element—or that negation is a necessary step in the process by which the human spirit rises into communion with God. As to the former of these points, it needs little reflection to see that that very recognition of the nothingness of the world and of all finite objects of desire, which in Buddhism reaches its climax, is a virtual appeal to a positive standard of reality by which we measure the world and pronounce this verdict. . . . A religion whose cardinal doctrine is the negation of the finite, bears unconscious evidence to the fact that it has already transcended the finite."

Both of Principal Caird's lectures are written in the fresh and streaming style which he is always able to command, whether in a popular sermon or more serious discourse. A monotheistic pantheism is his ideal faith—an ideal which he finds made actual in Christianity—and it is the failure of Brahmanism and Buddhism to embody the monotheistic factor which, in his opinion, is the defect of their excellence. In his treatment of the Vedic period he is less inclined than Barth and Tiele to attribute to the Vedic hymns a recondite and sacerdotal character. He insists upon the purely formal character of their polytheism; that essentially the Upanishads are not more polytheistic than the hymns. Caste, and the relation of Brahmanism and Buddhism to it, are discussed at considerable length and with much penetration. In Buddhism is discovered a return to the fundamental principles of Brahmanism to which the elder religion had proved sadly recreant. But with the return there was also an advance.

The lecture on Confucianism is by Dr. Matheson, minister of the parish of Innellan. It is written with much force and clearness. The conclusion arrived at is, that

"the doctrine of Confucius owes its success to the fact that it has made a real contribution to the science of natural religion. It gave to the faiths of the East an element that was distinctive and new. . . . It held up the vision of an infinite in the finite—the establishment of a kingdom of heaven upon earth, the existence of a perfected society, the organization of a divine order out of the elements of time. It pointed to the prospect of a paradise below—to the advent of a pure civil government—to the possibility of a reign whose law would be universal blessing; and in the suggestion of that hope it supplied the one feature which was lacking to give the religions of the East a power over the present life."

The defect of Confucianism is declared to be its self-conscious individualism. But when in the course of the discussion we are told that "Christianity has revealed to the world the principle of self-forgetfulness, and that the only road to individual greatness is the banishment of the individual from his own thoughts," many will be inclined to ask if the salvation of the individual soul has not been made eminently prominent in Christian teaching, and if the tendency of this has not been to concentrate the individual's regards upon himself in a manner sometimes painfully engrossing.

The lecture on Parseeism, by the Rev. John Milne, suffers in comparison with Prof. Whitney's treatment of the same subject in his 'Oriental and Linguistic Studies.' A fuller treatment of the relations of Parseeism to Judaism would have been acceptable here. It is certainly remarkable to find a Scotch Presbyterian contending that Jewish monotheism was perfected by Mazdean influences, and that the doctrine of immortality came into Judaism from the same quarter. Rev. James Dodds, the writer on Egyptian religion, is so much impressed by it that he suggests that only by some primitive revelation could so much of truth akin to that

of the New Testament have got into men's minds. He is, however, less inclined than Renouf to admit that monotheism was ever anything more than the esoteric teaching of an extremely limited circle. The lecture on Mohammedanism gets something additional of warmth and color from its being to some extent a record of the author's personal impressions. There is more in this lecture of the old-fashioned kind of contrast between revealed and natural religion than in some of the other lectures. In that upon Roman Religion there is no adequate suggestion, indeed, none at all, of the religious revival inside of paganism that synchronized with the first Christian centuries, and made the conversion of the Empire a less miraculous occurrence than it might otherwise have seemed. The lectures on Greek and Scandinavian religion are only tolerably good. The introduction of a lecture on the religion of Central America is a novelty in such a course as this. It is exceedingly meagre and conjectural, and could have been omitted without serious harm.

The final lecture, on "Christianity in Relation to Other Religions," would have been more catholic if this also had been assigned to Principal Caird. It should certainly have had the ablest treatment possible, but this has not been granted. The thesis it maintains is that "Christianity is the only religion from which, and in relation to which, all other religions can be viewed in an impartial and truthful manner. . . . Christianity alone occupies the lofty and central vantage-ground from which every phase and phenomenon of religion can be appreciated with all the exactness of human science and all the fulness of human sympathy." "This is a remarkable fact," the writer continues. It is indeed; and, moreover, if it is a fact, it is one which has been less apparent in some earlier stages of Christian development than in that which is represented by this interesting and important book.

Under the Sun. By Phil. Robinson. With a Preface by Edwin Arnold. Boston: Roberts Bros. 1882.

MR. ROBINSON'S name is comparatively new to American readers, and yet there is something rather American in his writing. The volume belongs to a field in which American humorists —or perhaps we should say wags—have done a good deal of work: the treatment of serious subjects in a consciously humorous way. If we can imagine Mr. Warner an Englishman, and an Anglo-Indian at that, he might have written parts of 'Under the Sun' much as they stand. The "Hunting of the Soko" is a story of African adventure in which we feel ourselves surrounded by a haze of humor and fancy that makes the improbabilities of the facts seem a matter of indifference. In the story of "The Man-Eating Tree," on the other hand, we are in a domain of pure extravagance, which, were the scene not laid in Africa, we should actively resent. A great part of the book is occupied with descriptions of Indian life and natural history; and here we have Mr. Arnold's word for it that the work is well done. To our mind, the description is better than the humor; for there is too much consciousness and too little originality about Mr. Robinson as a humorist to make the jokes with which he seasons his descriptive writing thoroughly funny. Indeed, we may say, at the risk of an apparent paradox, that Mr. Robinson would be more humorous were he less jocular. He is at his best in narration, and we are not surprised to learn from his title page that he has been a newspaper correspondent. Extracts would hardly give an idea of the book, and any candid critic who looks over the formidable collection of extracts from English newspapers and reviews published at the end of it, must feel that the reader had better find out for himself what 'Under the Sun' is. One critic declares the author to be "a kind of cross between White of Selborne and the American writer Thoreau"; to another he suggests Dr. Holmes; others find him like Charles Lamb; and, again, we learn that "Mr. Robinson belongs to that school of pure literary essayists whose types are to be found in Lamb and Christopher North and Oliver Wendell Holmes, but who seem to have died out for the most part with the pre-scientific age. One or two of the pieces remind one not a little of Poe in his mood of pure terror with a tinge of mystery." We do not put these opinions side by side for the purpose of proving anything beyond the fact that Mr. Robinson has claims of no mean order upon the attention of the American public. Some of these criticisms or our own must be wrong, but the reader will find it an amusing intellectual exercise, after comparing them, to try to make out for himself what 'Under the Sun' really is. He can hardly look through the book without finding something to his taste.

Altavona. Fact and Fiction from My Life in the Highlands. By John Stuart Blackie, F.R.S.E. Edinburgh: David Douglas. 1882.

THE hint of the title of this book was taken, the author says, from Goethe's autobiography, but it will not in any other respect recall to the reader the 'Wahrheit und Dichtung' of the German poet. Professor Blackie, having resided for twenty years in the Highlands, and, as he says, "in a position peculiarly well fitted for looking a little into the soul of things there," thought that it would be a pity not to note down in a book his impressions of the country. This he has done in the form of what he calls "ambulatory dialogue," which gives him an opportunity of changing his scene and, with his scene, securing a continual change of subject. He has also another reason for resorting to the form of dialogue, which, we fancy, had a good deal to do with his decision. "I have," he says, "decided opinions on important social questions, but I hate one-sided views. I strive always, when I most violently condemn, to appreciate my antagonist's point of view, and to state sympathetically any circumstances that may either palliate his guilt or make a sort of reasonable apology for his blunder. Now, there is no way of doing this so effective as the dialogue. Both parties in a disputed matter are allowed to state their case strongly, and the reader, as a wise arbiter, is invited to strike a just balance between the two." The characters introduced in 'Altavona' represent an Old Catholic and Highland type, a Presbyterian type (Gaelic, however, at all points), an English Episcopo-Oxonian type, and a cosmopolitan, philosophic German. What they say is supposed to be a true picture of the opinions respectively held by these types; and the author has worked out his scheme with a great deal of cleverness. But the difficulty with dialogue of this sort is that it proceeds on a false assumption. The characters are not real characters, and what they have to say is seen through the mind of the author. No matter how desirous he is to be fair, the reader knows after all that he must aim at giving his own side the best of the argument; and, consequently, unless the dialogue is a work of great interest as a dialogue, he refuses to accord that reality to the discussion which he would be willing to give if the author merely said what he had to say *in propria persona*. Real dialogues, like those in Boswell's 'Johnson,' or Madame D'Arblay, are always profoundly interesting, because they contain the real discussions of real men and women; so are the dialogues in a book like the 'New Republic'—a masterpiece, in its way, of pure literature. But every author who undertakes to convey information and correct opinions through fictitious dialogue, does so at his peril, and this peril Mr. Blackie has not avoided. 'Altavona' is a mine of information about the Highlands, its people, customs, language, songs, religion, and amusements. It is a really valuable *vade-mecum* to the country, and we cordially recommend it to any one who wishes to explore the subject; but we must protest against the form into which it has been thrown, and the author's belief that he has heightened the interest by adopting it.

The Political Conspiracies Preceding the Rebellion; or, The True Stories of Sumter and Pickens. By Thomas M. Anderson, Lieut.-Col. U. S. A. G. P. Putnam's Sons. 1882. 12mo, pp. 100.

SUMTER was a flaming beacon: its flash called a nation to arms, and the fierceness of its glow intensified the shadows. To this day its lights and shades embarrass the interpreter of the incidents that surrounded it. Men ignorant or unmindful of the political situation, and looking at the strictly military features, even now denounce Major Anderson as incompetent, cowardly, or disloyal. In their eyes, the assault on the *Star of the West* should have compelled him to prevent by force of arms the growth of the Carolina batteries. But most who remember the political situation as it was, and have learned the official restrictions that bound him, believe that Anderson acted with judgment, military propriety, and moral courage. Extremists, North and South, to whom the slavery cause was first and that of the Union subordinate, would have precipitated the war at the earliest possible hour. The mass of patriotic men at the North, in their distress at a possible disruption, would have exhausted every pacific agency before resorting to arms. The cross purposes and confused counsel of the ante-bellum period are a labyrinth through which the historical student will not find an easy way.

The writer of this little book vindicates the just fame of his kinsman, and retells the story of the fall of Sumter and the rescue of Pickens. There is very little that is new; the letter of General Meigs, giving his version of the curious military expedition which the Secretary of State set on foot without the knowledge of the Secretary of War or of the Navy, being the only original document. Lieut.-Col. Anderson does not accept the conclusions of the writer of the letter. The essay is often diffuse in style, and sometimes lacks dignity; it omits an occasional link of narration, and its story of facts is accompanied by reflections which, although generally just, are frequently commonplace. *Après nous le déluge* is, oddly enough, called Buchanan's famous phrase. The book is well published, although there is some indifferent proof-reading and there is no index.

Virgil, with an Introduction and Notes, by T. L. Papillon, M.A., Fellow and Tutor of New College, etc. Vol. I. Introduction and Text. Vol. II. Notes. Oxford: Clarendon Press; New York: Macmillan. 1882.

THE special value of Mr. Papillon's edition of 'Virgil' is in the Introduction, which contains a mass of information not found, we believe, in any other school edition. It is in four parts: Life and Poems of Virgil; the Text of Virgil; Orthography; and the Virgilian Hexameter. Of course there are few pupils, of the age at which Virgil is generally read, who will care for these discussions; but here and there there will

be one, and at any rate they will be very acceptable to teachers and to students who have not access to the larger editions. Of the commentary, it need only be said that the editor, in his preface, declares as his aim to provide something intermediate in quantity between the commentaries of Conington and Kennedy—"a want that my experience as a college tutor has shown to exist." He appears to have made intelligent use of these commentaries and the other leading editions. If he had been acquainted with Prof. C. L. Smith's paper in the *American Journal of Philology* (Dec., 1881) upon "Virgil's Instructions for Crops," he would certainly have modified some of his notes on the first book of the Georgics. Mr. Smith seems to us to have proved that the additional ploughing recommended in verse 48 was in the late winter, probably February, instead of in the autumn, as is usually assumed. When Mr. Papillon says "he alludes to the cultivation of 'novales,'" he ought to have told the student what *novales* were. In the note to Eclogue i. 71, he gives the word three distinct definitions; and what he means in the present case we cannot guess. Another passage explained by Mr. Smith is that in verses 71 to 84, where, however, some points are more uncertain, and a part of his argument rests upon a transposition of verses. But he has, at any rate, proved that peas, etc., were not "a spring crop," but were regularly sown in the fall.

Constitutional History and Political Development of the United States. By Simon Sterne. New York: Cassell, Petter, Galpin & Co.

Mr. Sterne has attempted to give a sketch of the Constitution as it stands, accompanied by a history of the political controversies which resulted in its formation and in the changes which it has undergone, together with a presentation of the actual present condition of politics, and of questions demanding the attention of parties. The work is of a popular character, and has the advantage of bringing down the constitutional history of the country to the latest period. It can hardly supplant the constitutional text-books used in schools and colleges now.

In his chapter on "Current Questions" Mr. Sterne takes up Civil-Service Reform, the Silver Question, the Transportation Problem, Revenue Reform, and, indeed, most of the questions of the day, and discusses them briefly. Mr. Sterne does not hesitate to tell his readers how they ought to be disposed of, and, in the main, his "soundness" cannot be questioned. We only complain here of a certain looseness of treatment, which in a constitutional history is out of place. For instance, with regard to centralization, speaking of the transportation question and the necessity of clothing the General Government with sufficient power to deal with the subject adequately, he says:

"That this necessity runs counter to a very correct theory of decentralization, and that the liberty of the individual is endangered by all centralization of power, is a truth to which thoughtful students of political history cannot shut their eyes. But precisely as in Germany a false decentralization of power had to be succeeded by a nation having centralized national power, with the view to intelligent and proper decentralization, so in turn it may be necessary in many particulars to disregard State lines, and the localizing of power resulting from such State lines, for the purpose of more intelligent and more effectual decentralization in those particulars wherein it is beneficial, and also to secure centralization in those matters wherein decentralization involves danger to the commonwealth."

We are sorry that Mr. Sterne did not take the pains to clear up a little more thoroughly the confusion which surrounds the subject of centralization. There are at least three different senses in which the word is used in the politics of this country, and used without any clear discrimination of the differences between them. It has an historical, a legal, and a political meaning. Historically, it is opposed to State rights; and here it is important to remember that the sentiment out of which the doctrine of State rights grew, or at any rate on which it was founded, is practically dead. Centralization in the United States, in its earliest manifestation, found its most serious obstacle in the fact that every addition to Federal power was secured at the expense of the original sovereignty of the States, which had been, so far as their relations to each other were concerned, independent governments. During the first generation after the Revolution, and in many parts of the country down to the time of the war, every American was born with a sentiment of State allegiance, weaker than, but in kind the same as, the allegiance of a Frenchman or an Englishman to his government. This was, however, a purely historical sentiment, and since the war it may be said to have been completely destroyed. Even in the older States, the notion of anything like allegiance or sovereignty is so dead that it can hardly be considered any longer as a political force, or as likely to produce questions on which parties can possibly divide. It is involved in none of the questions which Mr. Sterne considers "current." Legally, however, the conception of the Constitution, not as an original growth, but as a grant of powers—a charter conferred upon the Federal Government by the States—continues to exist, and must continue to exist until State lines are entirely blotted out. Here, then, centralization makes its inroads by merely modifying the rules of interpretation applied by the courts to the provisions of the Constitution, or by constitutional amendments. This process, however, is very slow, and must be hastened or retarded by considerations drawn from the political view of centralization as a matter of expediency. Such a question as the transportation problem involves both legal and political considerations, and we think that any one who discusses it is bound to show much more clearly than Mr. Sterne does what he means, when he predicts the extension of the powers of the United States over "all industrial and commercial matters as to which the States have a common interest," in order that "the United States may deal with that subject precisely as it deals with the subject of bankruptcy." The analogy between bankruptcy and the business of common carriers seems to us very remote; and if the grant of power over one could be extended to the other, we should be very curious to know precisely by what means. The fact that almost all the railroads in the country are the property of corporations chartered by the States presents a serious legal obstacle; and assuming, as Mr. Sterne assumes, that the change is to be effected by constitutional amendment, what is the change to be? Is the National Government to buy up the entire railroad system of the country? or is a central commission to fix the rates for freight and passenger traffic everywhere? or what is to be done?

Outlines of Ancient History, from the Earliest Times to the Fall of the Western Roman Empire, A. D. 476: Embracing the Egyptians, Chaldeans, Assyrians, Babylonians, Hebrews, Phœnicians, Medes, Persians, Greeks, and Romans. Intended for private reading, and as a manual of instruction. By P. V. N. Myers, A.M., President of Farmers' College, Ohio, etc. Harper & Bros. 1882. 12mo, pp. 484.

Mr. Myers has made a book which will accomplish very well the purpose he had in view—the preparation of an interesting and generally accurate sketch of ancient history, designed especially for readers and students who are not classical scholars. Nothing is harder than to make ancient times real to persons of the nineteenth century: Christianity, the Teutonic race, and the absolute principle of government, to say nothing of the radical changes in dress, habits of life, and manner of speech, separate ancient and modern times by a gulf which Mr. Freeman will never succeed in wholly bridging over. Even classical scholars seldom feel toward Themistocles and Cicero as they do toward Charlemagne and William the Conqueror; and certainly this sentiment is impossible to any one who is not imbued with a spirit of antiquity by a close intimacy with its works of literature and art. So far as it can be done, however, in a general sketch, Mr. Myers has succeeded, and this he has done largely by that rare quality in bookmakers—a willingness to omit names and dates which are not essential. What strikes one first on opening the book is the absence of capital letters and figures—it looks like a narrative, not a statistical statement—and the reader finds his pathway uninterrupted by the wearisome detail that cumbers most books of this character. This merit would outweigh many defects, even if the book were less sound in scholarship than it is. We notice (p. 12) that the Turanians are classed in the Caucasian race. Probably Blumenbach's division of races has little value at the present day; but at any rate the Caucasian race should not include the Tatars, Lapps, and Finns.

BOOKS OF THE WEEK.

Alexander, W. Sketches of Life Among My Ain Folk. Edinburgh: David Douglas.
Allen, W. F. The Reader's Guide to English History. Boston: Ginn, Heath & Co. 25 cents.
Bertram, R. A. A Homiletic Encyclopædia of Illustrations in Theology and Morals. Funk & Wagnalls. $2 50.
Brehm's Thierleben. Chromo-Ausgabe. Birds, Part 45 (conclusion). Mammals, Parts 46–49.
Buell, W. Joshua R. Giddings: a Sketch. Cleveland: W. W. Williams.
Chatterbox, Junior. R. Worthington.
Collections of the Massachusetts Historical Society. Vol. viii. Fifth Series. Winthrop Papers. Part 4. Published by the Society.
Danenhower, Lieutenant. Narrative of the *Jeannette*. Illustrated. Boston: J. R. Osgood & Co. 25 cents.
Eastern Question; or, An Outline of Mohammedanism: Its Rise, Progress, and Decay. Boston: A. Williams & Co.
Ellis, Rev. S. Life of Edwin H. Chapin, D.D. Boston: Universalist Publishing House. $1 50.
Faustine: a Novel. Philadelphia: J. B. Lippincott & Co.
Gréville, H. Sylvie's Betrothed: a Russian Story. Philadelphia: T. B. Peterson & Bros.
Heaton, M. C. Correggio. Scribner & Welford.
Index-Catalogue of the Library of the Surgeon-General's Office, U. S. Army. Authors and Subjects. Vol. iii. Cholecyanin-Dzondi. Washington.
Jenkins, T. J. The Judges of Faith, and Godless Schools. Thomas D. Eagan.
Jones, D. M. Lethe, and Other Poems. Philadelphia: J. B. Lippincott & Co.
Longley, E. American Phonographic Dictionary. Cincinnati: Robert Clarke & Co. $2 50.

Strange Journey; or, Pictures from Egypt and the Soudan. Harper's Franklin Square Library. 15 cents.
Washburn, E. A. Sermons. E. P. Dutton & Co. $1 75.
Wheeler, L. Erothanatos, and Sonnets. James Miller.
Wilkinson, W. C. Preparatory Greek Course in English. Phillips & Hunt. $1 25.
Wonders of the Heart of St. Teresa of Jesus. Baltimore: John B. Piet & Co.
Zola, E. The Girl in Scarlet. Philadelphia: T. B. Peterson & Bros. 75 cents.

HENRY HOLT & Co.

Have Ready:

ROBIN.

A Novel. By Louisa Parr, author of 'Dorothy Fox.' 16mo (Leisure-Hour Series), $1.

FANNY KEMBLE'S

Records of Later Life.

12mo (uniform with 'Records of a Girlhood'), $2 50.

Kinley Hollow.

A New England Story. 16mo (Leisure-Hour Series), $1.

GOODHOLME'S

Domestic Cyclopædia.

NEW, CHEAP EDITION.

8vo, $2 50.

NEW BOOKS.

ALDRICH'S POEMS.

SUPERB HOLIDAY EDITION.

THE COMPLETE POEMS OF THOMAS BAILEY ALDRICH. With a fine steel portrait, and admirably illustrated. 8vo, limp cloth, or illuminated flexible covers, $5; morocco, or tree calf, $9.

In every respect a work of art, and the season can hardly produce a gift-book more beautiful and acceptable.

DOCTOR ZAY.

A Novel. By Elizabeth Stuart Phelps, author of 'The Gates Ajar,' 'Friends,' etc. 1 vol. 16mo, $1 25.

One of the strongest and most engaging novels Miss Phelps has ever written. As the heroine is a lady physician, Miss Phelps has an excellent opportunity to present important views of professional and social life. Readers of 'Dr. Breen's Practice' will find the points of resemblance and difference in these two stories curiously interesting.

POEMS OF AMERICA.

HOLIDAY EDITION.

3 vols. 16mo, with 70 excellent illustrations. The set, cloth, $5; half calf, $10.

The first of these books contains the poems included in the two volumes devoted to New England in Mr. Longfellow's 'Poems of Places'; the second includes the Middle and Western States; the third the Southern States and British America. In this new form, and with the illustrations which are now added, these poems, which celebrate the legends, traditions, and picturesque incidents in the history of the famous localities of America will be doubly welcome.

THE OCTOBER NUMBER

OF

Le Français,

Revue Mensuelle de Grammaire et de Littérature,

IS OUT.

"It is edited with taste and discrimination, and will be read with a lively interest."—*The Nation.*

"It is without a rival in its field, for it aims not only to give light, graceful novelettes, but to discuss questions of syntax, grammar, and pronunciation. It is far superior to the ordinary French reader, as what it presents each month is fresh, original, and interesting."—*San Francisco Chronicle.*

Subscription price per year (nine numbers), $1 50; one single number, 20 cents.

Le Français can be procured at the principal newsdealers' throughout the United States.

Specimen Number sent on receipt of 20 cents, by the editor,

JULES LÉVY, Cambridge, Mass.

The Critic.

"The first literary journal in America."—*London Academy.*

No. 46, for sale at Brentano's and the leading bookstores and news-stands, contains:—"The Coming Transit of Venus," by Prof. Charles A. Young.—An editorial on "The Recent College Troubles" (at Dartmouth and Union). Reviews of thirty-two new books.

American, English, French, German, and Italian literary notes.—Science, The Fine Arts, Music, The Drama.

Ten cents a copy; $2 a year. The *Critic*, 30 Lafayette Place, New York. *Remittances should not be made in unregistered letters.*

Novissimum Organon.

The Certainties, Guesses, and Observations of John Thinking Machine. In five parts. 1. The Shop. 2. The Machine. 3. Problem of the Times. 4. Garfield *v.* Hancock. 5. Which is the Christ—Judas or Jesus? Pp. 116, price 75 cents; cloth, $1. Postage free.

This little book presents a new thought-method with its application to the events of the past twelve years, 1870 to 1882.

For sale by the Hugh R. Hildreth Printing Co., St. Louis; C. T. Dillingham, 678 Broadway, New York; B. F. Stevens, 4 Trafalgar Square, London.

Schouler's History of the United States Under the Constitution.

By James Schouler, of the Boston Bar. Vol. II., just published, 1801-1817. Published by W. H. Morrison, and for sale by all booksellers.

"I recognize in all I have read faithful investigation and superiority to prejudice."—*Hon. George Bancroft.*

NO. 10 JUST ISSUED.

Elocutionist's Annual,

200 pages. Latest and Best Readings, Dialogues, and Tableaux. Many entirely new, and collected from the best writers for the first time. Post-paid, 35 cents; cloth, 75 cents; gilt, $1. NATIONAL SCHOOL OF ELOCUTION AND ORATORY, 1416 and 1418 Chestnut Street, Philadelphia, Pa. JOHN H. BECHTEL, Secretary.

The Nation.

NEW YORK, THURSDAY, OCTOBER 19, 1882.

The Week.

THE two Camerons—father and son—bosses of Pennsylvania, are engaged in a supreme effort to maintain the rule of their dynasty. Senator Don Cameron, the son, has been in Washington for a day or two to see what the Government could do in the way of propping up the Cameronian cause, but he found that the Administration had long been absent on a fishing excursion, and was now doing honor to Daniel Webster's memory at Marshfield. The Pennsylvania boss thought that a live Cameron was worth looking after much more than a dead Webster; and, if report speaks truly, he gave emphatic vent to his feelings. When the clerks in the departments heard of Mr. Cameron's presence in Washington, their hearts sank within them at the prospect of another "voluntary" contribution for the grand old cause. They will scarcely escape the necessity of "volunteering" with their pocket-books once more. Ex-Senator Simon Cameron, the father, on Friday spoke to a reporter in Philadelphia. He thought it would have been better to let Tilden be President, for then the country would by this time have become disgusted with a free-trade Government. On civil-service reform Mr. Simon Cameron's opinions are particularly strong. He says: "This subject of civil service is all wrong." And why is it all wrong? Mr. Cameron's reasons are altogether philanthropic. "I believe," he says, "in giving poor young men a chance, but if you observe the custom observed in England, why, only the wealthy succeed each other." This is news. Does Mr. Cameron think the young men in England who work very hard to prepare themselves for the competitive examinations to get a living in the civil service, are mostly rich young gentlemen who might as well live on their independent incomes? Does he think such rich young men would crowd into the competitive examinations here? The chance Mr. Simon Cameron wants poor young men to have, is to be put into public places upon the selection and recommendation of the Camerons, father and son, and to pay lusty assessments when the Camerons have a political battle on their hands, and to be in constant dread of removal at the Camerons' request if they refuse to pay or otherwise displease the bosses. As to the campaign in Pennsylvania, the Camerons want it to be understood that they are "confident." They think it is too late for a compromise between the Independents and the Stalwarts, and that the defeat in Ohio will "do the party good."

The story of the conspiracy to ruin Colonel Irish, of the Bureau of Engraving and Printing, bears at some points a curious resemblance to the story of the safe-burglary conspiracy, in which "Dick" Harrington, of Delaware, played such a conspicuous part some eight years ago. In both cases the charge is that of a conspiracy to injure an innocent man by "putting upon" him a felony; in both cases the beneficiaries of the crime are supposed to be a gang of that class of politicians who are now known as "Stalwarts." The facts in the safe-burglary case were these: Columbus Alexander, a citizen of the District of Columbia of the highest character, was actively pushing an investigation into the transactions of the Shepherd Ring. In the course of the investigation it became for the interest of those carrying it on to get possession of the books of John O. Evans & Co., contractors, which were in District-Attorney Harrington's safe. Alexander was approached, and the books were offered to him if he would pay for them. He declined to buy any evidence. The burglary was then committed, with the intent that it should be traced to Alexander's door, but it miscarried, and Harrington was indicted. In the present case, Mr. Alexander is Colonel Irish; the part played by Harrington is taken by Salter and Ward, and the "job" consists in getting property of the Bureau stolen in order to bring discredit on its management, get Colonel Irish removed, and make places for two or three politicians, one of whom has been "working" for the place with the aid of Senator Cameron and the Pennsylvania delegation. Whether Salter and Ward, who are now under arrest, are guilty, remains to be shown; but if they are, they may well have got their idea of their little scheme from the history of the charges against Harrington, and they must derive encouragement in their awkward position from a recollection of the effectual way in which he has since been vindicated. He was indicted during General Grant's second term, and while under indictment he went to call at the White House, and was pleasantly received. The jury disagreed, and he returned to Delaware, where the party felt that he was just the man they needed; he has now been made Chairman of the State Committee, and is waging an active war against the wicked Democrats.

A case of political boycotting is reported from Albany. It is said that the letter-carriers of that city have been ordered to distribute, free of charge, circulars denouncing the *Evening Journal* for its independent course in politics, and urging Republicans to discontinue taking it and to take the Troy *Times* instead. In other words, a Federal office is used as an organized instrument to injure a private business whose proprietors are not in political sympathy with the Federal Administration. It is understood that large numbers of these circulars have been so distributed. If the facts are as reported, the partisan use of official power has gone a step further than ever before. Places have been awarded as a reward for political service, men have been turned out of office as a punishment for refusal to render such service, and officeholders have been required to contribute a fixed percentage of their salaries to support a political machine. All this is familiar. But we believe this is the first time that the organized force of a public office has been employed to induce the customers of a business establishment not to deal with it any longer in order that it may be punished for party contumacy. This is boycotting in politics carried on by Government officers. The *Evening Journal* asserts the facts in the most positive way, and the *Argus* announces that, after a thorough investigation, the charge appears to be well founded. It is one which Postmaster-General Howe cannot safely sleep under. If it is false, he ought to lose no time in contradicting it effectually. If it is true, a failure on his part to dismiss Albany Postmaster Craig from the office he has abused will throw upon himself and the Administration the responsibility for this gross outrage.

The Albany *Journal* of Monday says:

"It may not be generally known, but it is none the less a fact, that Judge Folger did intend to decline the nomination, and said so openly a couple of hours before the State Committee met. There is no doubt of the sincerity of this declaration. But unfortunately he allowed his best judgment to be overthrown by the urgent pleadings of the Machine men, and at last reluctantly accepted."

If this be true, Mr. Folger is undoubtedly now looking back with profound regret upon the hour when, yielding his better judgment to a set of tricksters, he lost a chance to put himself in a stronger position before the public than he has ever occupied in his life. That chance he lost, and a similar one is not likely ever to come back to him. It is rumored that the Machine men are urging Mr. Folger to "mount the stump" and make a number of speeches in the campaign in his own behalf. There should be a limit to their cruelty. They should be satisfied with the injury they have already done to Mr. Folger, and not insist upon inflicting upon him further humiliation.

Mr. Howard Carroll will do well not to repeat the indiscretion of his speech to the Young Republicans on Monday night, when he said:

"There has been a great deal said about civil-service reform, and nobody can doubt that such a reform is necessary. I do not believe, however, that the rules under which appointments are now made in the Custom-houses and Internal Revenue offices always secure the best men. It does not seem the best thing to ask a man how high a mountain is when he is to be made a gauger of whiskey, nor is it necessary to ask a man as to the depth of the sea when he is seeking a position as an appraiser of goods. I should be disposed to advocate such rules as would tend to secure the men best suited for the particular duties which they will be required to perform."

The illustrations he uses about the gauger and the mountain, and the appraiser and the sea, explain clearly why it is he believes "that the rules under which appointments are now made in the Custom-house do not always secure the best men." He is right as to the fact, but the true reason for believing it is that no system of human contrivance "always secures the best men" for anything. *His* reason is, however, the very plain and commonplace one that he knows nothing whatever about the examinations. He has evidently never attended them, nor ever seen the papers. His illustrations are therefore simple concoctions of his own fancy, and are intended to be a sneer at the only practical attempt at civil-

service reform yet made, which is the less excusable in him as he has been long connected with the *Times*, which has again and again exposed this particular device of the spoilsmen. His first duty now, before he speaks again on civil-service reform, is to go down to the Custom-house, and inform himself, either by witnessing an examination, or reading the examination papers, whether there is the smallest foundation for his joke. He will find that the questions are eminently practical, that they go straight to the candidate's general intelligence and special fitness for a special work, and that they are just such as a private employer would ask candidates for situations under him, if he had no previous knowledge of them. One candidate for Congress—Mr. Charles O'Neill, of Philadelphia—passed a portion of last Saturday doing this very thing, having been incited to it by questions put him by the Civil-Service Reform Association of that city. He did not stay at home and invent funny questions as specimens of "this particular method," and retail them on the stump, but took the train and went to the Custom-house and saw the thing itself, which Professor Huxley says is the true foundation for all knowledge. Mr. Carroll will do well to follow his example. He is young, is just entering on a political career, and is handling a question which is fast becoming the burning question of the day, and it may prove highly inconvenient to him hereafter to have talked about it flippantly, or without due information.

The *Herald* gives a synopsis of a plan suggested by the Hon. John Jay Knox, Comptroller of the Currency, for converting the outstanding 4 per cent. bonds, which run till the year 1907, into 3 per cents having the same time to run, in order to furnish the national banks a more secure basis for their circulation without lengthening or increasing the public debt. The plan provides that the Government shall issue the new threes in exchange for the outstanding fours, at the rate of $117 50 of the former for $100 of the latter. A computation will show that the amount of money to be paid by the Government between now and 1907, principal and interest together, will be the same in either case. It is believed that the banks would readily make the exchange, since it would enable them to realize the premium which the fours now have, without selling the bonds and retiring a corresponding amount of their circulating notes. Under present circumstances the premium yields nothing to the banks, and it serves as an inducement to them to retire their circulation and sell these bonds—the effect of the movement being a slow contraction of the currency. The plan appears to be free from objections and entirely feasible, provided the public can be made to see that it involves no loss of money and no extension of the debt beyond the period now fixed for its redemption. To make this clear will be a task of some difficulty, but not more difficult perhaps than many other financial problems we have had to deal with.

The New York banks during the last week again increased their reserve, and now hold a surplus of nearly $2,000,000 where a year ago there was a deficiency of $2,500,000. The money market worked easily for borrowers, and at lower rates than for several weeks, no loans having been made above 6 per cent., and not a few having been made below 5 per cent. The domestic exchanges are not running as strongly against New York as they were, and the Treasury disbursements during the week were heavier. Rates for foreign exchange, chiefly on account of the settlement of loan bills, advanced early in the week, but later declined again; rates, however, are still above the gold-importing point, and it begins to be seriously doubted whether any gold will be imported this year. At the Stock Exchange, the early part of the week was characterized by weakness and depression, but in the latter part there was a recovery in tone and prices. Railroad earnings continue very large on the leading lines; the tonnage from the grain movement is small, but other sources make up this deficiency, and rates charged are much higher than a year ago. The general trade of the country is fairly good, but is not up to extreme expectations, because of the slow movement of grain from first hands, which in turn is due to the low prices to be obtained for it.

Two colonels fought in St. Louis on Saturday, one a newspaper and the other a bar colonel, and the latter, who appears to have been a most estimable man, was shot dead. The Bar of St. Louis has accordingly held a meeting of mixed indignation and condolence over the affair, which protested against "the spirit of ruffianism which is abroad, the wanton employment in speech or writing of intemperate, licentious, and defamatory language, and the resort, on frivolous pretexts, to deadly weapons." The occurrence is doubtless most deplorable, but the resolutions of the Bar do not, it seems to us, go to the root of the matter. Colonel Cockerill, the slayer, made use in his paper—the *Post-Dispatch*—of "intemperate, licentious, and defamatory language" about Colonel Slayback, who thereupon went to the office of the paper with a friend, and found Colonel Cockerill in his room with his pistol on the table. There was an altercation, and Colonel Slayback was shot in the well-known Southern style. But then Colonel Slayback, being the kind of man the Bar describes, ought to have known better than to go armed to the office of a ruffianly newspaper colonel to call him to account. "The spirit of ruffianism" is just as much abroad here as in St. Louis. Dozens of colonels in this city are constantly defaming other colonels in the most licentious manner; but the defamed colonels take no notice of it, and it soon becomes as harmless as the noise in the street. No colonel of high character and standing at our Bar carries a revolver, or thinks of going in quest of other armed colonels to demand retractions or apologies. The apology of a blackguard is of no use to any colonel in any part of the world. If peaceable and respectable colonels at the South would make up their minds to disregard the foul-mouthed and abusive colonels, we believe the homicidal record of that blood-stained region would rapidly improve. And then, would it not be well to cut down the number of colonels? Would it not be well for hard-working lawyers—fathers of families—to go about as plain Misters? Does not this military rank make them feel as if they had a store of military honor to look after? And can there be a more inconvenient thing for a peaceful citizen than a commodity of this kind?

Our respect for Mr. Munro, the eminent Pirate, great already, for his endeavors to bring the best foreign literature within reach of the masses, has been heightened by learning that he now prints expurgated editions of his books. We are informed, but have not ourselves verified the information, that he has, for instance, produced an edition of Mallock's 'Romance of the Nineteenth Century' from which he has excluded all the objectionable passages, leaving simply what is pure and elevating. It would really seem from this as if we were about to witness one of the strangest transformations of modern times, full of strange transformations as this century has been—namely, not only the disappearance of all that is opprobrious from the term Pirate, but its conversion into a title of honor. What is perhaps most curious about this is, that it will be simply a recurrence to the old Greek use of the name, which not only conveyed nothing discreditable, but designated a calling in which a man could establish as high claims on the consideration of his fellows as in any other. Mr. Munro is thus perhaps unwittingly—though for aught we can tell he may be an eminent Greek scholar—furnishing a fresh illustration of the power and permanence of Greek culture. The modern world is slowly learning the extent of its indebtedness to the Hellenic thought and language. The idea that a Pirate could be a useful and honored citizen is Greek. We, after two thousand years, have revived it, but have also, we are glad to say, ennobled it by making the Pirate a philanthropist.

The change which has come over the spirit of the French people with regard to war, as illustrated by the disgust caused by the Tunisian expedition, and by the popular opposition to any participation in the invasion of Egypt, has naturally been exciting a good deal of surprise and speculation. It is only twelve years since the French had the reputation of being not only the most warlike people of Europe, but the people fondest of war. They have now the reputation of being the least warlike and most pacific people in Europe. It would have been said before 1870 by almost any observer of French politics that no government, whether monarchy or republic, could survive a refusal to participate in the enterprise against Egypt undertaken by the British. It is now generally acknowledged that no government could have safely participated in it. Can it be possible, it is now asked, that the old view of the French character, which may be said to have prevailed for seven hundred years, was all a mistake, and that the French all along have been quiet and peaceably disposed in spite of their incessant warring? Or has the national temper undergone a complete revolution under the discipline of the German invasion? The answer to both questions which finds most favor now is, that the French people never were really fond of war, but that owing to their highly centralized Government they never until now had a chance of impressing their real sentiments on the national policy.

The French public was, until 1870, for all political purposes, the inhabitants of Paris. It was in Paris that all revolutions were made, the provinces accepting the result as soon as it was telegraphed to them. It was the opinion of the Parisian salons which had most weight in the palace and Ministerial bureaux. It was Paris which clamored for war, and liked "glory," and enjoyed the spectacular triumphs which followed the return of the conquering heroes and the armies which they led. It was in Parisian society that the titles and decorations won on the battle-field were most effective, and to Parisian galleries and museums that the great spoils of victory came. In the provinces, it is said, war has all along inspired nothing but horror. It was not the provinces which longed for revenge for Waterloo, or which was ready to begin armed meddling in Spain seven years after Waterloo, and besiege Antwerp fifteen years after, and to fight England about Mehemet Ali and about Tahiti twenty-five or thirty years after, and which under the Third Empire began to threaten all Europe once more. It was good society in the metropolis.

It is to be observed that this theory does not fully account for the enormous popular vote in 1849 for Louis Napoleon, who can only have been known to the peasantry as the heir of a military hero. But this may have been due to the immemorial custom of the French people to vote always for the man in power. It is by no means conclusive proof of anything except their desire for a strong government which should put down the Reds. But the theory certainly does seem to be borne out by the recent history of the Republic. Paris, as a political capital, received a fatal blow from the insurrection of the Commune. The Commune got possession of Paris, but this did not give it possession of France, and this very novel experience seems to have awakened the provinces to a consciousness of their power. The establishment of the Republic may be said to have completed the transfer of the sovereignty, by taking away both the Legislature and the Administration from the control of "good society." The "elegant world," as the French call it, is no longer the official world. France is governed by country lawyers, manufacturers, and farmers, who do not go into society, and do not know or care about its standards or aspirations. They represent the peasantry, and they apparently truly say that the peasantry care nothing about the old French "glory." They want peace, a quiet life, and good markets. They will not submit to seeing their sons dragged off to perish in pestilential climates in order to uphold the traditions of the Foreign Office in Paris. They know and care nothing about these traditions, and if it costs money or blood to uphold them, will have none of them. The change is certainly most interesting, and, for the future of the European Continent, most important.

There is another Ministerial crisis at Constantinople, the first which has occurred for some years. Soon after the close of the Russian war the Sultan took all the affairs of state into his own hands, reduced the Ministers to the rank of clerks, and took away from the Vizier's office the character of lieutenancy which it had had since the foundation of the Empire. He then went to work to get up a sort of Mussulman revival in Asia, and restore the spiritual glories of the Caliphate in his own person, as a compensation for the terrible losses he had sustained in Europe. The Egyptian revolt seemed likely to further the scheme; and there is no doubt that he all along secretly encouraged Arabi. This game has, however, been brought to an abrupt close by the victory at Tel-el-Kebir. This has given a severe blow to Mussulman aspirations all over Asia, and once more demonstrated the Sultan's humiliating helplessness. So he is now anxious to fall back on Ministerial counsel and support, and wishes Saïd Pasha—one of the very few rational and decent pashas—to form a Cabinet, and Saïd refuses to do it, except on the basis of reconciliation with France and England, the abandonment of the alliance with Germany, and the acceptance of the situation in Egypt. This is, however, too much for the Sultan; so there is "a crisis."

The cable brings news of a declaration by Mr. Leonard H. Courtney, a member of the English Ministry, though not of the Cabinet, and a man who is not likely to talk loosely or unadvisedly, which must give sincere satisfaction to all friends of the Gladstone Government. The despatch seems to indicate that Egypt will be relieved from the necessity of paying the outrageous "tribute" which now goes to the Sultan, for which he makes no return whatever, and that the Egyptians, from the Khedive down, will have to go to work and govern the country decently, soberly, and economically, and, better than all, that the bondholders will have to look out for themselves. If this programme be carried out, it will furnish a splendid justification of the war, and really make it a blessing in disguise.

The latest despatches from Peru seem to show that a crisis of some kind, either diplomatic or military, or both, is at hand, and that our Minister, Dr. Logan, is taking part in it. Calderon and he, according to one story, have arranged terms of peace with Chili, and both of them are now going to set off to Bolivia to bring that country into the agreement. According to what seems like equally good authority, Pierola's adherents are making ready in the north to get up a "de-facto Government" in his interest, resting, it may safely be assumed, not upon the "character and intelligence" of Peru, but upon some guns and soldiers. Montero, meantime, has issued a circular to the Diplomatic Corps, declaring that he will continue the war to the last ditch, unless reasonable terms of peace are granted, and protesting against the exactions of Chili. Such a state of affairs can hardly last long.

The National Conference which is sitting in Dublin seems to be a sort of prelude to some permanent organization, probably of a more political and less economical kind than the Land League. It is already announced that the agitation it will undertake will be peaceable and parliamentary, and it will probably push for some large measure of Home Rule, and will undoubtedly rely on greatly increasing the number of members of the Home Rule persuasion in the next Parliament. At the last election in 1880 the party can hardly be said to have been organized, and the Irish constituencies were still mostly Liberal. At the next election they will, in the south and west, probably break with both the English parties, and set up an Irish party, pure and simple; and it is estimated that in this way Parnell will have about seventy-three followers instead of twenty-three, who will constitute a very formidable "balance of power" in the House, especially in case Mr. Gladstone should retire from office. Mr. Egan, the Treasurer of the Land League, has sent in his accounts, in round sums, and asked for the appointment of two auditors to examine them. He says that about $1,250,000 has passed through his hands, and he has obtained a vote of continued confidence.

The programme of the Irish National Conference has been somewhat more fully brought out in the later despatches, but there is nothing very definite about it, and in fact it seems to resemble somewhat the programme of a Social Science Conference. It proposes discriminating taxation against grass lands, which is of course aimed at the practice of evicting tenants for the purpose of converting their holdings into pasture; but it would bear with great severity on tenants who thought dairy-farming more profitable than tillage. It proposes also to pay the Irish members of Parliament, which will greatly scandalize the English members, but will probably give the Irish party the services of some valuable men who could not otherwise afford to live in London. In addition to all this, the Conference is to establish workingmen's clubs and reading-rooms. In fact, the mixture of things political and social in the programme is very considerable, and seems at the outset to promise a rather languid agitation. A movement in favor of the general welfare of the population is never carried on with much ardor. There were some signs of dissension, owing doubtless to jealousy of Parnell, on the part of some of the fanatical members, like Davitt, of humbler origin, which was apparently kept down with difficulty. Parnell's own speech seems to have been, on the whole, moderate, and in parts very practical. He said that they needed from eighty to ninety members to make an effective Irish party in the House of Commons, but he apparently despairs of this without household suffrage. We have little doubt he could get it with the suffrage as it is, if more rationality were infused into the talk and doings of his supporters, because the doctrine of Home Rule has apparently made considerable progress among all classes within the last two years. Even many of the landlords are now disgusted with the legislation of the British Parliament, and would sooner take their chances in an Irish one. The truth is, the reliance on the British Parliament to save them from the consequences of their own folly has been the curse of the Irish landlords. If they had had to fight their battles with their tenants on Irish soil exclusively, they would long ago have come to terms which would have made Mr. Gladstone's land acts unnecessary.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, October 11, to TUESDAY, October 17, 1882, inclusive.]

DOMESTIC.

THE later returns from Ohio increased the Democratic plurality to about 18,000. The Congressional delegation will consist of fourteen Democrats and seven Republicans.

Returns from Speaker Keifer's district in Ohio show that, although elected, he ran more than 1,000 votes behind the weakest of the Republican candidates for State offices, none of whom commanded more than seventy-five per cent. of the usual Republican vote in Ohio.

The Liberals of Utah Territory on Thursday nominated Philip T. Vanzile, United States District Attorney for Utah, for delegate to Congress. The platform arraigns the Mormon Church for making Utah disloyal to the Government, retarding its growth, and setting its people at variance with the United States, and declares that there can be no fair and impartial government in Utah while the Mormon Church is permitted to control the law-making power. It repeats the demand of the last Territorial Convention for a Legislative Commission.

A meeting of prominent citizens of New York, without regard to party, was held in the city on Wednesday, for the purpose of nominating a man for Mayor who should, apart from all partisan political considerations, be best fitted to administer the affairs of the city, and the nomination of the present Comptroller, Allan Campbell, was found to be the sense of the meeting. On Saturday a Joint Conference of Tammany Hall and the County Democracy agreed upon Mr. Franklin Edson as the Democratic nominee for the office of Mayor. On Tuesday the citizens' movement was thwarted by the arbitrary action of the committee appointed to give effect to it.

The Rev. Dr. Howard Crosby has written a letter, saying that the election of the present New York Republican ticket would be "the endorsement of bribery, fraud, and the tyranny of the money power"; and that no consideration whatever can justify this. He commends the nominees of the Democratic party as men of the "highest character, whom we can all respect and support without any qualms."

An intimate friend of Secretary Folger's is reported to have stated that Mr. Folger has not tendered his resignation from the Cabinet, and will not do so before the last of December, and only at that time in the event of his election as Governor of New York.

An enthusiastic civil-service reform meeting was held at Ithaca, New York, on Saturday evening. Addresses were made by President White, and Profs. Moses Coit Tyler and Herbert Tuttle, of Cornell University. A branch of the New York Civil-Service Reform Association was organized, with Mr. White as permanent President. It was voted to request an expression of the views of the candidates for Congress from that district on the question of civil-service reform.

Attorney-General Brewster, in an interview in Philadelphia on Sunday, stated that important arrests would soon be made by the Government in the Star-route bribery cases; and that among the arrests would be those of one or two persons in the Department of Justice who had been used as spies for the defendants, and who appeared to be deeply implicated in attempts to corrupt jurors on behalf of the defence, and that, moreover, the defendants having obtained information that the Government contemplated such action, would within a short time furnish an article to the press disclosing facts that have long been within the knowledge of the Department, and thus take the credit before the public of being exposers of wrong-doing. This statement of the Attorney-General was verified on Monday by the publication in various newspapers of a voluminous document, said to have been prepared by the lawyers for the defence, and consisting of affidavits reciting in detail the attempts to bribe members of the Star-route jury to find verdicts for the defendants. The affidavits charge Special Agents Bowen, Fall, and Brewster Cameron, and others with having made these attempts. In an interview on Monday evening in reference to the affidavits, Attorney-General Brewster said he did not think it becoming to carry the case of the Government against criminals into the newspapers in advance of the trial; that there was no fund from which any money could be drawn for the corruption of jurymen on behalf of the Government; that the whole thing was a palpable fabrication, and that "events which will take place hereafter will explain all that has taken place."

The Treasury Department will continue the redemption, both in New York and Washington, of the 117th-call bonds, without rebate of interest; but the owners, while receiving full interest to December 23, will be required to deposit a sum equal to three months' interest, from August 1, 1882, to November 1, 1882. A check for this three months' interest will be forwarded by the United States Treasurer to the registered owners of the bonds on November 1, in the usual manner.

The Acting Secretary of the Treasury has addressed a letter to all Collectors of Customs announcing that hereafter all accounts for travelling expenses incurred in that service will be paid from the Treasury Department, instead of allowing the Collectors to estimate for such expenses.

The annual report of the Director of the Mint, which was forwarded to the Secretary of the Treasury on Thursday, shows a decided increase in the coinage of the twelve months ending June 30, 1882, over that of the previous year.

The annual report of Commissioner MacFarland, of the General Land Office, for the fiscal year ending June 30, 1882, was completed on Thursday. It shows the total disposals of public lands under all acts of Congress to have been 14,309,126.50 acres, an increase of almost 3,500,000 acres over the preceding year. The total amount received from all sources in connection with the disposal of public lands was $8,392,848 24. The Commissioner states that the land now embraced in the limits of the public domain amounts to 900,000,000 acres, including Alaska. He recommends that the Preëmption Laws be abolished, as the Homestead Laws cover all the cases now arising.

The annual report of Second Assistant Postmaster-General Elmer, which is nearly complete, will show a decided increase in the mileage of the Star-route service for the last fiscal year, as compared with that of the year ending June 30, 1880, while the cost of maintaining the service has been less than in 1880 by more than a million dollars.

A statement showing the exact financial condition of the Post-office Department at Washington at the close of the fiscal year ending June 30, 1882, has been published, and states the total receipts as $41,876,410 15; total expenditures, $40,039,634 75; excess of receipts over expenditures, $1,836,775 40.

The Department of Agriculture has furnished a report of the corn crop of the country based on returns received for the month of October. New England will produce seven to eight millions, the Middle States eighty-two millions, the Southern States three hundred and forty millions, the States north of Tennessee and west of Virginia and Pennsylvania twelve hundred and fifty millions, an aggregate of sixteen hundred and eighty millions.

The more important claims filed with the board designated by Congress to audit the claims arising from the illness and death of President Garfield are as follows: Dr. D. W. Bliss, $25,000; Dr. D. Hayes Agnew, $14,700; Dr. Robert Reyburn, $10,800; Dr. D. S. Lamb, $1,000; Susan A. Edson, $10,000; Henry S. Little, receiver of the Central Railroad Company, of New Jersey, for laying special track at Elberon and running special trains, $3,239 91. No claim has yet been filed by Dr. Hamilton or Dr. Boynton.

Boards for the physical and professional examination of surfmen throughout the Life-saving Service were appointed on Tuesday.

A despatch from Pensacola, Florida, on Tuesday reported a total of 1,677 cases of yellow fever and 141 deaths to date. The fever is spreading in the northern and northwestern parts of the city, which have heretofore been exempt from the disease.

Reports from Pittsylvania County, Virginia, state that the ravages of diphtheria in certain neighborhoods are alarming, nearly 200 deaths having occurred within the sixty days ending October 12.

General Crook held an important conference with 400 of the head men and chiefs of the Apache Indians at San Carlos, Arizona, on Sunday. He informed them of his policy of government during the time he should remain in command of the department, the leading points of which are briefly as follows: All the Indians are to be counted daily, and none of them will be allowed away from the reservation without papers, and Indians found off their reservation without passes are to be treated as hostiles; the manufacture of tiswin, the favorite liquor of the Apaches, is to be stopped. In conclusion, General Crook said that, while every encouragement and assistance would be given to Indians willing to be peaceful and work for their living, no mercy would be shown to those who attempted to go on the war path. If any of the Indians at the council felt disposed to break out, he thought it best for them to break out now, and bring the question of supremacy to test without more delay.

The celebration of the one-hundredth anniversary of Daniel Webster's birthday took place at Marshfield, Mass. Mr. Stephen M. Allen, President of the Webster Historical Society, President Arthur, Governor Long, and others delivered speeches. A letter of Webster's, written in October, 1850, while he was a member of President Fillmore's Cabinet, and not heretofore published, was made public. It was intended to be sent to all United States officers, but the Cabinet for political reasons objected to it, and it was never sent. In it Mr. Webster upholds the supremacy and perpetuity of the Constitution and the Union and reprobates secession.

At a meeting of the Board of Trustees of Union College on Thursday, at Schenectady, President Potter appeared in person and read a brief letter in which he refused to resign the office of President, on the ground that but nine of the eighteen Trustees had asked him to do so. After a long debate, a motion that the action of the Board of Trustees asking for President Potter's resignation be rescinded was adopted by a vote of nine ayes to eight nays.

The international cricket match between the Australian Eleven and a picked eighteen of Philadelphia was concluded on Friday, and resulted in a victory for the Australians with nine wickets to spare.

The committee appointed to select the American rifle team and to make arrangements for the international match to be held in England, met on Monday, and adopted resolutions recommending as part of the conditions for the match in 1883, the use of the wind-gauge and of the barleycorn sight in use in the United States Army and approved by the National Guard of the various States; and enlistments on or before December 31, 1882, to make National Guard men eligible. It was resolved to "disregard sentiment" and purchase English rifles, which would place the American team on an equal footing with the British.

John Cockerill, managing editor of the St. Louis *Post-Dispatch* newspaper, shot Colo-

nel Slayback, in the office of the newspaper, on Friday afternoon. The trouble arose out of political matters, and the immediate cause of the shooting was that the *Post-Dispatch* had charged Colonel Slayback with cowardice. Slayback went, armed and accompanied by a friend, to the office of the paper, to demand satisfaction. A scuffle ensued, in the course of which Cockerill shot Slayback.

FOREIGN.

The Irish National Conference was held at Dublin on Tuesday. The attendance was large, between 700 and 800 delegates being present. Mr. Parnell presided. The scheme for the establishment of the Irish National League was adopted. The Central Council of the League will consist of forty-eight members, thirty-two representing the Counties, and sixteen the Parliamentary party. Mr. Egan presented the financial report of the Land League, which showed a balance on hand of nearly £32,000. Mr. Parnell, in a speech, said that no solution of the land question could be final which did not secure to farmers the right of becoming the owners of their holdings by purchase. Mr. Davitt made a speech, in the course of which he moved an amendment to the proposed constitution of the Central Committee of the new League, to the effect that the Parliamentary party have no nominations, but that its members be eligible for membership. Mr. T. P. O'Connor said that the adoption of this amendment would amount to a vote of want of confidence in the Parliamentary party, and accused Mr. Davitt of trying to injure Mr. Parnell's prestige, which greatly excited Mr. Davitt, and to prove the groundlessness of the accusation he withdrew the amendment. A resolution was passed expressing unabated confidence in Mr. Parnell.

Lord Northbrook, First Lord of the Admiralty, speaking at Liverpool Friday night on the beneficial effects of the Land Act, expressed the belief that a turning point had been reached in the affairs of Ireland. The number of outrages, he said, had decreased and rents were being freely paid.

Sir Stafford Northcote has sent a circular to the Conservative members of Parliament, enjoining upon them the necessity of attendance at the opening of the session, in view of the importance of the questions relating to Parliamentary procedure and Egyptian affairs.

The committee under General Alison appointed to report on the proposed Channel tunnel has recommended that the exit of the tunnel should be commanded by a fortress of the first class; that the tunnel should be provided with a portcullis, and with an arrangement for filling it for a sufficient space with an irrespirable gas; that an arrangement should be made for the demolition of the land portion of the tunnel, for the temporary flooding of the main tunnel, and also for its total destruction by mines; and that various other precautions should be taken; but even if all this should be done, the committee admit that it would be presumptuous to place absolute reliance upon the arrangements. Memoranda from Sir Garnet Wolseley and the Duke of Cambridge are appended strongly condemning the tunnel. The London *Times* considers that this report has settled the question of the tunnel adversely for a long time to come.

Mr. Leonard H. Courtney, M. P., Joint Secretary to the Treasury, opening a Liberal club at Torpoint, on Thursday, denied that the Government arrogated to itself the credit for the victories in Egypt. That country, he said, must eventually become independent of foreign control, and must defray the cost of the war, and no doubt the bondholders would have to forego something. It was not for them that England undertook the war. In regard to a resettlement, Mr. Courtney said it would be necessary to consult the Powers. He concluded by saying that the policy of the Government was to detach Egypt from the Sultan, to look after the Suez Canal, and to "allow the Egyptians to stew in their own juice," and to warn the Khedive that his future position depended on his management of affairs. This speech of Mr. Courtney's has been read with interest as being the first public expression of the probable policy of the Government in regard to Egyptian matters.

The Committee appointed to try the rebel prisoners on Wednesday examined several witnesses, including Princes Ibrahim and Kiamil. The evidence was insignificant. Arabi Pasha was also taken before the Committee, and replied to their inquiries in long but unimportant speeches. On Thursday the examination of Arabi was continued, and a despatch from Cairo says that it is understood that he ably defended himself, denying complicity in the massacres and in the burning of Alexandria. He boldly vindicated his conduct as leader of the National party. He said that when he reached Cairo, after his defeat at Tel-el-Kebir, and found the inhabitants unwilling to continue the struggle, he immediately bowed to their will and surrendered. On Sunday the indictment of Arabi and his associates had not yet been completed, and the Prosecution Committee expressed the belief that the court-martial would not meet again for another week. This delay is caused by the question of admitting English counsel to defend the rebel leaders. The Egyptian Government is preparing a note to Sir Edward Malet showing the inconvenience of admitting foreign counsel in the case, and explaining that the Government would instead prefer to hand back Arabi and his associates to the military authorities for trial; and a despatch from Cairo to the London *Daily Telegraph* reports that the Egyptian Ministry met on Saturday to decide the question of counsel, and has informed Mr. Rivers Wilson that permission to Arabi to employ foreign counsel has been refused. The London *Times* on Friday printed a letter from Mr. Wilfrid Blunt to Mr. Gladstone, protesting against the action of the Egyptian authorities in preventing counsel from seeing Arabi to prepare his defence. The news on Sunday was that the Hon. Mark Francis Napier would defend Arabi before the court-martial, the Egyptian Government having allowed the latter to choose his own counsel, whether native or foreign.

On Tuesday a Cairo despatch stated that it was believed in official circles that proof of Arabi's complicity in the June massacre in Alexandria would be unobtainable. The *Daily News* states that at the private investigation of the rebel prisoners most of them objected to being questioned in regard to events which had occurred prior to the outbreak, Arabi especially urging that they were covered by the general pardon issued by the Khedive. Arabi also said that the June massacre was precipitated by the presence of the British fleet. Another despatch to the *Daily News* says that in regard to the defence of Alexandria, Arabi avers that he acted under the orders of the Khedive, and that he continued the war after the bombardment by order of the National Council at Cairo. The Cairo correspondent of the London *Times* telegraphed on Sunday that the decree of the Council of Ministers, the existence of which Arabi vehemently denied, had been found at the house of Rifaat Bey, bearing his signature and that of the other Ministers.

The Egyptian Minister of Finance is in possession of a list of landed properties belonging to the leaders of the rebellion which are worth in the aggregate £2,000,000. It is believed that much of this property will be confiscated.

A despatch from Constantinople says that England's reply to the Porte's note in regard to the evacuation of Egypt by the British troops caused great exasperation at the palace. The fanatical party, taking advantage of the Sultan's anger, accused Saïd Pasha, the Turkish Prime Minister, of having caused the loss of Egypt to Turkey, and demanded his exile. On Tuesday the despatches stated that, though the Sultan had accepted Saïd Pasha's conditions for remaining in office—namely, the abandonment of the Austro-German alliance, the acceptance of accomplished facts in Egypt, and the reëstablishment of a good understanding between England and France on the Eastern question—yet the acceptance was only in principle, and that the Sultan really desires to frustrate Saïd Pasha's plans.

According to a Paris despatch to the London *Times* on Wednesday, Prince Bismarck, in a recent interview with a politician, said he believed England intended to secure a majority of the shares of the Suez Canal Company, so as to oust M. de Lesseps, and that she could do this by simply empowering trustees to invest trust moneys in the Canal shares. The *Times*, in discussing these suppositions, declares them to be unfounded, and believes that M. de Lesseps is more reasonable than might appear from his proceedings during the war.

The correspondent of the London *Times* at Berlin reports that the appointment of Count von Hatzfeldt to the Foreign Secretaryship has been definitely settled. Herr von Radowitz, Minister at Athens, will succeed him as Minister at Constantinople. It is considered by some persons that the appointment of Count von Hatzfeldt is an indication that he will eventually succeed Prince Bismarck, who is known to entertain the highest opinion of him.

In the Lower House of the Hungarian Reichstag, on Wednesday, Count Tisza, President of the Council, said that he had not ordered a state of siege to be declared in Pressburg (the scene of the recent Jewish riots), but that he had furnished the Commissioners with full powers to be used should any occasion arise, and added that in future, in case of necessity, he would again adopt measures similar to those taken to put down the riots against the Jews in Pressburg. He said that the movement might eventually degenerate into one of a socialistic character, and he declared he would never tolerate the perpetration of excesses. With a view to the settlement of the whole question, the Government had introduced measures revising the usury and trade laws.

A despatch from Tunis says that strong reinforcements have been sent to southern Tunis with the object of carrying on operations on a large scale against the insurgents during the cold season.

A despatch to the London *Standard*, from Athens, says that with the evacuation by the Turks of the position claimed by Greece, the difficulty between Turkey and Greece is regarded as terminated.

A despatch from Madrid says that at a Cabinet Council on Thursday, the Minister of Foreign Affairs announced that the negotiations for treaties of commerce with various nations were advancing, and that the basis of a treaty with Germany had been fixed. Spain, he said, entertained friendly sentiments toward England, but was unable to arrange an agreement for a treaty with that country.

The Madrid *Correspondencia* says that at a recent meeting of Carlists it was decided, in consequence of Don Carlos's course of life, to proclaim his son, Prince James, the head of the Spanish Legitimist party.

A despatch from Lima, dated October 11, states that the peace negotiations between the Chilian Government and Garcia Calderon, under the friendly offices of Dr. Logan, United States Minister to Chili, have failed. The rumors are that Señor Calderon will not listen to the proposals of Chili, and while Dr. Logan urged Chili to treat with Calderon, she preferred to treat with Pierola.

The German ship *Constantia* came in collision with the steamer *City of Antwerp* fourteen miles east of Eddystone Light on Tuesday, and both vessels sank. The despatch says that "all the *Constantia's* crew and four belonging to the *City of Antwerp* have been landed at Cardiff."

THE POLITICAL SITUATION.

THE Republican press all over the country is busily engaged in a sort of post-mortem examination of the Ohio case. Was it the temperance question that defeated the Republicans? And if it was not that alone, what was it? The facts, it seems to us, speak clearly enough. It was undoubtedly the temperance question and the interference with Sunday recreation which drove away from the Republican party many thousands of German voters who had formerly adhered to it with great fidelity, especially when the question of specie payments was in issue. The effect of this desertion was felt principally in the large cities. But it is generally admitted that this does not account for the large falling off in other districts where it might have been thought that an attitude in favor of temperance legislation would rather have strengthened the Republican side. What was the trouble there? Some say that it was the popular affection for Garfield, whose memory was not sufficiently respected by the present Administration and its friends. Others say that it was the appointment of Stalwarts to offices in the State which disgusted the Republicans generally. Still others say that the noise made by the newspapers about Mr. Hubbell's assessment operations told heavily against the Republican party. There is undoubtedly some truth in all these opinions. The manner in which Garfield's memory has been treated by the friends of the present Administration, in the press and elsewhere, has certainly offended the feelings of many Republicans, especially in Ohio. The preference given to Stalwart politicians in appointments to office was likewise against the general run of sentiment, and produced a similar effect. And as to the shamelessness with which assessments were levied upon public servants, we observed long ago that the scandal of this practice would drive away far more votes from the Republican party than all the money that might be raised by such a system of blackmailing could buy.

But it is certain that none of these things, nor a combination of them, would have driven so large a number of voters from the Republican ranks, had there been a great public question of overshadowing importance on which the voters would have felt compelled to take sides, and which would have made them overlook things of less immediate consequence. But there being no such issue, the ordinary Republican voter ceased to be impressed with the necessity of a party victory, and many thousands of them thought this an excellent time to punish the party for its shortcomings—a conclusion which some arrived at with regret, and others with a certain relish for the opportunity. Thus the temperance matter, the reviling of Garfield's memory, and the appointment of unpopular politicians became causes of great effects in Ohio, as the boss rule of the Camerons and the interference of the Administration with State affairs, and the Gould-Conkling combination, and "fraud and forgery" are causes working out similar effects in Pennsylvania and New York, while the assessment scandal is producing its impression everywhere. The fact is, that people have begun to care more for the effects of party rule than for the sanctity of party allegiance, or for the fortunes of the party itself. That this indifference to party as such should result in the heaviest blows against the party in power is but natural. It is also natural that it should in our case most largely affect the Republican party, for the Republican party contains the greatest proportion of independent elements.

On the whole, this is not an unhealthy condition of things at all. It is under such circumstances that people are most disposed to look at and to treat questions of public concern upon their own proper merits, unbiassed by mere party interest. And that is what the country really needs, although the professional politicians, whose only capital consists in their party standing, may not like it. One of the peculiar features of the present situation is that the shrewdest Democratic politicians are quite sincerely and seriously alarmed at the greatness of their success, and especially at the prospect of a large Democratic majority in the next House of Representatives. They fear lest the Democratic party, as on former occasions, when in possession of great power, will not know what to do with its opportunities; that it will again alarm the country by an injudicious use of its power, and, by forfeiting the confidence of the conservative citizen, destroy its chances for a Democratic victory in the Presidential election of 1884. This apprehension is well supported by past experience; and the fact that the shrewd Democratic politician is disquieted by it, shows that the independent spirit now prevailing is growing strong enough to become a cause of serious dread to party men on both sides. This condition of things usually precedes great changes in the grouping of political forces and new party formations, the advent of which would, we have no doubt, be hailed with great satisfaction by untold thousands of Republicans and Democrats alike.

A JOINT CANVASS.

MR. HOWARD CARROLL, the Republican candidate for Congressman-at-large in this State, showed the other night in his speech accepting his nomination a very refreshing sense of humor; and in what he said there was perhaps nothing really funnier than his offer to make a joint canvass of the State with General Slocum. To make a joint canvass the two candidates would have to stump the State, and debate the issues presented by the two parties before audiences composed of members of both. In theory this is all very well, but any one who takes the trouble to look into the two platforms to see what the "issues" are this year, will perceive at once that Mr. Carroll and General Slocum would have to take pretty much the same view of them all, a fact which would rob the canvass of the interest that as a joint canvass it ought to have.

The Republican view of civil-service reform, for instance, is that it should be placed "upon a popular basis by adequate legislation, so as to give facilities for the execution of the law upon the statute-book." (This includes, of course, the anti-assessment statute.) Mr. Carroll is, therefore, in favor of these things; but then so is General Slocum, for his platform calls for a "reform and purification of the civil service, and the forbidding by penal enactment" of the "levying of blackmail upon dependent officeholders."

Again, with regard to taxation, the view which Mr. Carroll must take under his platform is that every effort ought to be made "to bring taxation within the lowest practicable limit, and by the strictest system of economy to reduce governmental expense, and the number of those employed in the collection of the revenue, thus relieving the people of all unnecessary burdens." It might be imagined from the bold stand taken by the Republicans on this point, that the Democrats were in favor of making the taxes as heavy as possible. But, on the contrary, what they promise to do is "to reduce the amount of taxation to a sum sufficient only for the legitimate requirements of Government under an honest and frugal administration," and favor "such tariff and fiscal reforms as shall relieve an overtaxed people from all unnecessary burdens, and prevent the accumulation of a fund to be lavished in profligate legislation, and in the support of a horde of useless and idle placemen." There seems to be no real opportunity for a debate here.

Another point on which a debate might be carried on is the monopoly question. But here the Slocum view and the Carroll view are identical. What Mr. Carroll thinks is that "monopolies oppressing the people and unfairly discriminating against local interests are wrong in principle and should not be tolerated." But so does General Slocum; he is "in favor of the adoption of measures to restrict the growing power" of monopolies.

What does Mr. Carroll think about "primaries"? Why, that "stringent legislation shall be enacted to secure the purity and honesty of primary elections." If General Slocum were in favor of dishonest and impure primaries, there would be a fine opportunity for a debate here; but he is not: what he favors is "the speedy passage of general laws providing against fraud and intimidation at such elections." It would be as hard for them to debate this as it would for them to have a joint canvass on the canal question, with regard to which the Republican view is that the people of the State should "examine with intelligent care the constitutional amendments submitted to them," and "give full expression at the polls to their judgment and wishes thereon," while the Democrats "approve the submission to the vote of the people of the constitutional amendment in favor of free canals," and "have full confidence that they will dispose of it in such manner as to promote all the great interests of the State."

With regard to the River and Harbor Bill and the exercise by Governor Cornell of the veto power, both Republicans and Democrats take the same view—that one was bad and the other good; so that we must look still further to find materials for a joint canvass. So far as we can see from the platforms, Mr. Carroll would have to make his part of the debate consist of an "arraignment" of the Democratic party for its sympathy with secession, its "support of a slaveholders' rebellion," its connection with Tammany Hall, and its general wickedness, to which there are numerous

allusions in the platform; while General Slocum would have to "arraign" the Republicans for their extravagance, love of centralization, the Whiskey Ring, the Belknap case, etc., etc. But the trouble with this kind of joint canvass is, that the determination of the comparative culpability and insincerity of the two parties is such a vast and portentous matter that three weeks do not give time enough to settle it, and the debate would probably leave the audiences of General Slocum and Mr. Carroll in a quandary as to which of the two parties really was the worse, and whether, party for party, there is not the same sort of identity in wickedness that there seems to be in the principles professed; all of which would be very sad.

THE LOBBY AND THE BAR.

The New York Bar Association appointed a committee recently, on the motion of Mr. Simon Sterne, to consider a plan "for improving the methods of legislation of the State." Mr. Sterne made a speech in explanation of his plan, and the truth of what he said with regard to legislation at Albany—that "most of the legislators vote upon measures of the character of which they are grossly ignorant," that these are usually "couched in bad English," and that the work turned out at every session is decidedly inferior to that produced by the English Parliament—few people who have looked into the subject at all will be inclined to question.

It is not stated in the report of the meeting how far Mr. Sterne's committee proposes to go, but we presume that they will hardly content themselves with trying to reform the language in which bills are drawn up, but will, in addition to this, attempt to get some order and system introduced into the machinery of private legislation, the shocking condition of which is the effective cause of much of the worst work done at Albany, and not only at Albany, but more or less in every State capital; and at Washington more, perhaps, than anywhere else, because there no constitutional restrictions as to private bills, such as are in force in all the States, are met with. Albany, however, is nearer, there is less disguise about what goes on there, and we can see more plainly the evil with which we have to deal.

Three-quarters of the measures introduced every year at Albany are what are known as private or local bills, in which the public at large are not interested, which the newspapers do not discuss, and about which all the members of the Legislature, except those who represent the locality affected, are profoundly indifferent. This indifference is natural and unavoidable. A member of Assembly from Buffalo, for instance, does not and cannot be expected to understand such a question as that of the removal of the reservoir in this city; and, vice versâ, a member from New York cannot be expected to understand an elevated-railway question in Buffalo. If he were to devote his time and attention to the consideration of such questions, he would have no time for those which concern his own constituents or the public at large. He therefore leaves all the work and all the responsibility for such bills to the committee which has them in charge, and if those interested in any scheme or job can secure a favorable report, the bill, bad or good, is pretty sure to go through.

Now, the matter with which these bills are occupied generally relates to local property interests—questions of private right, disputes between corporations and those interested in their operations, etc.; and the questions involved are quite as much judicial as legislative. They cannot be altogether taken away from the Legislature and handed over to the courts (as has been done with many of them, such as the changing of names and the laying out of railroads), and with the Legislature they will remain, furnishing a constant incentive to and means of corruption, unless a reform in the methods of dealing with them can be effected.

The committees, of course, cannot decide the questions presented to them by these local bills without argument and evidence; and the lobby, of which we hear so much every year, is merely the body, largely composed of members of the bar, which performs this work for the committee. The lobby, therefore, must exist. A lobbyist is merely an attorney who appears before the legislative court called a committee, for or against a private bill; and if the products of lobbying—*i. e.*, private bills—are to be reformed, the first thing to be ascertained is how the judicial part of the work is done.

If we could imagine a court of justice in which the judges were changed every year; in which there was no regularly organized bar, but where any class, including criminals, could practise; where the sessions were not held regularly, but at the pleasure of the judges, without any notice to litigants except such as they chose to give; where there was nothing to prevent a judge from sitting in a case in which he was interested, and where rules of law and evidence were not binding, and there was not even any obligation to keep a record of the proceedings, we should hardly expect the decisions of such a court to be generally pure, or the bar practising before it to be a very decent body. Yet this is not an unfair picture of a legislative committee, and it shows conclusively in what direction reform ought to be undertaken. What is needed is the introduction, as far as may be, of judicial methods. This has been done in England, and, to a certain extent, in Massachusetts, and while it cannot of itself make the Legislature at Albany suddenly wise and good, it would unquestionably take away one opportunity for corruption.

The judicial investigation into private bills ought to be conducted before committees as far as possible under the restrictions imposed upon courts and upon the bar. No bill ought to be introduced affecting private interests without previous published notice, so as to give everybody interested an opportunity of appearing exactly as a party appears in court, and, where it is possible, proof of actual notice should be required. No lawyers should be permitted to come before the committee except duly admitted members of the bar, and no hearings should be had without notice to all parties in interest. Of course it will not do to expect too much from such reforms, but they could not but have, if permanently embodied in our system of legislation, some effect. They would, if nothing more, diminish the secrecy which now surrounds the business of private legislation, and which is a fruitful source of corruption. The exclusion of perfectly irresponsible persons from practice before the committees would make the position of reputable lawyers who have to go before them better, and the mere fact of the existence of a system in the matter would make it harder to get jobs through. For this purpose, however, the passage of a constitutional amendment seems absolutely necessary. A law would be of no binding force if committees chose to disregard it; while a constitutional amendment would make the new system compulsory, exactly as the Constitution now renders compulsory the separate readings of bills, and their passage in certain cases by a fixed majority. It is very true that in England the changes we have mentioned have been introduced as a matter of practice, and without any particular external pressure. But we know by experience that from such a body as one of our legislatures it would be idle to expect this. The Legislature at Albany does not introduce reforms into its own practice of its own accord. For the benighted and barbarous legislative practices prevailing at Albany, which often result in enactments that would shock the sense of justice of a tribe of savages, reform can only be secured by constitutional restrictions; and there is no better work for the Bar to undertake, and none in which it has a more direct interest, than that which we have suggested.

THE FRENCH MINISTRY AND THE SOCIALISTS.

M. Duclerc, the French Prime Minister, whose name is, owing to the curious condition of French politics, probably unknown to the great majority of our readers, and, one might perhaps add, to the great majority of Frenchmen, was interviewed by a correspondent of a Swiss newspaper lately. What the correspondent wished to find out, apparently, was why M. Duclerc had taken office, and what he proposed to do in office. He said, in substance, that he had taken office because the President, who was an old friend of his, could find no one else to take it, and was in a position of great perplexity. No one who was ever supposed capable of forming a ministry would undertake the task. Gambetta could not; Busson could not; Jules Ferry dared not. So M. Duclerc undertook it out of pure friendship.

What had he to do when he took office? Well, he found France threatened in her peace and security by a sort of alliance between Austria, Germany, Russia, and Italy. He had removed the distrust which brought this about. But what was his programme as regarded home politics? Simply the maintenance of an attitude of "active vigilance" toward the Anarchist agitators in some of the departments, whose performances, if allowed to go on unchecked, would furnish the Bonapartists and Legitimists with the means of restoring their failing fortunes. As an illustration of the extremes to which these Anarchists are prepared to go, he mentioned the wholesale desecration of churches which had taken

place in Montceau-les-Mines, and also a recent Socialist meeting in Paris, consisting of one hundred and fifty members, at which he (M. Duclerc) was condemned to death by a vote of 148 to 2. He further alleged that there was a close alliance between the Extreme Left and the Extreme Right of the Chamber, both of whom, in spite of their wide differences of opinion on almost every question of government, were united in their desire to make the moderate and conservative Republic impossible.

It would seem, however, if we may judge from the account given of the proceedings of the Socialists in the newspapers, as if there never had been a time, since they first made their appearance in France, when they were so harmless and produced so little effect on the public mind. So that one cannot help feeling that M. Duclerc, in trying to account for his presence in office, was forced to conjure up a danger which really did not exist. The Russian disease of Nihilism has undoubtedly made its appearance in France, but the Frenchman has not the silent, secretive, and terrible resolution which the Slav conceals under his sentimental, fair-haired, blue-eyed exterior. He cannot bear to be a Nihilist and have nobody know of it. Accordingly, the "Anarchists," as the French Nihilists call themselves, are much more occupied in threatening society from the platform than with making mines to blow people up, or arranging for assassination. They condemned M. Duclerc to death, but it was at a public meeting. Their Russian confrères would have made private arrangements to have him shot in the street.

The Socialists can hardly be said to have reappeared on the surface in France until the meeting of the Workingmen's Congress at Havre in 1880. They then found that body, like the Trades Unions in England, too practical and businesslike, and too much occupied with things which seemed easily attainable, and they accordingly withdrew and began an agitation of their own, which is a good deal more absurd than anything of the kind that has hitherto been carried on in France. Since then they have split into four sects, of which the two principal ones are the "Collectivistes-révolutionnaires-possibilistes," which we presume means Revolutionary Collectivists-at-the-earliest-possible-moment; and the pure Anarchists, whose chief, Bordat, acknowledges only one instrument of reform—dynamite. He does not explode or overthrow abuses; he explodes the persons who support them and the offices in which they transact their business. The Collectivists have a regular official hierarchy, and have to work under the authority of a council. The Anarchists, on the other hand, are so many individuals, acknowledging each no authority but his own will, and applying dynamite only to such persons as they individually think deserving of it. The contempt of the Anarchists for the Collectivists, we need hardly say, baffles expression. The former, too, have just been split into two at a Congress they have been holding at St.-Étienne. There has for some time existed two groups among them, or "nuances," as the French call them, or shades of opinion, as we should say. One is the Shade Malon, and the other the Shade Guesde—the names of their respective chiefs. The latter have an organ called the *Égalité*, and have been revolting against the party, and have been accordingly expelled by a formal and very diverting decree, in which all persons are warned against becoming their "dupes." The Shade Guesde have replied by a manifesto in which they denounce their enemies with equal vigor, and recall the fact that they are the not unworthy successors of the dissidents who broke with the Barberetists at the Congress of Havre, and that they have once already testified their devotion to the cause by breaking with the Possibilists at the Congress of the National Circus; and they call upon all who are not willing to be the dupes of Opportunism to join their ranks, and open a new Congress of their own. The schism was not accomplished without a severe scrimmage in the hall, in which clothes were torn—one of the orators losing a very important portion of his trousers—and such epithets as "blackguard," "lunatic," and "drunkard" were freely interchanged. Order was not restored until the police, whose total abolition forms part of the Collectivist programme, had been called in. It will thus be seen that the watching of these reformers is not a task which seems to call for a Cabinet made up *ad hoc*. A few policemen are evidently equal to the work.

THE FORESTS OF THE PACIFIC COAST.

CENSUS Forestry Bulletins Nos. 13, 19, 20, and 21 treat of the Forests of the Pacific Coast. No. 13, which appeared some months ago, is devoted to the redwood forest which stretches in a narrow belt along the California Coast, from the northern boundary of the State to below the Bay of Monterey. This is perhaps the most interesting of the whole series. It illustrates a forest of no great area, to be sure, as compared with other forest regions, but unequalled in the scientific curiosity with which it has always been regarded, and in its economic value. It is certainly the most important piece of tree growth of its extent now standing. Few trees equal the redwood in economic value, and no other forest at all equals it in productive capacity, while none on this Continent is as accessible, or, on the whole, as easily worked. Immediately north and south of the Bay of San Francisco, as is shown by Professor Sargent's map, the redwood has already disappeared, and through the whole extent of the forest the axe has long been busy. The most easily reached trees have disappeared. Fire and browsing animals have preyed upon it far and wide; and the Californians, in their methods of lumbering and total disregard of the value, present and future, of forest property, have surpassed in folly even the lumbermen of the East. It is estimated that this forest contained, two years ago, some twenty-five billion feet of accessible lumber; less, indeed, than the white pine which stood at that time in the State of Wisconsin alone, but still a very large amount in proportion to the annual consumption, which is below 200 million feet. But when it is remembered that more than ten billion feet of white pine are now cut every year in the United States, that the whole supply must, at even the present rate of production, entirely disappear in the course of a few years, and that the redwood is the best and really the only substitute for white pine, the entire extermination of this forest as a source of lumber supply can be predicted with entire confidence. Its value to the country certainly cannot be overestimated; and as a piece of property worth, in dollars and cents, more than all the gold California has ever produced, the redwood forest should, apart from the higher and more important public considerations which make forest preservation a public necessity, be jealously husbanded and carefully worked.

No. 19 covers the whole State of California, and Nos. 20 and 21, Oregon and Washington Territory. No attempt is made to estimate the amount of timber of any sort standing in these States outside of the redwood belt, but the relative average density of the different forest regions is shown on the accompanying maps, which well illustrate the effect of moisture upon forest growth, and show, for the first time, we believe, clearly and authoritatively the position and relative importance of the Pacific forests.

We need not now discuss at any length the value of the Sierra forests, the only forests in California, outside of the redwood belt, of more than local importance. These forests are dense, varied, and valuable. At several points on both sides of the mountains they have been long worked, but no organized attack has ever been made upon them, except, indeed, by sheep. Their isolated and elevated position seems to protect them from the logger, who will not climb the Sierras as long as more accessible and more tempting fields of operation remain to him. Such fields he will find in western Washington and in Oregon. From the summits of the Cascade range to the shores of the Sound and the ocean extends the greatest body of coniferous timber man has ever known. In Washington, too, east of the mountains, especially along the northern boundary of the Territory, the forest is heavy, extensive, and locally of great value. Eastern Oregon is almost destitute of forest. The territory occupied by these coast forests within the United States is not relatively large, although beyond the British boundary they extend far north, but somewhat reduced in density and quality. In average density of forest growth, however, no territory of equal extent at all equals it, although small areas of redwood certainly contain more lumber to the acre.

Words can hardly convey an idea of this great forest. Immense trees, often more than 300 feet in height, stand so close together that a man can hardly push his way between them. Undergrowths of prodigious size and luxuriance render locomotion slow and laborious. Fires and the axe have hardly left a mark upon this forest, although fearful fires rage through it nearly every year, and Puget Sound has long been the seat of important lumbering operations. But so quickly do these forests spring up, and without, too, any change of species marking, as in other parts of the country, the sites of former fires, that Nature quickly heals here at least the wounds man makes in the earth's tree covering. This region, taken as a whole, is not particularly suited for agriculture, and the hold which the forest has upon the soil is so firm that agriculture will never succeed in permanently throwing it off. Trees, as fast as they are cut, grow again, and this region seems destined to remain forest-clad, and to furnish a supply of lumber, long after the original forest growth of Eastern America shall have entirely disappeared.

But this Northwest forest excels only in productiveness. It sadly lacks variety of composition, and possesses no tree of the general utility of either the white pine or the redwood. The red or yellow fir forms a very large part of the forest growth of this region; and this is undoubtedly the timber tree of the future. It grows from British Columbia to Mexico, and from the Pacific to Dakota and New Mexico; and probably largely outnumbers any of our other valuable trees. The nature, then, of the lumber which this fir yields is of general importance and interest. Its

great value cannot be doubted. It is a strong, durable, resinous wood, difficult to work, and better suited to purposes of outside construction than for domestic use. It approaches, but does not equal, in character and quality the hard pine of the South Atlantic States; but it cannot enter into competition with white pine or redwood. In certain qualities the red fir surpasses them both, although destitute of others which make these woods, all things considered, the most generally useful products of our forests. The Pacific forests contain other species of value, but, with the exception of the Port Orford cedar of the Oregon coast and the Tide Water spruce, none yield what may be called domestic woods—that is, woods suited to domestic architecture. The Pacific forests, too, contain no hard woods. No future supply of oak or ash or hickory lies hidden in these untrodden forests, which can long supply the world with its masts and bridge timbers and railroad ties, but which can neither furnish a decent axe-handle nor a wagon-spoke.

The relations of the Pacific forest to the future development and prosperity of the nation are now so important that their careful preservation and management, in view of the almost certain destruction of the forests in other parts of the country, have become a matter of wide public interest; and we shall take occasion, at an early opportunity, to discuss more in detail the questions of national import which the condition and position of these forests involve.

COPYRIGHT ADMINISTRATION.

ANY paper upon this subject should begin with the statement that copyrights are of two kinds. The first is that variety known to, and protected by, the law. The second is made possible only by the existence of the first, and is in most cases nominally a violation of the law; but this violation is not always attended with risk, and the "copyright" thus obtained affords all the protection needed for some kinds of publications. It consists in simply printing the version of "Trespassers beware, etc.," prescribed by the copyright law, and as most persons know no test for distinguishing the counterfeit coin from the real, it may pass unchallenged. It is used chiefly by the publishers of periodicals, who form the class that finds the most fault with the operation of the law, which, though loosely worded, and affording very inadequate protection to some interests (the dramatic, for instance), probably gives more general satisfaction than that of any other country. These publishers are always anxious to copyright their "titles," and find it very difficult to comprehend the fact that the law does not, in any case, authorize the copyrighting of a title, but only of a specific work.

To effect this, a title of some sort (a figure is constructively a title) is necessary, but though it may, so to speak, be the soul of the work, it has no legal existence apart from the body. To obtain *legal* copyright, therefore, every number of a periodical, every variety of a photograph, etc., must be entered; but the title may be registered as a trade-mark (at the Patent-office), and the contents, if of only temporary value, would be sufficiently protected by the scarecrow copyright described above. Though generally, as above said, in violation of the law, this is sometimes obtained by neatly evading it. This can be done when the title of the journal admits literal or symbolical illustration. The illustration may be entered as an engraving, and the scarecrow, at small expense, obtain a legal existence.

But the scarecrow copyright is extensively used by publishers who have no thought of saving their pennies, and who comply with all the formalities of the law. As the Copyright-office is only a place of record, and not, as the Patent-office is, a place in which the validity of a claim is examined, any claim, if properly presented, goes at once on record. Hence, in printing a claim, though he may know it to be a fraudulent one, a publisher does not violate the law, provided actual entry is made; and as copyright claims are generally taken at their face value, possible competitors (especially in the case of books whose first term has expired) may be effectually warned off.

There are few publishers who are not occasionally careless in dealing with the Copyright-office, and some are habitually so. Often this carelessness is due to the belief that if there is no intent to evade the law, the title to a work will hold good in spite of informalities. But this is an error. Courts have almost invariably insisted on a strict fulfilment of the statutory provisions, sometimes deciding in favor of parties whose action was morally indefensible. For the validity of a copyright title, all the requirements of the law must be complied with.

One of the conditions of a valid entry is that the title shall be entered before publication. But in fact, the entry is sometimes not made at all; oftener it is made after publication; and it is worth while for publishers to remember that the records of copyright are not a secret between the publisher and the officials, but a question about a specified entry is answered—by whomever made; the Copyright-office, like that of Patents, being an office of public record. It is probable that, if inquiry were made, the titles to many pieces of more or less valuable literary property would be found to be void. But failure to enter the title, or to enter it at the proper time, is by no means the only omission sometimes made by experienced publishers. The law requires that every book shall bear the announcement of copyright by A. B., 18—. Through inattention to this, C. D., on purchasing from A. B. his rights, substitutes his name for that of the original claimant. Under such circumstances, C. D. would evidently have no case against an infringer. A serious defect in the law, as illustrated by judicial decisions, is that it provides inadequate means of proving the completion of a copyright entry (without which the copyright is void) by the deposit of two copies. The law provides that a postmaster shall, if requested, give a receipt for copies intended to perfect copyright. But the courts have decided that this receipt is insufficient evidence of deposit. Inasmuch, however, as the object of the deposit of copies is to establish the fact of publication, and as this will be sufficiently attested by the postmaster's signature, and as, furthermore, copies are frequently lost in the mail and the copyright thereby rendered void (since it is sometimes impossible for the publisher to learn of the non-arrival and send duplicates within the time prescribed), it seems as if an act should be passed, definitely declaring what was probably the idea of the framers of the law.

In conclusion, a word or two relating to the purely business rules of the Office may not be out of place. A *printed* title is required for the copyright files, and a *separate* title for every entry. Some publishers of periodicals and similar works waste their time, when summoned to send the printed title required by law, in explaining that their titles are alike except for the number of the volume, etc. But if the variation is sufficient to require separate entry, it is great enough to make necessary a separate title. But it is never necessary, though often done, to send two copies of a title-page. The facilities for intercourse with the Copyright-office by post are seldom fully appreciated. The Post-office carries *all* copyright matter free, if covered by the printed franks which are furnished on application; and works intended to complete copyright will be franked on demand by any postmaster. Nor is there any limit of size or weight for parcels so offered.

FROM MEXICO TO ACAPULCO.—II.

ITURBIDE was a subject of discussion between the Colonel and myself as we jogged along the trail, and this naturally led to Maximilian. The Colonel had served under Escobedo in the final campaign in which Maximilian was overthrown, and had witnessed his execution at the tragic Cerro de las Campanas. "He died like a soldier," said the Colonel. "He was not afraid, though he deserved his fate, and I would not have had it otherwise." It seems the general verdict that this ill-starred prince was not without the physical fortitude traditionally a part of the inheritance of princes. But he was of a gentle character, better fitted for the arts of peace, for improving the parks, rebuilding Chapultepec, and befriending antiquarian researches, than for encountering the tigerish opposition with which he was met upon his abandonment by the French. I drew the conversation, when an opening appeared, to the present novel relation of our own country to Mexico.

"Had I held the authority," said the Colonel frankly, "I would never have granted the railroad charters which are making this great bustle. I fear the aggressions of you Americans. The conservative Mexican policy is to grant such privileges to Americans only when balanced by others to Europeans. This was the consistent policy of Juarez and Lerdo. It was Porfirio Diaz, during his Presidency, who first broke it down and brought this invasion upon us."

"We make it one of his merits," I said, "and a proof of superior enlightenment. He stepped out of the boundaries of narrow prejudice and jealousy, and allowed a beginning to be made of developing the country by those who stood ready to do it, without waiting further for those who did not care to."

"His enemies say he was bought," rejoined the Colonel, who had no love for "Don Porfirio." "He has not been wholly above corruption in his time. He made fabulous sums out of the liquidation of military arrears, for instance. He paid a million dollars for a magnificent hacienda in the State of Oaxaca. Where did that come from? It is a great weakness among us—official corruption. There are too many examples. A defaulting person in a high place is rarely punished. When I see a case of that kind treated with severity I shall begin to conceive a new hope."

"But," I argued, "the Americans have no designs in the proceedings you fear, but a mutual commercial profit. They do not want your country. What Americans have anything to gain by taking it? Who will put his hand in his pocket to pay the expenses of a war of annexation? We Americans look out for ourselves very much as individuals, and we fail to see where the profit would come in. We are large enough now to gratify our lurking vanity. Love of glory and territorial aggrandizement is not one of our national traits. The spoliation you fear would rather be at the hands of some ambitious princes, if you had such for neighbors, who could turn it to personal account."

"You will not annex us with bayonets," insisted my companion; "you will annex us with the dollar. I feel it; I know it. Your great commercial enterprises will insensibly get hold of the vitals of the country, and the rest will follow. Perhaps there may be disturbances, and your Government be called in to protect the property of these investors. There will naturally be sympathy for them at home, and they will move heaven and earth rather than lose it. A

thousand times better, then, that our country had not been developed at all!"

As I still insisted upon the unreasonableness of this notion, the Colonel continued: "Granting that you are sincere in what you say of the present attitude of your people, I feel that it is the manifest destiny of Mexico to be taken by the United States. I admit to you that in former times the Latin races ruled the world, but that in this and the coming ages the Saxon will do it. You are strong and a commercial people, and commerce is as the breath in the nostrils of modern life. Look at what you have done in California since it has ceased to be a Spanish province. I have been in San Francisco—a great, splendid city that I looked at with amazement. Yes, you will get us. It will cause the amelioration of many abuses, and our greater prosperity, without doubt; but I hope I shall never live to see the day. As a patriot, as a soldier, I would give my life fifty times over rather than consent."

"But since you concede such benefits," I ventured to say, "what is this patriotism upon which you so strongly insist? We do not want you, and have no designs upon you, but—purely for the sake of argument, and talking as enlightened persons of modern times—is it not very fantastic? Is a boundary line such an object in itself? May not a good deal that has stood for patriotism in the past be mere provincial narrowness? Supposing, as a mere speculation, that Mexico or Canada, without force, but in its own judgment of what was for the best good of its people, should desire to become a part of the Union, maintaining its organization in States and its local self-government as now, and merely sending delegates to Washington to represent it in national affairs, would you, as a Mexican citizen, feel yourself bound to resist as if it were the consummation of something scandalous and recreant? Is not the enjoyment of life, liberty, and the pursuit of happiness to the greatest advantage the object of a rational being? Is there a virtue in an essential Mexicanism, Americanism, or Anglicism, that it should be preserved at all hazards?"

And having asked many like questions, I endeavored further to make plain a belief that we are approaching a great cosmopolitan period when we shall all be members of a republic of nations, and when foreigners, as such, will no longer be either dreaded or despised.

"That is all very well," said the Colonel, stubbornly, "since the advantage is to fall on your side; but I tell you I would give my heart's blood rather than let it happen."

As to the virtue of the prognostication, I have no opinion; but the seriousness of the conviction about the plans of the Americans from such a source was full of interest. It is held by the bulk of the Mexican people, and it means trouble ahead for the enterprises, since it must increase with their very prosperity.

"Has any party been formed in favor of annexation?" I asked.

"There is no such party," he replied. "There are no persons who could favor it—unless, singularly enough, it might be a portion of the Church party, who, Protestant country though you are, with you could enjoy greater freedom. Here, since their suppression under the War of the Reform, there can be no convents, religious orders, or monastic schools, but in the United States, I understand, they could have as many as they wished."

The Colonel was rather fond, as above, of dwelling upon the professional soldier's point of view. He had, too, his moods of a gloom which I do not wish to speak of with disrespect. One day he was writing to his mother. "It is the only tie that binds me to life," he said. "At forty-four, as you see me, I have passed through many disappointments and chagrins. I have little pleasure in the present and no great hopes in the future. Well, that is, perhaps, a proper enough state of mind in the army. A soldier," he went on to say, "should be either a person who sets little value upon life, and looks to death as a release, or one having a supreme sense of honor, of pride in his profession, of duty to his government. He makes this contract, as it were, with the authority to which he owes allegiance. He is well paid and highly considered. In return, he must be ready to spill his blood to any extent whenever the employer chooses to demand it."

The display of childish selfishness on my companion's part of which I have spoken, was in getting up one morning and coolly riding off on my horse. He had cast his eyes upon it as we went along, judged it to be on the whole preferable to his mule, and so in this direct way took possession. I had directly bargained for it, however, and this was not to be permitted. The matter was adjusted presently, but not till it had assumed at one time almost an international aspect. It was in the coolness resulting at first from this incident that I rode on alone and entered Iguala. The expedition had stopped, after its usual day's march, before sunset, at the tropical hamlet of Platanillo. I was anxious, however, to pass the night instead in the notable little city. The twilights shut down very rapidly here, and from the estimates of casual informants I had somewhat miscalculated the distance. "Adelantito, Señor," they said after the inaccurate way of such informants—"Just a little way ahead"; "Aca, bajito, no mas—Right down there, a mere trifle, that is all." I had a distant glimpse or two of it from the pass while the sun glowed like a beacon fire on the crests of vast mountains encompassing the valley. A small lake sparkled in its vicinity, and plantations of cane showed their brighter green. Of the town, which might have been a mammoth hacienda, only a dome and a few white spots appeared from the midst of a quadrangle of foliage cut off on all sides to an even line. Then night came on, and a dark and cloudy one, though without rain. My horse slipped with me on the declivity, over rolling stones. It was no longer safe to ride him after that, and I led him most of the way, picking out the path in the dark. The distance had been very deceptive, and we had many miles to go. We passed many lonely gulches, brooks, and bits of wood. Cows had gone to sleep in upland pastures, and one occasionally loomed up a mysterious shape from the path and took herself out of the way. The rays of a clouded moon occasionally showed a white spot of the small lake, but the city seemed to have vanished out of existence. At last, however, a dim light in its dome. All this time not a house nor a cabin. The barking of dogs, and voices, became audible. It was toward nine o'clock. We came to the formal line of trees, opened a gate in it, and were in the midst of Iguala. I do not know whether the place had quite advantages enough to offset the discomfort, since what there is to be seen could easily have been seen the next day during the regular nooning on the march. There is no other tangible vestige of Iturbide yielded to inquiry than the house in which the Plan of Iguala is said to have been signed. It is perhaps the oldest, as it is one of the shabbiest, in the place. It is of one story, like most provincial Mexican houses, with the whitewash badly rubbed off its adobes, and is now the site of a small *fonda*, or restaurant, without so much as a sign.

But the town around it was charming. A row of clean white colonnades, of solid square pillars, supporting red-tiled roofs, extends around the central plaza. The windows of the better residences are closed, instead of with glass, by projecting wooden gratings formed of turned posts and painted green. The market, a little paved plaza by itself, opening from the other, is a series of double colonnades, and is light, commodious, and very attractive. I recollect having been struck in the same way—of all places in the world—by the market at the once blood-thirsty Tlascala, there a series of isolated pavilions. The church at Iguala, of a noble massive form, made gay by an azure belfry and clockface, stands in a grassy enclosure surrounded by posts and chains. Across the way is the zocalo, a little park, with its brick benches, deep grateful shade of *tamarindos* as large as elms, and arbors of sweet peas in blossom. I could conscientiously recommend such a park, such a church, and such a market to any population in the world. The heads of palm-trees star the heavier northern-looking foliage. Grass sprouts plentifully between the cobble-stones, which gives a pleasing rural air. A band played in the zocalo in the evening, though there was not much walking about. As I was attempting a hurried sketch in the portal of what proved to be a school, some very well-dressed young men and their professor came out, and asked me what it was for, and called me in a rather patronizing way "Amigo" (My friend).

Chilpancingo, three days further on, is another small city to which complimentary terms—in a somewhat lesser measure than to Iguala—might be applied. It is the capital of this rugged State of Guerrero—named after the patriot general, once, like our Marcos and Vincente Lopez, a muleteer—who concluded the convention with Iturbide. It contains an ornate Government-house, a zocalo with a music-stand; and we met there a colonel of the detachment of cavalry guarding the country, gotten up in such dapper civilian riding-dress as if for a promenade in Central Park. Population—but populations are hard to get in Mexico. I should say, at random, that either place might have about 3,000 people. At Chilpancingo, too, you may see the place in which the original Declaration of Independence of Mexico was proclaimed, in 1813, for it had to be fought for long years before the day of Iturbide. It is merely a white house with a tablet, and not of further interest. It was a wild and problematic cause, truly, when remote Chilpancingo had to be resorted to by the first constituent congress, to throw off the yoke of Spain. But how is it all done? These little bits of ornate civilization are like the enchanted places of the legends, which we have happened upon by penetrating the fastnesses of insuperable mountains. Perhaps one had better take out a commission as Adelantado of the Seven Cities at once; and yet greater surprises may await further research. Each of them lies in its miniature valley, smiling and fertile, and wagon roads extend for a little space around them; but their inhabitants can never be conceived as going over the lonesome, wild trail to either extremity to supply themselves with fashions and comforts. Candid judges from elsewhere, if asked to look at this trail, would pronounce it impassable, and probably think it a practical joke that they were asked to consider it a road. We crossed and recrossed swift, small streams, shoulder high to the animals, continually. The Colonel dangled his military boots in the water to let me see how excellently they were made; but one night he could not get them off, and the next morning he could not get them on. All one day we traversed the cañada, or gorge, of Cholitla, over a sandy track of which the flood had not yet taken possession; another day, the Cañada del Zopilote. Our old friend of New York streets, the ailanthus, was common where the other features were dreariest, and its sickening odor often filled the air insufferably. The

three transverse rivers were swollen and turbulent, as we had been told. When we came down to the wide Mescala, it was opaque with red soil, and tearing past at a speed, as it seemed, of twenty miles an hour. We were to be transported in a flat skiff guided by an oar. There was no plank to aid in embarking the horses, and one of them fell into a panic which caused a terrific combat of nigh half an hour. He was finally thrown on board with lassoed legs, more dead than alive. "Ah, what a soul you have!" (*Ah, que alma tienes!*) cried Marcos to the terrified animal, who had well-nigh kicked us all into the river. Losing all policy in his rage, he called upon me for my revolver that he might despatch such a brute, of the ownership of which he was ashamed. The Papagallo River, succeeding, we crossed in a dugout, and the animals swam.

I asked the Colonel, in my simplicity, if this were not more or less like war—the kind of travel, our foraging, half open-air way of sleeping, and the like. He smiled in disdain, and gave me a sketch of his campaigns in the day of the French usurpation, when the rightful Government had so little foothold in the country that it was called the Government of Paso del Norte, from the furthest town on the northern frontier. Eating and sleeping seemed hardly to have been the custom at all till, by an unremitting guerrilla warfare, the tide was turned. When we came to the Cajones, however, he admitted that this was a little like war. We slipped and slid all one day down the Cajones—natural, or rather most woefully unnatural, steps in the solid rock, in the midst of a dark forest. The perpendiculars are three and four feet at least, and often there are mud-holes at the bottom, and vines that aim to take the traveller under the chin. It was wonderful to see the sagacious steadiness of the pack-mules, picking their steps unaided in the most critical situations. We met peons in white cotton coming up with barrels of ardent spirits on their shoulders, and we came to a full stop to allow the passage of jingling mule-trains of goods. The water ran in the path with us, sharing by courtesy its right of way. At one place it seemed to increase on every side, so that the wood was full of its murmurs, as if the deluge had come again. It was full, too, of patches of pale-green light, full of moss-covered stones and limpid pools and delicate ferns like snow-crystal shapes turned vegetable; and white cascades showed among the trees in ghostly fashion, like apparitions of Undine.

Among the vegetable growths we saw on the way was the gum-copal, a tree not unlike the white birch. There was a tree, the *cuahuete*—if I may trust my rendering of the pronunciation of Marcos—which was smooth and bronze-like, and often of a repulsive red, as if full of blood. There was a good deal of a charming red and yellow flower on a high bush, in shape like a butterfly, and once or twice a sprig of heliotrope and a calla lily. The *amape*, found in the villages, somewhat like the chestnut, was the finest shade-tree. There was a notable absence throughout the journey of the essential tropical features. Very often one might as well have been riding in the woods of Connecticut. There was not even a rank luxuriance of growth, just as there were no serpents nor the swarms of pestiferous insects, other than a few gnats, that might have been expected. We saw once a couple of coyote wolves trotting demurely along, and again a large iguana, a harmless reptile, which I noted later gliding around an old bronze gun at the castle at Acapulco. Birds I hardly recollect at all, except a white heron or two, reflected charmingly in an upland pool one early morning, and the *tecuses*, a kind of blackbird, which Vincente pelted with small stones, by way of trying his aim. The organ-cactus, however, should be exempted from the complaint of a want of tropicalness. It abounds thickly about the gorges and on the mountain slopes. The plants, rising to twenty-five feet in height, are like the seven-branched candlestick of the Mosaic law, or, if unsubdivided, like the spears of the gods shot straight down and quivering in the earth. The fan-palm, too, must be excepted. It crops out on the bleak hillsides as common as mullein-stalks. I can never respect it in conservatories again. To see it thus at first was a kind of shock: it was like seeing some perfected belle of society turned (say) to minding sheep. For a day before reaching the coast there were cocoanut-palms. It may be remarked that nobody in the hamlets would get the fruit down from the trees except on a wholesale order or for munificent prices, which brought the cost far above what it would have been in New York. There was often a shortage of other fruits and commodities, as sugar, in this way, in or near the very places where they were growing.

It must not be represented that the Colonel was always of an oppressively serious carriage. On the contrary, he developed a vein of humor which was the more amusing from the general good faith of those at whose expense it was exercised. "Do you charge no more than this—to persons of our consideration, my good woman?" he said to a peasant, whose bill was in fact modest, though in keeping with the primitive nature of the accommodations. "It is a species of affront, as one might say, considering that I am a colonel in the army, and this gentleman, etc., etc. When travellers of our position come this way again, understand that double is the least you should take." The woman, abashed, received double her fee, and will no doubt bear the lesson in mind for the benefit of future travellers as directed. Meeting three honest-faced Indian maids with pitchers on their heads going to the spring, he thought good to say, "Good-day, Marias!" but turning to me, in an aside, as they passed on, continued: "Not that I know, from Adam, whether they are Marias or not, and perhaps we need not greatly care." Again, he praised most glaringly, to her face, the exceeding comeliness of a servant-maid who wore gold ear-rings and a necklace, and in other respects was perhaps not of more than the average dumpiness and plainness. She waited on us at table at Tierra Colorada. The Colonel desired to know her name. It was Victoria. "Well are you named Victoria," he cried with enthusiasm, implying that we succumbed to her power. "Que cara simpatica! (what a sympathetic face!)" he exclaimed frequently. The people receive this seriously, and do not suspect raillery. To each one of his compliments the maid replied meekly, "Mil gracias (a thousand thanks), Señor." "Give thanks rather to God who made you so," rejoined the Colonel piously, "and not to us, who but recognize it."

At La Venta de Peregrino the night was hot, and it still rained, after having rained all day. A garden of bananas twenty feet tall grew next to the basket-like house of canes where we stopped. We hung up our wet garments and properties under the poles of the thatched porch or pavilion till it resembled one of those very national establishments, the pawn-shops. Dogs, cats, donkeys, horses, pigs, and fowls—shooed out, when they became too familiar, with an emphatic Ooch-t!—gathered under the same shelter, as if it had been a Noah's ark. We supped on pepper-sauce, tough chicken, frijoles, tortillas, cream-cheese, and coffee without milk, spread out upon a mat on the ground. The proprietor in person, a man in an embroidered shirt and cotton drawers, whose talk was not of the wisest sort, held pitch-pine splints to light the feast.

"Now, how does it happen, hombre," inquired the Colonel, as if in a speculative way, "that a person of your fine appearance; a person of manners, intelligence, education, hospitality; a statesman, as one might say, who goes to Dos Arroyos to see who is going to be elected mayor [the man had been there that day, as he told us], with a fine house like this—how does it happen, I say, that you have not a table of any sort to serve two travellers a supper upon?"

"*Pos bien*," said the illiterate host, both pleased and flustered, scratching his head. "Tables? yes, tables, now to be sure. All that you say is very true, but there is a great scarcity of carpenters in this part of the country. *Si, escasen muncho*—Yes, they are mighty scarce, I can tell you."

Two days after this, we came down to Acapulco, a straggling town of thirty-five hundred people, with no vestiges of its antiquity but the old Spanish fort. Near the fort lay a couple of rusted rails in position on a bit of washed-out embankment, the beginning of a railroad inaugurated here with a flourish on the 5th of May, 1881. Having passed over the route, one would judge that it might be very much more than dread of American invasion which would prevent its speedy completion.

W. H. B.

CONTINENTAL VIEWS OF ENGLISH POLICY.

LONDON, October 5, 1882.

ENGLISHMEN are accustomed to remark (and the same reflection must often occur to American travellers) how much more like the great countries of Europe are to each other than any of them is to England. It is not merely because we are strangers in all of them that they seem to us to present greater contrasts to England than they do to each other, for really many points in which there is a sort of solidarity, likeness of ideas, and power of understanding one another one may notice as existing between Frenchmen, Germans, Italians, Scandinavians; whereas England remains a little world by herself, whose insularity in character, manners, and even in political ideas, has been wonderfully little affected by the facility of communication which brings so many foreigners among us and scatters our tourists over the whole of Europe. Certainly one never can open a French or German newspaper and read its comments on English affairs without being struck with the total want of insight it displays. It is not merely so much that these papers judge us severely as that they misconceive us altogether. Their praise is as likely to be misplaced as their blame. You in America, on the other hand, though of course we should often dispute your criticisms, have got the right point of view. You understand English character, and the notions which lie at the bottom of an Englishman's political doctrines, because those notions are in the main your own. We are therefore usually instructed, even if sometimes nettled, by your remarks upon us, while Continental judgments only amuse us. There is, therefore, nothing to surprise Englishmen in the misrepresentations of our policy in Egypt which abound in the Continental press. The view of England which prevailed in Europe thirty years ago represented her as a preëminently selfish and rapacious Power, sordid in her aims, which were chiefly those of extending her commerce; bold and violent in carrying them out by seizing something for herself wherever she got a chance. The acquisition of Gibraltar, of Malta, and other

colonies, as well as the conquest of India, were taken as proofs of this spirit. We were the Carthaginians of the modern world. The security which the Channel and our naval supremacy gave us, made us envied, and the envy remained even when the policy of interference and annexation seemed to have ceased. Our wealth, our impunity from revolutions, the fact that we had no conscription and a small standing army, made the Continental nations envious of us, and no doubt made us disagreeably self-complacent toward them.

From the time when the Ionian Islands were given up by us, and suffered to join the Greek Kingdom, a new view of English foreign policy began to spread on the Continent. This act of renunciation was subsequent to the development of the doctrines associated with Mr. Cobden and Mr. Bright, and was supposed to be a result of the Manchester school's teachings. There were several speakers and writers in England who had prophesied a reign of general peace from the extension of free trade, and others who condemned our aggressions upon native races in various parts of the world as inconsistent with a high view of moral and Christian duty. Although the Crimean War had reawakened the military spirit, still the tendency toward non-intervention in Continental politics seemed to grow. It was put forward as the true theory by active publicists, and in the great struggles of 1859, 1866, and 1870 England took no part. Continental observers came to think that non-intervention and the peace-at-any-price doctrine were far more powerful in England than they really were. In particular, they believed that Mr. Gladstone and the Liberal party were strongly inclined in that direction. England, they said, has grown rich and luxurious ; she has lost the aspiring spirit of former times. She would still, perhaps, fight if her commerce were in danger, but she looks upon national honor as an empty name, does not care for her old European position, and may practically be left out of sight in our European calculations. Mistaken as such a theory was, there were some things in the words of eminent Liberal statesmen to make it seem plausible. Whenever it was expressed by Continental newspapers the English Conservatives took up what they said, and used it against Mr. Gladstone's Government of 1868–74. Such accusations had something to do with making that Government unpopular, although any one who knew the real temper of the English people might have seen through them, and perceived that the growth of a moral sentiment, as applied to foreign policy, had not diminished the sense of national dignity or the willingness to support it by arms. Indeed, an acute observer might have said that there was, in the years after 1870, almost a wish to have a Continental quarrel in order that England might show she was not afraid to hold high language, and fight if necessary.

Lord Beaconsfield's conduct in the East and in Afghanistan opened the eyes of Continental politicians. They saw England again active and aggressive. They perceived that this policy met with great applause from the upper classes, and, so far as they could tell, from every one but Mr. Gladstone's followers. They concluded that England was again the old ambitious and dangerous neighbor of Mr. Pitt's days. When, however, Lord Beaconsfield did not go to war with Russia after all, they began to doubt whether he had not been imposing on them, and when the election of 1880 drove him from power, and brought in Mr. Gladstone, stronger than ever, they felt sure that England had returned to non-intervention and self-effacement. Sentimentalism, timidity, and the passion for quiet commerce were, in their view, the three influences which governed our leading statesmen, and the Opposition press in England, repeating this daily, confirmed their belief. There was consequently a disposition on the Continent, when the difficulties in Egypt became serious, to predict that England would shrink from active interference. Such a view, as it was held at Constantinople and impressed on Arabi Pasha, contributed to make the latter more obstinate and sanguine, and probably indisposed the Turks to play for a settlement. When such dreams were dispelled by the bombardment of Alexandria, the pendulum of Continental opinion swung back to the other extreme. "England," it was now said, "is, after all, the old snake, albeit in a new skin. When she proposes a conference, and talks about the concert of Europe, she is seeking to amuse us with fair words, while she steps in and takes Egypt for herself. She would have had it long ago but for the fear of French opposition; and now that France retires, she does not mean to let the opportunity slip. The expulsion of Arabi and conquest of the country will be a costly enterprise. England means to have the worth of her money, and will take it in the form of a protectorate, if not of the direct sovereignty, of the Nile Valley." It is not the interests of the bondholders, as some English opponents of the war have alleged, which Continental publicists conceive us to have in view, but partly the security of our route to India, and partly the fertile lands of Egypt, which produce some of the finest kinds of cotton, and which have been largely developed by European capital.

This assumption, that we have gone to Egypt with the design of ultimately annexing it, may be said to be common to the whole Continental press. There are, however, differences of view between the writers of different countries. The jealousy and annoyance which would otherwise be the prevailing sentiments in France are modified, and to some extent mitigated, by the desire of the various French parties to find in our conduct grounds for attack on each other. It is only a small section which has seemed to condemn our action altogether. But the Gambettists agree with the defenders of that policy of abstinence which M. de Freycinet followed, in insisting that England must not think of arranging affairs in Egypt to suit her own wishes, but, when she has conquered the country, must be content to submit its future to the arbitrament of Europe, and in particular must fully recognize the special interests of France. On this point there exists much uneasiness; but both the organs of M. Gambetta and those of his opponents have been concerned to put the best face on the matter, because each party is accused by the other of having brought about the present state of things, the one by originally drawing England on, the other by leaving her in these last months to act alone. On the whole, therefore, England has been less denounced than one might have expected from the keen jealousy which the French have always felt of her action in the East. The Italian newspapers, with less apparent reason, and greatly to our surprise, have been more bitter. Italy, as a new Power, is ambitious and self-conscious; she seems to feel it all the more necessary to put herself forward, and assert her claims to have as much influence as every one of the older arbiters of Europe, just because she is the youngest. She was disappointed at not being allowed to share in the Joint Control which was established in Egypt three or four years ago; and although her exclusion then was due at least as much to France as to England, the fact that England is acting alone in a country to which her ports lie nearest, and in which so many of her own citizens have settled, nettles her, and gives rise sometimes to complaints of England's aggressive spirit, sometimes to sharp and even spiteful criticisms upon any defects in the English arrangements, or checks which English troops have appeared to experience. Probably, as often happens, the newspapers do not fairly represent the sentiments of the Italian people, usually friendly to ourselves. Still these criticisms are significant. The German press, following the line taken up by the German Chancellor, have declared that Germany has little concern with the matter, and have been chiefly occupied in watching and commenting on our military operations. They have given us a good deal of candid advice, and express great doubts as to our disinterestedness. Austria's attitude is not less suspicious, yet not more unfriendly; public opinion there seems well pleased to see us occupied with a difficulty which will prevent us from objecting to any movements she may choose to make toward the Ægean. Assuming that we shall desire to retain Egypt, she sees how convenient it will be to have us seeking her assent, in return for which she can demand ours to her advance southward to Salonica. Finally, Russia, so far as one can judge from the Russian press, and from the diplomatic demonstrations occasionally made by her Envoy at Constantinople, is in no good humor toward us. Whether it be (as is suggested) that she seeks a sort of revenge for the interference of England between her and Turkey after the Treaty of San Stefano, or that, having her own game to play in the Turkish Empire, and desiring to annex some part of it, she finds it expedient to represent England as a disturber of the peace of the East, and to take the opportunity of re opening the Eastern Question generally—in any case she has shown a disposition to insist on the rights of the European concert, and if not to check, at least to supervise and review, the proceedings of England.

These have been, speaking generally, the sentiments of the great European countries during the last three months of suspense. Now that a rapid and complete success has been achieved by the English arms, their half-concealed acerbity and suspicion will probably become more patent. But with them there has been a remarkable change of opinion as to England's military spirit and vigor in action. The idea that the Liberal party is necessarily timid and pacific is abandoned. The reputation, or what people call the prestige, of England in the councils of Europe, stands higher at this moment than it has done since the days when Lord Palmerston's restlessness kept the Continent busy. Having made the mistake of supposing that we had become non-interventionists, the German and French press will probably now run to the other extreme, and discover in all quarters evidences of aggressive designs on the part of Mr. Gladstone. The part of his task which remains—the resettlement of Egypt and conciliation of all the jealousies that centre round her—is at least as troublesome as that which has been despatched under the leadership of Sir Garnet Wolseley. Y.

Correspondence.

THE CURE FOR REPUDIATION.

To the Editor of The Nation:

Sir: I have noticed in the *Nation*, under recent dates, articles on "How to Cure Repudiation." The concluding words of the last correspondent are: "I fear the disease is incurable, and the worst of it is the patient can never die." It has been no secret for a number of years with the unfortunate bondholders that if there be a remedy for the cure of repudiation, it will be discovered about the time these repudiating

States come to market offering their new securities for sale. And it is quite certain that day is near at hand. Under date of August 21, 1882, the State of Arkansas made a test of her credit, and gave us an example of how repudiation works under the new order of things. The Associated Press sent the following item:

"*No bids for a State loan.*—Little Rock., Ark., August 21st.—The time for receiving bids for $100,000 loan to the State of Arkansas expired to-day. *But no bids were offered.*"

It would seem that this State needs help and cannot for the present find even one penny. But how could the State of Arkansas have expected any other result? She certainly could not have supposed that capitalists at home and the aliens (as they were wont to call all Northern bondholders) had forgotten, among other things, the special acts of her Legislature, her courts, and the vote of her people, who repudiated the entire payment of her State Levee bonds, accompanied with reasons for so doing which were more infamous and trifling than repudiation itself. She has been taught the lesson that such things are not easily forgotten, and that where credit is given based on no other security than confidence in the honor and integrity of a State, it must fall in future to the lot of said State to prove by its past record and present acts that it is worthy of credit and confidence.

But these States must in the very necessity of the case soon have money or go out of sight. Right here is where this and all repudiating States will be called upon to show their hand. And the first thing that will be required of them will be that they find a way for honorably settling old scores, together with an assurance that hereafter honesty of purpose and honesty in fact are to be their governing principles. So soon as the repudiating States know their real situation and comprehend that the foregoing is to be the ultimatum, then shall we see how quickly they will find a remedy for the cure of repudiation.

ONE WHO TRUSTED THEM AND SUFFERED.

NEW YORK, October 9, 1882.

CABINET RESPONSIBILITY.

TO THE EDITOR OF THE NATION:

SIR: May I ask leave to offer one or two comments upon the letter of Mr. C. F. Adams? He seems to adopt the popular idea that there is a fundamental difference of principle between our government and the English, whereas I believe the difference is only in the practical application of the common principles upon which all popular government is based. He says that the English Ministry are responsible to the House of Commons, while our Cabinet is directly responsible to the people—but only for administration. The fact is that the English Ministry are no more responsible to the Commons than the Commons are to them; and if the House can vote out the Ministry, the latter have the power of appeal to the people by a dissolution. Both are directly responsible to the people, and it is the daily contact and friction between the executive and legislative branches which keeps the people interested and informed, and which is the permanent safeguard for either branch against being overwhelmed and suppressed by the other. A mere reference to Mr. Gladstone's Government furnishes a sufficient illustration.

In this country, Congress and the President are just the same in theory responsible to the people, but owing to the exclusion of the Executive from all voice or power of debate, whether as to legislation or administration, both branches have escaped from this responsibility—the Executive has become the mere instrument of Congress for the dispensing of offices, while Congress itself presents nothing but a chaos of lobbying and intrigue, with an apparent impossibility of coming to any practical or effective conclusion on any subject whatever. As regards the effect of excessive power in a legislature, and its illustration at this moment in France, there is an article in the London *Spectator* of Sept. 23 on the Dictatorship of the French Assembly, which might have been written as a pertinent contribution to the present discussion, and is most valuable reading, in the light of events here, for every student of American politics.

It gives one a cold shiver to hear the proposal that members of the Cabinet should be elected by Congress. It would not be difficult to demonstrate that three-fourths of all our political woes in the States and cities have arisen from the practice of separate election of executive, not to mention judicial officers, and that whether by legislatures or the people. There is nothing so destructive of good administration or good government, nothing which tends so much to despotism of the legislature cr is so fertile of anarchy, intrigue, and corruption. It will be the deepest wound ever inflicted on our Government if it forsakes the sound and simple traditions of executive appointment, and individual responsibility, for the elective and divided responsibility which is the curse of our local governments. Mr. Adams says that a cabinet which is responsible to the legislature is nothing else than the executive committee of that body. As regards the British Parliament, I repeat that the Ministry is no more responsible to it than it is to the Ministry.

It is noteworthy also, that while Parliament may turn out one Ministry, it can never put in another. The outgoing premier recommends a member of the Opposition to the Queen, who invites him to form a government, which he does with an eye quite as much to the confidence of the country as to that of the House of Commons. As to the arguments in favor of election adduced from Mr. Goldwin Smith, one may, without disrespect even to so great an authority, prefer the logic, as well as the practical results, of the experience which the English Government has worked out during two hundred years.

G. B.

BOSTON, October 9, 1882.

"ERRORS OF THE CENSUS."

TO THE EDITOR OF THE NATION:

SIR: Some of Mr. Rose's letters I have seen; one, perhaps two, have escaped me. Assuming that an official answer would be made from the Census Office, whenever Mr. Rose should have fully unfolded his budget, I have not deemed it necessary to offer any reply to his successive communications. Since, however, you call upon me, by name (in the *Nation's* issue of September 28), to respond in this matter, I cheerfully do so.

Permit me to say, first and chiefly, that, whatever be the effect accorded to Mr. Rose's attacks upon the points he has selected for attack, your conclusion, that this series of letters must needs shock greatly the confidence of the country in the Census, does not appear to me warranted by the situation.

Mr. Rose's criticisms, so far as I have seen them, do not in the remotest degree touch any one of what may be called the substantial tables of the Census—that is, the tables which give the population of towns, townships, counties, and States. They simply relate to a body of tables which appear for the first time in the Population volume, having for their purpose the distribution of the population according to certain physical features of the country; all which tables might be stricken out, yet leave the Census intact, with all the detail ever before given. Mr. Rose's title, "The Errors of the Census," is indeed suited to impress upon the minds of those who do not read his letters, that his criticisms affect the integrity of the enumeration, or the correctness of the compilation of the results, according to the traditional forms of the Census. They, in fact, only concern a body of *secondary* tables, compiled for purely scientific purposes, inaccuracies in which no more affect the Census, in the usual sense of this term, than if they had been first published ten years after the Census in a cyclopædia or a scientific magazine.

The preparation of the tables in question was committed to Mr. Henry Gannett, a geographer of repute, connected creditably with several of the Government surveys. That these tables were not prepared with all the care which it was desirable should have been given them, Mr. Rose has, it is true, conclusively shown. It is equally true that a large majority of Mr. Rose's criticisms are of the most microscopic character, altogether unsuited to the subject-matter of the tables themselves.

Alike in the nature of the case, and according to the distinct warning given by Mr. Gannett in the text preceding the tables, statements relating to the number of persons living, *e. g.*, under such or such a mean annual temperature, or at such or such an elevation above sea level, can only be rudely approximated. Neither Mr. Gannett nor myself, nor, I dare say, the present Superintendent of the Census, ever supposed that such statements could be relied upon to be exact within one per cent., or three per cent., or perhaps even five per cent. The lines of temperature belts, for example, are not staked off by surveyors. They sway forward and backward under the varying meteorological conditions of each new year. Delineations of curves of mean annual temperature, made on a basis of twenty years' observations, for example, would differ not a little from delineations made from the observations of ten years or thirty years.

Yet such generalizations of the conditions of our population are not, therefore, without value. On the contrary, they may have the highest value—an inexpressible value, indeed, to the economist, the sanitarian, the social philosopher. To show, for instance, the widely-differing aptitudes of the colored and the foreign elements of our population in respect to heat, moisture, and altitude; to show the widely-differing rates of increase of population within different isothermal or isohystal groups, or upon different hypsometric grades, is to furnish most valuable material for a philosophy of population. And the value of this material is not in the smallest degree affected by minor inaccuracies of classification. When, for example, it is stated that one-quarter of the population—12,750,000 people—live where the mean annual rainfall is from forty-five to fifty inches, the statement is just as instructive if there be doubt whether the number may not, in fact, be as high as 13,000,000, or as low as 12,500,000, as it would be were the number precisely ascertained to the last man, beyond the possibility of cavil.

It has been said that such generalizations can only be approximately just. Now, the hard answer to Mr. Rose's criticisms is that the "errors" he discovers are, with few exceptions, of a scale which brings them within—far, far within—the degree of uncertainty which belongs to the subject-matter itself.

Thus, after reading one of Mr. Rose's letters, I called the attention of the Census Office to the fact that all the territory covered by the criticisms (occupying nearly a page of the *Nation*) directed against the tables of the density of population amounted in the aggregate to less than one-twentieth of one per cent. of the territory of the United States. I dare say, if Mr. Gannett had

apprehended that he was to be followed around with such microscopic malignity, or malignant miscroscopy, he would have taken pains to remove even the ground of such criticism as this is, but, knowing the very rude nature of such generalizations, and having amply warned the reader to that effect, he probably did not imagine that his maps and tables would be subjected to a method which, if applied to blood-corpuscles or yellow-fever germs, would be truly admirable.

And it is to be further observed, as characteristic of nearly the whole list of these "Errors of the Census," that the question raised by Mr. Rose respecting this minute fraction—one-twentieth of one per cent.—of the territory of the United States, as delineated on the "density maps," is only as to its belonging to the fourth or to the fifth group—that is, to one of two contiguous groups, respecting which 500 more or 500 fewer inhabitants might throw a county upon one or the other side of the dividing line. Such is the nature of most of the errors discovered by Mr. Rose. In some cases the discrepancies between the maps and the tables on which he comments are so small as to convince me that they are due simply to defects of "registry" in printing the maps. In other cases, the discrepancies are due solely to the fact that, in making up the tables, inconsiderable fractions were properly and purposely omitted, as in the case of every generalized statement.

There is another class of so-called errors discovered by Mr. Rose, for instance in Colorado, West Virginia, and North Carolina, which are not errors in any sense. Thus, we may suppose a region, containing 10,000 square miles, having a general elevation of 2,000 feet above the sea, with occasional valleys, too small to be shown upon the scale of the hypsometric map. Those valleys may, notwithstanding, contain all or nearly all the population of the region. Rightfully, therefore, the maps will appear colored according to the general grade of the country, while in the tables the population will be classed according to the facts of its situation. This is the explanation of Mr. Rose's tremendous "find" in Colorado, to use the language of the country.

The only errors which I recall having seen in the three or four letters which I read, as being of sufficient importance to affect the proportions of the different groups for any purpose for which I can conceive of their being used, certainly for any purpose I had in contemplation in causing the tables to be prepared, are two.

One is unmistakably an error of the types in the tens of millions place in the hypsometric tables. No person of ordinary intelligence can consult the table with a view to using the figures for any purpose, without coming squarely upon the fact that this is a typographical error, while one has only to perform an operation in simple addition, such as a ten-year-old boy could perform in three minutes, to obtain the true total. Mr. Rose, however, makes this the occasion for some majestic and altogether withering sneers about the "approximate" accuracy of the Census.

The second error is clearly one of compilation in the Census Office. In preparing the table of population according to mean annual temperature, the figures for Missouri were pushed one place too far toward the left, thus causing them to be added into a temperature group lower by one grade than that in which they should have been placed. The figures being large, the error becomes noticeable, although the change of a degree in the temperature of Missouri might make the table right; and I don't suppose that, as a matter of fact, we know the mean annual temperature of Missouri within one degree, or within two degrees, or even three.

This error is, notwithstanding, a real and a serious one. It ought not to have been committed, even considering the enormous mass of figures by which it is surrounded—the tens of thousands of sums which are rightly set. Its occurrence is fairly a subject of criticism and complaint, if one is disposed to criticise and complain.

While, however, it is an error, it is only one error. The reader of Mr. Rose's communications would think it was not one error, but many. All the variations are played upon it of which it is arithmetically susceptible. In this way any one error occurring in an extensive series of tables might be multiplied indefinitely for controversial purposes. There is really no reason why Mr. Rose, at least so long as he can get a publisher, should ever stop bringing to light "Errors of the Census" due to this unlucky displacement of the population of Missouri by one point in the tables of Mean Annual Temperature.—Respectfully,

FRANCIS A. WALKER.

BOSTON, October 3, 1882.

[The common acceptation of the term "Census" covers all tables which the Bureau issues under that name; so that General Walker's criticism of our title for the letters seems hardly called for. We must also say for Mr. Rose that, although his criticisms happened to concern Mr. Gannett's work principally, there is no ground for supposing them to be in any sense personal or "malignant." Our own interest in the matter, we need hardly add, is purely scientific.—ED. NATION.]

BULLYRAG.

TO THE EDITOR OF THE NATION:

SIR: I have lately seen, in speeches of Congressmen and in other documents, the word "bullirag." On referring to the dictionaries, I find that Worcester pronounces the verb to be "local and low," and Webster (edition of 1875) also calls it "low," but derives it regularly from "*bully*, to insult, and *rag*, to scold." The word means, according to Webster, "to insult in a bullying manner."

In my own boyhood, twenty-five years ago, I remember the word "bulrag" as in common colloquial use in Northern New York, in the sense of "to talk provokingly," having evident reference to the shaking of a red rag at a bull. In that sense, and with the orthography I have given, it strikes me that "bulrag" is a word well worth preserving, and of probably legitimate descent. Skeats, I think, pays no attention to any form of the word; but if my idea of the matter is correct, ought it not to take the form in print that it has so long held in spoken language, thus divesting itself of a superfluous and misleading syllable? THERON W. HAIGHT.

WAUKESHA, Wis., October 11, 1882.

[This word, variously recorded by lexicographers as *ballarag, ballirag, ballyrag, ballywrag, bullyrag,* and *bullrag,* is in vulgar use all over England and in the north of Ireland. In the form preferred by our correspondent (Oxfordshire only) it signifies, according to the glossary of the English Dialect Society, simply 'to scold'; and this is the almost universal acceptation, with 'bullying' sometimes thrown in. It is the prime meaning—'to scold or reproach,' 'to bully and scold'—even in Cumberland, where alone the word is given a sense approaching our correspondent's—viz., 'to rally contemptuously.' But there the spelling is *bullyrag* and *ballyrag.* In the East Cornwall Glossary (*s. v. ballywrag*) it is remarked that "Barnes, in the glossary appended to his 'Poems of Rural Life,' in the Dorset dialect, suggests a derivation from A. S. *bealu,* evil, and *wregan,* to accuse."—ED. NATION.]

Notes.

D. APPLETON & Co. announce that they will have ready next month volume i. of an entirely new and fully revised edition of Bancroft's 'History of the United States,' in six volumes, octavo; also the second volume of Bolles's 'Financial History of the United States,' from 1789 to 1860. Other works in press are: 'Sir Roger de Coverley,' with illustrations by C. O. Murray; 'Homespun Stories,' by Ascot R. Hope; 'Facts and Phases of Animal Life'; 'Stellar Theology and Masonic Astronomy'; and Nicoll's 'Landmarks of English History.'

Harper & Bros. will shortly publish 'Eras and Characters of History,' by the Rev. W. R. Williams.

Among the announcements of the *Century* magazine for the year which begins with the current (November) number, are the following serial tales and history: "A Sea Change," by Mr. Howells; "The Point of View," by Henry James, jr.; "The Creoles of Louisiana," by George W. Cable; "The Led-Horse Claim," by Mary Hallock Foote, whose first long story we believe this is; and Edward Eggleston's "Life in the Thirteen Colonies."

The Century Co. send us a page extracted from the first "illustrated juvenile" ever printed in the Arabic language or in Syria—viz., the Rev. Henry Harris Jessup's Arabic version of poems and rhymes from *St. Nicholas,* brought out at Beirut. The illustrations are borrowed from the same source, or, rather, were placed at Mr. Harris's disposal by the publishers.

Charles Higham, 27A Farringdon Street, London, E. C., solicits subscriptions to 'Bibliotheca Novæ Ecclesiæ,' or, 'A Bibliography of the Literature of Emanuel Swedenborg and of the New Church,' by the Rev. J. R. Boyle. It contemplates "a description of every book, pamphlet, or tract which has been published, to the present day, in connection with Swedenborg or the New Church, either in England, America, the Colonies, or the Continent of Europe," with short biographical notices of authors, wherever possible. It is based on the compiler's private collection, and will, it is estimated, embrace 6,000 titles. The book will be elegantly manufactured.

No. 3 of the Library of Cornell University continues its important list of the mathematical works in the collection, and gives the first part of a bibliographical list of the "Living Authors of Iceland." The latter was compiled three years ago by Mr. Bogi Melsted, a student of the Icelandic College at Reykiavik, and Professor Fiske has at no little pains enlarged it to date, indicated the deaths of authors that have occurred meantime, and added as far as possible the avocation and residence of each person whose works are recorded. The full list, we understand, will include 205 names (many mere contributors to periodical literature being omitted), and this number is, as Professor Fiske justly remarks, "astonishingly large for a population of less than 75,000." Among the Notes, students of early printing will find an interesting ascription to Gerardus de Elten of a folio 'Declaratio quædam modi,' etc., probably printed in 1480 at Cologne by Arnold ter Hoernen.

Mr. Samuel S. Green, librarian of the Worcester (Mass.) Public Library, reports to the September number of the *Library Journal* the steps

taken by Congress at its last session toward a rational and economic distribution of public documents hereafter. By a joint resolution, "423 copies not only of the Congressional set of public documents, but also of all documents ordered to be printed by Congress," will be placed at the disposal of the Interior Department in the interest of incorporated libraries, colleges, boards of trade, etc. Provision was also made for distributing the Census volumes and the official records of the Rebellion.

Congress having refused to meet the expense of publishing the *Bulletin* of the National Board of Health, the Board have accepted the offer of the *Sanitary Engineer* to print for them the most important information heretofore published in the *Bulletin*.

A partial list of the writings of the late Lewis H. Morgan is appended to a biographical sketch furnished by Mr. F. W. Putnam to the Proceedings of the American Academy of Arts and Sciences (vol. xvii., May, 1882). As a memorial of his two daughters who died young, Dr. Morgan left his entire and considerable property in trust to the University of Rochester for the establishment of a college for women in that city. This bequest takes effect upon the decease of his widow and only son.

Mr. Albert S. Gatschet's brief paper on the "Phonetics of the Káyowē Language," read in August, 1881, at Cincinnati, before the American Association for the Advancement of Science, and now just printed, possesses general interest. It illustrates from this "rattle-brained" tribe (as they are designated in the gesture-language of their neighbors) a characteristic of all Indian languages, viz.: "the constant permutation or interchangeability of the sounds which are produced by the same vocal organ. Thus, to take an example easy for our types, "táki, *good;* tá-aki, tó-iki, tó-igi, toíki." In Mr. Gatschet's experience, "an Indian pronounces almost every word of his tongue in six, ten, or twelve different ways." Hence the endless diversities in attempts at notation. Moreover, "Indians do not conform themselves in their daily conversation to the orthography laid down in the religious books printed for them. The Creek Indians, for whom books were printed in a uniform orthography over forty years ago, speak with the same phonetic freedom as before, and constantly permute the related vowels and consonants with each other." As the numerous spellings of Ketchwyo's name testify, Mr. Gatschet's remarks have an application beyond the languages of this continent.

The 'Jean Ingelow Birthday Book,' published by Roberts Bros., inclines towards the larger size of this already voluminous class, and every page is red-lined. A steel portrait of Miss Ingelow faces the title. The same house have issued a pretty little volume of selections from Cervantes ('Wit and Wisdom of Don Quixote'), the short and the long fairly mixed, preceded by a biographical sketch signed Emma Thompson; and two smaller pocket volumes, containing respectively Plato's 'Phædo' and 'Apology and Crito,' both in Professor's Jowett's translation.

C. T. Eben's 'Comparative German Primer, Containing Lists of German and English Words of Common Origin, and More or Less Identical in Form and Sound' (New York: B. Westermann & Co.), is a compilation of rules, "observations," and one hundred "miscellaneous remarks," not without intrinsic value, and bearing the marks of industry and intelligence, but of a decidedly forbidding character for beginners. There is a curious lack of perspective shown in the introduction, in an elementary work of this kind, of such conjectural philology as that of "remark" No. 51: "The noun *Schurke* (scoundrel) is presumably related to the English *shark* and *sharker;* possibly also to the verb *to shirk*." The popularization of comparative philology is a very delicate task, and calls for greater carefulness than is evinced in such statements as that "*wholesome* and *heilsam* are perfectly identical" (in meaning). The word *Racker*, as the German equivalent of "wretch," is stigmatized as a "rather vulgar" provincialism, whereas *schmeissen* (to throw) is apparently sanctioned as unobjectionable.

'A Practical German Grammar for High Schools and Colleges,' by Prof. Wesley C. Sawyer (Chicago: S. C. Griggs & Co.), will be found useful in the hands of a competent teacher who supplements its concise rules with appropriate exercises and reading matter—the grammar being sparing of both. General accuracy is the chief merit of this modest work, which is typographically very attractive. But few blemishes betray that German is not the author's native language. On page 106 we find the rule that the pronoun follows the sex (and not the grammatical gender) in "Ein Mädchen *die* etwas von sich hält," and "Welches Weib *die* zehn Groschen hat." The contrary rule generally holds good in the best writers. The plural "Annan" (p. 59) is practically never used, nor is "der wievielste" sufficiently common to justify its adoption in preference to "der wievielte." "Selbstliebe ist *einem jeden* Menschen gemein" (p. 39) is un-German.

Prof. James A. Harrison's 'French Syntax' (Philadelphia: John E. Potter & Co.), based on Eduard Mätzner's 'Französische Grammatik,' is a thorough performance. It would have been safer, in our judgment, to pass over the pronunciation, always a delicate subject for foreigners. Thus, on p. 20 we are told that *a* is sounded alike in *mâle* and *aimâmes*. On the same page, by the way, deference might have been shown to the Academy's latest dictionary by giving *piège* the grave accent. The index at the end of the book will prove invaluable to students, who are supposed, we ought to remark, to have studied or be studying Latin.

From V. G. Fischer, Washington, D. C., we have the second edition of the Catalogue of the Vienna International Art Exhibition, which opened on April 1, and will hereafter regularly be held every four years. The 188 autographic illustrations seem to us rather more carefully done than those for the Salon Catalogue. America is represented, so far as we have noticed, only by specimens of the work of our best wood engravers.

Vol. viii., No. 2 of the Proceedings of the U. S. Naval Institute contains a paper by Commander John R. Bartlett, U. S. N., on the results of the *Blake's* summer cruise in the Gulf Stream. It is accompanied by lines of soundings.

The Philadelphia Society of Etchers will give a first Exhibition of Modern Etchings ("original works by modern painter-etchers, of all countries and schools"), at the Pennsylvania Academy of Fine Arts, from December 27, 1882, to February 3, 1883, inclusive. Works from this city as well as from Philadelphia will be collected and returned free of charge, the dates of collection for New York being December 11-13. The Secretary of the Society is Mr. J. Neely, jr., 1334 Chestnut St.

The growth of the Italian element in New York city has long been a matter of daily observation, but one is surprised to find the Italian colony ready for a handbook ('Guido Manuale ad uso dell' Italiano in New York') such as comes to us from the compilers, the brothers Metelli, of the circulating library at 135 Bleecker Street. This plump volume, well supplied with advertisements, conveys in simple terms all the information necessary to Italian immigrants. The United States Constitution; the Government; the tariff; the commercial and extradition treaties with Italy; the laws of the mother country applicable to Italians residing abroad who do not forfeit their citizenship; the laws of the State of New York concerning partnerships, rents, divorce, etc.; the requirements for naturalization; the buildings, schools, churches, and charitable institutions of the metropolis—such is a part of the contents of the 'Guide.' Eighteen (not very harmonious) Italian provident and other associations are enumerated, two of these being in New Jersey. The Italians here have three day and one night schools, with more than 2,000 pupils. They have two daily and two weekly journals. They have plenty of good restaurants if no showy hotels. A special chapter on the Italian colony (which numbered 16,223 in 1880) defends this class of our population against popular prejudice, only reproving them for their abstinence from citizenship and politics. A directory is added, of about 1,400 names, representing nearly half the population by heads of families. This commendable publication will be renewed yearly, with improvements.

A handbook for restless Americans desirous of crossing the Rio Grande is Mr. Lorenzo Castro's 'The Republic of Mexico in 1882' (New York: Thompson & Moreau), an honest and modest work, of which the occasionally unidiomatic style and illogical arrangement will readily be forgiven. A sketch of the Constitution (modified as to the succession to the Presidency while this book was on the press), brief accounts of the several States, the tariff, the naturalization laws, and miscellaneous statistics, are coupled with fifty-one pages devoted to mines, ten to railroads, and forty-nine to itineraries and distances. A large folding map of Mexico, revised to date, completes the utility of this manual.

Westermann & Co. have received Part 6 of Heinrich Düntzer's illustrated edition of Goethe's works, already described in these columns.

The second volume of M. Leroy-Beaulieu's 'L'Empire des Tsars' is shortly to appear.

Maisonneuve, Paris, has begun publication of a little *Almanach des Traditions Populaires*, which folk-lorists will eagerly adopt, especially as the first volume contains their addresses and lists of their works; or if not, the editor, M. Rolland, should be notified.

In our News Summary for September 14 the death and career of Earl Grey were recorded, whereas it was Sir George Grey who was reported by cable as having died. The error originated with one of the morning papers of this city, whose accuracy is commonly to be relied upon.

—The narrative of the *Jeannette*, by Lieut. J. W. Danenhower, was published some time since in the New York *Herald*, from notes dictated to the *Herald* correspondent at Irkutsk. It excited very general interest, and was soon out of print. Yielding to the requests of those who desired the story in more attractive form, the author has issued, through Osgood & Co., a revised edition of it, neatly printed, with a portrait, an illustration of the *Jeannette* in the ice, and a small map of the route. It does not pretend to do more than relate the writer's experiences, and the details of the finding of De Long and his party are not considered as coming within its scope. It is, of course, impracticable, until the official details are made public, to form any just estimate of the contributions to knowledge made by the expedition, or to judge fairly its methods. The chief scientific novelty that appears in the narrative is the evidence of complete dependence of the motion of the ice upon the winds in the region traversed. This is in accordance with the views of Payer and Weyprecht, but the striking nature of the corroboration has hardly attracted the attention it deserves. The narrative is told in a straightforward, sensible way, and impresses the reader

strongly with the cheerfulness of the author's disposition, which endured without souring, in addition to the privation, danger, and discomfort of the journey, those harder trials which followed in the train of the blindness by which he was afflicted.

—We have received from the Chief Signal-office of the United States Army two pamphlets full of charts very clearly and attractively draughted, portraying, the one, the isothermal lines in the United States for each month in the year—to which the only objection is its pretence of completeness in continuing the lines over mountain-chains where no observations have been taken; and the other, the supposititious isobars for each month during several years. We call these isobars supposititious because they summarize facts which have no existence, and reduce to an absurdity the hypothesis of "correction for elevation." There are two meteorological phenomena which will always elude accurate recording, and yet whose real or supposed importance is so great that they will always be pretended to be recorded; and these are, the rainfall and the baric pressure. To the inanity of the current notions of "correction" we have repeatedly called attention in these columns. Some of the grosser objections to them may be classed under three heads: First, storms have not only lateral boundaries, but also boundaries above and below them, so that when you "correct for elevation" you can "correct" out of a storm into one. Secondly, your elevated station is not, like a lantern on a tower, removed from disturbing surface influences, but is organically related to an incline; and inclines produce disturbances and phenomena of their own. Thirdly, not only have no two hypothesizers been able to agree upon a scheme of corrections, but not even have the United States correctors adhered to a consistent one, but have experimented with several arrangements of widely contrary principles, and decide between them on grounds which must be whimsical and which reason in a circle. But the first-mentioned of these groups of charts is substantially correct, at least as regards dry lowland regions, and is interesting from its condensed exposition of climatic laws. Most striking, of course, is the parallelism of the isotherms to mountain ranges and to ocean coast-lines, except in April and October; with the heat increasing by gradients inland during five months, and decreasing inland during five. The gradients are steepest just north of the Gulf of California, a region having close analogies, climatically, with the valley of the Jordan in Southern Syria.

—Though it obviously omits numerous details, the twenty-sixth annual report of the English Civil-Service Commissioners, lately issued, takes up, with its Appendices, no less than 783 pages. The staff of examiners employed by the Commission consists of a Director of Examinations, three permanent Assistant Examiners, and about 160 Occasional Examiners, including many of the most distinguished scholars in the kingdom. During 1881, the total number of cases dealt with amounted to 24,243, as against 20,452 in 1880; the increase being mainly due to the introduction of open competition for the situations of telegraph-learner and female clerk in the Post-office. Out of the forenamed aggregate of 24,243 cases, 18,511 were connected with the Home Civil Service; the remaining 5,732 being distributed as follows: Home services, 1,621; Indian services, 286; Military services, 3,756; Naval services, 69. With exclusion of examinations for the Indian, Military, and Naval services, the principal competitions held in 1881 were 69 in number, at which 10,375 candidates competed for 1,670 appointments. The post of female telegraph-learner is conspicuously coveted: for forty appointments to this situation there were as many as 448 candidates last year, while only 934 persons offered themselves for 345 appointments for the situation of male telegraph-learner. Almost as popular with young women as the telegraph is the Postal service. Out of 747 candidates for female clerkships in the London Post-offices, 525 failed at the preliminary test, five withdrew after passing it, and 217 competed for 76 appointments. The ambition evinced for a soldier's life is noticeable. The candidates for the Royal Military College at Sandhurst, or for commissions in the Army, were 1,265, the appointments vacant being 244; and the candidates for the Royal Military Academy at Woolwich were 384, the appointments offered being 80. In the fulness of time it has been discovered that the Hindûstânî or Urdû is "not the true native language of any part of" India; and a change has been introduced accordingly, with reference to the selected candidates for the Indian Civil Service. In future, those among them who are destined for the Northwestern Provinces of Hindostan are to give their chief attention to Hindî. This innovation, though extremely distasteful to Indian civilians of the old school, whose injudicious predilections for Urdû and neglect of Hindî one hardly expected to see practically exploded in our generation, has been dictated, as facts abundantly testify, by plain, unprejudiced common-sense. By the estimate of the Civil-Service Commissioners, the fees payable by examinees will henceforth be about £13,000 annually.

—A copy has recently been received of the Proceedings of the International Congress of Electricians, which was held in Paris in September, 1881, in connection with the exhibition of electrical instruments and inventions. The Congress was assembled by invitation of the French Government; and M. Cochery, Minister of Posts and Telegraphs, presided. The most distinguished physicists of Europe were in attendance, and a few from distant lands. Prof. G. F. Barker, Prof. Rowland, Dr. C. Herz, Captain Heap, of the United States Army, and Lieutenant MacLean, of the United States Navy, with the American Minister to France, appear as delegates from this country. The 400 pages devoted to the proceedings of the Congress include the history of the assembly, the papers, the debates, and the conclusions. It gives the text of M. Mascart's speech, reviewing the results obtained by the Conference, and the reasons therefor. It concludes with a brief address from M. Dumas, the French physicist, on the significance of the proposal adopted by the Congress to fix the units of electric measurement. Professor Rowland's paper on atmospheric electricity is also given. Three international commissions were agreed upon, and the French Government was requested to invite the Governments of other nations to unite in constituting them. When formed, these commissions are to consider (1) the redetermination of the value of the *ohm;* (2) the observation of atmospheric electricity, the efficacy of different systems of *paratonnerres,* the study of terrestrial currents on telegraphic lines, and the establishment of a system of international telemeteorography; (3) the determination of a standard of light. The Commissioners who have been appointed in accordance with this request, are about to assemble in Paris. Prof. John Trowbridge, of Harvard University, and Prof. H. A. Rowland, of Johns Hopkins University, sailed last Saturday, having been designated as Commissioners by the Department of State, in accordance with a provision made by the last Congress of the United States.

—The word *paratonnerres* appears to be used by the French for all safety appliances against lightning — lightning-rods, lightning-arresters, etc.—and, like parasol, would be a convenient word in English. A similar term is *paragrêles,* hail-preventers. The physicists have been quite felicitous in some of the new terms of their vocabulary—Ohm, Volt, Farad, Coulomb, Ampère—all of which are brief international words, capable of very exact limitations, and suggestive of the names of the great investigators in science whose theoretical work underlies the practical applications now so familiar to every one.

—The Paris *Temps* publishes a sketch of Ernest Bersot by his executor, Edm. Scherer, which is to be prefixed to Bersot's forthcoming posthumous work, 'Études et Pensées' (Hachette). As this work is not likely to reach many American readers, we translate an interesting letter of Bersot's, written February 15, 1860:

"Monday, I lunched at M. de Falloux's. Montalembert, Ampère, the Abbé Cazales, ex-Representative, and Barthélemy-Saint-Hilaire were there. We lunched gayly, amid bursts of fury from Montalembert, who is excessively passionate and very interesting in his passion. . . . After lunch we set M. Ampère going about Italy and Rome. He lives in that country. About Tuscany, from which he came here two months ago, he assures us that it is decidedly against Austria, and willing to endure everything rather than Austrian rule. We knew it before. But the most curious thing was his conversation about Rome in that *salon.* He analyzed Roman society for us—the nobility null, of a nullity thirty degrees below zero; no ideas, no feelings, no will—nothing, pure nothing, absolute nothing. It no longer counts even in the Church, to which each family always used to furnish a Prelate or a Cardinal. The *bourgeoisie* has spirit, but no political intelligence; a single sentiment—hatred of the government of the priests, with Mazziniism here and there. Then, besides hatred, there is superstition. For about six years it has been imagined that the Pope has the evil eye, that he can cast spells. Not long since he was in a shop; as soon as he went out the frightened husband looked at his wife and cried, 'We are done for!' The wife answered, 'I made horns under my cloak' (they make horns with the little finger and the forefinger). We said to Ampère, 'But why has not the Pope reformed anything?' 'Reforms! People think they are easy, and the Emperor, in his letter to Edgar Ney, demands that our Civil Code be imported into the Roman State unchanged. It is not a matter of one abuse or several abuses at Rome. Everything is abuse, and the abuses interlace so closely that they must be reformed all at once, and the reformer would have nearly everybody against him. A Roman may suffer by thirty abuses, but there's sure to be a thirty-first which gives him his living, and he won't suffer that one to be touched. Rossi tried to touch them, and he was assassinated. To effect anything would require thirty years of energetic Popes and Ministers ready to be assassinated. As for Roman justice, it's a wonderful thing. A man is accused; he carries money to an officer of the Court, and the matter dies. There is no security for money which is stolen from you; nor for life which is attacked even at seven in the evening; nor for the family, for they steal children in the name of the law.' There's the abstract of Ampère's conversation; you can judge of the effect. My meal was very amusing."

—Bersot says, "We knew all this before"—ten, twenty years ago; but the evils of a form of government that has passed away are forgotten, and there have been symptoms that the temporal power is regretted in certain quarters, and that certain persons would not be sorry to see it reëstablished at Rome or elsewhere. That is a consummation not much to be feared in the present temper of the world. Still, it is not altogether useless to remind people now and then what "temporal power" means. And it is well to show where political and judicial corruption can lead a great country if they are not resisted at the outset.

—Two Venetian journals, *Il Veneto Cristiano* and *Fra Paolo Sarpi,* were "reproved, condemned, and anathematized" on September 4, and all their writers, and all who trust and favor them, whoever they may be, were declared to incur

the greater excommunication, and the printers, sellers, and readers declared guilty of a grave fault.

—No. 37 of the *Gegenwart* contains a curious article by Prof. R. von Ihering on "The Æsthetics of Eating and Drinking." The distinguished jurist thinks that three principles have guided the development or shaping of our present table manners: the suppression of the brute element, the cultivation of an appearance of moderation, and the change from communism to individualism. The German language has different words for the processes of eating and drinking by animals and human beings, and this difference is based on an actual distinction in the things themselves. Animals eat hastily and continuously, man slowly and with conversational pauses between the courses; animals lie or stand, man sits; animals use their fore-feet and mouth directly, man uses knife, fork, and spoon, which, however, have been introduced very gradually and against much opposition. The second point is not so much moderation as the semblance of moderation, for if we are honest we must confess that the opposite of moderation is the aim of our pleasures at table. It is for æsthetic reasons alone that we have gradually reduced the size of our glasses, and bring on the dishes in successive courses instead of placing them all in an imposing array on the table; and the same is true of the substitution of the habit of sitting, in place of the Roman and Oriental custom of lying, at the table, which gives the semblance of immoderation. Thirdly, we find that individualism has taken the place of communism. Our ancestors used the same bench (*Bank*, whence *Bankett*, banquet), whereas we have chairs; they used the table-cloth to wipe their hands, we have napkins; they ate from the same dish and drank from the same glass or bumper, while we have each our own. According to this writer, the habit of touching the glasses on drinking a toast symbolizes the former unity of the cup.

VAN HORNE'S LIFE OF GENERAL THOMAS.

The Life of Major-General George H. Thomas. By Thomas B. Van Horne, U.S.A., author of 'History of Army of the Cumberland.' With portrait and maps. Charles Scribner's Sons. 1882.

THE place of General Thomas among the officers of the national armies in the late war has been regarded as a very secure and very honorable one. His patriotism, courage, perseverance, judgment, and military intelligence all ranked high. He has, besides, enjoyed the reputation of sincere modesty, and of being so far from self-seeking or restless ambition that he preferred a secondary place rather than a chief command of great armies, where the crown is apt to have as many thorns as laurels. It has long been thought one of the most enviable of things to have a character and repute that would make one, in the public opinion, worthy of the chief places without bearing the burdens and assuming the severe responsibilities belonging to them. This was Thomas's position for more than three years of the war; but when, in the final campaign of the great struggle, a responsible separate command was thrust upon him, the successful outcome of it, ending as it did with the signal defeat of Hood at Nashville, was so connected with criticisms by his superiors as to the dilatoriness of the earlier parts of his movements, that his ardent friends have made it the subject of one of the liveliest controversies of the period.

From the 12th of November to the 15th of December, 1864, General Thomas remained on the defensive against the Confederate army under Hood. He himself was at Nashville, and his only active forces in the field were commanded by General Schofield, who was slowly forced back from the southern border of Tennessee to the capital of the State. On the 30th of November, the sanguinary battle of Franklin was fought by Schofield's troops, and on the next day they retired to Nashville, where they met five divisions which Thomas concentrated there, besides the garrison of the town. The army thus gathered was that with which the battle of Nashville was fought two weeks later, and was not sensibly increased in the meantime. The danger that Hood would turn the position and march to the Ohio, as Bragg had done in 1862, and the fact that the greater part of middle Tennessee was given up to the enemy to be stripped of its supplies and have its young men forced into the Confederate army, while the railway system was wrecked in all directions, made the Administration at Washington and General Grant urgent and even imperative that Thomas should assume the aggressive at once. His assigned reason for delay was that he wanted to complete the mounting of his cavalry corps, so as to be superior in that arm to his estimate of Hood's mounted force, as he confessedly was in infantry. The reason did not seem sufficient, and after nearly a fortnight of reiterated exhortations and orders, Thomas was on the point of being relieved from his command, when he gave battle successfully, and the defeat of Hood gave a happy ending to the unpleasant situation. Honors and compliments were showered on the successful General, and, to all outward seeming, the griefs which the preceding correspondence had caused were buried and forgotten. To leave the matter there should have been satisfactory to General Thomas, and we may presume that it was. There had been nothing in the correspondence which was personally unkind. Grant had said to him: "I have as much confidence in your conducting the battle rightly as I have in any other officer, but it has seemed to me that you have been slow, and I have had no explanation of affairs to convince me otherwise." Sherman had written to Grant: "I know full well that General Thomas is slow in mind and in action, but he is judicious and brave, and the troops feel great confidence in him." The one criticism was, that a lack of that natural aggressiveness which leads a commander to seize and keep the initiative had delayed the early movements of the campaign, and postponed a battle beyond what was necessary. There had been no denial of mental ability, of physical or moral courage; the whole offence consisted in the one word "slow."

The debate which the principals in it would gladly have let drop has been persistently, and often excitedly, continued by those assuming to be their champions, until this biography of Thomas by Chaplain Van Horne caps the climax of indiscretion not only by reviving and insisting upon all the old personal issues in their least pleasant form, but by adding fresh ones which will inevitably bring new combatants into the field. He has with great pains collected and displayed in his pages the criticisms upon his hero which have given offence, overlooking the danger that anything short of a most demonstrative refutation of them would have an effect akin to an admission of their justice. He has overestimated his own power of answer, and has contented himself with general and sweeping assertions when the only successful completion of his task would be found in a full analysis of the situation, and a detailed examination of numbers which should be proof against the most searching inquiry. He condemns the military plans of every officer to whom Thomas was subordinate, from Buell to Grant, and makes in each case a contrast intended to be favorable to Thomas. He repudiates the theory that Thomas was modestly content with a secondary position, and insists that he constantly protested against the failure to intrust him with a chief command, until he took refuge in a surly and discontented silence, writing to Halleck during his service under Rosecrans: "I have made my last protest while the war lasts. You may hereafter put a stick over me if you choose to do so. I will take care, however, to so manage my command, whatever it may be, as not to be involved in the mistakes of the stick."

In like manner, the common and flattering opinion that the refusal to take Buell's command before the battle of Perryville in 1862 was only due to diffidence as to his own powers, combined with friendship and respect for Buell, is rudely shattered by the quotation of letters to Halleck in which his own embarrassment at taking command of an army on what he thought was the eve of a battle is made to count for much in his motives, his language being so strong as to declare it "unjust to myself," and placing him "in a situation to be disgraced." It does not seem to have occurred to Chaplain Van Horne that such phrases are more powerful than pages of argument to prove that Thomas shrank from responsibility, and lacked the proud confidence of ability to grasp and handle an army which the emergency offered to him. The point, however, with which we are now dealing is the strange misconception of what constitutes friendship for a deceased worthy, which enables the author to think that, in thus presenting him, he is doing honor to his memory. The strongest language of formal praise neither compensates for nor annuls the mischievous effect of what is thus given to the world as fact which cannot be disputed. The only question which others have raised is, whether Thomas had the spontaneity of action which responds instantaneously to every demand, or needed time to study the situation and make prolonged preparation before acting. His biographer forces upon us unwelcome doubts whether his modesty, his kindliness, and his self-forgetfulness were what we had all supposed them to be; and while the book lacks the closeness and cogency of argument needed to meet imputations of deficiency already made, it is unfortunate in suggesting grave criticisms which have not before been broached.

No better illustration can be given of the manner in which Chaplain Van Horne makes his narrative of facts contradict his conclusions from them than is found in the story of the battle of Perryville. It occurred, as will be remembered, a few days after Thomas had declined to relieve Buell of the command of the army; and partly, no doubt, in recognition of this, Buell had announced Thomas in general orders as second in command. The army was composed of three corps under Generals McCook, Gilbert, and Crittenden. Near Perryville Bragg so concentrated the Confederate army as to attack McCook, who was the left of Buell's army, and who was separated from Gilbert in the centre by a stream and a valley. Van Horne says:

"Three divisions had attacked the left of an army of eight divisions in line of battle, and yet one of these attacking divisions had wedged itself between six of these eight divisions on one side and two on the other, and, turning its back upon the six, had moved upon the flank of the other two. And while the conflict on the left of the national army was waxing hotter and hotter, not an order was given for two hours that directed support to the two isolated divisions. The fact that three divisions attacked an army of eight, and escaped severe punishment or capture, proves that grave errors were committed by responsible commanders in General Buell's army, and that a great opportunity was lost."

This seems clear and conclusive, but how does it affect General Thomas? We are told that Buell was three or four miles in the rear, behind intervening hills, so that he did not hear the noise of the battle. In fact, he was suffering from injuries received in being thrown by a vicious horse, and was nearly disabled. General Thomas was with Crittenden's corps, and on the line of battle. It was a time when an officer of quick decision and of bold and prompt action, seizing with firm grasp the forces in hand, could have used the glorious "opportunity for the capture or annihilation of Bragg's forces," as Van Horne himself calls it. The Chaplain says that "Crittenden had been urgent that his corps should advance against the enemy; but General Thomas had refused permission, for the assigned reason that he did not know the plans of the commanding general." It was a time to make plans and to execute them on the instant, and, had the second in command done it, there would have been no occasion for complaints that when Buell was a second time relieved, Rosecrans and not Thomas was assigned to the command of the army. Van Horne, a few pages later, echoes the general admiration for Colonel Miller's assumption of responsibility at Stone River, when he, "without orders from his immediate commander, and against the orders of another general of division, crossed the river in the face of the enemy, and in a brilliant charge drove Breckinridge's forces in rout far toward Murfreesboro." He does not seem to see that this was the sort of initiative that, by his showing of the facts, Thomas should have used at Perryville, and that the omission to use it was exactly the deficiency for which he has been criticised. The biographer's statement of the case is a stronger, because more circumstantial, proof of the mental slowness referred to than any one else has made.

In the treatment of the events of the week following the battle of Franklin, the same incongruity between facts and conclusions is noticeable. In opening his fourteenth chapter the author tells us that "on the first day of December General Thomas had in hand at Nashville all the troops available for battle, except a part of his cavalry that had been sent North to be remounted." That his army was decidedly superior in strength to Hood's is also admitted. Schofield had just given Hood a bloody repulse at Franklin which made it the opportunity to assume the aggressive, attacking the Confederates with the combined national army, of which one-half had administered the terrible lesson of the battle of the 30th of November. The President and General Grant exhorted and ordered an advance. As we have already stated, the only reason assigned by General Thomas for delay was his wish to add to his mounted force. He said that he was ready to fight on the 9th of December, but the icy storm which had then set in was the cause of further delay. Chaplain Van Horne treats it as if this had been the only delay Thomas desired, and as if he had succeeded in remounting his dismounted cavalry by that time. But the truth is, that the returns in the Adjutant-General's Office show that he reported no more mounted men on the 10th of December than on the 30th of November. The successful battle was, therefore, fought at last in obedience to the orders from Washington, and not because the preparation which General Thomas wished had been completed. The biographer's rhetoric lacks substantial basis when he asserts that "he preferred the loss of command to fighting before he had made preparation to crush Hood's army." The icy condition of the ground had intervened as a new obstacle, but the material "preparation" is not shown to have been better on the 15th than on the 1st of December. Chaplain Van Horne's talk of the need of giving the "semblance of unity to this heterogeneous mass" of Thomas's army, is an excuse which Thomas did not himself urge, and which, like many other of the biographer's assertions, is unfortunate, since the troops fought at last under the same organization which they had on the first of the month. The facts which are given all support the conclusion that the obedience to orders which gave battle on the 15th would have been equally easy a fortnight sooner, and that it would have been as feasible to attack Hood from the position of the Brentwood hills as soon as he had put the Harpeth River at his back, as it was to assail him afterward in his lines about Nashville.

The concluding chapters show a spirit toward General Schofield which is so little accounted for by any facts narrated as to make it another serious fault in the book. The correspondence between the two officers through the preceding part of the campaign exhibits only a mutual good understanding, and the most earnest efforts on the part of the subordinate to meet his commander's views. Schofield had carried out to the utmost Thomas's wish to gain time. He had made the retreat of his inferior force before Hood so slow that, with strange inconsequence, Van Horne makes it a reproach that he ran too great a risk at Spring Hill, where he gained a day by uncommon tenacity, and still brought off his little army safely. The day so gained was that which alone enabled Thomas to get Stedman's division to Nashville. Overtaken at Franklin, Schofield had punished Hood so severely, and with so small loss to himself, as to make the Confederate advance to Nashville, in the opinion of Beauregard, a wholly unjustifiable movement. When the icy storm after the 8th of December made movements so difficult, Schofield had sustained his superior in the decision to wait for a thaw, when the command of the whole army was on the point of being transferred to him.

In the face of these facts, which Chaplain Van Horne's narrative sufficiently reveals, he asserts that prior to a conference of officers held by Thomas on the day before the battle of Nashville, "and ever afterward, he regarded General Schofield as unfriendly to himself." Nothing could justify such an assertion except conclusive evidence to support it; for without it, the biographer would prove unworthy jealousy on the part of the superior, instead of anything wrong on the part of the subordinate. As, therefore, we look through the book in vain for proof of an act or a word on Schofield's part which was not of the heartiest subordination and friendship, we are forced to conclude again that the author has done his hero great injustice, and attributed to him sentiments and motives that General Thomas would himself have repelled.

After the war was over, we are told that General Schofield was assigned to a district which General Thomas desired for himself, and that the latter protested against a preference shown his junior by President Grant. But it also appears that General Schofield, on learning of General Thomas's wish, himself requested that it might be complied with. In this incident we still look in vain for evidence of unfriendliness on Schofield's part. Some five years after the close of the war, however, we are informed that a communication was printed in the New York *Tribune* criticising General Thomas's conduct of the Nashville campaign. This, Mr. Van Horne asserts, was believed by General Thomas to be attributable, "directly or indirectly," to General Schofield. Still later, in 1880, General Schofield addressed a letter to the Society of the Army of the Cumberland, in which, referring to Van Horne's 'History of the Army of the Cumberland,' he complained of what seemed a systematic ignoring of his position as commander of the army in the field from Pulaski to Nashville. The careful reader of Chaplain Van Horne's present book will be likely to see a much more close connection between these last-named facts and the charge of unfriendliness to General Thomas than will be found in anything narrated as occurring during the war, and will be likely to find the author obnoxious to the charge of retroactive unfriendliness on his own part, by which he has been led to a judgment of Schofield's motives and conduct in 1864 which his own narrative sufficiently refutes. In this, as in the other cases noted, he manages to injure General Thomas by attributing to him feelings in that campaign which, upon the evidence of their own correspondence, would be grossly unjust to General Schofield.

The most cursory examination of the story of the Nashville campaign as told in the present volume shows a laborious effort to depreciate the services of General Schofield. The biography is nowhere a critical examination of the campaigns touched upon; but in this last its omissions, its errors, and its glosses are multiplied. That it will be the end of controversy would be absurd to suppose. The various officers who are so freely attacked or belittled will have their say, and the weakness of many of the positions taken by Mr. Van Horne, sufficiently evident as they are in his own book, will be so exposed as necessarily to react against the reputation which he has tried to exalt.

One of the omissions is so noticeable as to demand special mention. As it was the author's avowed purpose "to give the well-defined reasons for his belief" that injustice had been done General Thomas, we naturally look for a careful and exact marshalling of the forces and means at his command during the period of a month prior to the battle of Nashville. The question between him and the War Department was, whether it was reasonable to expect greater activity from him and to look for better results. But we look in vain for the figures. There is a table in the appendix entitled "Extracts" from the morning reports, but this gives no statement of the forces in Tennessee prior to the 10th of December, and on the last-mentioned date gives only the troops alleged to be in line at Nashville. There is nowhere any account (that we have found) of the other forces in Tennessee, which General Thomas's official returns show to have been more than 26,000 men. Neither is there any reference to the fact that the same official returns show a force of nearly or quite 65,000 men in his command in Tennessee from the 20th to the 30th of November. To explain satisfactorily why these were not concentrated, what garrisons were necessarily kept at different posts, and the reasons for so doing, is certainly part of any "well-defined reasons" for insisting that the best possible course was pursued. But no such explanation and no such exhibits are given. We have abundance of superlative, if not extravagant, assertions of the absolute wisdom and vigor of whatever General Thomas did, and of the consummate character of his generalship, but this vital point in the whole argument is quietly ignored. If Chaplain Van Horne's opinion were conclusive of the matter, we might as well have stopped with the preface as to have read the volume; but since proof was promised, we can do no less than notice that it is signally absent in so important a place.

THE FOURTEENTH VOLUME OF THE BRITANNICA.

Encyclopædia Britannica. Ninth edition. Vol. XIV. Kaolin—Lons-le-Saulnier. New York: Charles Scribner's Sons; Boston: Little, Brown & Co.

THIS volume, like its predecessors, contains a considerable amount of matter sufficiently interesting and intelligible to be appreciated by all classes of readers, and perhaps a scarcely less considerable amount that will be found digestible by the special student only. The list of contributors comprises the names of a host of men of recognized eminence in the fields of letters and of science, but the number of really striking articles is comparatively limited. We notice in the department of Biography, Keats and Landor, both by Algernon Swinburne; Leonardo da Vinci (seven pages), by Prof. Sidney Colvin; Liebig (whose death is accidentally placed in the opening sentence in the year 1837, instead of in 1873), by Prof. Crum Brown; Leibnitz (six pages), by W. R. Sorley; Lessing, by James Sime; Locke (eleven pages), by Prof. A. C. Fraser; and Longfellow, by Thomas Davidson. Mr. John Bigelow and Col. John G. Nicolay furnish the biographies of La Fayette and Lincoln respectively. Among the more important geographical contributions are those on Kashmir, by Gen. Maclagan; Kurdistan, by Sir Henry Rawlinson; and Lhasa, by Col. Henry Yule. The complete account of London covers thirty-four pages. In the department of science—natural, physical, and mechanical—the contributions especially deserving of mention are Lichens, by the Rev. J. M. Crombie; Lighthouse, by Thomas Stevenson; Lizard, by Dr. Günther, of the British Museum; and Light, by Prof. P. G. Tait. It is interesting to note, that in this last article, which is the *pièce de résistance* of the volume, and which covers thirty-seven pages, the name of Tyndall does not occur a single time—a peculiarity that likewise distinguishes the article on Heat, by Sir William Thomson, in vol. xi. of the same work. It would certainly appear as though this ludicrous omission were the outcome of the famous controversy, Tait and Thomson *v.* Tyndall, fought some twenty years ago over the respective claims of Joule and Mayer to the honor of having discovered the principle of the conservation of energy. All, or nearly all, of the ornithological subjects are treated by Prof. Newton, of Cambridge; and the principal ones in mammalogy, such as Lemur, Lion, and Llama, by Prof. Flower. Mr. Glaisher, of the Meteorological Bureau, contributes Logarithms. Latin Language, by Prof. Wilkins, covers sixteen pages; Law, by Prof. Robertson, thirteen; and Logic, by Prof. Adamson, twenty-three.

The subject of Libraries has been well treated, in forty-two pages, by Messrs. Tedder and Thomas, both of whom have been secretaries of the Library Association of the United Kingdom. The statistics of the chief libraries of the world, with which it closes, are the most satisfactory portion. They are brought down to the latest time, and the authors' success in previous efforts of this kind makes it certain that they are trustworthy. Perhaps their work will repress for a time the erratic exuberance of the newspapers in this regard. Every one who is interested in the subject must have noticed the continual appearance of items on the number of volumes in the chief libraries, founded on the statistics sometimes of the last decade, sometimes of the last century, and sometimes of a distant future. At the risk of starting a new family of such paragraphs, and seeing statements which are true in 1882 repeated in 1892 or in 1902, when they will have been entirely falsified by the prodigious growth of libraries, we have prepared from the eighth and the ninth editions of the 'Encyclopædia' a comparative table of the number of libraries exceeding 100,000 at the two periods:

	1857.		1882.	
	No. of libraries.	Volumes in hundred thousands.	No. of libraries.	Volumes in hundred thousands.
Great Britain	6	1,413	12	3,296
France	8	1,801	15	4,528
Germany	19	4,289	45	11,349
Austria	4	780	7	1,744
Italy	8	2,431	25	4,162
America	0	0	12	2,305
The rest of the world	9	1,950	31	6,518
	54	12,664	147	33,902

It will be seen that France, though it has not gained so much as England in the number of libraries, has gained more in the number of volumes. The large increase in Italy probably comes from the conversion of monastic into public libraries, in which process several have often been united. America is all gain, and "the rest of the world" has gained more than the average.

The ten principal libraries were, in

1857.	Vols.	1882.	Vols.
Imperial Library, Paris	815,000	Imperial Library, Paris	2,290,000
British Museum, London	562,000	British Museum, London	1,500,000
Imperial Library, St. Petersburg	519,500	Imperial Library, St. Petersburg	1,000,000
Royal Library, Berlin	500,000	Royal Library, Munich	1,000,000
Royal Library, Munich	480,000	Royal Library, Berlin	(?) 750,000
Royal Library, Copenhagen	408,000	University Libr'y, Strassburg	513,000
Imperial Library, Vienna	365,000	University Libr'y, Leipzig	500,000
University Libr'y, Göttingen	360,000	Grand-duc'l Lib'y, Darmstadt	500,000
University Libr'y, Breslau	350,000	Royal Library, Copenhagen	482,000
Royal Library, Dresden	305,000	Imperial Library, Vienna	440,000

It will be seen that Munich and Berlin have changed places, and that Strassburg, Leipzig, and Darmstadt appear for the first time in the list of 1882, and crowd down Copenhagen and those below it.

The historical portion is as good as the statistical, although it suffers from the want of space inevitable in an encyclopædia. But the part devoted to Library management has lost most in this way, the manuscript, we have heard, having been cut down one half. As a result, the reader finds so much treated insufficiently, he so often is stopped just as he seemed to be coming to the root of the matter; that he is tempted to wish that library economy had been left out altogether, and the space saved added to history. No one is to blame. The 'Encyclopædia' could not afford more room; the subject cannot be treated in so little room. And when we see that in the previous edition Library architecture had only two pages out of sixty-one, and Library management only one and a half, it would be very ungracious to complain of the five and a half pages which Messrs. Tedder and Thomas have crammed full of valuable facts, including the latest discoveries and referring to the best sources of information. But for a complete treatise we must wait till Mr. W. E. A. Axon issues his library guide, which has been so long in preparation. That will appear, we hope, as soon as the English Library Association have reached as definite conclusions on classification as they have on cataloguing.

In common with the earlier volumes of the series, the present one shows the ill effects arising from publication without revision. Completeness, orthographic consistency, and correctness can scarcely be claimed for the 'Britannica.' Among the biographical omissions we notice the Australian traveller Leichhardt (perhaps intentionally omitted, on the strength of the sensational reports recently circulated as to his actual existence as a "wild man of the woods"), the African traveller and distinguished ornithologist Levaillant (there is no reference to a possible Vaillant), and the painter Koekkoek. George Eliot, whose death took place too late for insertion under "E," should have found a place under "L," but, strange to say, she is omitted. And, what must appear still more singular, not the remotest reference is made to her, either in name or person, in the article devoted to George Henry Lewes. Is this writer possibly an "illusion" in the eyes of Mr. James Sully? In the biographical notice of Sir Edwin Landseer we fail to notice any reference to the famous lions of Trafalgar Square, with which the name of the artist, as sculptor, was so long unpleasantly identified.

Geographical blemishes appear to be less numerous in the volume before us than in some of the earlier ones—a circumstance due, probably, more to the character of the subjects treated than to any special attainments on the part of the geographical contributors. Kinchinjunga, under its various orthographic forms, is completely wanting, whereas considerable space is devoted to Kilimanjaro. We likewise note the absence of Lochs Katrine and Lomond, both under their own names and "Loch," although we have a Como (in vol. vi.), and in the present volume a reference from Lago Maggiore to Maggiore. In the article on the Kuen-Lun Mountains (by "R. S.," presumably Richard Strachey) the summits of the Karakorum are stated to rise above 28,000 feet, but at the present time only one peak, Dapsang, is known to attain to that elevation. Lodz, the most rapidly-developed town in Russian Poland, is still credited with only 50,000 inhabitants (census of 1872), whereas numerous estimates made within the last few years have placed the population at from 80,000 to over 100,000 souls. As a specimen of *definite* historico-geographical information, may be cited the last statement under Kars, to the effect that "the fortress was again stormed by the Russians in the war of 1877-78." A piece of perplexing orthography is shown in the placing of Hungarian towns. We have the German Kaschau instead of the Hungarian Kassa, Leutschau instead of Löcse, and so on; yet in the bodies of these very same articles the references are more generally made to the Hungarian form first. Thus, Erlau appears as Eger, under Kaschau; Kaschau as Kassa, under Leutschau; Raab as Györ, under Kisfaludy (Károly); and Zemplin as Zemplén (only), under Kazinczy. In the last-named notice, only the one form Kassa is used, although beside it we have Eperies. In the article Lake, Mr. J. Y. Buchanan furnishes a considerable amount of valuable physiographical information; but the purely geographical data are very meagre, and in several instances decidedly erroneous. For instance, the maximum breadth of Lake Superior is given at 100 miles, instead of about 160; its area is stated to be "more than double" that of any other of the northern lakes, whereas, as a matter of fact, the areas of both Lakes Michigan and Huron, as compared with Superior, stand pretty much in the ratio of 2 to 3. The maximum depth given for Lake Baikal, 4,080 feet, is very much below the 12,000 to 13,000 now very generally accepted by both geographers and geologists. Nor is it exactly correct to state that the lake is situated "on the upper waters of the Lena," meaning thereby the Lower Angara, a tributary of the Yenisei. As examples of lakes of great elevation, we have Koko-Nor, 10,500 feet, and Titicaca, 12,500 ft.; but no men-

tion is made of the chain of lakes occupying the Thibetan plateau, at altitudes ranging from 14,000 to 16,000 feet, and of which the Tengri-Nor (15,190 feet) is the most prominent feature. In the article Lebanon, the author—Prof. Socin, associate editor with Baedeker of 'Palestine and Syria,' of the "Baedeker Series"—volunteers a considerable amount of geological information; but a novice would probably be somewhat puzzled to understand how, if the "rocks belong to the Middle Chalk system, and fall into four subdivisions," the "latest member" can be the "Eocene nummulite"; nor is the looseness of description at all lessened by the remark, further on, that Miocene and Pliocene deposits are also met with in various sections of the region. It may be noted here that "Limestone" is despatched in a very few words under Lime, and that "Limulus" finds no place either as such or as King-Crab; nor is there any reference to Crustacea.

SOME RECENT ELEMENTARY ASTRONOMIES.

Astronomy for Schools and General Readers. By Isaac Sharpless, Professor of Mathematics and Astronomy, Haverford College, and G. M. Philips, Principal State Normal School, West Chester, Pa. Philadelphia: J. B. Lippincott & Co.

The Heavens Above: A Popular Handbook of Astronomy. By J. A. Gillet, Professor of Physics in the Normal College of the City of New York, and W. J. Rolfe, formerly Head Master of the High School, Cambridge, Mass. New York and Chicago: Potter, Ainsworth & Co.

Easy Star Lessons. By Richard A. Proctor. New York: G. P. Putnam's Sons.

School Atlas of Astronomy. Comprising in twenty-one plates a Complete Series of Illustrations of the Heavenly Bodies. By Alex. Keith Johnston, LL.D., etc., etc., Geographer to the Queen. With an Elementary Survey of the Heavens, by Robert Grant, LL.D., F.R.S., Professor of Astronomy and Director of the Observatory in the University of Glasgow. New York: G. P. Putnam's Sons.

Professor Sharpless and Mr. Philips have put together a very presentable astronomy, but certain parts give evidence of crudeness and unfamiliarity with book-making which are not pleasant. The book shows in many ways that the authors have thoroughly familiarized themselves with the best recent works on astronomy. Some of the more difficult points in astronomy are well elucidated—the explanation of the opposite tide is particularly effective. By all odds the best feature is the frequent endeavor to engage the attention of the student in the matter of observations with the naked eye and with small telescopes: this might well have been attempted even more extensively. The simple phenomena of variable stars are well treated, and should enlist many observers. In describing the watch for meteors, attention should have been directed to the worth of observations of the time occupied in the flight of a meteor over a given arc of the heavens. The illustrations are well chosen, and, with the exception of a few worthless ones, excellent. Without systematic search, a few important inaccuracies are apparent. At page 121, the revolution of the earth and *sun* about their common centre of gravity is spoken of—meaning the earth and moon; page 223, the statement of the number of miles at which a foot-rule would subtend an arc of one second seems to need some emendation; page 268, Römer is said to be a German astronomer; page 167, it will give rise to a misapprehension to say that the outer satellite of Jupiter is generally eclipsed at every revolution, when the true state of the case is that it is eclipsed at every revolution during quite exactly three years, and then fails to be eclipsed during the same period following, and so on; page 163, the opposition of Jupiter is said to occur only once in twelve years; and it is only giving further currency to a popular misapprehension to say (page 26) that the nautical almanacs are issued from the national observatories, when only two or three of the minor publications of this sort are so issued, and all the more important ones have no connection whatever with the observatories under the auspices of the several governments. We should scarcely expect to find a book of this character open to grammatical criticism, but we might cite several instances in point. Aside from an occasional mis-reference, typographical errors of any account are not abundant. Rutherfurd is spelled wrong wherever it occurs; Seagrove should be Seagrave, and Commons's Common's; Humboldt is spelled in different ways on the same page. For the length of the tail of the great comet of 1881, 20° is nearer than 40°; and for *Pisces Austrinus* doubtless *Piscis Austrinus* is meant. With the correction of such errors, and the addition of a fuller index for convenience of general reference, the book may, in another edition, be made to rank among the best treatises for the use of elementary classes.

Of a much higher order is 'The Heavens Above,' by Professor Gillet and Professor Rolfe. The sections devoted to the sun, the spectroscope and the spectrum analysis, the moon, and comets are very full and well written. The authors could not have done better than draw so freely from Professor Young's 'Sun,' in making up the chapters relating to that body, but his views of the sun-spot periodicity should have been given also. Very rarely is an elementary scientific work issued with illustrations equal to those in this book, and the authors are quite correct in believing them unsurpassed in number, freshness, and beauty. Nor is that all, for they have been selected from such sources as carry with them a very desirable authority. The book would have been better if set in type a little larger, treating some of the topics less fully, if necessary to keep its size within a given limit. The pages relating to superior and inferior planets are too technical for a popular handbook, and the distinction between these planets, as regards their apparent motion, might better have been left with the simple and general statement that any planet, when in the part of its orbit nearest the earth, retrogrades, and when in the part furthest from the earth, advances. The book is better adapted to the purposes of the general reader than to class instruction, and the authors have thought well enough of their work to provide an index with very copious entries. By an important oversight, the sun's parallax is printed (page 148) "eighty-eight seconds"—or ten times its true magnitude. The book would have been quite as good if the twenty pages on the constellations had been omitted. The figures are unobjectionable in themselves, but they do not supply the place of more elaborate star-maps, and very few people will take the trouble to trace out star-configurations from them.

If one have a mind to learn the constellations, he could not do better than begin with such a book as Mr. Proctor's 'Easy Star Lessons.' He very rightly observes that no one can be said thoroughly to know the constellations until he is able to recognize them readily in all the varied aspects they present, and positions in which they are seen, at the different seasons of the year; and bearing in mind the difficulties and inconveniences of the ordinary method of memorizing the constellations, Mr. Proctor has drawn a series of forty-eight maps, arranged in sets of four for each month, showing what stars can be seen toward the north, toward the south, toward the east, and toward the west at a certain convenient hour every night in the year—the hour varying, of course, night by night. This affords an excellent way to emphasize the remembrance of star-configurations. The star-maps are carefully executed and in good taste, and printed in a tint which shows dark blue on direct light. It is a good thing to have drawn on all these maps the imaginary lines of the celestial sphere: the improbable directions in which so important a circle as the ecliptic lies, at some seasons of the year, become thereby thoroughly familiar. Had the literary part of the book been as well and appropriately executed as is the mechanical, the 'Easy Star Lessons' would have been better worthy of praise. Poetical quotations abound with apparently no other intent than that of impressing youthful readers with the notion that Mr. Proctor has some time made the acquaintance of the best authors. The out-of-door tracing of the constellations, and the vexatious attempts at comparing them with maps of any kind, will be found to inspire anything but sympathy with poetic imagery. Nor is a book of this elementary sort a suitable place to indulge adverse criticism: it is scarcely wise here, and surely in poor taste, to poke fun at Admiral Smyth; and we should have been better pleased with a more meagre showing of the special spite Mr. Proctor seems to entertain against Hevelius. There is no astronomer but recognizes the systematic unsystem of constellation and star names as faulty; but it is not much of a venture to say that anything different will never meet with universal adoption. However, after all his ridicule of a thing generally regarded as irremediable, one must confess to somewhat of curiousness to see what the new Proctor-constructed heavens would be.

Dr. Keith Johnston's 'School Atlas' is an old astronomy in new boards. The plates of the atlas have been carefully prepared with scientific accuracy, and nothing has been spared to make the prints perfect and precise. The representation of the zodiacal light is the only unfaithful print in the book, being about as much brighter than the thing itself as the electric arc outshines the wax taper. This is not at all different, however, from the way it is usually represented. The star-maps and star-clusters would be much more effective if put on a background of dark, instead of light, blue. The prefixed treatise on astronomy, by Dr. Grant—rather elaborate for a mere explanation of the accompanying plates—was doubtless very correct at the time of its original writing; but that time is now so long ago that it would have paid the publishers well to turn over the work to some competent person for revision previous to the recent American issue. Instead of that, all the constants of the older astronomy remain unchanged; less than half the present number of small planets are given, with nothing, of course, said about Peters as one of the chief discoverers of these bodies; Mars is dismissed with not a word about satellites; and the late researches on the solar parallax, the results from recent total solar eclipses, the discovery of oxygen in the sun, the new stars of 1866 and 1876, etc., etc. —all count for nought so far as this astronomy is concerned.

George Ripley. By Octavius Brooks Frothingham. [American Men of Letters Series.] Boston: Houghton, Mifflin & Co. 12mo, pp. 321.

"It is not claimed," says Mr. Frothingham of the subject of his biography, "that he was a profound scholar, an original thinker even in his favorite department of philosophy, nor yet an accomplished man in the usual sense of the word. But it is claimed that he possessed the literary spirit in a remarkable degree; that his mind was singularly calm, even, capacious, and exact;

that he was a man of rare intelligence, and master of a pure style of English."

Mr. Ripley sprang from the family of Benjamin Franklin. His parents were poor, but they made a great effort and sent the boy to boarding-school, and afterward to college. His letters home do not give a pleasant idea of him at that time, as they are cold and egotistic, and without the healthy boyish fun natural to his age. He plans for no one but himself. He wants to go to Yale rather than Harvard, although he knows of the better literary facilities of the latter institution, because, he says, "the temptations incident to a college, we have reason to think, are less at Yale than at Cambridge." His father, however, thought differently, and sent him to Harvard, but he took a very solemn, not to say priggish, view of life there. When a frolic got his class into a scrape, he was one of the few who kept out of it. He studied hard, but he wrote to his sister that "a confinement to abstruse studies chills the ardor of feeling which is so necessary to the cultivation of the more kindly and tender affections." He graduated first in his class, and a little later we find him recurring to the grace with which he had "figured among the literati of Cambridge." He became engaged, and wrote to his sister that "a just regard to prudence does not forbid us to cherish an attachment which has long been the secret of our hearts," and requested her "to expound all the circumstances" to his parents. His sister's letter he speaks of as "an auspicious event," and alludes to the blessings of a kind Providence given to his own active, personal, patient efforts. It would be unjust, however, to judge the man by these amusing youthful lucubrations, the formalism of which was largely due to his time: for he soon outgrew this early narrowness and egotism.

Unitarianism was the topic of the day, and at Harvard Ripley became fully imbued with its spirit—both its virtues and its failings. He was soon settled over a new society in Boston, and his slender figure was regularly seen

"wearing in summer the flowing silk robe, in winter the dark-blue cloak, of the profession, walking with measured step from his residence in Rowe Place toward the meeting-house in Purchase Street. The face was shaven clean, the brown hair curled in close, crisp ringlets; the face was pale as if with thought. Gold-rimmed spectacles concealed the black eyes. The head was alternately bent and raised."

He could not have much resembled the New York editor of later years. He soon became intimate with Theodore Parker, but

"they were very different men. One was engrossed in books; the other was full of action. One was contemplative, . . . quiet, thoughtful; the other was impetuous. One was silent; the other was outspoken. One was cautious to the verge of timidity; the other was bold to the verge of rashness. One was a thinker, taking no part in agitation, political or social; the other was a reformer, eager to apply his ideas to laws and institutions. But their faith in one another was constant."

Mr. Ripley had little of Parker's personal influence. His sermons were neither brilliant nor enthusiastic. His creed was founded on rational investigation, and not on a revival of religious zeal; and he naturally found it hard to interest people in his quiet discussion of abstract doctrines which were not essential to salvation. The extreme sensitiveness of the time forbade him to speak in the pulpit of the questions of communism and slavery, on which he felt most strongly. He was chilled and hampered by restraints that he could not break through, and his ministry of nearly fourteen years was not a successful one. His letter of resignation is a remarkably clear statement of the difficulties which Unitarianism had to meet. It is written in a simple, impartial style, rising at the close to eloquence, as he tells his people that he cannot behold the degradation of one part of the community and the indifference of the other "without the sad conviction that the spirit of Christ has well-nigh disappeared from our churches, and that the fearful doom awaits us, 'Inasmuch as ye have not done it unto one of the least of these, ye have not done it unto me.'" Under the influence of these feelings he naturally threw himself soon after into the socialism of the day, and became the head of the Brook Farm Community.

Mr. Frothingham tells us a good deal about this experiment, dwelling upon its practical side and its freedom from communistic extremes. The whole thing has a dilettante air to us, like Dresden-china shepherdesses, but it was sober earnest to the Ripleys. Mrs. Ripley, a woman of rare intelligence, exhausted her strength in the laundry, while her husband milked the cows, an occupation which he thought "eminently favorable to contemplation, particularly when the cow's tail was looped up behind." The inevitable failure turned Mr. Ripley adrift in middle life, disillusioned and in debt—even his library swept away. In the revulsion of feeling, his wife, who had not long to live, went over to Catholicism, but such a change was impossible for the judicial mind of Mr. Ripley. His liberalism was a fundamental element in his character, and, although he was satisfied that one embodiment of it was impossible, he retained its principles all through his life.

He soon obtained work on the *Tribune*, but it was for a time a severe struggle for bare existence. Five dollars every other week was the scant reward of his first exertions, which soon, however, became ten dollars a week, and at last a fair income. He was the first of the notable literary critics of the daily press. He was one of the editors of the 'American Cyclopædia,' and he was engaged as editor or critic in many other works. His was no creative genius, no aspiring imagination, but he understood the limits of his own powers, and made the most of them. He had the austerity and love of humanity of New England's earlier days, stripped of her theological narrowness. The failure of the religious and socialistic phases of his early life was due more to the age than to himself; the success of the latter part of it was wholly his own; and it is pleasant to think that his declining years were brightened by the happy disposition and social powers of his second wife.

Political History of Recent Times, 1816–1875, with special reference to Germany. By Wilhelm Müller, Professor in Tübingen. Revised and enlarged by the author. Translated, with an Appendix covering the period from 1876 to 1881, by the Rev. John P. Peters, Ph.D. Harper & Bros. 1882.

THIS comprehensive volume is a translation of the third edition of Prof. Müller's 'Politische Geschichte der neuesten Zeit,' with not inconsiderable changes, and an addition drawn almost exclusively from the same author's annual publication on the 'Politische Geschichte der Gegenwart,' of which fifteen volumes have appeared. The space allotted to Germany in the original is somewhat abridged, that allotted to England and one or two other states slightly enlarged, and the history of the United States entirely omitted. In the addition the American writer has "followed his own discretion in his selection and mode of presentation"—very wisely, we believe; for Prof. Müller, whose historical impartiality deserves the greater commendation the more remote the period of which he writes, is not an altogether trustworthy guide through the political history of the most recent time, which in his year-books he treats more like an ardent German nationalist and wilful partisan of Bismarck than like an independent historian. Wilhelm Müller himself would never have penned remarks like the following on the Prussian royal rescript of January, 1882:

"This extraordinary rescript, affecting primarily Prussia and secondarily the Empire, faithfully reflected the reactionary policy of the Chancellor. Officials and private individuals were decorated for activity in assisting Government candidates or inventing monarchical theories. . . . The native press scarcely ventured to comment upon the rescript, and various foreign papers which criticised it too freely were confiscated. The press censorship was so exercised as to bring attacks on the Government policy under the head of libels of the sovereign or his ministers."

The Professor is fair enough when speaking of Frederic William IV., of whom he neatly narrates how, in March, 1848, curbed by the revolution, he "descended from his heavenly heights and became like one of us"; or even of the merciless courts-martial held under the auspices of his brother William on the captured leaders of the Baden insurrection of 1849; but in those years the King of Prussia still spurned the crown of united Germany, William had not yet fought at Sadowa or Sedan, and Bismarck was far from being the arbiter of the destinies of Europe before whom German liberalism must bow in reverence. Prof. Müller's liberalism indulges freely in pictures of earlier reactions, especially non-German, as in the following sketch of things in the Kingdom of Sardinia, on the return of the legitimate King after the downfall of Napoleon I.:

"By a royal edict all French laws and institutions, whatever they might be, were at once abolished, and in their stead was sought out, like a wonder-working relic, the Constitution of 1770, with its intolerance, its caste distinctions, its wheel and quartering; and by its tangle of antiquated laws an incomparable chaos was introduced. Suits which had been decided before the French courts of final appeal were reopened, and business thus made a prey of a depressing uncertainty. Cloisters which had been turned into factories were given back to the Capuchins; famine was remedied by processions and crowns of thorns. The Jesuits again gained possession of the schools, and the most talented professors of the University of Turin had to give up their positions. In the grand opera-house, the Queen, who was her husband's master, permitted only the nobility to attend the representations, and to them places were assigned according to the length of their pedigrees. In Turin . . . the soldiers of 1800 were called back, as though the commanders could regulate the very calendar. They even wanted to tear down the splendid bridge which Napoleon had built over the Po at Turin, and no passes were given for the road over Mont Cenis, in order, forsooth, that this Napoleonic work might fall into decay. The department officials, in their Francophobia, threw the furniture of their predecessors out of the windows and the royal gardener was too good a Legitimist not to root out and destroy all French plants in the botanical gardens."

The extract may also serve to show our readers the plain and easy way in which the author presents historical facts, grouping them so as to make them tell their own lesson, and avoiding dogmatism and the inculcation *ex cathedra* of political maxims and doctrines. The various sections of the work are not entirely even and symmetrical, and some portions are perhaps slightly overladen with details, while others could still be improved by amplification; but every part is pleasantly readable, lucid, and wholly free from rhetorical bombast and unmeaning phrases, such as generally disfigure histories written, as this is, for general use. If we add that the knowledge of the author is ample for his task, his method and arrangement correct, and his judgments generally sound and fair, it will hardly be necessary to add that we consider the publication before us a great service

rendered to the American public. As shown in a prefatory note, to President White, of Cornell University, belongs the merit of originating the publication, and he also seems to have aided the translator in his labor. In selecting Müller's book as one "which should give to thoughtful students a view, large but concise, of the political history of Continental Europe in the nineteenth century," he certainly did the right thing; and the work of translating, abridging, and completing has also been executed with ability and literary fidelity, although it is not free from blemishes.

The translator's transliteration of foreign names, such as cannot be rendered in their vernacular form, is, it is true, better than in many a similar translation or compilation from the German or French, but it is still very defective. We find the German forms *Medschid*, *Tundscha*, and *Dobrudscha* changed into "Medshid," "Tundsha," and "Dobrudsha," but not into the correct English Medjid, Tunja, and Dobrudja. Kulja appears both in its correct form (p. 485) and as Kuldsha (p. 575); Russia's Chancellor as Gortchakoff, correctly, in one section, and as Gortschakoff in another; Khosrev as *Ch*osrew, and Vorontzoff as *W*oronzow. Mixed German and English forms appear in "Karzoff," "Nachimoff," and "*Ch*arkoff." The *ch* which in the last two names represents the German guttural, approximately expressed by *kh* in English, is used in its English value in "*Ch*ernayeff" (for Tchernayeff) and "Cherkassky," while elsewhere we find "*Tch*erkesses," etc. We also find "*S*assulitch" (for Zassulitch), "Kasanlik," "*S*abalkanski," "Menzikoff" (for Mens*h*ikoff), and the strange form "Chettinye," a transliteration of the Italian *Cetigne*, as the name of the capital of Montenegro. The names of the Poles Wysocki and Dwernicki are disfigured by the dropping of the *c*, which in Polish has the value of *tz*. These errors may be misprints, of which there are many, especially in the chapter on the war of 1866, where we find "Trantenau" (for Trautenau), "Brannau," "Reinerg" (Reinerz), "Nicholsburg" (Nikolsburg), Iglav (Iglau), etc., some of the blunders being repeated many times. A worse blunder is "Brunswick" (p. 499) for Braunsberg, or "Temesman" for Temesvár.

On page 158 "Capudan Pasha" appears as a proper name, which it is not, and on page 142 the value of "20,000,000 Polish gulden" is magnified almost fourfold by making its equivalent to be "between nine and ten million dollars." We must also point out the very capricious and indiscriminate use of German, French, and other names in Swiss geography—witness page 169, where we see side by side "Aargau" and "Thurgovia," "St. Gallen" and "Soleure," "Switz" and "Ausser-Schwyz," "Basle city" and "Basle-landschaft," while page 492 has "Basel," and, instead of "Soleure," "Solothurn." Of Germanisms, we notice the constant use of "robbers" and "robbery," in speaking of brigands and brigandage in Italy, and of "nuntius" for *nuncio*, and such expressions or phrases as "over-president of Prussia" (p. 166), "then it rained political notes" (p. 170), "102 voices in favor" (p. 465), or "the Left stormed the Ministry with appeals" (p. 476). To hasty abridgment we must ascribe a tissue of chronological blunders in the account of "the meeting of Emperor William with Francis Joseph, in Ischl and Salzburg, in 1871," and "the meeting of the three Emperors . . . in Berlin, in September" of the following (not "of that") year, which, again, "was followed by return visits from the German Emperor in St. Petersburg and Vienna," and "complemented by a visit from Victor Emmanuel," but not "toward the close of the same month," and not even in either 1871 or 1872. Prof. Müller's chronology is, with very rare exceptions, correct, though the dates given are numerous. An index of the principal dates has been supplied by the translator, as well as a general index of matters and a complete index of persons—additions which further enhance the great value of the work.

English Studies; or, Essays in English History and Literature. By the late J. S. Brewer, M.A., Preacher at the Rolls, Professor of English Literature and Modern History in King's College, London. London: John Murray.

To Mr. Brewer must be assigned a rank of conspicuous eminence among recent investigators who, as editors and commentators, have assisted in rendering generally accessible materials for English history which they have been the first to put in print. Even his labors in connection with the 'Letters and Papers of the Reign of Henry VIII.' would have distinguished him honorably in his favorite line of research, and yet the bulky volumes so entitled bear witness to only a fraction of his prodigious industry. In the list of his numerous publications occur the works of Gerald of Barri, the inedited remains of Roger Bacon, the 'Monumenta Franciscana'; and the 'Registrum Malmburiense,' to all of which, what with his varied learning and his critical scholarship, he was admirably qualified to do full justice. As a writer of Latin, he has had few equals in modern times, while his 'Nicomachean Ethics, with English Notes,' which appeared as long ago as 1836, attests his proficiency as a Grecian.

By collecting in a permanent form some of his minor and occasional prolusions, his friend the Rev. Prof. Wace has manifested an esteem for comparative trifles in which, probably, not very many will participate. Mr. Brewer is certainly not seen at his best in his contributions to the *Quarterly* and *National* Reviews and in his lectures, pleasant enough as they mostly are to wile away a few of one's spare hours. At the same time, there is too frequent call on his readers—unless they be Englishmen, and rather obsolescent Englishmen—to summon up all their forbearance, if they would not be repulsed by his effusive homage to crowned heads, good, bad, and indifferent, and by his acid scorn of republicans and Nonconformists. Of course, he regards Mr. J. R. Green, the historian, with horror well-nigh unmitigated. His two articles on Shakspere will, we imagine, be preferred to everything that precedes and follows them, though the lecture on "Ancient London" would be scanted of its due if not particularized as meritorious.

Yet, even when he discourses on Shakspere, his straitened sympathies and his enthusiasm land him, here and there, in conclusions which stand but ill with equity or reasonableness. Referring to the poet's reserve touching a future state of retribution, he more than hints a conviction that he was, therein, "like Bacon, unconsciously exhibiting the Calvinistic tendency, the downward and disorganizing progress, of his age, by substituting man for God, as the great centre of this universe, as the sole and engrossing subject of human interest." Elsewhere, in the exaggerant tone of that debasing hero-worship which so specially discredits our age, he asserts of Shakspere that "none but he [*sic*] could have conceived how a spirit would or should talk." Of the degree in which he could express himself recklessly there is another illustration where he says: "To Bacon it was enough that any theory, any opinion, any fact should be generally accepted, to be unceremoniously rejected." But did Bacon deny that two and two make four? Did he repudiate Christianity? And did not he cling to geocentricism, which was still prevailingly current in his day, ridiculing Copernicus and his adherents as "those carmen which drive the earth about"? Nor can we find anything better than a silly sacrifice of truth to antithesis in the remark that "the world is pretty fairly divided between the men who have brains and no facts, and the men who have facts and no brains." Somewhat characteristically, for a native of Great Britain, he predicates of his countrymen their "national love for fair play," and also their "intense curiosity and thirst for seeing things and men from all points of view and in all aspects"; and he speaks of them as "preferring to look at things as they are, even in their nakedness and weakness, to any theories or notions or systems about them."

As a college professor of English literature, Mr. Brewer ought to have employed his mother-tongue in a way not open to obvious exception; and his use of it has repeatedly been eulogized by critics. At most, however, it can be conceded, in his favor, only that he was not more slipshod and wordy than, for instance, Mr. Freeman or Mr. Froude. His "builded," "doubtlessly," "hodiernal," "hunger-starved," and "unbark," to which may be added "the poet's *immature* death," and "to *that* degree," for "to *such a* degree," are surely out of place in good modern prose. "Allude," for "refer," is, further, a vulgarism into which he trespassed; and he seems to have thought that "exponent" signifies "explanation, solution, or key." Out of thirty or forty sentences in his Essays which we have marked as objectionable on some ground or other, it will suffice to transcribe half-a-dozen: "He was as remorselessly and effectually crushed, and with as little consideration and afterthought, *as the king of the forest might tread* upon an insect" (p. 137). "The most accessible *person* in her kingdom, *her ears*, like her palace, were open to all comers" (p. 145). "Thus, within a very brief space, English literature, as represented by the drama, experienced a sudden and entire transformation, *such as no other period affords the like*" (p. 224). "*Like* the Greeks, also, the sun was the chief object of their national worship" (p. 389). "We may see how their pride, or presumption, or tyranny, *have* been followed by punishment" (p. 398). "Would he not be *liable* to neglect the most important mechanism for its apparent insignificance?" (p. 403). Can it be that we have an exemplary stylist in a writer whose pages abound with such English as has just been quoted?

Christenthum, Volksglaube, und Volksbrauch. Geschichtliche Entwickelung ihres Vorstellungsinhaltes. Von Julius Lippert. Berlin: Hofmann. 1882.

In this volume Professor Lippert presents the third in a series of studies upon the origin of religious beliefs and observances. In the first of these studies his aim was to illustrate the development of such ideas from an original soul-worship in the case of the Jews, and in the second to apply the same hypothesis to the civilized races of Europe—the Lithuanians, Slavs, Germans, Greeks, and Romans. And now his purpose is to show that the religious conceptions of Christianity as expressed in its traditional ceremonies, and also in those observances whose origin is later, are derived from conceptions previously existing in the religions it displaced. His point of view is that of opposition to the two theories of an origin in philosophical speculation and in mythological conceptions. His thesis, which all three volumes are designed to prove, is that all religions, no matter how various

in their present form, are more or less complete developments from one and the same original idea of soul-worship.

"By means of the same logical process, the Zulu has come to the same fundamental ideas as the Greek, only, in conformity with the progress of his social and intellectual life, he came earlier to a standstill in the collection and combination of the elements of these ideas."

Although Lippert stoutly maintains that his method has been a purely inductive one, still one is forced to the belief that the inductive process was suggested and guided by a preconceived theory. The conclusions here reached are such, we venture to say, as no one without this particular bee in his bonnet would ever have arrived at. A mass of interesting material is accumulated—that no one can deny—but, with all this, the thesis that Christianity had nothing essentially its own to offer by which the spirit of all that it borrowed from earlier beliefs was modified and made fruitful, is not proved.

The Modern Appliances of Electricity. By E. Hospitalier. Translated and enlarged by Julius Maier, Ph.D., Science Master Cheltenham College. D. Appleton & Co.

THIS treatise has the faults of most of the recent French works on the application of electricity. The matter contained in it is poorly digested, and valuable space is given to elaborate illustrations where smaller cuts, and even diagrams, would have answered. The Brush machine, for instance, has two full-page illustrations of its external appearance. Moreover, the machine is fully described twice in the book. To the uninitiated these illustrations give no idea of the actual construction of the machine. The exuberance of illustration is most strikingly shown in the pictures of the photophone. Another and more serious fault consists in the descriptions of apparatus which, on careful examination, would be shown to be unworthy of extended notice, or even notice at all. Some of this apparatus never performed satisfactorily the work for which it was intended. Long extracts, also, are made from *Engineering* and from *Nature*, where short abstracts would have sufficed. Notwithstanding these defects, the reader will find here much that is not contained in other treatises.

BOOKS OF THE WEEK.

ANNOUNCEMENTS FOR THE FALL OF 1882.

A. WILLIAMS & CO.,

283 Washington St., Boston, Mass.

TOWHEAD: The Story of a Girl. By Sally Pratt McLean, author of 'Cape Cod Folks.' 1 vol. 12mo, uniform with 'Cape Cod Folks,' $1 50.

This is a story altogether American in plot and character. It combines the same spirited and humorous style which characterized 'Cape Cod Folks' with that pathetic *touch* so peculiarly her own, which has made Miss McLean such a phenomenon in the world of letters. (Ready Oct. 20.)

A STUDY OF MARIA EDGEWORTH. By Mrs. Joseph P. Oliver. Illustrated with portraits and several wood-engravings. 1 vol., 500 pages, price $2 25.

As a charming piece of literary work, presenting for the very first time the domestic and inner life of so famous a personage as Maria Edgeworth, dealing not only in reminiscence, but taking in contemporary criticism, it will occupy a first rank among the biographies of celebrated women of letters. Full of important and interesting material, it includes letters touching upon every possible subject of literary and social interest written at a period which certainly was the most active in the whole history of English literature. (Ready Oct. 20.)

ANCIENT LANDMARKS OF PLYmouth. By Hon. William T. Davis. 8vo, cloth, 600 pages, price $4.

A history of the early settlements of the Plymouth colonists, giving the methods by which the land was obtained, the titles of estates, the history of homes, churches, schools, etc., the genealogy of families, records of births, marriages, deaths, etc. Compiled largely from original sources. Altogether the most important volume of local history published for many years. (Ready Dec. 14.)

EMERSON: An Estimate of his Character and Genius. By A. Bronson Alcott. 1 vol. small 4to, beautifully printed and bound, price $2.

This work, by Emerson's celebrated contemporary, neighbor, and friend, of which only a very limited edition will be printed, will contain a fine likeness of Emerson—the celebrated Hawes portrait—together with some curious photographic illustrations in the possession of Mr. Alcott. (Ready Oct. 20.)

TROUBLESOME CHILDREN: Their Ups and Downs. By Rev. William Wilberforce Newton. Oblong 4to, with brilliantly-illuminated cover and many colored illustrations by Francis G. Attwood, price $2 50.

B. Westermann & Co.,

838 Broadway, New York,

The Nation.

NEW YORK, THURSDAY, OCTOBER 26, 1882.

The Week.

THE Attorney-General, as the result of his investigation of the Star-route bribery charges, has, it is said, made up his mind to arrest Dickson, the foreman, Brown, one of the jury, Fall, at one time an employee of the Department, and Shaw, who is charged with having approached one of the jurors. There is no question that persons formerly connected with the Department are gravely implicated in the charges; but then the very plausible theory on the other side is that men like Fall got positions in the Department for the express purpose of making it appear as if those in charge of the investigation were engaged in an attempt to corrupt the jury. The ease with which irresponsible men get positions at Washington makes work of this kind much easier than it would be if changes were not frequent and arbitrary. There is, of course, something monstrous in the idea that the Star-route conspirators could ever have expected to make people believe that Messrs. MacVeagh, James, and Brewster were engaged in a corrupt conspiracy against them; but it must be remembered that this was not necessary. All that they actually needed was to throw a cloud of doubt about the verdict; this they certainly have succeeded in doing, by what means remains to be proved.

The activity of the Prohibitionists in Pennsylvania and Ohio seems to be increasing, and there is evidently to be in both these States this winter a powerful agitation in favor of a constitutional amendment prohibiting the manufacture, importation, or sale of alcoholic drinks. The excitement of the women in Ohio on this subject is now said to be reviving, and they promise a vigorous campaign. Curiously enough, however, one finds nowhere in their speeches or documents any indication of concern about the means of executing the prohibitory law in case they get it passed, and this in the very presence of the disastrous failure in Ohio, during the last winter, to execute a very much milder measure than the one they propose. This apparent indifference to the question of means—which is, in the temperance field, as abundant experience has shown, the main question—gives the agitation an almost childish air. They know that an act of the Legislature or constitutional amendment without a far more powerful and vigilant police than any one has as yet proposed or talked of, will be of really no use to them whatever. They know that if voted, the majority in its favor will be largely composed of persons who will rely on its not being executed, and will chuckle over its failure, and yet they do not say a word about the machinery by which these hypocrites are to be disappointed.

Whittaker, the young impostor who, two years ago, got West Point put "on its trial," and extracted so many terrible articles from some of our contemporaries about "caste," and cruelty, and prejudice, after having been found guilty by two military courts, and expelled from the Academy, took, like so many of the recent escaped criminals and notorious reprobates, to lecturing. He seems to have failed on the platform, and has now actually gone back to South Carolina and turned Bourbon, and, what is funnier than all, is received with respect by the white man's press in that State. The Charleston *News and Courier* "commends to the white and colored people of the State" a very impudent letter from him, which it publishes, advising the colored people to abandon the "Radicals," whom he abuses, and to whom he says he "owes nothing," and join their true friends, the Democrats. The *News and Courier* says it "shall watch Cadet Whittaker's career with interest, and with hopeful curiosity." This, we must say, is a queer occupation for a white man, not on the police force, to propose for himself. All the instruction to be got from Whittaker's career can be found in the report of his trial at West Point.

The verdict rendered on Thursday in the suit of Miss Prescott against the American News Company will not be likely to do very much for the vindication of the sanctity of private character unless it is followed by a prosecution of Harvier, who was the author of the libel. The News Company will have to pay a heavy sum for having circulated the newspaper containing the libel, but, as it circulates thousands of newspapers, and cannot possibly know what is contained in them, the rule of law which makes it responsible for their contents makes it practically responsible for the general tone of the press—a matter over which it has no control. Still, there is no doubt about the rule of law, and as news companies must go on selling newspapers of all sorts, published, too, in many cases, by perfectly irresponsible men, the only way in which they can protect themselves is by prosecuting to the extent of the law any one who gets them into trouble of this kind. The elevation of the drama through dramatic journalism as at present practised is likely to be a slow process at the best, but the more Harviers there are in jail the more rapidly will it proceed. The News Company made a glaring mistake in attempting to justify—that is, in reaffirming a libel which they did not originally put forth, and which they only circulated as common carriers. For this mistake they are now called upon to pay $12,500—a greater sum, we think, than was ever actually collected in any libel suit in this country. Juries have scant sympathy with plaintiffs who bring suits for libel against parties who are only technically guilty, as the News Company was in this case. If the defendant had admitted the circulation of the paper containing the libel, and proved, as it could easily have done, that it was free from "express malice," and rested there, it is not likely that the verdict would have been for more than six cents damages. Justification in such cases is always dangerous, and especially so where a woman's reputation is involved.

Frank James, in surrendering to the Governor of Missouri, announced that it was his intention, if pardoned, to reform, and do what he could to help in the enforcement of the laws he had so long been engaged in violating. The Governor said, in reply, that he must be tried first, as he could not be pardoned in advance of conviction. As Frank has committed a number of murders of the most unprovoked kind, it is fair to assume that a trial would result in a conviction, and that the question whether he shall be hung or pardoned will shortly arise. Now, all penologists are agreed that in the case of habitual criminals everything depends on the occupation which the criminal selects after being allowed to return to society, and that regular employment at some steady industry is essential as a guarantee of complete reformation. The story, therefore, that Frank proposes to go upon the stage cannot but cause alarm to the friends and well-wishers of the young man, as well as to society at large. The Ford boys, who murdered Frank's brother Jesse, immediately went upon the stage, so far as to exhibit themselves at a museum in this city, and it is some such dramatic career as this, no doubt, which Frank now contemplates. It would, we feel confident, be full of peril and temptation to him, and there is no saying how soon the excitement of museum life would arouse in him those predatory and homicidal instincts which he has had such difficulty in overcoming. He may imagine that his case is like that of a professional beauty doing *Rosalind*, or an agnostic coming out as *Hamlet*, but the difference is very great.

Western papers complain of the acts of vandalism constantly committed by visitors of the Yellowstone Park. It is said that several of the magnificent geysers have been greatly injured if not totally destroyed by people who thrust the trunks of trees into the apertures for the purpose of seeing the water force them out again, and that in this way—the logs sticking fast in the subterranean channels—the spouting of some geysers has been entirely stopped. It is also said that sportsmen, especially Englishmen, visiting the Park, amuse themselves by indiscriminately and needlessly slaughtering the game there, leaving the carcasses on the ground. These complaints are undoubtedly in a great measure well founded. In addition to the destruction of the geysers and the slaughtering of the game, the park is suffering much from forest fires set by mischievous or careless tourists. Of late years the Interior Department, under whose care the Yellowstone Park is placed by law, has made various efforts to prevent, or at least limit, this vandalism. Congress was asked to provide funds for the organization of a park police, and for such other measures as would be required to protect the game in the park, which outside of it is rapidly disappearing. But, in Congress, very little interest was taken in the subject. All things considered, it would probably be best to put the park under the supervision of the War Department, with authority to establish a small military post within the limits of it. A small

force of mounted men could be used as park police, at least provisionally, and an intelligent officer in command might efficiently serve as Superintendent of Public Works in laying out bridle paths and building roads and bridges. Something of this kind should be done soon, for the work of destruction in the most interesting part of our mountain regions is evidently going on at a rapid rate. The Yellowstone Park was set apart as a great pleasure-ground for the enjoyment and instruction of the American people. No country in the world can boast of anything like it. It should certainly not be permitted to go to waste and ruin.

The *Sun* reports a scene said to have recently been witnessed in the General Land Office at Washington. The Commissioner, Mr. McFarland, touches his bell and sends for a certain clerk who is "credited to Virginia." The clerk appears and the meaning of the summons is at once revealed to him. "I am sorry to have to say to you that your place is wanted," says the Commissioner. And to the unfortunate clerk's question why his place is wanted, the Commissioner replies: "I do not know why. You are faithful, competent, and satisfactory, and I am willing to give you an endorsement to that effect. But Senator Mahone wants the place for a friend. You will have to surrender it, for I am powerless in this matter." This is the tale told by our contemporary. It exhibits the spoils system with its finest flower —the Senatorial boss—in the highest state of development. Senator Mahone, the chief of the progressive Repudiationists in Virginia, "wants a place for a friend." Mahone is engaged in a political fight in his State, and he wants to encourage his followers by the distribution of rewards. Whether that "friend" is mentally and morally fit to perform the duties of the place "wanted" for him is a matter of no consequence: he must be appointed. And, in order to make room for him, another man must be removed. That other man is a "faithful, competent, and satisfactory" public servant. But that is a matter of no consequence: he must go. And the chief of the bureau in which this outrage is perpetrated stands by and says regretfully: "I do not know why this must be. I am powerless in this matter." Is there a sensible man in the country who will not admit that such scandals must be put an end to? Ex-Senator Simon Cameron thinks that civil-service reform is all nonsense, and that the spoils system as it now exists is all right, for it "gives poor young men a chance." Here is an illustration: it gives Boss Mahone's political favorite a chance. But where is the chance of the "faithful, competent, and satisfactory" clerk who must yield his place to the favorite of the boss? And where is the chance of the public service?

There is one thing about the Butler campaign in Massachusetts this year as to which the meetings and speeches leave no room for doubt, and that is that everybody enjoys it thoroughly, and no one more than the General himself. He evidently does not expect to be elected; but he has been off on a yacht voyage and come back full of good health and good spirits, feeling, as he said himself in his Faneuil Hall speech, "exceedingly happy." High spirits are always contagious, and his followers have caught them from him, and fairly bubble over with delight whenever he addresses them. It is not often that a candidate can have such a thoroughly good time as he is now having, for generally he is oppressed with a sense of the responsibility of his position; but nobody, from the General down, feels any more responsibility for this campaign than the celebrated General Boum did in Gerolstein for those which he conducted. The General is, in fact, probably the only man in the United States who can say just what he likes on any subject without any fear of the consequences, and is actually doing it. He poked a great deal of fun at the press the other night at Faneuil Hall, suggesting that if the editors of all newspapers would consult each other before writing their editorials there would be less "diversity of opinion" among them; then he touched in a jocular way on polygamy, and hinted, to the great delight of his audience, that there was a good deal of that sort of thing in Massachusetts; then, returning to the newspapers, he gave some illustrations of their diversities of opinion, showing how one editor declared that his letter of acceptance was very shrewd, another that it was very weak, another that it was very audacious, and another that it was not audacious at all; all of which, he said, looked as if he must resemble John the Baptist, who was declared by the Pharisees of his time first to be possessed by a devil because he neither ate nor drank, and then to be a wine-bibber and glutton because he did both. Ben, however, takes it all much more comfortably than John ever did, for he says in his cheerful way, "Now, my friends, don't you think I had a right to enjoy this?" Branching off from this on civil-service reform, the merry old man suggested that it "never would have been necessary" if parties had "changed once in four years"—a sentiment which called out loud cries of "Good, good," from the audience—because, he added, "changing the officers as often as you change the President" would have been "sufficient for reform."

It is hardly necessary to mention that the General is in favor of "protection to American labor," which he proposes to secure by means of "an economical revenue tariff." He gave a delightful account of his own experience as a manufacturer of bunting. The Secretary of the Navy, at the close of the war, once asked him whether bunting could be made in the United States. He said that he would "go home and see"; so off he went with two young men to Lowell, and in a short time brought back the best bunting in the world. Immediately a heavy duty was put on this, at whose request he does not say, but probably that of the two young men; and this stimulated the bunting industry so much that the business was overdone, and finally, if he had not given it up and "gone into dress goods for ladies," he would have failed. Now, he says, what is bunting? Is it a luxury or a necessity? Why, it is a necessity to the war-worn soldier who goes to the front to meet the enemy, but "to the stay-at-home politician who never did go to war, and never would, it is a positive luxury, and ought to be taxed." And then tremendous bursts of applause made old Faneuil Hall ring again, and the General retired, whether on one leg or two is not mentioned in the report.

It has been an uneventful week in the financial world. The New York banks further increased their reserve, and money was in abundant supply. Foreign exchange first advanced and then declined to the opening rates. The Treasury disbursements exceeded the receipts; and early in the week another call was issued by the Treasury for the redemption of $15,000,000 of extended 3½ per cent. bonds. At the Stock Exchange the tone of the market was uncertain and variable, personal influences having overruled considerations which should directly affect prices, such as increased railroad tonnage and higher rates thereon. General trade continues to be fairly good, but is not up to the expectations formed early in the season.

Some of the self-constituted leaders of the workingmen have assured them that high tariffs and high wages go hand in hand; that as long as the present scale of duties is maintained work will be steady and pay large; and that if there should be a reduction of rates they would be deprived of employment, or the compensation for it would be cut down to the starvation point. Here is a case which may test this argument. The Dolphin Mill, at Paterson, having reduced wages five per cent., and the hours of work from ten to nine, the hands, 900 in number, struck on Friday. The company immediately improved the opportunity to resolve to stop the mill for three months on the ground that the market is overstocked with goods of their manufacture—hemp carpets, manila matting, and twine. The puzzled workingman may ask how high duties guarantee him steady employment and liberal wages in this particular case. This event, happily, has occurred in time for the Tariff Commissioners to consider and explain it in their report.

The *Phrenological Journal* calls attention to the fact that women have not yet secured the right to whistle. It thinks that they ought to have this right on several grounds. The practice of whistling tends to promote cheerfulness in the whistler, and also to strengthen the lungs. Women need cheerfulness and good lungs just as much as men do, and, therefore, the question is, as the *Journal* says, why should not women whistle "as they rock the cradle or perform their household duties?" This is a question which is not easy to answer. The right to whistle is one of those which can hardly be secured by legislation, and the only way for women to secure it, if they want it, is to persist in whistling until their right to do so is recognized. But then, as a rule, men, for some reason, do not like women who whistle, and therefore what the Darwinians call the law of sexual selection would interfere with the success of the movement. The reason that enlightened women do not now whistle more is undoubtedly that, in their present oppressed condition, they have no cause

for cheerfulness, and, far from whistling, can only groan, because this and other rights are denied them by the tyrant, man.

The growing use by the press of titles derived from occupations seems thus far to have escaped the attention of philologists, but we hope they will not let it go unnoticed any longer. With "Squire" and "Lawyer" as titles everybody has long been familiar; but the reporter's use of such designations is much more extensive. After every railroad accident, for instance, Conductor Smith and Brakeman Jones are brought forward to tell their stories, while it is becoming common to learn from the files of Editor Tompkins that Broker Robinson has failed or made an assignment under which Assignee Simpson takes charge of his property. There seems no reason why Bootblack Brown and Lamplighter Thompson should not be added to the list, because the social level of the occupation has evidently nothing to do with the matter. In early times it is well known that names were derived from occupations—the Smiths were originally smiths, the Brewers brewers, and so on. But these newspaper titles cannot grow into names, because the persons to whom they are applied already have names, and therefore it is difficult to see why they should be used, except for the purpose of temporary identification. Smith is called Conductor Smith, because for the time being he is the conductor about whom an investigation is going on, and so Brakeman Jones is the Jones for the time being who cheerfully explains that the cause of the accident was his habitual negligence of his duty. This sort of title may be often used in politics, as in the case of Mr. French, whom we have seen referred to as "Proxy" French. So we might have Bogus-Contractor Smith and Star-route Thief Brown, Blackmailer Harris, Safe-Burglar Tompkins, etc. This would serve to keep the occupations of all classes of citizens before the public, and would be an aid in making the census returns more accurate.

The Irish Land Leaguers are about to go through one of their severest ordeals in having to convince people that the sum of $1,250,000, which the Treasurer received, was honestly spent. The Irish Tory papers have begun to charge malversation and defalcation against the persons having the handling of it, and especially Mr. Egan, the Treasurer, who, in order to avoid arrest under the Coercion Bill, transferred himself to Paris; and while there the "landlord press" told the usual campaign stories about his mode of life, which they described as one of unbridled sensual indulgence. He is, however, a business man of good standing in Dublin, and derides the attacks on him, and boldly asks for an audit of his accounts, and is vouched for by such undoubtedly (on money matters) trustworthy authorities as Messrs. McCarthy and Davitt. We presume he will not have much difficulty in showing that he sent all the money he got to Ireland, except the balance now in hand; but it is also likely that it will be impossible to show that it was properly handled by the branch societies which disbursed it, and, indeed, we doubt whether the attempt will be made. No such fund was probably ever administered with care or economy. The machinery of distribution has to be hastily organized, and is sure to contain a good many careless and impulsive and incompetent, even if not dishonest or needy, agents.

The trouble with all the Irish patriotic funds subscribed both in this country and in Ireland is, that they come almost exclusively from the pockets of very poor and ignorant people, so that the temptation to cheat or mismanage on the part of the holders of the money would, even if they were men of higher character and position than they usually are, be almost irresistible. In fact, the difficulty there is in keeping them straight is very much like the difficulty there is in finding honest Indian agents. The virtue of the Indian agent is very often insufficient to resist the strain put on it by the fact that the Indians know so little of arithmetic and book-keeping, and in like manner the Irish trustees and treasurers are led astray by the fact that their subscribers are seldom intelligent enough to call them to account or watch over them. This was the secret of the enormous malversation practised in the Fenian funds, and it is the secret, too, of poor Archbishop Purcell's bankruptcy as a custodian of savings. What tempted him into keeping no books, and into ignorance of the amount of his liabilities, is precisely what tempts the trustees of skirmishing and other funds into playing ducks and drakes with the money which the donors fondly expect to shake the British Empire to its centre. Of course, it is easy to laugh at the gullibility of the subscribers, but it must be said for them that it is doubtful whether men and women so poor and ignorant as they are could be found in any other race who would so freely part with their earnings for the promotion of a cause which appealed to their imagination only, and the triumph of which, even if it came in their lifetime, could bring them no material gain. There is sometimes a certain nobleness in being duped, and the poor Irish of this country may fairly claim credit for it. Nor can Americans be very hard on their credulity, when we see the license enjoyed by Hubbell's Committee, not only in raising money by intimidation, but in raising money of which they do not pretend to render any public account. He is now so unblushing as to sell for cost the books and documents for which, he said, he levied assessments on the Government officeholders—a piece of impudence for which, we think, the annals of Irish skirmishing furnish no parallel, not even in the case of the ram, on which, though it figures on the accounts for $20,000, $8,000 was really spent.

There is more news of the False Prophet's operations in Sudan, which seems to come in part from a trustworthy source, Dr. Schweinfurth, the well-known African traveller. What he says apparently is that the Prophet is making progress, and will probably soon be in possession of Khartum (which is, however, over 1,000 miles from Cairo by the river), having driven the Egyptian troops out of the provinces south of the city. The details furnished from other sources are of the usual terrible character. He has fought "seven sanguinary pitched battles" with the Egyptians, killing eight thousand of them and driving the rest into Khartum. He has little ways with his prisoners, it is said, which are not nice, such as pouring boiling tallow into their eyes and ears. This is pretty bad, but what is worse is that he has a corps of "Man-eaters," who eat "those who refuse to believe in him." A great change must, however, have taken place in the spiritual condition of the people of Sudan if many of them give the Man-eaters the trouble of devouring them through unwillingness to believe in a prophet of any kind. And what digestions the Man-eaters must have to be able to assimilate an unbeliever eaten, not because he is savory and tender, but to punish him for the hardness of his heart. The Egyptian troops, too, who fought "seven sanguinary pitched battles" before they gave in, must be a very different body of men from their brethren who were massacred by King John of Abyssinia, in the same region, and ran away so readily from the British in Lower Egypt. The truth probably is that there were but few troops left up in Sudan by Arabi, and these of very inferior quality, and that the Prophet chose the right moment to attack them, and that he has been driving them as fast as he could follow them down the river with a force of stout blacks, who have been having a good time among the prisoners and stragglers. It is not unlikely now that he will take Khartum and give Baker Pasha a chance of showing the quality of his new army by a little expedition up the Nile. Baker Pasha's brother, Sir Samuel, knows all about that region, and may be the person chosen to measure himself against the Prophet and the Man-eaters.

The French Ministry has adopted M. de Freycinet's treaty with Tunis, which it had dropped, under the pressure of the odium excited by the Tunisian expedition, when it was found how much it was costing and how much trouble it was likely to entail. The now peaceable French public was considerably alarmed by the prospect which the expedition opened up of a Mussulman rising against France, not in Tunis only, but in Algiers and along the frontier. Its fears were deepened by the Egyptian revolt, and the stories which were carefully circulated from Constantinople that this was but part of a widespread Mohammedan revival, which was to roll back the tide of Christian aggression. The ease with which Arabi has been overthrown, and the pricking of the fanaticism bubble which was thus effected, have apparently restored French courage, and the Cabinet are ready to resume business on the old basis—that is, to take charge of the Government of Tunis, which is substantially what the treaty provides for. The financial administration passes wholly into their hands, and they make the Bey an annual allowance, and allow him to police the country under the superintendence of the French Minister, who will play the part of the British Resident at the courts of the native princes in India.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, October 18, to TUESDAY, October 24, 1882, inclusive.]

DOMESTIC.

A CABINET meeting was held at Washington on Friday afternoon, at which all the members of the Cabinet, with the exception of Attorney-General Brewster, were present. No questions of importance are said to have been considered. The political situation in New York and Pennsylvania was informally discussed. President Arthur is reported to have remarked that he supposed it was well understood that no force or pressure should be used to compel payment of political assessments, but that he did not suppose there was any objection to the occasional presence in the departments of persons collecting voluntary contributions. The President did not designate the officers selected to fill the vacancies in the Army caused by the retirement of General McDowell, and it is understood that the promotions will not be made for several days yet.

Senator Mahone is said to be carrying the "boss system" to the highest pitch of perfection in Virginia, and to be using the power of patronage, with the consent of the Administration, in the most unscrupulous way. Two instances have been reported in the newspapers of late: in one case the Postmaster of a small town in Franklin County, Virginia, replied to Hubbell's demand for an assessment of $20 with a $20 Confederate note. This was reported to Mahone, who not only dismissed the Postmaster, but, as he was supported in his views in regard to assessments by the people of the village, had the post-office in that place discontinued. In another case, Mrs. Pine, Postmistress at Manassas, Virginia, was removed, notwithstanding the fact that special agents of the Post-office Department who have examined the office have reported that it was managed with great efficiency, because her brother dared to run for Congress against one of Mahone's creatures. The removal caused a great outcry from the people of the place, and the matter was referred directly to President Arthur, who, on Friday, approved Mrs. Pine's removal.

A Republican mass meeting was held in Albany on Thursday, at which a letter from Secretary Folger was read, in which, after highly praising his opponent, Mr. Cleveland, he says that "there is one difference which goes to the root of the matter when we are brought to view as public men and put forward to act in public affairs. He is a Democrat. I am a Republican. . . . The very qualities of character that make him a man of principle bind him to the ways of the party which has set him up as its exponent, and to a repetition of its deeds, if he is placed in a place of power wherein he may show forth in his acts the indwelling political faith that is in him." Mr. Folger then attempts to show that the business interests of the country fear the return of the Democrats to power, and, as an instance, that on the 11th of October, the day following the Ohio election, "there was a shrinkage of value in the greatest properties of the country of over $40,000,000," caused by a dread of the result of Democratic control in the House of Representatives.

Mr. James G. Blaine has written a letter to the Chairman of the Republican State Committee of Delaware, regretting that the condition of his health will prevent him from fulfilling his engagements to speak in the campaign in that State; and advising, for the remainder of the campaign, that Republicans everywhere should bend their energies to securing a majority in the next House of Representatives. He says that "whatever causes of just discontent may exist with State nominations unfairly and injuriously thrust upon the party, and whatever means may be taken to resent such wrongs and repel such indignities, it is evidently the duty of all true Republicans to use every honorable effort to hold control of the popular branch of Congress."

On Saturday John N. Dolph (Republican) was elected United States Senator from Oregon. He received fifty-one votes. Mr. Dolph is a partner of Mr. Mitchell, who was the most prominent candidate for the office.

In the United States Circuit Court, at Portland, Oregon, on Tuesday, the 17th, Judge Deady called the attention of the Grand Jury to the law in regard to political assessments, and instructed them that if any violation of the law was found, it was their duty to indict the offender.

The Mormons held a political meeting at Ogden, Utah, on Saturday night. George Q. Cannon denounced the men who are attempting to despoil the Mormons of their constitutional rights, and a vote of confidence in Cannon was unanimously carried with great enthusiasm. Judge Van Zile, the Liberal candidate for Delegate to Congress, and other Liberal speakers are making a thorough canvass. They are reported as having "large and attentive but not sympathetic audiences."

The Citizens' movement in New York city, which threatened to be a failure, owing to the arbitrary action of the Committee, took a new lease of life during the week, and Mr. Allan Campbell was nominated for Mayor. On Tuesday evening the Committee of Fifty of the movement met and nominated a full city ticket.

Dr. Hamilton has at last filed his claim for services during President Garfield's illness. It is for $25,000. Dr. Bliss's claim is for the same amount, and Dr. Agnew's is $14,700. Congress only appropriated $35,000 to be paid to the physicians, and their claims thus far amount to $85,000, with Dr. Boynton yet to hear from.

The opinion of Attorney-General Brewster upon the paper presented to the President last June, in support of an application for the appointment of a commission to consider the mental condition of the assassin Guiteau, and asking for a reprieve pending such investigation, has been given to the press. The Attorney-General said that he could not recommend such a reprieve; that the case had been thoroughly and fairly tried, and the evidence was overwhelmingly against the prisoner upon the point of insanity. Further than this, the Attorney-General maintains that the application has no legal status, and concludes by saying that "to investigate in unusual if not irregular way a fact that has been solemnly determined by the constituted authorities of the law," would establish a dangerous precedent, and ought not to be done.

An inquiry into the alleged insanity of Frances M. Scoville, sister of the assassin Guiteau, was begun in the Cook County Court on Thursday, on complaint of her husband.

The Quartermaster-General of the Army has submitted to the Secretary of War his report for the fiscal year ending June 30, 1882. The amount available during the year was $13,628,681. The total disbursements were $12,446,442, leaving a balance on hand of $1,182,239. The responsibilities and magnitude of the service are described, and an appeal made for additional force. The opening of the ranks for promotion and appointment, and the enlistment of past quartermaster-sergeants, are recommended.

General Hazen, Chief Signal Officer of the Army, has completed his annual report, in which he says that the Signal Service has greatly increased its usefulness since last year, in spite of greater difficulties than have been experienced since the organization of the weather service. Although the work of the corps has grown, he says there are fewer officers to perform it, and for the fiscal year 1883 there is $55,000 less for observation and report of storms than was actually expended in 1880, 1881 or 1882. The report shows the insufficiency of the force employed to do the work required, and a strong appeal is made for an additional force in order to meet the actual requirements of the service.

The sixty days appointed by law for filing with the Secretary of the Navy plans and specifications for the new steel war vessels provided for at the last session of Congress have expired, and only one plan has been received.

The Spanish-American Claims Commission held a session on Monday afternoon at Washington. All of the more important claims to be decided involve the question of citizenship, and no action will be taken upon them until the negotiations now pending between the United States Government and Spain shall terminate in an agreement as to what shall be accepted by the court as conclusive evidence of American citizenship.

Arthur W. Roudier, the Venezuelan Consul at Boston, announces that July 24, 1883, the centenary of Simon Bolivar, liberator of Venezuela, New Granada, Ecuador, and Peru, and the founder of the Republic of Bolivia, has been declared a national holiday by the Government of Venezuela. The day will be celebrated by the opening of a railway, the unveiling of a statue to George Washington, and an exhibition, to which all inventors, manufacturers, and citizens of the United States who may wish to display their products, are welcome.

A meeting of Friends was held in Chester, Penn., on Sunday, to celebrate the two hundredth anniversary of the landing of William Penn. The exercises were interesting and were conducted in a plain, unostentatious way. Addresses were delivered, and an early poem by John G. Whittier was read. On Monday the formal celebration commenced. 200,000 visitors were present and all places of business were closed. Among the guests were Governor Hoyt, of Pennsylvania, and the mayors of many cities in Pennsylvania, Delaware, and New Jersey. Each bell in the city was tolled two hundred times in the morning. The exercises began with a representation of the landing of William Penn from an old-fashioned yawl-boat at the foot of Penn Street, the exact spot where Penn first landed 200 years ago, after which a meeting was organized and speeches were delivered and poems read. In the afternoon there was a civic, industrial, and military parade, in which 6,000 persons participated. On Tuesday the festivities in Philadelphia were begun on a much greater scale. The streets were profusely decorated and crowded with people.

A complimentary dinner was given to Mr. Henry George, the author of 'Progress and Poverty,' at Delmonico's, in New York, on Saturday night. Mr. Algernon S. Sullivan presided, and about 100 persons were present. Mr. George made a speech, in which he explained and defended his theory of the nationalization of land.

Mrs. Langtry, the celebrated "professional beauty" and actress, arrived in New York on Monday. She will make a six months' theatrical tour of the United States.

A bloody affray took place in Knoxville, Tenn., on Thursday, in which Gen. Joseph A. Mabry, Joseph A. Mabry, jr., and Major Thomas O'Connor were killed. The cause of the difficulty was an old feud about the transfer of some property from Mabry to O'Connor, which resulted finally in Mabry's sending word to O'Connor that he would "kill him on sight." On Thursday afternoon O'Connor was standing in the doorway of the Mechanics' National Bank, of Knoxville, of which he was President, when he saw Mabry walking past on the other side of the street, so he stepped into the bank, got a shot-gun, and fired at Mabry, killing him instantly. At this moment Joseph A. Mabry, jr., son of the General, came running down the street with a pistol with which he shot and killed O'Connor, but before dying O'Connor managed to shoot and kill him. A number of bystanders were wounded by buckshot from O'Connor's gun.

The parties to the affray being "well-known men" and "prominent citizens," the affair caused a ripple of excitement in Knoxville's cultured community.

A memorial meeting was held at the St. Louis Merchants' Exchange, on Thursday afternoon, at which it was unanimously decided to give a testimonial benefit to the family of Col. A. W. Slayback, in the form of a matinée benefit, to take place on Thursday next, the seats for which were then sold, bringing very high prices.

FOREIGN.

Parliament reassembled on Tuesday. Previous to the assembling of the House of Commons the advanced Irish members held a meeting. They were chiefly occupied in arranging petitions referring to the imprisonment of Mr. E. Dwyer Gray. In the House of Commons Lord Randolph Churchill made a speech in which he contended that the present sitting was irregular, after the Appropriation Bill had received the Royal assent. He made a long historical review, and pointed out, amid the cheers of the Tories, that the House of Commons had ever been jealous of monarchical or ministerial tyranny. He moved an adjournment of the House in order to protest against an autumn session. Mr. Gladstone, in reply, said he was glad to see the House and Lord Randolph Churchill again. He contended that the precedents cited by Lord Randolph Churchill were inapplicable, and declared that the House had full power to take its present course. Lord Randolph Churchill, he said, had small knowledge of Parliament if he thought the Government would be upset by a vote of want of confidence on an appropriation bill.

Mr. Gladstone made a statement in regard to the rules of procedure. As to the first rule, he said the Government would adhere to its main proposal, and would propose as a second rule that motions for adjournment could only be made by leave after questions were finished and the order of the day begun. The motion for granting leave should be put forthwith on more than forty members supporting it by rising in their places. He also gave notice of a further addition to the rules, according to which motions to bring in bills, and bills which have passed in Committee, shall not be subject to the rule precluding any opposed business being taken up after 12:30 A.M. This will in a great measure frustrate obstructive blocking of bills.

Mr. Gladstone called attention to the committal of Mr. E. Dwyer Gray, and moved the appointment of a committee in his case. In regard to Egypt, Mr. Gladstone said that the Government were less fettered in respect to their policy now than they were six months ago, but they would hold out no expectation of laying down a scheme for the approval of the House during the limited time at their disposal. If, however, the Opposition wished to attack their policy, the Government would arrange to bring forward an issue.

In the House of Lords Earl Granville gave notice that he would on Thursday next move a vote of thanks to the commander, officers and men of the British Army in Egypt. He would then propose that the House adjourn till November 10.

A despatch from London says that a letter from Clifford Lloyd has been published stating that at his recommendation Earl Spencer, Lord Lieutenant of Ireland, in consequence of the improved condition of the country, had revoked the proclamation of Loughrea and the neighboring districts.

Mr. Trevelyan, Chief Secretary for Ireland, in a speech at Selkirk, Scotland, on Friday evening, said that the resident magistrates in Ireland in their last reports were singularly unanimous in stating that the relations between landlord and tenant were improving, that rents were being fairly paid, and that intimidation was decreasing. Mr. Trevelyan said that another subject for thankfulness was the fact that it is now nearly six months since there has been a collision between the constabulary and the people in the Irish provinces.

Justin McCarthy and Michael Davitt have declared that the charge which has been published, that there is a total of nearly £100,000 of the Land League fund which is unaccounted for in the statements of accounts, is utterly unfounded; and further, that the allegation is a reiteration of charges which have been circulated in the interest of the landlord party ever since the Land League was organized.

Messrs. Healy, Brennan, and Harrington have been appointed honorary secretaries, and Messrs. Biggar and Webb treasurers, of the Irish National League.

The Household Cavalry returned to London from Egypt on Thursday, and were welcomed with great enthusiasm by the large crowd assembled to receive them. On Friday they marched through London to the Albany Barracks, and their reception along the whole route, which was over six miles long, was enthusiastic to a remarkable degree. On their arrival at the barracks they were received by the Prince and Princess of Wales.

The Egyptian Ministry have finally agreed to permit Messrs. Broadley and Eve and the Hon. Mark Francis Napier to defend Arabi, on the condition that the witnesses in the case shall undergo a preliminary examination. The trial is not expected to take place until after the festival of Bairam. On Sunday it was telegraphed that the Ministry had ratified the agreement between the Government counsel and Messrs. Broadley and Napier in regard to the course of procedure in the trial. Mr. Broadley declares that all the elements of a fair trial have been secured, the conditions being more favorable to the defence than those allowed by English courts-martial. The counsel for the defence are to have access to Arabi, the right of recalling witnesses for the prosecution for cross-examination, of calling witnesses for the defence, and of examining the evidence given during the preliminary examination. The counsel also expect that the Egyptian Government will appoint several additional members on the court-martial who will be able to speak English. Very little documentary evidence has been adduced in the examination of the rebel prisoners beyond a file of Arabi Pasha's official journal, published in Cairo during the campaign. Arabi has admitted nothing, and has not imitated his colleagues in attempting to throw the blame on others. He stated to his counsel on Sunday that he had been ill treated and twice spat upon, but that since October 10 he had been well treated, owing to the intervention of Sir Edward Malet.

Arabi Pasha's correspondence for the last two years was seized on Tuesday morning and deposited with Sir Edward Malet, the British Consul-General. It includes voluminous correspondence with Constantinople and the minutes of the secret sittings of the Barudi Cabinet.

The Egyptian Council of Ministers has adopted the preliminary scheme of Baker Pasha for the reorganization of the Egyptian Army. The field officers of one-half the regiments, battalions, batteries, etc., are to be British, and the other half Egyptians. The other officers, from the rank of captain downward, are to be selected from the Egyptians, Albanians, and others already in the service of the Khedive. The staff will consist of an equal number of British and Egyptians. The expense of the Army will be £368,000 a year, and it will number 10,900 men. Baker Pasha thinks that one of the advantages of his scheme will be a healthy emulation between the regiments commanded by British officers and those commanded by native officers. The gendarmerie will be officered by Egyptians, but will have two British inspectors.

Recruiting for the new Egyptian Army has begun. The total effective strength will be twelve battalions of infantry, two of mounted infantry, two of garrison artillery, two squadrons of cavalry each 400 strong, six batteries of artillery with 100 men and 4 guns to each, 100 engineers, a transport and ambulance corps of 300 men, and two regiments of gendarmerie of 700 men each. There is under consideration a proposal for the importation of coolies to replace natives as army servants.

The correspondent of the London *Daily News* at Cairo says that the Egyptian Ministry are representing that the reports of a renewal of disturbances in Sudan are unfounded, while the truth is that they have been in possession of messages in regard to the disturbances for the last three days. The Sudan movement has no connection with the Arab rising. The London *Times* despatch from Cairo, on Monday, says that Professor Schweinfurth has declared that the situation in Sudan dwarfs Arabi's revolt into insignificance, and that last June 6,000 Egyptian soldiers were surrounded by the troops of the False Prophet and massacred.

The Porte has sent a note to Lord Dufferin, announcing its readiness to negotiate a settlement of the Egyptian question.

The preliminary elections for members of the Prussian Diet have resulted, as far as can be estimated, in the choice of 2,900 electors belonging to the Progressist and Secessionist groups, against 750 Conservatives and anti-Progressists. Nearly two-thirds of the voters in Berlin abstained from voting. In all the great towns where Catholics do not predominate the elections resulted in favor of the Liberals, who have gained 30 seats in the Diet from the Free Conservatives and Nationalists. The Conservatives and Centre retain their positions intact. No one party will have a majority in the new Chamber. In order to obtain a majority it will be necessary for the Government to enter into an alliance with the Clericals and Conservatives.

There was a serious riot in Lyons, France, on Sunday, caused by the municipality having suppressed the subvention to the opera. The police were unable to cope with the crowd. Bombs were exploded in a crowded restaurant, shattering furniture, and seriously injuring three persons. This riot, together with the troubles which recently occurred at Montceau-les-Mines, and a threatened strike of 20,000 employees in the furniture trade in the Faubourg St. Antoine, in Paris, have caused some uneasiness in France.

A despatch to the London *Times* from Paris says that the Government has resuscitated the treaty concluded between the Bey of Tunis and M. de Freycinet. It will be submitted to the Chambers for ratification. By the treaty France undertakes to redeem the Tunisian debt, and to provide the Bey with a civil list of £28,000 yearly, and with £52,000 a year as the future allowances to the Princes.

King Milan, of Servia, was fired at in the Cathedral at Belgrade on Monday. His assailant was a woman, the widow of a man who was executed with several other rioters in 1878, by order of King Milan. It is suspected that the attempt was not merely attributable to revenge, but partly to political motives. After the attempt the Queen, who was with the King in the Cathedral, fainted, and was carried in an unconscious condition to the palace. The crowd attempted to lynch the assassin.

Negotiations in Spain between the old Republicans and Marshal Serrano, for the formation of a monarchical Liberal party, still meet with great difficulties, owing to the want of accord with regard to the reform of the Constitution. It is thought that an arrangement will be difficult unless Señor Sagasta consents to abandon the Carlists, whom Marshal Serrano considers an insuperable obstacle to the proposed reforms.

A great typhoon devastated Manila, the capital of the Philippine Islands, on Friday. A large portion of the city was destroyed, and business entirely suspended. There was great destruction of shipping.

MR. HERBERT SPENCER ON AMERICAN CIVILIZATION.

MR. HERBERT SPENCER, who has been so long tantalizing the newspapers by his silence —which the condition of his health, we regret to say, made imperative—has at last produced an interview, containing some of his impressions of American politics and society. Anything, however brief, on such a topic from such a source, is, of course, in the highest degree interesting; but the value of the observations he has made on the present occasion is mainly corroborative. That is to say, he has been struck chiefly by things which have struck other philosophic travellers before him —the national respect for inventiveness, the growth of the boss system in politics, the impossibility of preventing a paper constitution from working in unforeseen directions, the excessive good-nature of the American temperament, which, by leading men to be careless about their own rights, leads them also to be careless about the rights of other people, and is illustrated by the intrusions of the newspapers on private life, and by the overwhelming power of corporations. Mr. Spencer holds that—

> "Free institutions can be properly worked only by men each of whom is jealous of his own rights and also sympathetically jealous of the rights of others—will neither himself aggress on his neighbors, in small things or great, nor tolerate aggression on them by others. The Republican form of government is the highest form of government; but because of this it requires the highest type of human nature—a type nowhere at present existing. We have not grown up to it, nor have you."

About the future of the country, he holds the old-fashioned — we might almost say Fourth-of-July—view. The nation will be vast and triumphant, and will, after a long process of evolution, reach a high form, and produce a civilization "grander than any the world has known."

Mr. Spencer, in saying that America, mainly through the boss system, is "showing on a larger scale than ever before that paper constitutions will not work as they are intended to work," and that "constitutions are not made but grow," both overestimates the extent to which the American Constitution is paper and misconceives the nature of the boss system. The truth is, that the Constitution never was a paper Constitution in the strict sense of the term, because its interpretation was left to the courts, or in other words, its growth under the hands of the judges was provided for and expected. It was at most an outline, which the Legislature was, under the supervision of the courts, to fill in to suit the changing needs of the country. There is no good reason for supposing that the framers of the Federal Constitution intended anything more than a good framework of Federal Government. They undoubtedly expected constitutional growth in various directions not specified in the instrument, and were far from believing that they constructed a finality, even within the limited sphere of their jurisdiction. Both the Federal and the State constitutions differ from the paper constitution which Mr. Spencer has in mind, in that they contain some sort of provision for their own revision and amendment, and are frequently revised or amended. In fact, all American constitutions might fairly be called journals in which the varying phases of public opinion on rights and duties are from time to time recorded. Their function is to prevent, within certain limited periods, violent changes by the Legislature, and by no means to provide a cast-iron system of government. The constitutions of every State contain a history of public opinion within that State upon all great questions of polity.

It is a great pity that Mr. Spencer's health should not have permitted him to examine the boss system, by which he has evidently been much impressed, more thoroughly, both because he would have become better acquainted with its real nature, and because his opinions as to the possibility of extirpating it permanently from a democratic society would have been very interesting and valuable. He has plainly misunderstood the relations of the boss to the voters when he talks of "20,000 citizens going to the polls, led by a boss." He apparently imagines the American boss to be more of a demagogue of the Greek type than he really is—that is, more of a specious rhetorician, swaying large crowds by his blandishments and promises. Nothing could well be further removed from this type than an American boss like Cameron or Conkling is. These men have no following from the multitude properly so called, as the Old-World demagogues have always had. Nor is their connection with the growth of the American Constitution at all certain. They are distinctly a product of the working of party government on a great scale through universal suffrage. The American people's chief political occupation of a constructive kind during the last forty years, has been the organization of universal suffrage for party purposes, or, in other words, the creation of machinery for providing party candidates. The nominating convention or caucus, made up of local delegates, is the result of this work. It is this rather than the Constitution which has "grown into something different from that intended." It was intended to be, and was in the beginning, a strictly representative party assembly, elected for a strictly defined and easily discharged duty. But in practice it imposed double political work on a community which has for three generations been growing more and more busy, and the result has been that the election of the conventions has fallen into the hands of a few who are easily "manipulated," as the phrase goes, by the clever intriguers to whom we give the name of bosses, and who drive the voters to the polls, not in their own names, but in that of the party. The whole process of the growth and degeneration of the nominating convention is most interesting—perhaps the most interesting phenomenon of American politics to-day; but its connection with the development of the Constitution, if any there be, is very remote indeed.

Mr. Spencer's observations on "the universal delusion as to education as a panacea for political evils" are not marked by his usual accuracy of expression. We doubt very much whether even the most deluded admirer of education as a political agent has ever considered it a panacea, or anything more than a help in raising the standard of morality. That it diminishes crimes of violence, there is, we think, no question, and that it also increases the restraining power of public opinion with regard to other crimes, there is just as little. There is no timid owner of property or industrious man who would not sooner settle in a well-taught than in an ignorant community, if for no other reason, for the very important one that the force of persuasion—or the results which may be achieved by reasoning—are vastly greater in the former than in the latter. Moreover, in judging any improving agency, we are bound to take into account the *milieu* in which it works. Every such agency creates its own dangers, and education is no exception to the rule. Navigation increases the number of deaths by drowning, railroads the number of deaths by crushing and bruising. Education, too, increases the amount of certain kinds of knavery, which in an ignorant community would be rare or unknown. But, like the police, a large part of its work must be preventive, and therefore unseen.

We touch a lighter topic when we come to consider Mr. Spencer's remarks on the American willingness to put up with petty annoyances, or permit small trespasses or invasions of personal rights or comforts, "because it would be troublesome, or profitless, or unpopular to oppose, which leads to the habit of acquiescence in wrong and the decay of free institutions." This is one of the first things that every English traveller in America, from the time of Captain Basil Hall and Mrs. Kemble to the present day, has noticed, and the truth of the criticism is now pretty generally recognized by Americans. The more Americans travel abroad, the more they see that in other countries people secure their rights by insisting on them individually, by complaining, and making themselves disagreeable to those who interfere with their comfort, while here people, as a rule, adopt exactly the opposite course, and if anything occurs which they feel they have a right to resent, look out of the window or down at the floor, or smile at the opposite wall, rather than do anything.

The *Tribune*, in an article on this subject, admits that Mr. Spencer is right in his assertion, but does not believe that the unwillingness to grumble involves any real danger to free institutions, because it thinks that when the small annoyances of life assume serious dimensions, the people will "rise in their might" and overthrow them. With regard to grievances which affect people in large masses, this may be true; but it is only these which a "rising" can deal with, while it is individual grumbling which Mr. Spencer thinks ought to be encouraged. In that little cosmos which typifies and illustrates American civilization most perfectly—the horse-car—we may see every day excellent illustrations of the unwillingness to grumble which is so characteristic an American trait.

Mr. Curtis, in one of his pleasant papers in the "Easy Chair" of *Harper's*, recently called attention to the fact that if a man got into a car and deposited a huge basket on the floor, no one would remonstrate or insist on having it removed: the passengers would all step over it, and submit to being crowded by it, rather than make any trouble. So, if a passenger makes himself disagreeable by indecent or drunken behavior, the chances are ten

to one against his fellow-passengers remonstrating or insisting on the conductor's removing him from the car. There seem to be hardly any people who object to the presence of the one-armed beggar who is allowed the free use of the horse-car for the sale of his Song or Life, while in railroad cars the boy who does not merely offer for sale, but deposits upon the person of the passenger, his prize-candy package and other wares, is not remonstrated with. Humorists always refer to crying children as one of the most serious discomforts of life. Yet what an infinite toleration of children in cars of every sort and on journeys of every length do we see all the time! Mrs. Kemble mentions, in her recently-published memoirs, an inconvenience of American hotel life which she had frequent occasion to resent, yet which few Americans fail to submit to without a murmur—the practice of "doubling up" the occupants of beds.

If Mr. Herbert Spencer will go to any American hotel, he will find on every hand abundance of illustrations of the American unwillingness to grumble. We have seldom seen a hotel clerk grumbled at on the score of rooms or service, and never successfully; and in the case of waiters, it is the rarest thing to hear any one complain of the grossest inattention. We have ourselves seen a waiter in a sea-side restaurant display considerable indignation at complaints made of the badness of the fare, and inquire whether the complainant had come there to "quarrel with him." In fact, it may be said that, as a rule, anybody who complains or grumbles in the United States at any of those little petty annoyances which come from the disregard of duty on one side and right on the other excites some surprise, because it is obscurely felt by those who witness the spectacle that he is adding to his own discomfort without the prospect of improving his position, and is consequently an unpractical, foolish person, or else an Englishman, or some other variety of foreigner.

It is obvious that a social trait of this kind will not be affected by the people "rising in their might." They cannot "rise in their might" against the passenger with the big basket, or the depositor of prize-packages, or the gentlemanly hotel-clerk, or even the horse-car conductor; no popular movement can be got up on the subject, and, moreover, there is no indication that any popular rising is contemplated. In fact, individual grumbling of the kind that English observers wish to have cultivated is in a great measure anti-popular, as it is based on a feeling of the importance of the assertion of individual rights, even when they come into conflict with the prejudices or customs of the majority. Now, we believe that a vast majority of Americans do not protest against the sort of discomfort and inconveniences that humorists like Mark Twain laugh at, and philosophers like Mr. Spencer complain of, simply because they do not really mind them, because for the vast majority of Americans life, on the whole, has, in the past forty or fifty years, grown so much easier and pleasanter and more luxurious than it was in the old pioneer period, that they are perfectly contented with it.

To the "average man," who constitutes the majority everywhere, life in the United States is a sort of paradise, and the average man is in a position to sympathize with and exculpate rather than to criticise the gentlemanly hotel-clerk, the horse-car conductor, and the prize-package depositor. The annoyances which Mr. Spencer and other critics have in mind are rather those felt by the educated, luxurious, and cultured class, which is a small, though growing, one in the United States. In other countries, owing to a variety of social causes, this class has hitherto had its own way. In the United States it has not; it has had to "conform" to the ways and prejudices of the average man, and has consequently had to submit to all those annoyances and invasions of right which the average man does not regard as such or trouble himself about. The spread of luxury in the United States will undoubtedly lead to more and more grumbling; but to grumble well, we must first learn to grumble individually, and not trust to a popular "rising" to do the work for us.

THE INFLUENCE OF HOMICIDE ON SOUTHERN PROGRESS.

THE Southern papers contain every day longings for white immigrants to help them to solve the political problem created by the size of the negro vote. They now complain that they cannot secure laborers at Castle Garden here, owing to the stories that are told the newly-arrived Europeans of the way in which laborers are regarded in their part of the country. Nor is there any such resort to the South on the part of Northern capitalists, business men, and farmers as one might expect, considering the attractions the South offers both to the manufacturer and the agriculturist. Men prefer encountering the long winters of the far Northwest to going down to the South, with all its advantages of climate and soil and nearness to the great centres of civilization. The South is growing in population and wealth, undoubtedly, but it is not growing in what may be called the American ratio, which is made up both of the natural increase and the increase through immigration.

That a very considerable share in keeping settlers and capital away from the South must be ascribed to the part played by manslaughter in Southern life, we think no candid person can deny. The best class of settlers are men of peaceful habits, who above all things seek security, and will go nowhere where it is not to be found. Nothing can be better calculated to drive away this class than the continuing Southern habit of settling business disputes by unpunished murder. Two years ago one of the most prominent business men in Georgia was murdered by his partner in an ordinary commercial venture, because they differed in the settlement. In South Carolina, last year, a lawyer was killed almost in cold blood by a practised duellist and notorious ruffian, who found fault with his manner of conducting a case in court. In Knoxville, Tenn., last January, Don Lusby killed Will Mabry. The result of this was that some months later another Mabry and his father killed Lusby and his father in a court of law, *coram judice*, so to speak, and went unpunished. We commented on this at the time. Within the past week Mabry, the father, quarrelled with one O'Connor about a business transaction, and announced his intention of killing him in the old-fashioned way. O'Connor, thereupon, anticipated him by slaughtering him in cold blood, in the public street, in the presence of a crowd. While engaged in this little transaction he was himself shot by the younger Mabry, whom he afterward managed to kill. The result was they all three lay dead, and Knoxville was thrown into a "great tumult of excitement." O'Connor, we are surprised to learn, was only a major, and not a colonel. Old Mabry, however, was a general, and we presume young Mabry was at least a captain. There were three nephews of O'Connor, probably all majors, in an adjacent building, one of whom handed him his "second gun" when Mabry, junior, appeared on the scene. Of course they are all prominent business men in the place, and much esteemed. Major O'Connor was rich and enterprising, and General Mabry poor and unsuccessful, and had to allow mortgages to be foreclosed through inability to pay his notes. So O'Connor had to be killed.

It must be remembered, too, that these cases of what may be called business homicide are only heard of through the newspapers when they occur among local notables in the large towns. Many such murders, we venture to assert, take place on farms and in small villages every year of which we never hear at all. The story is in nearly every case the same. You have a difference with a neighbor, one of the unavoidable and constantly recurring differences of civilized life, about a boundary, about a debt, about courtship, about cattle, about a horse, about a joint note, about a mortgage, about a lawsuit. At the North it would lead, possibly, to a coolness, an abusive correspondence, or to litigation. At the South it is very likely to result, especially if your neighbor has been "drinking a good deal," in his concluding that he must kill you. He announces this to your other neighbors, who are much interested, and tell you of it, not that you may have him arrested and tried, or bound over to keep the peace, but that you may get your weapons ready for the impending fray. There is no more expectation among them that you should seek the protection of the police than if you lived in a village in Ashanteeland. By and by you meet your foe, and you have a public fight with him—it may be on a crowded street—which is as ferocious and shameless, and as much enjoyed as a spectacle by the bystanders, as a dog fight by a party of Sixth Ward roughs. Both parties are perhaps killed on the spot. If one survives, there is a mock trial; the prisoner proves malice prepense on his own part, and is promptly acquitted.

In fact, a murder trial at the South, unless the crime has been committed for the purpose of robbery, is very apt to take the nature of a proceeding in bankruptcy. The defendant shows that he committed it as a necessary incident of his business, and the jury then treat the death of the victim as the equivalent of a surrender of a debtor's assets. The murdered man cannot be restored to life, and where is the use of keeping the murderer in jail? Moreover, several of the jurors are

probably murderers themselves, and all feel that they may have to murder any day as a condition of their residence in the locality. In fact, the curse and shame of the South is the constant presence in the minds of the males of all classes, from childhood up, of homicide as one of the probable contingencies of ordinary social life. At the North no man above the ruffian class of the cities thinks of it as anything but an extremely remote and absolutely dreadful possibility arising out of the necessity of self-defence against criminals. It is in these parts unthinkable among decent people as a probable social or commercial contingency. Until the Southern mind can rid itself of this "damned spot," Southerners may rest assured that rapid and healthy progress at the South will be impossible.

THE SPANISH-AMERICAN CLAIMS MUDDLE.

The letter of Mr. Frelinghuysen to Colonel Suydam, the counsel for the United States before the Spanish-American Claims Commission, ought to remove all difficulty in the way of proceeding with the business of that body, in which there has been a deadlock for some months. This deadlock was brought about by a difference of opinion between Mr. Blaine and Count Loewenhaupt, the umpire, as to the effect to be accorded to the naturalization papers presented by American claimants. The agreement entered into between the two Governments in 1871 (for it was a convention between the State Departments of the two countries, and not a treaty) provided for a settlement of claims of American citizens on account of wrongs committed by the Spanish authorities in the island of Cuba, and the question of the citizenship of claimants was a difficult one to dispose of, because it had been a common practice for Cubans to get American papers, exactly as Irish subjects of Great Britain have been doing lately, to protect themselves when within the island, though really living very little in this country, and many of these were improperly or fraudulently issued by the courts of this State during the Ring period. To guard against imposture, the agreement provided that in the case of any claim the Spanish Government might "traverse the allegation of American citizenship," and that thereupon "competent and sufficient proof thereof" would be required.

Now, it is obvious that the Spanish Government might traverse the allegation of American citizenship on a variety of grounds. It might, of course, be maintained that the papers had been issued by a court without jurisdiction, but as to this there has been no difference of opinion, and it need not be discussed. Again, it might be contended that the papers had been obtained fraudulently, or, in the third place, that some error of fact or law had been committed by the court granting them. As to the question of fraud there can be no doubt, and there is no evidence that there ever was any doubt in the mind of any one connected with the arbitration, that it was the duty of the tribunal to inquire into the allegation of fraud, if made. To put the matter on the lowest ground, no government could afford to insist that the question of fraud could not be inquired into, because it would itself have to submit to the same rule in the case of claims made against it by citizens of foreign governments; and as there is no limit to the manufacture of fraudulent claims, the whole business of international arbitration would be reduced to a farce.

As to objections on the score of error, the case is very different; for granting the tribunal the right to inquire into such objections really makes it a court of review or appeal on all naturalization papers presented. There is only one class of claims in which such an appeal would on ordinary principles be allowable, and that is where the Spanish Government insisted that the decision of the naturalizing court was in conflict with some rule of international law or some treaty provision. In such a case, presented in an international tribunal, the decision of the local court must give way.

These principles, when once stated, seem very simple, and when in the Buzzi case the umpire showed that he proposed to go behind the naturalization papers presented, and institute a reinquiry into the facts on which they were based, it would have been very proper for Mr. Blaine to call the attention of the American counsel to the importance of an understanding as to the exact meaning of the agreement. Instead of doing this, he wrote a very confused letter on the subject, in which, without taking any notice of the different grounds on which naturalization might be objected to, he refused to allow the arbitration to proceed, because he could not "recognize the power of the Commission to denationalize an American citizen." There was, of course, a great deal more in his letter than this, but nowhere in it can be found a word to show that Mr. Blaine understood that there was any difference between the question of fraud and any other question, or that he contemplated it as possible that under any circumstances the tribunal could possibly inquire into the validity of papers presented to it. The nearest approach which he made to a presentation of the legal questions raised by the Buzzi decision was contained in the following passage: "The principle upon which the decision of the Buzzi case rests, stated simply and briefly, is this—that the Commission has a right to go behind the certificate of naturalization to decide, not whether the court which issued it was of competent jurisdiction, but whether it rightly administered that jurisdiction; not whether a certificate of naturalization has been granted to the claimant, but whether it has been properly granted; in short, that the Commission is a court of appeal, with a right to review a duly rendered judgment of the courts of the United States." This did not advance the matter in the least, and it was accordingly left to Mr. Frelinghuysen to clear up the confusion introduced into the subject by Mr. Blaine's letter, and set the arbitration going again. This his letter to Colonel Suydam will probably accomplish. The gist of it is contained in the following paragraph, to which the Spanish Government can hardly raise any well-founded objection:

"The true rule to govern the Commission is, that when an allegation of naturalization is traversed, and the allegation is established prima-facie by the production of a certificate of naturalization, or by other competent and sufficient proof, it can only be impeached by showing that the court which granted it was without jurisdiction, or by showing, in conformity with the adjudications of the courts of the United States on that topic, that fraud, consisting of intentional and dishonest misrepresentation or suppression of material facts by the party obtaining the judgment, was practised upon it, or that the naturalization was granted in violation of a treaty stipulation, or of a rule of international law."

It will be seen that this letter disposes finally of the singular notion—the appearance of which in the field of American diplomacy seems to have been due to Mr. Blaine's bungling interference with the Commission—that fraudulent naturalization papers are just as good for the purpose of making claims against foreign governments as any others.

THE PROPOSED NEW NATIONAL LIBRARY.

On the 11th of December next, by special appointment, the bill providing for a new fire-proof building in Washington for the National Library comes up for discussion in the House, and the matter is one of such importance and general interest, that it is highly desirable that members of Congress should be fully informed upon the various points involved. The plan of the proposed building is one that is strongly disapproved of by the great majority of the librarians of the country. It is enormously costly, the estimates ranging from seven to ten millions of dollars, and the greater part of this cost is due to ornamental work. The criticisms of Mr. Poole, of the Chicago Public Library, who has given special study to library construction, are summed up as follows: (1) The plan adopted will make a show building, not practically adapted to the uses of a library; (2) the building will be needlessly extravagant, a vast amount of space being wasted; (3) the arrangement for storing the books is the worst that could be devised, the books being placed in alcoves five stories high, where the bindings in the upper stories are sure to be injured by heat.

Certainly in view of these objections made by competent librarians — objections which Mr. Poole tells us are made also by Mr. Spofford, the present Librarian of Congress—there should be no hesitation in abandoning the plan adopted by the Library Committee, and requiring a new one possessing the characteristics of convenience, security, simplicity, and economy. No doubt the nation is willing to expend eight millions of dollars for a library building if it is necessary; but if two millions will provide a building in every respect superior to the one proposed, excepting only that it will not make so great a show, there can be little doubt that the latter plan should be preferred.

In considering the merits of the proposed building there comes up an exceedingly important question, and one which as yet has received little public discussion—viz., *What is to be placed in it?* Mr. Spofford thinks that it should contain all the special collections of books belonging to the Government in Washington, including such as the Library of the Surgeon-General's Office, of the Army, of the Patent-office, the Bureau of Geology, the Naval Observatory, etc., etc.—allowing each department or bureau to retain only a few books necessary for its immediate work. The arguments in favor of this view may be stated as follows: (1) The National Library of the United States should be as complete as possible in all its departments. It starts at a disadvantage with other great national collections by reason of its youth, for it requires time as well as money to form a great library. By sweeping in all these special collections it will at once be greatly en-

larged, and seem something like the big Library which such a big country should possess. (2) If the National Library is to be made complete in all departments, to allow the special libraries to go on would be uneconomical, since it would necessitate the purchase by the Government of two or more copies of each work. (3) For such a great and popular institution as the National Library is intended to be, there will never be any difficulty in obtaining any amount of appropriations desired, whereas the smaller special libraries will have a constant struggle to obtain the funds necessary to keep them complete. (4) It is desirable that the whole of the National Collection of books should be under the management of a skilled librarian, like Mr. Spofford, to secure uniformity, economy, proper cataloguing, etc.

At first sight these seem strong reasons for merging all the special collections in the great National Library that is to be. But there is another side to this question. To illustrate this, let us take the Library of the Surgeon-General's Office, U. S. A. This Library, which has been formed during the last seventeen years, is now the largest and best practical working collection of its kind in the world. Its present value and prosperity are largely due to the deep interest which the physicians of this country have taken in making it as complete as possible, and this interest has been aroused and kept up because they have felt that it was their special library, under the direction of a skilled physician, who knows what they want and supplies it. Is this interest likely to continue if this collection is merged in the general one? Certainly not. Are not the prosperity, popularity, and practical value of this library under its present management the best possible reasons for continuing it under that management? None of the great national libraries of Europe, with all their advantages of age, ample funds, and skilled librarians, have a collection of medical books equal to this, and none of them are used by physicians to any extent. Physicians in London do not go to the British Museum for books—they use the libraries of the College of Surgeons and the Medico-Chirurgical Society. In Paris they go to the library of the Faculty of Medicine, or of the Academy of Medicine, not to the National Library.

Now take each of the reasons above advanced for merging the special libraries, and see what may be said on the other side.

(1) The fact that the National Library should be large and complete does not involve the keeping it all under one management, or in the same building. Nor is the convenience to a very few inquirers of having all the special libraries under one roof so great as to counterbalance the inconvenience to a much greater number of visitors who wish to see them in connection with the museums, laboratories, etc., pertaining to the same division of science to which they belong. By all means let the books in the Surgeon-General's Library be counted as belonging to the National Library and helping to swell its numbers; but to do this it is not in the least necessary to destroy its identity.

(2) The duplicate question is easily settled. The main branch of the National Library has no need to purchase the special professional and technical works which belong to the special collections. For some years the Library of Congress has purchased no medical books, and no inconvenience whatever has resulted. It is true that the Surgeon-General's Library has been compelled to purchase a few American medical books not presented by their authors, while the Library of Congress has received two copies of these same books by copyright; but the remedy for this is simply to place one of the copyright copies of all medical books in the Library of the Surgeon-General's Office.

(3) It will be quite as easy to obtain funds for a well-managed and popular special library as it is for the National Library; and it is far easier for the special libraries to keep constantly complete their collection of that vast body of ephemeral literature pertaining to each branch, which never comes into the book-trade at all, and is only to be had by the personal interest and good will of the writers.

(4) No one man has the knowledge or the ability to supervise all branches of literature. The necessity of employing specialists is as great in this as in other departments. We have great respect for Mr. Spofford's abilities, but we certainly do not believe that he can manage the Library of the Surgeon-General's Office any better than it is managed now. He will necessarily place the work under some subordinate, and the consequences will certainly be extremely unsatisfactory to the physicians of the country, who are the persons chiefly interested.

To us it seems clear that the Law Library of the nation, the Medical Library, the Astronomical Library, the Library of Physics, Chemistry, and Mechanics, and the Library of Natural History, should each be under separate and skilled management, separately catalogued, and in the buildings which contain the museum, etc., to which they naturally belong. If, however, it be decided that all the libraries shall be placed in one building, then that building should, without question, be so arranged that each special library will be separate from the others, and preserve its own independence. This could be done in the building proposed by Mr. Poole, but it would be out of the question in a building on the plan accepted by the Library Committee. Before Congress meets, its members should be made acquainted with the views of scientific and professional men on the merits of the plan of merging all the Washington libraries into one, and also as to the propriety of wasting six millions of dollars in absolutely useless ornament upon a Library Building.

A NEIGHBORLY VISIT ACROSS THE RHINE.

DOES any one remember how interesting were the accounts of travellers in the South during the first decade after Lee's surrender? The French look with a similar curiosity upon Germany, and especially the provinces of Alsace and Lorraine. A Monsieur *** (possibly M. Gustave Fischbach?), who has a good eye, has sent the result of a week's travel there to the *Revue Politique*. He is not too prejudiced for agreeable reading, though one must make some allowances. He is yet a little sore. For instance, *Kladderadatsch* lately had a cut of a Prussian lieutenant chucking an Alsatian soubrette under the chin with the legend, "Zur Germanisirung." This harmless joke M. *** calls "cruellement malséante." The Germans are doing everything to reconcile the Alsatians to their rule. With this generation they do not expect to succeed, but the next, they hope, will be half, and the third wholly, German. Why should it not be so? They are only reversing what the French did two and a half centuries ago. Among the improvements at Strassburg, he notes the destruction of the old city walls, which were too confining and made the town unhealthy, and the building of new suburbs and handsome promenades. Great pains especially have been taken with the university. Its library in ten years has grown from nothing to half-a-million; rich endowments attract learned professors from all parts of Germany; it is one of the three or four scientific centres of the Empire. Great efforts are made to attract young Alsatians into the army and the public offices. Those who will consent to give up their French leanings—to desert, as their countrymen think it—are sure of advancement; but they lose a country in getting a career. Their old friends leave them alone with the German colony. M. *** tells a story of a young German upon whom invitations and attentions of all sorts were showered by the Governor and his wife, to his great surprise, till it was discovered that he was not an Alsatian, when they suddenly ceased.

From Alsace M. *** went to Bayreuth, where he found few external indications of the Wagner festival, except the booksellers' windows filled with Wagnerian and anti Wagnerian pamphlets, scores of the opera, and busts and photographs of the composer; some windows where Wagner cravats were for sale; and in one place a flaming advertisement of "liqueur Klingsor"—Hochheimer rebaptized in honor of the sorcerer in "Parsifal." Of the spectators at the representation, he notes that the majority were of the German middle class on their vacation journeys—few French, no English. While waiting for the overture to begin, the public cast a last glance over the book of the opera, watched the notabilities enter, enjoyed the magnificent panorama of the city and the pleasing undulations of the neighboring country, or, less poetically, drained a final beer-glass; for the representation lasts from four o'clock till ten, with only two intermissions of forty minutes—hardly enough to supply a Bavarian with beer and sausages. M. *** objects to the narrow and uncomfortable seats, but likes the concealment of the orchestra, because it was first suggested by Grétry. The music, now loud, now soft, coming one does not know whence, has a mysterious effect which is very agreeable. The musicians like it, too, for they can play in their shirt-sleeves, and in "Parsifal" their task is long and (physically) fatiguing. The concentration of light upon the stage alone is well enough in a theatre to which one certainly does not go for amusement, but it would never do in an ordinary opera-house, where the ladies in the stalls and boxes are, and wish to be, as much a part of the show as the salaried actresses on the stage. Offenbach once said to M. ***: "La musique, c'est une algèbre"; and this definition, he thinks, applies to "Parsifal" and the Nibelungen. He speaks of Wagner's "charlatanisme indéniable," but, being unable to deny his success and popularity, he ventures on the following amusing explanation: "The success of these plays, I believe, is due to three principal causes: the excellence of the *mise-en-scène* and the execution, the exaltation of the national sentiment of the Germans, and the mystico-metaphysical tendency of their minds."

M. *** found the railway stalls well supplied with the worst French pornographic literature—the works of Zola, Huysmans, Vast-Ricouard, Belot, and the like. He thought he understood why, when he tried to read some specimens of the more serious part of recent German literature. Not caring to fall back upon 'L'Assommoir,' he was fortunate enough to get into conversation during his ride with a Prussian general "of fine presence, red face, gray moustache, exquisite manners, irreproachable uniform," a conservative after Bismarck's own heart. The General blamed the thirst for enjoyment and the poison of *Aufklärung* as the cause of popular discontent and Socialist agitation. "We must revive the religious sentiment, and recall our primitive simplicity. The Liberals are all rascals or fools who hamper the beneficent work of the Chancellor." On foreign politics he detested the Russians. He was not afraid of them, but he apprehended commissariat difficulties in case of a war. As to the English, he agreed with the *Kölnische Zeitung* in characterizing their conduct as "a harmonious mixture of cowardice and stupidity."

"England will be punished, and that before long, for her piracies and her violations of the law of nations" (M. *** thought of Schleswig-Holstein and Alsace Lorraine). "Her ruin will come from her sin. She unchained revolution in Italy and in Poland. Foreigners will help the Irish revolt against her; India will shake off her yoke; the Zulus will invade the Cape," and so on.

The General's opinions about the German army were more worthy of attention. He professed himself well satisfied with the volunteers for a year. About 12,000 are accepted annually (France's annual contingent is 6,000). Formerly the preliminary examination was easy; now it is so severe that it is easier to spend two or three years at a Realschule. The volunteer service, therefore, has been a powerful stimulant to the cause of secondary education. The volunteers are usually considered model soldiers, and furnish excellent officers for the reserve or the Landwehr. They are well treated; they live in the cities, if their conduct is satisfactory, and they can continue their studies. After the first six weeks they are exempt from police duty and the care of their arms and horses—that is, they can hire a man to take this off their shoulders, becoming responsible for him. The non-commissioned officers are mostly reënlisted men. The German Government gives no bounty, as the French does, for reënlistment, and only a very slight increase of pay; and yet, while France can hardly induce any to prolong their service, Germany has no difficulty. The reason is that in Germany, after twelve years' service, they are sure of good employment on railways or as telegraphists, custom-house officers, policemen; all such places being filled exclusively from the army. The Government undertakes to give such a position to all non-commissioned officers with whose conduct it is content. Of course this is a powerful incentive to good service. The men are allowed a certain part of each day to study their future work, so that they shall be ready to take it up as soon as they leave the army. M. *** did not learn from the General, but from some other source, that the higher officers were many of them very unpopular with their men, and that it was not uncommon for several to be found dead after the sham fights, struck in the back by some unknown ball, which of course was represented to the public as an accident.

M. *** found Frankfort proud of its sumptuous Bourse, which it has built just as its commercial activity is slipping away from it to Berlin, and Cologne still prouder of its completed cathedral. He thinks the regular geometrical design of the towers far inferior to the freedom and variety of the other details of the building, and declares that they correspond well with the spirit of modern Germany—Marguerite, after all her golden dreams, quietly marrying Corporal Müller, 2d Regiment Pomeranian Fusiliers.

THE CITY OF LONDON SCHOOL.

CONWAY, WALES, September 6, 1882.

IT was quite as much the reputation of the head master, the Rev. Edwin A. Abbott, as the fame of the school itself which led me to Milk Street, off Cheapside, in the heart of the city, to witness the annual distribution of the prizes at the "City of London School." There had been some mistake about cards, and for a moment it seemed as if we should not gain an admittance; but that ready courtesy with which the English, especially in London, respond to any intelligent interest in the things which are their pride, made all smooth, and we soon found ourselves on the upper bench of a semicircular hall or theatre. Deep down below us within a small railed space were seats for the dignitaries, in front of a table heaped with shining new books and glittering medals. There were hardly seats for five hundred, while there are more than six hundred scholars, so the audience was limited to the friends of the boys receiving prizes. Promptly, at the hour, appeared the head master, in all the dignity of his Oxford gown and hood, followed by the Aldermen's Committee, each with staff in hand, as escort to the Lord Mayor. His Honor was arrayed in the full glory of scarlet and sables, set off with lace ruffles and gold chains, and accompanied by the Sheriff of London, a personage only less splendid than himself.

The programme on such an occasion follows an ancient custom, and is made up, after the address of the head master, of five declamations—Latin, English, Greek, German, and French—"in praise of the Founder, John Carpenter." This honored personage was "town clerk" of London in 1417 ("Stadtsschreiber," as the German orator called him). He left a small estate to the City for a school for poor children. Nothing much came of it, except in the sense that a venerable historical tradition is always a great thing, until about fifty years ago this endowment was one of the first to receive that rehabilitation by which so many of the old charities in England have been so wonderfully renewed and increased in efficiency during this century. The uneventful career of a "town clerk" supplies little material for eloquence, so that the boys must usually have rather a hard time with a threadbare subject, but this year's set were in luck, for the school is to be removed in December next to a magnificent new building and playgrounds on the Embankment near Blackfriars Bridge ("sur les bords de notre grand fleuve près de cette relique de l'Égypte," said the French orator). So each one rang the changes upon the memories of the old and the hopes of the new, after Dr. Abbott had announced in his opening address, "We meet here to-day for the last time"—whereat was a little sensation in the audience, as if there had been hopes deferred. "Yes," he repeated, "positively the *last* time that we shall conduct His Honor the Lord Mayor through devious and subterraneous passages to emerge into an apology for daylight and to breathe a substitute for air." Apparently every one now wonders how they managed to stay so long in such crowded quarters. It was either a very good or a very bad specimen of a London day, for though there were plenty of large windows, the gas was lighted at 2 P. M., after the Doctor had asked the next boy to step up for his prize without being called, as he could not see to read his name.

The general drift of the school is toward commercial life, as becomes a pet of the City of London, but its work is very carefully kept up to the rank of the great schools like Winchester and Rugby, and its scholars have taken high rank at the Universities. This year two of them were wranglers at Cambridge. One of them has gained a fellowship at King's, London, and another a fellowship at New College, Oxford. It is a very good illustration of the opportunities open in England, that the boy who spoke the French declamation has just obtained a scholarship at Wadham College, Oxford, of £80 a year for five years, and the English speaker has gained one of the same value for five years at Trinity College, Oxford.

There were about three hundred names upon the list for prizes, great and small, and from the list one could learn something of the benefactors as well as of the boys. There are also something like sixty special prizes given in the spring for proficiency in the English language and in the study of Shakspere. The present list covers all the other studies. The scholarships, which are the highest prizes, show curious and interesting juxtapositions. The Beaufoy, the Travers, and the Mortimer stand side by side with the Sir Albert David Sassoon and the Jews' Commemoration; the Sir David Salomons and the Lionel Rothschild, with the Grocers' Exhibition and the scholarships of the Sadlers' Guild and the Fishmongers'. Sir James Shaw's Classical Prize is followed by Mr. Alderman Hale's Medal for Arithmetic; and Mr. Alderman Knight's Gold Pen (Commercial Prize), by the Worshipful Company of Turners' Medal for Mechanical Drawing. Robert Seymour Conway was Captain of the school this year and Carpenter Scholar, while Simeon Moses was Sir William Tite scholar, Lionel Rothschild scholar, Sassoon Sanskrit Exhibitioner, and the future scholar of Trinity, Oxford. It reads curiously in the list of recent university honors, that the late Fishmongers' scholar has gained the first Jeremie Prize for knowledge of the Septuagint at Cambridge, another Fishmongers' scholar is placed alone in the first class for Jurisprudence at Oxford, and the Grocers' scholar is in the fourth class in the Final Classical Schools at Oxford.

The tuition, ten guineas a year, is very low indeed in proportion to the excellence of the school, so that boys come as day-scholars from all parts of London, and a considerable number board in the families of the masters. The lady next me pointed with fond pride to her own little lad of thirteen, as he appeared a second time for a prize, and said that he came in from Clapham every day. The Lord Mayor distributed the prizes as each boy was called in. Many of them came more than once, and there were sounds of hearty applause from the boys who were waiting in the passages outside. It was pleasant to hear that the best of it seemed to be given equally to a very little boy who received a good-conduct prize, and to the Simeon Moses already mentioned, when he carried out his seventh and last prize. It was a place to accept without dissent the established order of things, but it was impossible not to recall the question of an eminent German after a similar scene: "Can this be the way that English boys are taught that England expects every man to do his duty?"

The form of procedure in all such gatherings here is that of a public meeting, with Chairman, etc.; so, when the last book had disappeared, Sir John Bennet (a famous clock-maker, I was told) rose to move, on behalf of the Aldermen's Committee, a vote of thanks to the head master and his assistants for their work, etc. Sir John is "the City man made perfect," a capital specimen of the hale and hearty type of Englishman. His ruddy face, bluff manner, and sonorous voice gave a solid emphasis to his advice to parents. "In these days mind is money, mind is future preëminence. You take care of the boys' bodies—give them good rump-steaks, and we will take care of their minds." He read his resolution and laid it down on the table before the Lord Mayor with a good, hearty thump, which the audience echoed with vigorous applause. Dr. Abbott responded, saying: "The Corporation of London has already thanked us for our work. The new Schoolhouse on the Thames Embankment is a vote of thanks from the Corporation, written in stone." Then somebody rose to move thanks to the Lord Mayor for his gracious presence, etc., and somebody else was to be thanked for something, and so on. But we slipped out and found the dingy entrance-hall illumined with the gold lace, the white stockings, and the white plumes of the eight magnificent footmen attending upon the Lord Mayor and the Sheriff. Outside, the more than dingy street was resplendent with their gorgeous gilt coaches and superb horses, while about them a crowd of eager urchins stood agape, in whose ears something was whispering: "Turn again, Whittington," or whatever may be its nineteenth-century equivalent.

M.

RECENT REFORMS IN THE ENGLISH UNIVERSITIES.

LONDON, October 15, 1882.

OUR English universities—that is to say, those two oldest and greatest of them which are so much the most important that we scarcely regard the others—have just been passing through one of their periodical processes of reform. It may interest American readers to learn how this is done, and not the less so because no corresponding process seems to pass upon the universities of America. Oxford and Cambridge hold a position unlike that of any other seats of learning on either side of the Atlantic. They are neither state establishments, like the University of France, or the universities of Germany, or some of the universities in your Western States; nor, on the other hand, do they go on their way wholly untouched by the State, as is the case with Harvard and Yale, Princeton and Cornell. They are, it is true, independent corporations, which grew up of themselves in remote ages—Oxford in the twelfth, Cambridge in the thirteenth century; they govern themselves—no Minister of Public Instruction has anything to do with them. But Parliament claims, and has repeatedly exercised, the right of stepping in from time to time to deal with them, to give them new constitutions—highly complicated ones—to abolish many of their existing arrangements, and prescribe new modes of applying the enormous revenues which they possess. When this has been done, they are again started to walk alone, and go forward legislating for themselves in their miniature parliaments until such time as the state thinks fit once more to interfere. This is done in pursuance not so much of any legal theory as to their dependence on the state (for, on the contrary, they are held to be in law ordinary lay corporations, not dependent on the Established Church) as on the ground of their great public importance, and because they are technically charitable foundations, enjoying large endowments of ancient date. Just in the same way the state exercises the right of legislating for the endowed schools of the country, and of thereby altering the destination which the founders have impressed on those endowments.

When it is thought necessary for Parliament to interfere with the universities, the course usually followed is to appoint a commission for the purpose. If the object is to inquire into the existing arrangements, and see how far they are working well, the commission is appointed by the Crown—that is, by the Ministry of the day. It has then no compulsory powers, and can, in point of law, do nothing more than invite people to give evidence, but practically this is found sufficient; even those persons or corporations which have most to conceal do not like to refuse, because this would fix suspicion on them, and they would ultimately be compelled, by some further action, to make disclosure. When, however, it is not inquiry, but legislation—a reorganization of the institution—that is sought, a Parliamentary Commission is appointed. For this purpose an act of Parliament is passed naming the commissioners, setting forth their powers, directing them to do certain things, and declaring that whatever statutes or ordinances they may frame shall, after the lapse of a certain time, after being laid on the table of both Houses of Parliament for a certain period, and after being approved by the Queen in Council, have the force of law as much as if they had been embodied in the Act itself. The advantage of this method is that it enables very complicated matters, which Parliament has neither the time nor the special knowledge to deal with, to be despatched by a body of persons chosen for the particular purpose, and presumably chosen on account of their special knowledge and general fitness for the work. The drawback to it is that these persons are sometimes ill-chosen, and, either from want of judgment or from timidity, show themselves unequal to the task, and produce a feeble, or even mischievous, reorganization, which leaves things no better than they were. We have always a certain number of such commissions sitting. Several that were originally temporary, like the Charity Commission, the Copyhold Commission, and the Ecclesiastical Commission, have now become permanent sub-departments of government. But the majority are temporary. Their powers are limited to expire in two, three, or four years; the members are unpaid, but they have a paid secretary, and may employ clerks and other officers. Most of them are only directed to inquire and report; but occasionally, as has been said above, they are empowered to legislate.

It was to a commission of this latter kind that the work of reforming the universities and colleges of Oxford and Cambridge was intrusted. There had previously been a Commission of Inquiry to ascertain the amount and modes of applying their revenues, which had presented its report, and on the basis of that report the new commission was to proceed. The act appointing it was passed in 1877. Two separate commissions were named, each of seven members. The Oxford one was presided over by Lord Selborne, one of our greatest lawyers, himself highly distinguished at Oxford fifty years ago; the Cambridge one by Lord Chief-Justice Cockburn. Before the work was completed, Lord Selborne became Lord Chancellor, and Chief-Justice Cockburn died, and their places were filled by new members named by the Crown. Both commissions, but especially the Oxford one, showed the fault which is so common in England of choosing for all sorts of important work not the men who are really best qualified for it, but men who have become eminent by success in some walk of public life. When a commission has to be created, the Minister looks about among the people he meets and the people who enjoy political influence: he takes a bishop from one party and a judge from the other; he throws in a peer or two, a respectable member of the House of Commons, a retired official, and then at last adds one or two persons only who possess any practical acquaintance with the subject. If this does not produce a really able and competent board, it has the advantage of producing one whose conclusions carry a certain weight, because the men's names are known, and as some of them, being members of one or other House of Parliament, are on the spot to defend their views or action, the Minister is in so far helped and his responsibility lessened.

After more than four years of pretty steady work, these two Commissions had prepared a large number of statutes, the one for Oxford University and its colleges, the other for Cambridge University and its colleges. These statutes were duly laid before Parliament, and, although opposition was threatened in the House of Commons, and actually raised, as respects one Oxford statute, in the House of Lords all passed scathless, were approved by the Queen, and are now law. The principal change they have made, and the one received with most general favor, has been the abolition of the restrictions which limited the headships of nearly all the colleges, and a good many of the fellowships, to clergymen of the Church of England. Thus the process of desectarianizing the universities which began in 1854 has been virtually completed. Up till the University Reform Act of that year, every one who matriculated or took any degree at Oxford (Cambridge was somewhat more free) was obliged to sign the Thirty-nine Articles. A further step was taken in 1871, when the Act of Uniformity, so far as it affected the fellowships and professorships, was repealed, and the requirement of signing the Articles hitherto required for the higher degrees abolished. Now that clerical fellowships are gone, the Established Church has practically no advantage over Nonconformists in the universities, except that she still retains the faculty of theology, and that the service used in all the college chapels and in the University church is the Anglican. So marked has been the progress of opinion in these matters, that, although these two Commissions were appointed by a Tory Government, and the statutes they framed might have been rejected by the Tory House of Lords, no serious resistance was made to this reform, which forty years ago no one would have dreamt of. Even fifteen years ago, hardly any Nonconformists came as undergraduates to Oxford, and very few to Cambridge. Now they come in large and increasing numbers, have obtained fellowships and professorships, have founded Nonconformist associations, and enjoy full legal equality with members of the hitherto privileged Church. That Church, however, still retains a social ascendancy, and probably rather gains than loses by the coming in of the Dissenters; for young men belonging to the Nonconforming bodies are apt to be drawn into the Anglican communion, while such losses as the latter experiences are not due to the Nonconformists, but arise from the prevalence of scepticism in theological matters. There is, however, nothing to show that scepticism has increased in the universities; it is possibly a little less concealed than it was in the old days of strict tests, when everybody signed the Thirty-nine Articles whether he believed them or not, but it does not seem to be any more really influential.

The other changes which the Commissioners have introduced at Oxford and Cambridge could hardly be set forth without a long explanation of the very peculiar and intricate system of university and college teaching and government which prevails there. Opinion is a good deal divided about them, but the general feeling, especially at Oxford—which is always more unquiet and "viewy" than Cambridge—is one of disappointment. The main defects of both universities, it is said, remain uncured. Although Oxford and Cambridge are by far the best-endowed educational establishments in the world, having each of them a revenue from fixed property (without counting the fees paid by the students) of at least $1,000,000 a year, they are too costly for the middle and lower classes. The vast majority of those who come to them belong socially to the upper classes, although a good many of these, and especially the sons of the Anglican clergy, are by no means rich. Very few children of shopkeepers or of the minor professional men, such as country doctors or attorneys, come. They could not afford it, because board and education there cost for the six months of the academical year—the other six months being vacation—from $600 to $1,000, or for the whole course of three years (for the ordinary degree), or four years (for the degree with honors), from $1,800 to $4,000. It is true that the scholarships are open to competition, but they are usually obtained by those who have been taught at the best and most expensive schools, so that the children of poor parents are not greatly helped. People complain that the Commissioners ought to have grappled more boldly with this evil, ought to have somehow provided that these immense endowments, most of which were originally given to help poor and deserving students, should cheapen education for persons of that class.

It is also felt that both universities fall far short in the teaching they provide of what may be expected from such famous and wealthy establishments—far short, indeed, of what is offered in the less-wealthy universities of Germany. There are many subjects for which no professor exists. The professors are not well paid, considering how highly other kinds of intellectual work are paid in England, and how expensive living has become. As they are paid by fixed salaries, they want one powerful motive for exertion. As the bulk of the teaching is done by college tutors and college lecturers, they are not even sure of getting a good class, for nobody is obliged to come to their lectures. If the universities were to make it their main business to provide at a low figure first-rate teaching by the best men in all subjects, they might double the number of their students and their usefulness to the country. They might draw far more largely not only on the middle classes of England itself, but on the colonies and the United States, from which already a good many students come, attracted chiefly by the charm of the college life. There seems to be some truth in these complaints. At the same time, any one who compares Oxford and Cambridge now with what they were sixty or seventy years ago will find no reason to despair of their future. They influence the intellectual and moral life of the nation probably more powerfully, and certainly more beneficially, now than they did then. And whatever charges may be brought against their teaching, the social and intellectual life of the students is no doubt far superior to that of the German universities. It is not only very easy and pleasant, in the better colleges, teachers and students meeting one another almost on equal terms, but it is very stimulating, and possibly does as much for a man's mind as the regular instruction he receives. Y.

THE FRENCH ASPIRANTS FOR QUEEN ELIZABETH.

PARIS, Sept. 28.

M. DE LA FERRIÈRE has given us the letters of Catherine de Médicis—a great work not yet finished. He has also published a number of interesting letters of the sixteenth century, the result of a special mission to St. Petersburg, where the Imperial Library is very rich in historical documents. He has now published a minor work under the title of 'Les Projets de mariage d'Élizabeth d'Angleterre.' This is certainly an interesting subject; and by his familiarity with the Valois and their Court, M. de la Ferrière was particularly fitted for the undertaking. He regards Elizabeth from a French point of view, and thus gives a new interest to a subject which is familiar to all English readers. It is needless to describe Elizabeth as she was in her youth; we can only say with the Venetian ambassador, who saw her when she was twenty-three: "She is of an admirable mind, and well showed it during the life of Mary Tudor, when she knew so well how to govern herself in the midst of the suspicions of which she was the object, and of the dangers which surrounded her. Her fine and penetrating judgment, her profound application, her haughty and adroit character, her active ambition, mark her for the part of a great Queen." A month after the beginning of her reign, the Ambassador of Spain wrote to Philip II.: "She orders and does as she pleases, as absolutely as Henry VIII., her father."

The list of aspirants is very long. She had refused the Duke of Savoy in the reign of Mary Tudor: Philip II. had had secret meetings with her while he was in England, and she afterward told the French Ambassador, M. de la Mothe-Fénelon, that she had refused him on a scruple of conscience, as she was not willing to marry her brother-in-law. She refused the Kings of Sweden and of Denmark; she coquetted for years with Charles, the youngest son of the Emperor Ferdinand. The most brilliant of her suitors was Jacques of Savoy, Duke of Nemours. Elizabeth felt much curiosity on the subject of this Prince, who was very much admired at the French Court. Nemours sent one of his gentlemen, Lignerolles, to London, who brought an encouraging answer. Nemours was already on the point of going to England when, says Brantôme, the journey "se rompit et demeura court."

The Prince of Condé thought first of a marriage between Elizabeth and Charles IX., Charles being only fourteen years old, and Elizabeth already more than thirty. Condé spoke of the subject to Smith, the English Ambassador, who objected the difference of ages. A few months afterward, when peace was signed with England after the retaking of Havre, Catherine de Médicis adopted, or seemed to adopt, Condé's project. She probably wished to separate Elizabeth from the French Protestants, who looked upon the Queen of England as a natural ally. She made overtures to Smith, choosing as negotiator in this affair of the marriage of Charles IX. Paul de Foix. The despatches of this Ambassador are preserved at the National Library. Elizabeth received him, and he read her a letter from Catherine, in which she said that she should be very happy if Elizabeth would marry her son. Elizabeth changed color several times, then, thanking the Queen-Mother for the honor she offered her, she regretted that she was not ten years younger. She was afraid of so great a difference; the young King might soon leave her, as Philip had left Mary, and she would rather die than be despised and abandoned. On the side of her subjects she had nothing to fear; but they would prefer to see her marry an Englishman. In England, she would only marry Arundel; but they were as far from each other as the East and the West. As for Leicester, she had much esteem for him, but she could not marry him.

Paul de Foix asked her to keep the proposal a secret. She replied that she had learnt to be secretive under Mary. She first consulted Cecil, who made some objections touching the question of the succession. He saw no advantages in the marriage, only dangers. Elizabeth sent for Paul de Foix. She told him that she had kept the project secret, but that she respected the judgment of Cecil, and proposed an interview between him and the French Ambassador, which was, of course, accepted. Meanwhile, she told the whole story to Guzman de Silva, the Spanish Ambassador. Silva reproached her for having refused the Spanish Prince.

"At that time," said Elizabeth, "I had no thought of marrying, and, even now, if I only could name a successor, I would not marry, having no inclination that way; but my subjects press me so much that I shall not be able to refuse. A woman who is not married is exposed to the talk of the world; people suppose that she has imperfections or bad motives. People said that I did not marry because I was attached to Lord Leicester, and that I could not marry him because he had a wife. Now he is a widower, and I do not marry him. God knows my thought and my soul; but, after all, if I married the King of France, what should you think of it? That the way is neither good nor short, and that even in a broad way there are dangerous passes."

This was almost threatening; it was the time when Catherine de Médicis was arriving at Bayonne and had her meeting with the Duke of Alba. Elizabeth detained Paul de Foix a long while, treating him with the greatest honors. She wished to gain time; so did Catherine de Médicis. Catherine suddenly turned round after the interview at Bayonne, and instructed Foix to abandon the project of her son's marriage and to forward the ambitious schemes of Leicester. Her only desire was to prevent the marriage of Elizabeth with the German Archduke. Paul de Foix was much embarrassed, but he obeyed his instructions, and told the Queen that perhaps she would do well to choose an English lord. To speak of an Englishman was to speak of Leicester, the great favorite, the man who was determined not to allow Elizabeth to marry anybody but himself. Elizabeth seemed not much surprised; she answered in her usual evasive style, making objections after objections, in order to see how they would be answered. Leicester now became very bold; he asked the Queen to marry him at Christmas-time. She gave her promise, and when the time came she asked for a delay, saying that she was awaiting a letter from Catherine de Médicis. After a while the influence of Cecil became again predominant. He wrote to Leicester, and, making an appeal to his patriotism, asked him to sacrifice his ambition to the good of the country. Elizabeth was thrown into new hesitations when, in the midst of a ball at Greenwich, she heard the news that Mary Stuart had been confined, on the 19th of June, 1566, and had become the mother of James. The dance ceased at once; everybody went away. Elizabeth remained with her ladies of honor, and uttered the well-known words: "The Queen of Scotland has a fine son, and I am a barren stock."

Paul de Foix was heartily sick of his embassy, and asked to return to France. He was replaced by La Forest, and the latter, *ad interim*, by his own nephew, who had a very extraordinary conversation with Elizabeth's doctor. The doctor bade him "pay no attention to what the Queen says about herself; she speaks according to her desire to marry or not to marry. If your King marries her, I will answer for ten children. Nobody understands her better than I do. If you like, you and I will conduct this affair secretly. Your King is young, accustomed to travelling; he can come over from Boulogne to see this fine lady" (National Library: Fonds Clairambault, No. 355). La Forest soon came himself. He understood at once that Elizabeth's doctor had only played a part in a comedy; he saw that Elizabeth kept aspirants in all countries merely to help her politics. She was so vain that she felt convinced that in the last analysis she could always get whomever she chose.

The difficulty was with Parliament. Elizabeth knew that the majority of the Lords looked on Mary Stuart as her successor, and the majority of the Commons on Catherine Grey, who was married to the Count of Hertford. The question of the marriage of Elizabeth and of the succession was in the minds of everybody. Elizabeth became angry; she saw Norfolk, and accused him of treason; she insulted Pembroke; she was brutal toward Northampton, and even with Leicester. She received very haughtily the address of Parliament, and, having prorogued it on the 5th of January, 1567, she found herself free again. Meanwhile she had seen Castelnau de Mauvissière, and, having spoken to him of Charles IX., she said: "Your King is too great and too small."

After a lapse of five years, which in France were filled with the wars of religion, a new project of marriage was formed for Elizabeth: Cardinal Châtillon and the Vidame of Chartres thought of the Duke of Anjou. The Duke was twenty years old, Elizabeth thirty-seven. Guido Cavalcanti, one of the friends of Catherine de Médicis, took part in this new negotiation, which was openly conducted by Lamothe-Fene-

lon, the French Ambassador. Walsingham, in his letters to Leicester, thus describes the Duke of Anjou:

"He is taller than I by two fingers, a little pale, well made, with long, slender, and well-proportioned legs. If what one sees not is as well as what one sees, he is tolerably healthy. He looks proud at first; but as soon as one speaks to him, one finds him more courteous and of better humor than his brothers. . . . The Queen Mother loves him as much as all her other children together."

Anjou had had a brilliant début, having gained two battles; but he soon became very effeminate. He wore jewels, pearls, feathers; he spent immense sums on his dress. Elizabeth conducted this new negotiation as she had done the first: she was probably never in earnest, and merely wished to amuse the French Court. Catherine, on her side, who was called the mother of kings, wished to give Anjou the Crown of Poland; she had the Duc d'Alençon in reserve for the Crown of England. Alençon had nothing but "guerre et tempête dans son cerveau," to use his mother's expression. He was a born agitator, conspirator—reckless, uneasy, incapable of repose. His life was a succession of frivolous and ambitious attempts. The disproportion between his age and that of Elizabeth was such that the idea of a marriage between him and the Queen of England seemed a perfect absurdity. The history of this third negotiation fills the second part of the volume of M. de la Ferrière. It is extremely interesting, and rests upon the best documents—the letters and negotiations of Walsingham, the state papers of the Record Office, the diplomatic correspondence of Lamothe-Fénelon. Elizabeth had a fixed idea in her head: she wanted Calais to be the wedding present of the French Prince. Nothing could be more dramatic than the death of Charles IX. at the age of twenty-four; the return of the Duke of Anjou, who had become Henri III.; the expedition of the Duc d'Alençon to Flanders. The memoirs of Marguerite of Navarre, who was very intimate with Alençon, are a very important document for those troubled times. Alençon spent his life in useless intrigues; he betrayed his friends; he seems to have been possessed with an evil spirit. It is impossible that Queen Elizabeth should have ever seriously thought of marrying such a frivolous and mischievous Prince, though she had evidently some sympathy for him. When he died, Elizabeth wrote to Catherine this strong letter: "Madame, your regret cannot be greater than mine, though you were his mother. You have another child, but I find no consolation but death, which soon, I hope, will unite me with him. If you could look into my heart, you would see a body without a soul." We must not take all this too much *à la lettre*. The style of the sixteenth century was very emphatic, and the sentiments of Elizabeth of England could not be expressed as they were really felt. Each century has its peculiar way of lying; in the sixteenth century everything always tended to an almost absurd exaggeration.

Correspondence.

"ERRORS OF THE CENSUS."

To the Editor of The Nation:

Sir: General Walker's defence to the criticisms directed against the accuracy of the Population volume of the Census is, that mistakes in the tables attacked are of little moment, inasmuch as those tables purport to be only approximate, and that in any event the errors dwelt upon are in themselves small. Whether this defence is applicable to some of the inaccuracies pointed out, will be left to the judgment of those who have read the letters upon the "Errors of the Census." It may be interesting, however, to hear General Walker's opinion upon the value of such a defence. In his report upon the Ninth Census (vol. on Population and Vital Statistics, pp. xxiii.-xxiv.), he says:

"Every error that occurs in the census of a country, or in any statistical work whatever, is to be regretted as an independent evil, hardly less where it balances another error than when it exaggerates the amount of error already existing. Two wrongs no more make a right in mathematics than in morals; and a falsehood in figures is none the more to be tolerated or excused because it may serve to conceal another falsehood."

In his interview of December 16, 1878, with a Congressional committee (Senate Miscellaneous, 1878-79, vol. xxvi., p. 15), he uses the following language: "It is exceedingly undesirable to bring anything into the Census which is not thoroughly trustworthy. Such material always does more than discredit the work: it accomplishes a great deal of positive harm." After stating that he had branded some of the results of the Census of 1870 as untrustworthy, he adds: "Yet even so, people will be misled by bad statistics. Those who have a purpose to serve, or proposition to prove, will use such figures in spite of any brand that may be put upon them."

Respectfully, John C. Rose.

Baltimore, Md., Oct. 21, 1882.

POLITICS IN NEW YORK CITY.

To the Editor of The Nation:

Sir: Will you allow an outsider to reply, from a somewhat different point of view, to the inquiries of an "Old Reader" and a "Constant Reader of the *Nation*"? It is one of the most constant teachings of history, from the earliest to the latest times, that the disciplined few, in strict subordination to strong individual leadership, can always triumph with ease over many times their number of those to whom such organization is wanting. That which happened with Cæsar's legions in Gaul, with Cortes and Pizarro in Mexico, and with Clive in India, has taken place in New York under Tweed and his successors. The respectable classes love to deal in checks and balances, are always running to the Legislature for commissions to do this, that, and the other thing, or exhaust themselves in frantic but spasmodic efforts to get good men to work a thoroughly bad system. The result is that while they may occasionally and temporarily stop a leak, they effect nothing permanent, and matters soon fall back to a worse state than before. Meantime their opponents, the Tweeds—I use the name typically, and the list of given names which you delight to rehearse in true Homeric fashion has a deep significance—organize their followers by "captains of fifties, and captains of hundreds," enforce unquestioning obedience as the price of plunder, take possession of the primaries, and the polls, and the sources of revenue, and laugh to scorn the faltering tactics of their victims.

I understand that the city of Brooklyn has adopted an arrangement by which the Mayor has the absolute power of appointment and removal of all executive officials without confirmation by anybody. If this is so, it may be the beginning of an extensive and beneficent revolution throughout the country. If the citizens of New York would bend their efforts to procuring a charter in which the Mayor had the absolute government of the city for a year, with power to appoint and remove every subordinate, and with no boards or commissions, but individual action everywhere; in which the aldermen, or council, or whatever the legislative body may be called, should have the right and the duty of criticising every act or plan of administration, and the power of granting or refusing money, but no power of interference in any way, so that the people at the end of the year, with a full understanding of the subject, should be called on to decide, not what is the best mode of cleaning the streets or managing the fire department, but whether they wish to have "Hon. John Smith" for their ruler for another year—then the mass of honest voters would begin to have their fair share of influence at the polls and in the primaries.

The respectable classes will not do this, because, under "the theory of our institutions," they have a morbid dread of one-man power, not seeing that one-man responsibility contains much more of security and protection than one-man power does of danger. But they can be sure of one thing, that they will have the one-man power, whether they like it or not, the only question being whether they prefer that of Hon. John Smith aforesaid, one of their own number, whom they can hold to responsibility, or that of "Barney" and "Mike," who are responsible only to themselves.

Please observe that I am not now urging any practical course in politics, but replying to some speculative inquiries of your correspondents.

G. B.

Boston, October 16, 1882.

D'AZEGLIO'S 'REMINISCENCES.'

To the Editor of The Nation:

Sir: The letter of Bersot, given among the "Notes" of the last number of the *Nation*, recalled to me the description of Roman society under the Papal régime, by D'Azeglio, in his delightful autobiography, entitled 'I Miei Ricordi.' Has that book been translated into English? If not, it would be well worth that honor. It certainly is one of the most instructive and entertaining books to read, alike for the lover of art and for him who feels interested in the latest history of the Peninsula, in the "evolution of the kingdom of Italy."—Yours respectfully,

J. J. Schobinger.

Chicago, Oct. 21, 1882.

[A translation, 'My Recollections,' appeared in London in two volumes in 1868.—Ed. Nation.]

ENGLISH VERSIONS OF THE "DE REPUBLICA."

To the Editor of The Nation:

Sir: I should like to add a brief note to your own, of August 10, 1882, p. 113, correcting Mr. Quaritch's error in stating that "the Latin text [of Cicero de Republica] has never yet been published by the English press." The "Latin text" of the London reprint of Cardinal Mai's edition was reprinted in Boston, by O. Everett, in 1823, the same year in which it appeared in London. The title-page styles it "Editio prima Americana"; but I do not think there has ever been a subsequent one. If Mr. Quaritch had taken the trouble to look into Lowndes, he might have found that another edition was published in London, in 1853.

The work itself was first translated into English by an American, Mr. George W. Featherstonhaugh, as early as 1829. It was published in New York by G. & C. Carvill, accompanied by a brief critical and historical introduction, and was dedicated to Sir Roderick I. Murchison. There is an amusing instance of professional or national jealousy to be seen in the remark of Mr. Francis Barham, whose translation was pub-

lished in London, in 1841, that "the work has also been translated at New York, in the United States, 1829, if we may trust the 'Cyclopædia Americana,' by Mr. Featherstonhaugh." Now, as the 'Encyclopædia Americana' merely states that "the work has also been translated in the United States" (New York, 1829), without mentioning the translator's name, it seems highly probable that Mr. Barham had Mr. Featherstonhaugh's labors before his eyes, and possibly may have availed himself of them. But "the gods are just," and the same fate has befallen him at the hands of Mr. Yonge, in Bohn's Classical Library.

I have never seen these facts stated in any bibliography of Cicero's writings, and as they are to the credit of American letters, I trust they may find a place in the new translation announced by Mr. Quaritch.

Very truly yours,
HENRY W. HAYNES.

BOSTON, October 17, 1882.

Notes.

J. B. LIPPINCOTT & Co. have in press 'The Princess and Curdie,' a juvenile story by George MacDonald; a 'Life of Sir Wm. Rowan Hamilton,' by Robert Perceval Graves; 'The Subjection of Hamlet,' by William Leighton; 'An Epitome of Modern Literature,' by Mrs. F. C. Henderson; and 'The New Arabian Nights,' translated by W. F. Kirby.

'Moravian Missions,' by the Rev. A. C. Thompson, D. D.; 'In the Desert'—a journey in the track of the Israelites—by the Rev. Henry M. Field, D. D.; and 'The Book of Forty Puddings,' by Susan Anna Brown; are among the fall announcements of Charles Scribner's Sons.

Vol. ii. of Lalor's 'Cyclopædia of Political Science, Political Economy, and of the Political History of the United States,' is announced to appear in December. The publication of the work, we learn, has, with the consent of Mr. Lalor, been transferred from Rand, McNally & Co. to the new firm of Melbert B. Cary & Co., of Chicago; but the present volume will, like the preceding, be manufactured by the former house.

L. R. Hamersly & Co., Philadelphia, have nearly ready 'A Chronological History of the Origin and Development of Steam Navigation, 1543–1882,' in one volume, by Rear-Admiral George H. Preble.

We have received the second annual list of prizes, 190 in number, aggregating nearly $1,000, for pencil drawings made with Dixon's American graphite pencils by pupils of primary, grammar, high, normal, and art schools. These must be sent, duly certified, to the Joseph Dixon Crucible Co., at Jersey City, N. J., on or before June 1, 1883. The circular specifies the kinds of drawing for each group of competitors.

Miss Hewins, in the current number of her Hartford Library Association *Bulletin*, gives a list of works on English and American history for children; it will be a sure preventive of idleness.

Much the fullest account that we have yet seen of the late Col. Joseph Lemuel Chester is contributed, with a steel portrait, to the October number of the *N. Y. Genealogical and Biographical Record*, by Mr. John J. Latting. We are surprised, however, that no reference is made to Colonel Chester's "hot scent" of the pedigree of the Washington family.

Teachers of history will find 'Historical Reference Lists,' by Prof. John T. Short, of the Ohio State University (Columbus), very serviceable. It is divided into "Thesis Subjects," in four divisions—Middle Ages, Modern Europe, and English and American Constitutional History—and "Lecture Subjects and References in United States Constitutional History": ninety-six pages in all. Such books cannot be too highly commended. We notice, however, a tendency to detail of reference which we fear will partly defeat the object intended. For example, the 112th lecture subject, on the "Results of the War of 1812," has two references to Von Holst, six to Hildreth, and so on. Now, finding matter for himself is as important as any part of the student's work: a general reference to the volume, with, of course, particular references to some passage of special importance, is all that he needs. Anything more than this is doing his work for him. Another suggestion: such lists should always begin with the two or three indispensable works, and then pass to the less important ones. But, for example, the fourth thesis subject, on the "Origin of Towns," begins with five references to Bryce's 'Holy Roman Empire,' all of which are incidental, and only one of which is really an important one.

Houghton, Mifflin & Co. have taken from the 'Poems of Places,' for the selection of which Mr. Longfellow was responsible, the 'Poems of America,' and issued them in three very tasteful companion volumes. The arrangement is alphabetical by towns, and as the pieces are all signed, the table of contents might well have been omitted in favor of an index of authors; or this could have been added for the set at trifling expense. The association with the "place" is sometimes no closer than that the selection was composed there—see, under Pittsfield, Mass., "The Old Clock on the Stairs."

Forestry Bulletin No. 22 tabulates in family groups the specific gravity and ash of the woods of the United States.

We are glad to see that the *Harvard Lampoon* still survives, though the designs for the first number of the new volume are feeble enough. Cannot there be a greater variety in the "processes" by which the autograph drawings are reproduced? The pen-point is trying to the tyro.

The interference of railroads in politics, though less gross and unblushing now than thirty years ago, cannot be resented in the form it takes in the 'Baltimore and Ohio Red Book,' which has an edition for every State, and carefully records the vote at the State and Presidential elections of 1880, 1881, by counties and districts.

The 'History of Wood Engraving in America,' contributed to the late *American Art Review* by Mr. W. J. Linton, which will here bear the imprint of Estes & Lauriat, is announced for publication in London by George Bell & Sons. The same house will issue 'Arthur Hugh Clough: a Monograph,' by S. Waddington. Mr. Wm. Conway's papers in the *Bibliographer* on 'The Woodcutters of the Netherlands' will be collected in a volume and reissued by Elliot Stock. Mrs. Fanny Kemble will publish her 'Notes upon some of Shakspere's Plays' through Richard Bentley & Son, who also promise a large-paper edition of Jane Austen's novels in six volumes. Kegan Paul, Trench & Co. announce the 'Life of Antonio Rosmini-Serbati,' by G. S. Macwalter, and a translation of his 'Origin of Ideas.' Through W. Swan Sonnenschein & Co. will appear 'Alice through the Looking-glass, and Other Plays for Children,' dramatized by K. Freiligrath-Kroeker, with plates giving suggestions for costumes. Prof. Oldenberg's 'Buddha, his Life and his Doctrine,' will be published by Williams & Norgate.

Parts 33–39 of the new Brockhaus' Conversations-Lexikon (New York: L. W. Schmidt) nearly attain the letter C, ending with *Bronze*. *Brazil* is the chief article, at least on the geographical side, and has a folding colored map; but the articles *Brunswick*, *Borneo*, and *Bosnia* are also tolerably full, and the last two have a fresh interest. Another colored map is allotted to *British North America*; and *Bombay*, the *Bosphorus*, *Boston* (Mass.), and *Bremen* are each provided with a chart in the text. The article on Boston is a little antiquated in the descriptive portions: *e. g.*, the sightseer would look in vain in that city for the Lowell Institute among "buildings," as he would for the indigenous *North American Review*. Nor, in the appended list of recent authorities, which is an excellent feature of this cyclopædia, is there any allusion to the monumental 'Memorial History of Boston.' American biography is perforce sparsely represented in these instalments. The illustrations relate to boring, lead-working, butter-making, bread-baking, and book-printing tools and machinery; to bridges, all American, including the East River Bridge, and (prophetically) the North River Bridge at Poughkeepsie; to the circulation of the blood; to the leaf; and to statuary—these last, though simple outlines, being more painstaking and satisfactory than ordinary.

The Cambridge (Eng.) Philological Society has resolved to publish its proceedings in the shape of summaries of the papers read and business done at its meetings. These will generally appear at the end of each term, and the 'Proceedings' for Lent Term and Easter Term, 1882, has just been published, making a thin pamphlet of twenty-eight pages. A limited number of copies in excess of those sent out to members may be had of Trübner & Co. for a shilling a term, or two and sixpence a year.

The *Academy* states that the series of upward of 300 ethnographic masks and busts modelled by the brothers Schlagintweit from living natives of British India, Thibet, Central Asia, Morocco, and North America have been reproduced in zinc and bronze by the surviving brother. The casts are highly praised for their minute fidelity to nature. They can be had in metal for about $1,800, in plaster for about $300, of Johann Ambrosius Barth, Leipzig. Any museum would be enriched by such a collection of "types of mankind."

We read in the *Medical and Surgical Reporter* that Professor Arnold, Director of the Berlin Institute for the Blind, has succeeded in teaching stenography to the blind. They not only learn to write shorthand, but to read their own notes—a feat which seems impossible. Their acute sense of hearing should make them, if their general knowledge is good, the best of reporters.

Here is an instance for those who delight in saying that the world is full of compensations. The daughter of Claude Bernard, the great physiologist and no doubt vivisector, has made her whole house an asylum for vagrant and suffering caninity. To such an extent has she carried her benevolence that the police have condemned her to a fine of a franc for not keeping her *kennel* clean enough.

As previously announced, the *Allgemeine Zeitung* was transferred to Munich on October 1. The change of domicile leaves this journal intact in all its features, but Augsburg has lost what for nearly a century has made its name famous in the annals of German politics and literature.

Two sales by the well-known Amsterdam firm of Frederik Muller & Co. deserve the attention of connoisseurs of art. They both take place on November 20, 21, proximo, and embrace (*a*) collections of pen, chalk, and water-color drawings (of the Dutch school particularly, but also of the Italian, French, and German) made by the Marquis de Chennevières and by Mr. J. C. Robinson; and (*b*) the engravings of Henri Goltzius, Jacques de Gheyn, and the brothers Wierix, together with a remarkable lot of portraits, mostly of the sixteenth century. Mr. Christern has the catalogues.

A self-correcting blunder occurred in the first

of the library tables given on page 337 of last week's issue of the *Nation*. The figures for volumes represented thousands, not "hundred thousands."

—Mr. William Potts, the Secretary of the Civil-Service Reform Association, No. 4 Pine Street, has a limited number of copies of Hubbell's 'Campaign Text Book' for sale at fifty cents each, postage paid. We would advise all in search of entertainment to procure a copy from Mr. Potts, as single copies cannot be obtained from Hubbell himself. It contains a great deal of very diverting reading, and then we have no doubt collectors will find it to their account to purchase it, as it will undoubtedly in a very few years be a valuable and probably scarce relic of the spoils system in its last days. There are few things in comic literature equal to Hubbell's defence of political assessments, because he both commends them as an excellent thing and uses them as an illustration of the rascality of the Democrats, who, he says, originated them.

—*Lippincott's* for November contains an article by Frank D. Y. Carpenter, on "Dom Pedro's Dominion," which will please the Brazilians even less than Mr. Bigelow's paper in the last *Harper's*, on the railway invasion of Mexico, has pleased the Mexicans. The article is in the shape of a conversation between an elderly foreigner, long resident in Brazil, and a young man who draws him out. The old cynic begins his plaint with domestic service, which, it seems, is worse even than it was in the United States a generation ago, if we may judge by the alleged fact that in the hotels the "first six rings (of the bell) don't count," the servant generally answering only on the seventh. To pass to more serious subjects, the Brazilians cannot pay their debts, or even the interest on them; the upper classes are "shiftless, proud, and poor"; taxation is oppressive, being laid both on imports and exports. The population is grossly provincial, as the story of the persecution of the Paris physician brought out to attend the Emperor's daughter shows, and science is in such a very rudimentary stage that the Directors of the National Museum published an elaborate account, accompanied by finely drawn plates, of a very peculiar zoölogical specimen—a new discovery—which, on being taken to Boston by the Emperor, was found to be nothing more nor less than a tadpole. In society the tone of conversation is very loose: the young man mentions his being casually asked by his partner at a ball whether he had brought his *amiga* with him to the hotel at which he was staying. Dom Pedro is represented as a titled globe-trotter, who runs about over the face of the earth, looking at museums and manufactories, and getting flattered up to the eyes for his energy, which is simply due to the speed of the railroad train, and his wisdom, which is shown by his preserving a discreet silence. It must be added that the cynic, who appears to be an American, does not give a very agreeable picture of the representatives of our Government in Brazil. One of them is mentioned as having been in the habit of walking about the streets in his shirt-sleeves, and another of carrying his luncheon away from the hotel in his coat-tail pocket. A third foreign Minister is spoken of—his nationality is not given—who, being about to sell out, advertised a portrait of the Emperor as "stable furniture." It appears, further, that at a dinner "at which all classes, including Government officials, were present," a toast to "The Republic—when it shall come," was received with an outburst of approval by "all present, drunk or sober." How much of this picture is true, and how much due to the cynicism bred in the Anglo-Saxon mind by a residence in a tropical country under a "Latin Government," we will not undertake to say, but merely call the attention of the friends of Dom Pedro and of Brazil to it, and suggest that the December magazines and the daily press are open to them for a reply. Mr. H. W. Raymond contributes an account of the "Cruise of the *Viking*," from Greenport, Long Island, to Chicago, Illinois; a voyage not often made, though not especially difficult to make.

—Alphonse Daudet has an article in the *Century* on Victor Hugo in his old age, which is pleasant reading, and adds one or two new points to our knowledge of the poet. Nothing is more curious about Hugo than the fact that his writing has been so little affected by the literary influences which have come into play within the past thirty years. The explanation of this is very simple, if Daudet's statement that "he reads nothing" is to be accepted. "No literary work of our day," says the author of the 'Nabab,' "has ever passed under his eyes," with the exception of the attack upon him by Zola in the *Figaro*. A good many of the practical details of his every-day life—the article is by no means critical in character—are given, among others the simple device he has adopted for relieving himself of the trouble of answering the numerous correspondents who intrude themselves upon him, asking for his advice and critical offices. Daudet says: "Worthy people, thinking no harm, write to Victor Hugo, begging a reply, and demanding his opinion of several stout volumes of 500 pages each. Well, I really am not spiteful, but I cannot conceal the satisfaction with which I now shatter their illusions, the joy with which I say to them: 'Write, good friends, send Victor Hugo your volumes; Victor Hugo will not read them, Victor Hugo will not even open your letters.' He has two good watch-dogs, Mme. Drouët and Richard Lesclide, the latter an enthusiast from Bordeaux, whose admiration for the poet made him take the post of secretary. It is Mme. Drouët and Richard Lesclide who read and reply. While they are thus engaged the poet is at leisure to write poetry." Mr. Albert Stickney writes on the jury system, bringing forward many arguments to show that it is a failure, and ought to be abolished. He proposes an absolutely novel substitute—that of trial by a number of judges, of the same standing and capacity as those who now sit in courts of last resort, and the abolition of appeals. He would retain the feature of unanimity, for he thinks that a number of intelligent judges can arrive at a unanimous decision in the vast majority of cases, though, of course, there would have to be a new trial whenever they failed to agree. The increase of expense through the necessary additions to the judicial force would, he thinks, be compensated for by the saving effected in time and money now lost through protracted litigation. We have not space to examine his arguments in detail here, and can only say that they deserve attentive examination. Of course, the question of the expediency of abolishing juries is not involved in that of the abolition of appeals. Juries may be abolished, and the right of appeal retained. In this State there can be no question that the right of appeal gives opportunity to enormous and needless abuses. The double appeal from the trial court to the General Term, and thence to the Court of Appeals, is certainly unnecessary. One court to review errors of law is enough, as the successful operation of the system of single appeals in Massachusetts amply shows. Mr. Howells contributes an article on Mr. Henry James, jr.; in the course of it he refers to a subject to which he often alludes in his novels, and which must puzzle his foreign readers a good deal—the "American joke." In this continental jest, he very justly insists, all true Americans have a share; it greatly relieves the monotony of life for all native-born citizens, but perhaps most of all for those Americans who are familiar with European society—as the joke, if we are not mistaken, derives much of its value from that contrast between Europe and the United States which Mr. James has been the first to bring prominently into fiction. Mr. James himself has a pleasant illustrated article on Venice.

—In the *Atlantic* the civilization of the American Indian is the subject of an article by Lieut. George S. Wilson, of the Twelfth Infantry. It is one of the plainest, most forcible, and most practical papers on the Indian question that have ever been written. Lieutenant Wilson has had serious and successful experience with Indians of various tribes, both in peace and in war; and knowing them well, he has that pity for them which contact or study, independently of sentiment, gives thoughtful men. He describes in great detail how he would civilize the Pimas, an Arizona tribe, numbering 4,600 souls. They are not nomadic, and subsist by a rude agriculture, but, according to Mr. Wilson, are only slightly above the level of the Indians of the plains. He would establish a sort of community, in which the Pimas would be civilized by being treated not as so many abstract Indians, but as Pimas, with all the mental, moral, and social peculiarities of Pimas. There is nothing in his scheme which is at all hostile to the schools in operation at Carlisle and Hampton. On the contrary, it would, to a certain extent, be intended to supplement these, and afford a sort of "half-way house" on the road from barbarism to civilization. Here Indian boys coming back from an Eastern school with a trade, or other useful means of self-support, could find a place "where they would be associated with a respectable class of whites on the one hand, and the more progressive of their own kindred on the other." "Studies in the South" is continued, but there is nothing very new in the current number, which merely serves to deepen the impression produced by all that have gone before, that the South has broken with its past, and that in the generation now occupying the stage there is a wonderful hospitality to all ideas which seem to have any economical value. Even as to homicide, most of the Southerners with whom Mr. Harrison converses seem struck with the fact that in those parts of the country where wealth accumulates fastest, homicide is most infrequent. When such ideas as this get abroad there is hope for the future, however dark the present may look. The serials are all continued, and in "Two on a Tower" Mr. Hardy gets his astronomical hero and heroine into some more trouble, out of which, however, it will not be very difficult to extricate them. He is not very successful in his mixture of astronomy and love, with which the tale is flavored. It is the astronomy which is stirred in with a stick, for the love is natural enough, and Viviette rather an attractive heroine.

—The most serious contribution to literature in *Harper's* is Mr. Howells's "Pordenone," a poem in hexameters. These, if not as smooth as those of Longfellow, adapt themselves easily to the sort of narration which the subject requires. Howard Pyle contributes an illustrated article on the Quakers, and Mr. John Fiske an historical sketch of Virginia in the colonial period, in the course of which he traces the belief that the aristocracy of Virginia was recruited from the ranks of kidnapped paupers and convicts, in part to a falsehood set afloat by Malachi Postlethwaite, about the middle of the eighteenth cen-

turv. The belief was certainly prevalent in England at the time, but Mr. Fiske thinks that few if any of the convicts and paupers who formed the wretched class of indentured white servants in Virginia, ever worked their way up to the ownership of a plantation—all of which will be consoling to the impoverished Virginian landowner of to-day, whose hard fate after the war was aggravated by the prevalent suspicion that he was, if the truth were known, little better off for ancestry than he should be. Junius Henri Browne writes about "The Problem of Living in New York." This, he thinks, is partly solved by the coöperative flat system. The principal difficulties about living in New York are, we fancy (for the class for which such articles are written) to a great extent moral ones. The tenacity with which people in moderate circumstances cling to display in things perfectly unimportant lies very near the root of it. The need, for instance, of living in what is called the "fashionable quarter" of the city is not great: and houses at a moderate rent are to be had if this is given up. No man need feel his dignity lessened because there is no "high stoop" in front of his house. No man, in short, need sacrifice comfort and economy to what is vulgarly known as "style," and yet this has been for many a long year a temptation to Americans not overrich such as is unknown to any corresponding class in the world elsewhere.

—Professor Corson, of Cornell, contributed to the eighth meeting of the Browning Society an essay on "The Idea of Personality," as embodied in Robert Browning's poetry, which is now published separately. It is the fruit of a careful, and what must have been a patient, study of the obscurer works in which the poet has veiled the truth from ordinary eyes. Professor Corson finds that the entire work of Browning is really very homogeneous, with but few principles underlying it. He states these in general terms—that mind is something supernatural, that truth is implicit in the mind, that the intellect is at present too much valued at the expense of other human faculties, and the like. But the cardinal idea of all is, that men are regenerated, converted, by higher personalities who bring them light and open to them the meaning of life; and with this goes the subsidiary notion that one main mode by which such personalities operate on men is art. This is, as is said, the Messianic idea of life—Christ being the historic personality of most power, but not of power different in kind from that of others who have helped to enlighten and purify humanity. Hence Browning, as the apostle of this idea, is the most essentially Christian poet of the time. This analysis is helpful in indicating the intellectual affinity between him and his friend Landor, who set the same value on great men in a different way, and especially in showing how coincident Browning's thought was with Carlyle's. But the attempt to present Browning as a great teacher can have but little effect; if he be such, it is only for the few, for his defects of expression make his philosophy a sealed volume even to the cultivated. If he be a great thinker, he has failed to convey the truth through beauty as a poet ought; and it is for a very different reason from Professor Corson's that lovers of poetry as an art would think his suggested "general title" for Browning's works appropriate—"The Burden of Robert Browning to the Nineteenth Century." But for those who are content to miss beauty for the sake of truth, this essay is a safe and valuable guide: it affords the not easily discovered clew to the labyrinth, and with it one may venture even into the obscurity of 'Sordello' without fearing to experience that sense of being utterly lost which most of us have felt.

—We have received from the office of the Chief Signal Officer a "Report on the Character of Six Hundred Tornadoes," by Sergeant J. P. Finley, of the Signal Corps, published as No. VII. of the Professional Papers of the Signal Office. The preface consists of the following words only: "The publication of this monograph as a Professional Paper is merely for the purpose of bringing it to the attention of scientific men, and is not to be taken as an endorsement of the views or theories set forth." Such disclaimers are usually oftenest made when least necessary. This concise and lucid pamphlet of Sergeant Finley is almost free from hypotheses, the only one which intrudes itself being the notion that storms are caused by a collision of northerly with southerly winds. Some of the inferences from the tables presented are as follows: June is the month in which tornadoes are more frequent than in any other. Kansas is the State most often visited by them. From four to six in the afternoon is the favorite time of day. The direction of the path of destruction lies from southwest to northeast, and the wind preceding the tornado blows in the same way. The average width of the path of destruction is one thousand feet; the average velocity of the storm-cloud, thirty miles an hour; the average duration of the gust, six minutes; the average length of track, twenty-eight miles. The peculiar dark funnel-shaped cloud always has a whirling movement in the direction the reverse of that of the hands of a watch, and is half the time preceded by the fall of hail. At the close of the monograph is an interesting chart showing the geographical distribution of tornadoes over this country, which suggests the criticism that undue weight is given to testimony from the Atlantic States at a period when none could be obtained from the West, since the period embraced in this investigation begins as far back as 1794. Until very recently, nine-tenths of the most violent storms may have smitten the soil of Kansas without being reported to the Signal Office, or even been known of, until years after their occurrence.

—The movement in this country and in England for the opening of libraries, museums, etc., on Sunday, in the interest of the working classes, has for several years had its counterpart in Germany in a quiet agitation which, prompted by the same philanthropic motives, has apparently pursued a different aim. There a stricter general observance of the Sunday is insisted on, in order to secure to the laborer the complete cessation from work which characterizes the Anglo-Saxon "Sabbath." The movement, which first took shape at the Wiesbaden "Protestantentag," in 1874, has ceased to be exclusively Protestant, Windthorst, the most prominent Ultramontane politician in Germany, having become one of its champions; and although it has naturally found favor with the Socialists, it is essentially non-political in its character, as well as very rational in its methods. The most prominent of the associations for the promotion of Sunday rest, that of Bremen, which was formed in 1879, some time ago made inquiries in about fifty cities of Germany concerning the Sunday observance in factories, workshops, counting-houses, retail stores, restaurants, etc. The result of these inquiries is made known by A. Lammers in a pamphlet on 'Sonntagsfeier in Deutschland' (No. 166 of the *Deutsche Zeit- und Streit-Fragen*. Berlin: Carl Habel). Herr Lammers states that, while in Saxony alone Sunday work in factories is not permitted by the authorities, it was generally found that the abstention from Sunday labor is strictest in the great centres of industry. Thus, in Mülhausen, Crefeld, Elberfeld-Barmen, all factories remain closed. In Munich, Königsberg, Gera, and Weimar, too, the laborer enjoys a day of complete rest. The replies from all the other cities were more or less unfavorable; factories being generally closed in but few, while workshops and retail stores are open in most. With regard to counting-houses, the evil practice of "opening the mail" prevails throughout Germany, rendering the "voluntary" attendance of at least some of the clerks necessary, who pass their time in a lounging, dissatisfied sort of way. Equally general is the thoughtless habit of making unnecessary purchases on Sunday, and it was against this evil that the Bremen association successfully directed its efforts. It wisely enlisted the fair sex in its cause, eighty well-known ladies of Bremen having canvassed the city in the spring of 1880, and secured the names of 6,000 women who declared their intention of making none but unavoidable purchases on Sunday. No pledge was exacted, the association having evidently profited by the experience of transatlantic associations in other fields concerning the value of "total-abstinence" pledges. Conservative action was also enjoined by the popular Continental prejudice against the "dreary English Sunday." That purely religious motives play no part in the German movement is proved by the activity of such sister societies of the Bremen association as the Berlin "Verein fur das Wohl der aus der Schule entlassenen Jugend" (Society for the care of children who have left school) and the Göttingen Society for the Promotion of Popular Education. The former includes in its summer programme Sunday excursions, the latter entertains its charges—mostly apprentices—on Sunday evenings with recitations, musical performances, games, etc., not omitting experiments in physics and instructive lectures. Several university students have taken an active part in these entertainments. Herr Lammers urges the formation of similar societies in the interest of the working girls, justly remarking that if ladies of intelligence were to devote an occasional Sunday evening to such a cause, they would provide for themselves, as well as for hundreds of poor girls, a novel and profitable Sunday entertainment. Herr Lammers's pamphlet deserves the widest circulation alike for its humane spirit and admirable fairness of tone.

—A noticeable literary phenomenon is the sudden and widespread revival of the 'Surgeon's Stories,' by Prof. Z. Topelius, a translation of which is in the press in this country, and will probably also be brought out in England. A new translation of them is being also made in Germany, and a new edition has just appeared in Denmark, published by P. G. Philipsen, Copenhagen, the translator being Fr. Winkel Horn. Finally, the Swedish publisher of Topelius's works, Albert Bonnier, has in preparation a superb illustrated edition, the designs for which are by Larsson (the same artist who illustrated Bishop Wallin's fine poem, "The Angel of Death"), and will number 350, or between fifty and sixty for each volume. Few works offer such abundant material to the artist. Topelius's tales cannot fail to have a great success in all Protestant countries, and Mr. Bonnier intends issuing an edition of 15,000 copies of the new illustrated series, at the same price as that of the original edition without illustration. Another enduring work, 'Fänrik Ståls Tales,' by the poet Johan Ludvig Runeberg, has been brought out recently in two illustrated editions—one a beautiful portfolio series, having large colored plates, with the text beneath; the other in book form, with designs by the celebrated painter Prof. J. A. Malmström. A translation of "Faust," ranking among the best in any language, has been made by Dr. Victor Rydberg, and that, too, is magnificently illustrated. Besides the fine wood-engravings, about ninety in number, by A. von Kreling, the edition has two carefully executed large photographs, made in F. Bruckman's atelier, in Munich, from

Prof. von Kreling's original compositions, "Faust's Dream" and "Margaret led to Death."

—In his "Letter to a Friend" M. Renan showed that the Germans have no wit; in his lecture before the Sorbonne he pointed out the enormity of their offence in taking possession of an integral part of France, dismembering a living body; and now, in his annual report as Secretary of the Société Orientale, he hints that the method adopted by the Deutsche Morgenländische Gesellschaft is much inferior to the practice of the French society. Thus, all roads lead to Rome. The comparison is made with his accustomed neatness. What could be more complete, he courteously asks, than the German society's conscientious *comptes rendus*? But their very completeness makes them deceptive. By giving the bad as well as the good, they cause an entirely wrong impression of the state of learning. Among the writings on these subjects, the foolish, the nearly worthless always exceeds the valuable, and will always be in excess as long as the freedom of the press lasts; but Learning is to be judged by her children, not by the works of the unlearned and the semi-learned. The Germans rake together everything, taking titles from the reviews and the publishers' advertisements. In their accounts of French Oriental studies they mention a crowd of ineptitudes which do not obtain sufficient vogue at home even to be heard of. This is bibliography, not reporting: a report should select. If anything is so bad that it would have been better had it never been written, it should be passed by. Every honest worker should be welcomed with fairness, whatever mistakes he may make; and it is well that his errors should be pointed out by severe critics—the literary police; but that is not the duty of the Oriental Society, nor can it refute all false theories and call attention to all shortcomings. Its reporter's duty is to record the progress of knowledge, and he may be silent about those works which merely stand in the way of that progress. Renan hints that this view leads to a much less wearisome result. It brings the whole report within the capacity of one man, and allows of unity of style. Certainly Renan's reports have been always agreeable reading, and it is to be regretted that this is to be the last.

—Our readers will find in the *Zeitschrift für Deutsches Alterthum*, 1882 (Anzeiger VIII., pp. 26–52), a valuable review, by A. Brandl, of a no less valuable work, Kawczynski's 'Studien zur Litteraturgeschichte des 18 Jahrhunderts' (Leipzig, Matthes, 1880). The author's work is in two parts. In the first he gives a list of English, French, German, and other periodicals dealing with social-moral questions. Brandl offers many corrections and additions. The second part of the work is taken up with the *Tatler*, and Steele's general position in English literature. Brandl's remarks are so full and so well put as to constitute practically an independent essay. From author and reviewer we can learn much concerning Steele's relations to Addison, the influence of Jeremy Collier and Cibber upon Steele, the antecedents of the *Tatler*, the connection between Steele and Lillo and Gay, and Steele's influence upon Richardson. On one point we have detected Brandl in serious error. He calls (p. 34) Jeremy Collier "der eifernde Dissenter," which implies a total misconception of Collier's position. Collier was emphatically *not* a Dissenter, but a Churchman of the most pronounced type, a Non-juror who forfeited his living just because of his Tory and Anglican views. And his strictures upon the immorality of the English stage owed a large, perhaps the largest, part of their force to the circumstance that they came from one who had proved beyond question that he was in all other respects the most ardent Jacobite. Beljame's estimate of Collier, in his 'Le Public et les Hommes de Lettres en Angleterre au Dixhuitième Siècle' (pp. 248–252), is immeasurably superior. In general, Brandl seems to us to have but a vague insight into English society of the eighteenth century. He confounds Whigs with Dissenters, the anti-Tory views of Addison, Steele, etc., are to him *antiaristokratisch* (as if the Whigs were not themselves aristocrats), and he looks upon the establishment of Whig constitutional government as the development of English *Bürgerthum*. But it is idle to speak of an English *Bürgerthum* in politics, or even in literature, before the Reform Bill of 1832. These defects, however, do not impair the value of Brandl's critique. In purely literary matters he is accurate and clear-sighted. We expect much from his promised work upon Coleridge.

—It has frequently been noted that the *ensemble* at the Academy of Music is apt to be better in Verdi's operas than in those of any other composer. Probably the reason is that Verdi's operas, while easy enough to be mastered by Mr. Mapleson's company, at the same time partake sufficiently of the modern dramatic spirit to inspire the performers with some interest in their interpretation. On Monday evening "Rigoletto" was given in quite a satisfactory manner, so far as orchestra and chorus were concerned. Of the principals, Galassi and Ravelli deserve especial praise, although the latter has lately taken to forcing an occasional note in an unpleasant manner. The audience, however, was small and undemonstrative, barely one-half of the seats being occupied. We wish to lay particular stress on this fact, for it shows the truth of what we have been preaching so long: that people are tired of Italian opera, and want to hear something better. The friends of the tuneful old fashioned opera cannot complain that their claims have been neglected. While some of the Italian operas have deserved their popularity, others would have disappeared at once had they not had the advantage of being patronized by fashionable society, to whose tastes they had been carefully adapted at a frequent sacrifice of all artistic form and content. But fashionable society is now turning its back on its old favorites. In German cities not one opera in ten is Italian, and in Paris the proportion is almost as small, while London, too, is at last following suit; and what London fashionable society does, New York soon imitates. The London *Times* speaks of the "shadow of Italian opera" of which the "substance has dwindled away," and with this opinion of a Wagnerian organ agrees that of a rabid anti-Wagnerite—the London *World*—whose critic says in the last number: "Italian opera is dead, and no frantic efforts of any kind will revive it. It was a fashion, and has ceased in reality to exist long ago, both as to Italian works and Italian singers."

—Mr. Mapleson has so far given us operas by Bellini, Donizetti, Verdi, and Rossini alone—"Puritani," "Tell," "Lucrezia Borgia," "Rigoletto"—all of which belong to the barrel-organ repertory. After the arrival of Mme. Patti this state of affairs will not be altered, for Patti sings in only half-a-dozen operas. Now, look at Vienna, for example. During the first six weeks of the present season four Italian operas only were given, the others being by Gluck (2), Mozart (3), Weber (2), Wagner (3), Meyerbeer (4), Gounod (2), Adam, Marschner, Boito, and Thomas. Furthermore, half-a-dozen complete novelties are promised. But we need not go so far to find a pleasant contrast to Mr. Mapleson's stagnant and antiquated repertory. The list of novelties and of standard works that will be produced this winter by Mr. Thomas and Dr. Damrosch is magnificent, and we can positively state that it is not equalled by the lists published in any foreign city, nor are our concert orchestras inferior to any in the world. But Mr. Mapleson does not undertake to bring us a single novelty; and although it would be unjust to deny that he gives the barrel-organ operas better than they have been given before, it must be remembered that these operas are easy, and that the people who attend the Philharmonic concerts do not go to them. If Mr. Mapleson would bring over a different kind of a company, including singers who can do justice to the best French and German operas, we should be among his warmest supporters. Herr Neumann, who is now meeting with extraordinary success with his travelling Wagnerian company in German cities, would doubtless meet with similar favor here; and it is to be hoped that Frau Materna's project, announced some months ago, of coming over here with some of the best dramatic vocalists of Germany and a choice and varied repertory, may be soon realized.

AMERICAN IMPRESSIONS OF A FRENCH MONARCHIST.

De Bacourt. Souvenirs d'un Diplomate. Lettres intimes sur l'Amérique. Paris: Calmann Lévy; New York: F. W. Christern.

WHO was M. de Bacourt? A diplomat of the old school, who entered the service in 1822, was Talleyrand's First Secretary of Legation at London in 1830–34, Minister at Carlsruhe from 1835 to 1840, Minister Plenipotentiary to the United States in 1840–42, and ended Minister at Turin, where the revolution of 1848 overtook him, and he resigned rather than serve the Republic. He became the depositary of Talleyrand's Memoirs—a striking tribute to his discretion and probity—and in assigning them, on his death in 1868, to their present custodians, added twenty years to the term of thirty already fixed for their publication by their author. They can, accordingly, not see the light before 1888. So much we learn from his niece, the Comtesse de Mirabeau, who edits the present volume, and who lauds M. de Bacourt's qualities of head and heart in a manner which will not appear excessive to his readers.

These familiar letters seem to have been addressed to Talleyrand's niece, the Duchesse de Dino, *née* Princesse de Courlande, and later Duchesse de Talleyrand et de Sagan, the joint depositary with M. de Bacourt of the Memoirs. The first bears date of May 24, 1840, and is written from London: the last, of July 25, 1842, from Washington. The correspondence, faithfully kept up, averaged more than one letter weekly, for there are in all 124 letters. We do not hesitate to say that a more readable and, in the main, more discriminating picture of the period covered by them does not exist, due regard being had to the scope of these private jottings. At every page our pencil has made marks to satisfy which would involve practically a translation of the entire work. M. de Bacourt's observations were contemporaneous with those of the 'American Notes.' They are not more flattering to the great Republic of the West, and would, if published when written, have raised an even greater storm of indignation; for in matters personal the French minister was under no restraint whatever. His niece even gives a polemic character to the present publication by offering it as a weapon to the irreconcilable opponents of the Republic in France.

The date of his visit was fortunate for M. de Bacourt. He landed in the midst of the most exciting Presidential canvass ever known in this country. He was, in the space of ten months, presented to three successive Presidents of the United States. He watched with a lively interest the making of the tariff of 1842, in which,

despite his best efforts, French silks and wines were for the first time taken from the free list. He witnessed the tempest which arose on John Quincy Adams's presenting a Northern disunion petition in the House (Feb. 2, 1842). He went to meet the Prince de Joinville on his second visit to this country. He greeted as an old friend Lord Ashburton, come to settle the northeastern boundary dispute, and outstayed the conclusion of the Treaty, with the *Creole* case looming up as a fresh cause of difficulty with England. He saw civil war break out in Rhode Island, the Seminole war dragging its slow length along in Florida, hostilities begun between Mexico and that "vrai nid de bandits de toutes les nations, mais particulièrement des États-Unis," Texas. Arriving while the effects of the panic of 1837 were still visible in vast areas of suspended buildings in New York and in Brooklyn, he hears before his departure that Pennsylvania has paid the interest on her debt for the last time. The fact that most of the bondholders are foreigners "gives much force to the doctrine of *repudiation*—a doctrine in fashion here, and which consists in disowning one's debts."

"There is at this moment," he says (Washington, Feb. 17, 1842), "in the United States a literary celebrity who enjoys here and in England a great popularity; I mean Charles Dickens. His quite democratic works insure him a brilliant reception. Every city he passes through offers to fête him. At New York they gave him a ball of five thousand persons, representing, the while, in *tableaux vivants*, the principal scenes of his novels. It is a sort of dementia among the Americans, who are extreme in everything. The newspapers agree that more has been made of Dickens than of Lafayette, Fanny Elssler, and the Prince de Joinville—the one I quote puts the names in this order."

Fanny Elssler's name rivals Talleyrand's in the frequency of its recurrence in these letters. M. de Bacourt met her everywhere. "Seen from near, she is extremely *passée*, and her smile is spoilt by her wretched teeth": she might have dispensed with the duenna who attended her. Yet in Baltimore the young men drew her in her carriage, and in Washington—"Will you believe that she was formally presented to the President [Van Buren] and all the Cabinet officers gathered to receive her!" That seemed to M. de Bacourt the height of the ridiculous (*d'un ridicule achevé*). In New York, the Germans had made great preparations to serenade her, but were invaded by the natives with torches, who burnt their music-stands and sent them flying. In Boston, M. de Bacourt found the danseuse "very anxious" about her first representation the next day. It was Sunday (Sept. 6, 1840), and the Puritan strictness of the place forbade either a Saturday night or Sunday rehearsal for the musicians and the corps de ballet. Our Frenchman could not, of course, meet Fanny Elssler at that time without encountering also the Chevalier Wickoff.

To M. de Bacourt, as to the rest of the diplomatic corps, life in Washington was a bitter pill; and yet he was favored by having material for his despatches, on account of the commercial interests he was striving to protect. He calls it his penitentiary; a nondescript place, neither city, village, nor country—pigs and cows roaming at large and making night hideous; mud up to the hubs in the streets. He sends his card to all the members of Congress, according to custom, calls upon a certain number of Senators as he is advised, and passes his time as best he can in social and official intercourse.

Van Buren had grown stout almost beyond recognition (they had met in London). He was very cordial to M. de Bacourt, who records the fact that the President was called the American Talleyrand, and in return for his politeness pronounces him "a perfect imitation of a gentleman." His remarks on American politics evinced great shrewdness, but "of European affairs he comprehends not a word. If I did not know the ignorance of Europe about the United States, I should be surprised at that I find here concerning our Old World." The President's French cook told M. de Bacourt's valet during the canvass "un fait curieux": people were incessantly coming to the White House, who unceremoniously invited themselves to breakfast or dinner, threatening to vote against the President if he repulsed them. Nor were these boarders easy to satisfy: they frequently returned his dishes to the cook, as if badly prepared, and ordered others. "So that my valet exclaimed gravely: 'Apparently it is not very agreeable to be President.'"

Harrison's reception of the diplomatic corps is said to give "a just idea of American manners," and reads like a scene from *Pinafore*. Mr. Webster, as Secretary of State, had arranged the procedure. The President, followed in file by his Cabinet, meets the foreign ambassadors drawn up against one side of the room in the White House; and, having been addressed by Mr. Fox, puts on his glasses and reads his response. Then he shakes hands with Mr. Fox, and seriatim with each one of the line as named by the Secretary, saying never a word. Then he brings on his arm from an adjoining room his son's widow, and presents Mistress Harrison to the corps *en masse*. Mr. Webster next does the same for the mother of this lady, in the following terms:

"'Gentlemen, I introduce to you Mistress Finley, the lady who attends Mistress Harrison'; and observe that this good lady who *attends the others* (takes care of the others) is blind. Then, all of a sudden there burst in a mob of women—sisters, daughters, cousins, and friends of the President and of all his Cabinet—who were presented to us and we to them, in the midst of incredible confusion. Most of the men who accompanied these ladies wore frock-coats. . . . After having exchanged a few words with Mrs. Webster, I took to flight."

Tyler's reception was more intelligent and conventional than Harrison's, but in subsequent meetings his conversation, on account of his "très-petit esprit," proved heavy and fatiguing.

Clay, who looked like an English gentleman-farmer, and had or professed a strong French leaning, at first attracted M. de Bacourt. But the latter's respect for him was rapidly lowered when he saw him wrangling in the Senate with King of Alabama, who was resisting Clay's attempt to oust the public printer as one of the first results of the new Administration (March 27, 1841). Clay called his adversary's remarks false, cowardly, and infamous, and was at once challenged, but the authorities interfered to prevent a duel in the District.

"This parliamentary incident gives an idea of the tone which pervades the Senate, the highest body in the country, esteemed for its intelligence and the consideration which it enjoys. Observe, too, that Mr. Clay is sixty-four years of age, has been for thirty-four years in public life, and passes for the most eminent man in the United States. Mr. King is sixty years old, and had held several important offices before becoming Senator."

The two speeches which M. de Bacourt heard Clay make (after the impost had been laid on French silks) were "a complete fiasco" and "quite a failure." The last was his final leave-taking of the Senate.

"He tried to be touching, and sniffled (*pleurniché*) in a ridiculous fashion; but it was only the babbling of a tired old man—nothing more. However, his partisans felt obliged to weep too, while the Opposition laughed in the most insolent manner. I went to see him the next day. He affects to be in a fine humor, would play the rat retiring into his cheese, but awkwardly lets you perceive that he has not abandoned the hope of being elected President in three years."

To Webster M. de Bacourt took a dislike from the first. He was anti-French and "English at heart," to begin with, and "pompous to the last degree." Like all the distinguished men in this country, he would in England pass for a statesman of the second or even third rank—a favorite generalization of Bacourt's for all good society in America. Elsewhere he calls the new Secretary of State a pretentious bore. The last mention of him we might pass over but for the clerical and other efforts now making to explain away a perfectly notorious weakness on the part of Mr. Webster. The occasion was a state dinner given by President Tyler (Jan. 12, 1842)—forty men, no women.

"I was seated between Mr. Spencer and Mr. Webster. The latter unconsciously dropped the contraband dignity in which he habitually wraps his sad mediocrity. The too free use of Madeira made him not only amiable (in the American manner, of course), but even touchingly tender. He seized my arm with his two hands, and said: 'My dear Bacourt, I have infinite pleasure in seeing you this evening—much more so than some time ago—I don't know why! Perhaps I haven't hitherto shown you sufficient friendship, but let us, if you will, become a pair of friends. You shall see that I am good company. Come to my house every day, without ceremony. That will please me, my dear Bacourt, for truly I find you charming.' This flattering declaration was made to me with a pasty tongue, and, may I say so to you? with hiccoughs which made too close proximity to the Secretary of State altogether disagreeable. And this took place at the table of the Chief Magistrate, at a feast offered to the representatives of all the European powers."

We should do injustice to M. Bacourt if we gave the impression that his letters are purely censorious. They are not. He admires the American who remains an American—he marvels at the ease with which he has accomplished his manifest destiny of peopling and reducing this continent. He enjoys the scenery, especially our trees known only as shrubs at home; thinks the view from Greenwood Cemetery the finest in the whole world; prefers the Hudson to the Rhine; stands dumb before Niagara; finds Jefferson justified in his praise of Harper's Ferry. He is never weary of looking at skies of a clearness and brilliancy unknown in Europe. He is struck by the consideration shown to women, which he styles "une politesse incontestable, mais sans recherches dans la forme." He aptly describes the Northern in contrast with the Southern character. "The Yankees are English at heart, notwithstanding the contempt they profess for them. . . . Much more civilized than their Southern compatriots, they readily tolerate an aristocracy and all the kinds of superiority tolerated by the English; and in New England few changes would be needed to establish there a form of government quite like that of Old England."

"But there is," he continues, "a third race forming in the West beyond the Alleghanies, on the banks of the Ohio, the Mississippi, the Missouri, which has also a character of its own, and which it would be difficult to describe at present. It is composed of emigrants from the North and the South, of Irish and Germans. It is destined, in my opinion, to play the principal rôle in the United States, and to dominate the others in a few years."

With some lighter excerpts we must close an article already too long. M. de Bacourt writes, June 26, 1840, at New York:

"I came near forgetting a characteristic American anecdote related yesterday at table. A girl of loose character got married here, two years ago, without interrupting her former mode of life. Her father having remarked of her that she was a hard case (*un mauvais sujet*), she sued him for libel, and has just obtained a jury verdict of one thousand dollars, penalty

and costs. It is alleged that she begs her father to continue to speak ill of her."

In August, being still here, he has another characteristic story to relate:

"On leaving the restaurant where I dine, a few days ago, it was raining, and I called a two-wheeled cab. I had my umbrella in my hand, and the driver asked me to lend it to him, which I did cheerfully, though making a note of this little act of democratic liberty."

A young miss sends her album to him for his autograph, which he politely but firmly declines to give. Turning over the leaves, however, he finds this inscription:

"Le premier qui fut roi, fut un soldat heureux;
Que sert bien son pays n'a pas besoin d'aïeux!
"LOUIS NAPOLÉON BONAPARTE.
"(*Racine.*)
"NEW YORK, 10 June, 1837."

"What do you say," inquires M. de Bacourt of the Duchess, "to this French prince who gives to Racine what belongs to Voltaire?"

Bidding numerous farewells in Washington, he is met on all hands with the exclamation, "What! are you going? When shall you be back? You don't mean to say you are not coming back! It's very wrong to leave us, especially without taking an *American wife* with you." "This last remark was repeated to me by everybody, and," ends letter 124, "gives an idea of American taste."

The misprints of English phrases and proper names in this entertaining volume are, *more Gallico* (but M. de Bacourt is clearly not responsible for them: his niece and the printer must divide the honors), numerous and amusing. One of the best is *Execution Mansion*, in reference to the White House—appropriate whether we regard the fatality of that residence to its occupants, or the operation of what the Republican Campaign Text-Book for 1882 facetiously calls "the guillotine." A happy error, also, is that which makes *multifiers* (*i.e.*, separatists) of *nullifiers*.

TIELE'S EGYPTIAN RELIGION.

History of the Egyptian Religion. By Dr. C. P. Tiele. Translated from the Dutch, with the coöperation of the author, by James Ballingal. Boston: Houghton, Mifflin & Co. 1882. 16mo, pp. xxiii.-230.

THIS volume (one of the English and Foreign Philosophical Library) contains the first part of Tiele's 'Comparative History of the Egyptian and Mesopotamian Religions,' which appeared in Holland in 1872. The author, well known as an able student of the history of religions, had previously published a valuable little manual entitled 'Outlines of the History of Religion to the Spread of the Universal Religions' (English translation, London, 1877), which may be called the first orderly presentation of modern views on this subject. But he saw that the attempt to construct a general history of religion was premature until the particular religions had been worked out in detail, and he has since devoted himself to more special studies. This is now the understanding among scholars everywhere, and solid foundations for the new science are being laid by the Hibbert lectures in England (so far delivered by Max Müller, Renan, Le Page Renouf, and Kuenen), the *Revue de l'Histoire des Religions* in France, and various contributions elsewhere. The really elementary work to be done is the study of the savage religions, in which not much has yet been accomplished; till this field is explored, the student of the more advanced faiths will find himself constantly perplexed by questions which baffle his resources, and his work will be of a tentative and unsatisfactory sort. So Tiele has found it in undertaking to give a history of religions so highly developed as those of the Egyptians and the Semites—religions which are already old when they appear on the stage of history. He is well aware of this, and has no hope of saying the last word on any of the important problems of his subject; but he has done good service in marshalling the facts so far brought to light, investigating their meaning, and stating clearly the difficulties that still exist.

Thus, in Egypt, to which the present volume is devoted, the fundamental question, Which was the earliest of the local cults? is still undetermined. Tiele in the text assigns the priority to the Osiris-worship of Thinis-Abydos, but states in a note that he has since come to the conclusion that the first place in time belongs to the Ra-worship of Heliopolis. The evidence on either side is very slight, consisting in notices on the monuments, and inferences from the forms and ideas of the worships; but these are both precarious, being liable to be changed at any moment by fresh discoveries of historical material. What seems clear is that these two very similar cults have both issued from an earlier one, the precise nature of which is not yet known.

The question of diversity of local worships is connected with the equally obscure one of the elements of the ancient population of Egypt, about which, notwithstanding the valuable illustrations of Ebers and others, we as yet know very little. Ebers has shown that the Semites (Phœnicians) were numerous and influential in Egypt in very early times, but there seems to be no evidence for a Semitic coloring of the primitive Egyptian religious ideas. All Egyptian questions in which early ethnological relations are involved must be treated cautiously. When Tiele says (p. 37) of the worships of Ptah and Neith that there is reason to think they were not of "purely Egyptian origin," it might puzzle him to say exactly what this expression implies; for who were pure Egyptians in the earliest times, it is hardly possible now to determine. On this point he seems to hold one preconception that, it is to be feared, will not tend to advance his inquiry: he speaks sometimes (pp. 12, 13) almost as if it were necessary to identify the Egyptians either with the Aryans or with the Semites. He says, indeed, that, inasmuch as sufficient light has not yet been thrown on this subject, he will not "as yet" rank the Egyptian among the Semitic peoples, but he is evidently seriously inclined to this position, which his scientific sobriety prevents him from distinctly announcing. The same disposition is shown in his remarks on the religion, as where he says (p. 75) that "the myth of Osiris might be described as more Semitic in character, while that of Ra is more Aryan"—that is, Osiris corresponds to the beneficent sun-god of the Semites, killed by the consuming god of the summer sun, while Ra, like all the Aryan gods of the light and the sky, fights against the demon of darkness. In the same connection, however, he intimates that the differences in the Egyptian conceptions rather point to an earlier stage of religious growth, when Semites and Aryans were one, and there existed a parent myth from which the Semitic and the Aryan and the two Egyptian have descended (so also on p. 224). It would be better, instead of introducing the vexed question of the ethnic relation between the Semites and Aryans, to confine the discussion to the Egyptian representation, fix that as fully as possible, and then let its resemblances to other myths come out naturally; the danger in this comparison between diverse races being that the attention of the student will be fixed on relatively superficial similarities, and distracted from the more fundamental characteristics of the particular form of religion under examination. Indeed, Tiele, in his larger work, in which he compares the Egyptian and Semitic systems, seems not to have entirely avoided the perils of the attempt to find essential unity in the two.

Apart from these generalities, Tiele's treatment of his subject is masterly. He has brought out clearly the peculiar features of the several local cults, showed how they gradually coalesced at prominent centres, traced the development of the religion down to the Greek period, cleared up somewhat the Egyptian doctrines of the future life and the resurrection, contributed in a satisfactory way to the explanation of the animal worship, and thrown much light on the characters of several of the deities, particularly Set, or Sutech, Hor, and Thot; and he has given a brief but clear and useful account of the literature. He seeks everywhere for natural and simple processes and causes, wherein his book is in refreshing contrast with Canon Rawlinson's lately published 'History of Egypt.' His concluding chapter, on the "character and moral results of the Egyptian religion," is a candid attempt to state the two contrasts which he regards as constituting its main peculiarity, and to estimate its ethical value. The first point he puts thus:

"In the Egyptian religion we find characteristic qualities conjoined, apparently mutually exclusive, but yet, as a matter of fact, seeming to be not irreconcilable, while they may also be shown to be logically capable of coexisting in the same system. In all that the monuments tell us about the beliefs of the ancient Egyptians two things may be clearly observed: first, a vivid consciousness of the spiritual nature of the deity, combined with coarsely sensuous representations of the various gods; secondly, a no less vivid consciousness of the oneness of God, conjoined with the greatest diversity of divine persons."

The explanation of this double contrast he finds, after setting aside the supposition of esoteric and exoteric teachings as baseless, in the "symbolic-mystical" tendency of the Egyptian religion, whose epic or myth-forming period was a short one (the people speedily settling into agricultural life), and quickly passed to the expression of religious ideas under sensuous forms. Thus were originated a multitude of representations of the deity, and these representations became deities, while at the same time the better thought of the people rose to the conception of the spirituality and unity of God. It will be seen from this that he agrees with a large number of Egyptian scholars in recognizing a real monotheism in ancient Egypt, which, however, he regards (which seems the better view) as a development from a preceding polytheism. His judgment of the Egyptian ethics is in the main fair; the moral teaching, he thinks, is of a lofty purity, and was not at all divorced from theology, and the principal gods became moral beings. Indeed, it may be doubted whether any people has ever divorced its morality from its religion in theory, or failed to do so in practice. And we do not fully understand Tiele when he says (p. 226): "it must not be forgotten, however, that it [the morality] remained stationary at the elementary stage, and its moral maxims never rose to the rank of principles." If this means that the people did not live up to the standard of their best teaching, it is nothing more than what is true of all nations. Were the Hebrews or Greeks more faithful to their maxims? or have we the advantage of the Egyptians in this matter? There is no evidence that the Egyptians were laxer in their daily life than their contemporaries; if they did not become the teachers of monotheism and morality to the world, as the Jews did, we must look elsewhere for the explanation.

The book has a calm, judicial tone, and is written in a very attractive style. As discoveries in

this subject are being made every year, we may expect subsequent editions of the work to show greater clearness and fulness, and approach more nearly a complete history of the religion of Egypt.

The Coming Democracy. By G. Harwood, author of 'Disestablishment.' London and New York: Macmillan & Co. 1882.

THE title of this little book raises expectations which are not realized when we have made ourselves acquainted with its contents. The object which Mr. Harwood has in writing is to forecast the changes in the government of the British Empire which may be expected upon the advent of the "Coming Democracy." There is only one way in which such an undertaking can be attempted with any profit, and that is to determine, first of all, the component elements of the Coming Democracy—to ascertain the political ideas and aspirations that are prevalent among them; and then proceed to show how the existing order of things in Church and State is likely to be affected by the introduction of these new forces into the body politic. Mr. Harwood has evaded this laborious and difficult investigation by assuming that the phrase "The Coming Democracy" is one on the meaning and nature of which all sensible people are agreed. It needs no further definition than just its use. The consequence is that the reader of this book very speedily discovers that the Coming Democracy is nothing but an *alias* for Mr. Harwood himself. What Mr. Harwood is setting forth and explaining is the manner in which he would modify the Constitution of Great Britain and Ireland were he placed with uncontrolled authority at the head of affairs; but instead of saying this in so many words, he credits the Coming Democracy with the possession of his own personal opinions. The Coming Democracy is thereby converted into a very steady-going, commonplace personage. "You might stroke it as gently as you would a greyhound puppy. It would not ruffle with a Barbary hen if she turned back her feathers in any show of resistance." For, following in the footsteps, and guided by the example of, Mr. Harwood, the Coming Democracy will be a loyal and devoted subject of "the Crown," because "the King is the incarnation of nationality as well as of royalty"; and "the Coming Democracy is sure to be moved by these feelings; for with democracies patriotism is a passion, and a person a necessity." Mr. Harwood believes in the utility of the House of Lords; therefore the Coming Democracy will carefully abstain from uplifting the sacrilegious hand of Reform against that august chamber. But to the House of Commons Mr. Harwood is by no means so partial, and he considers that on the appearance of the Coming Democracy the powers of the Lower Chamber will be considerably curtailed. Not so, however, with the Established Church. Has not Mr. Harwood himself written a book in defence of the Establishment? The Coming Democracy will therefore perceive that a Church in connection with the state there must be, and will fashion its policy accordingly. That we may not be suspected of caricaturing Mr. Harwood, here is a passage which is intended to explain why the Coming Democracy is most unlikely to look with an eye of disfavor upon the House of Lords:

"The Reform Bill and the Repeal of the Corn Laws are the two measures which have chiefly determined the present condition of parties; for the effects of political struggles remain long after their causes have passed away. The House of Lords was slow to see the advisability of either of these changes, but it did not stand out any longer than was necessary to give assurance that what might have been a transient fancy was the settled wish of the people. Within about a year of the first reading of the Reform Bill passing the House of Commons by a majority of one, it was allowed to go through the House of Lords and become law, while the Repeal of the Corn Laws was accepted by the House of Lords without delay after it had passed the Commons. Even if these measures had involved fundamental principles, and so been available as tests, there would have been nothing in connection with them to justify the belief that the House of Lords had lost that steadfast and sober attachment to freedom which has for so long characterized its history. Thus, when the Democracy—as, with increasing education, it will be more and more inclined and able to do—looks properly over the past conduct of the House of Lords, it will grow less and less disposed to believe that the influence of that House has been inimical, or even obstructive, to the cause of true freedom."

Obviously, the concluding sentence in the foregoing passage ought to have been printed thus: "When the Coming Democracy—as, with increasing education, it will be more and more inclined and able to do—looks over the past conduct of the House of Lords *through the spectacles prepared for it by Mr. G. Harwood*, it will grow," etc., etc. What we apprehend the Coming Democracy will most concern itself with is, not the past, but the present, conduct of the House of Lords; and unless that conduct is subjected to a radical change, the Coming Democracy will be something either very much above or very much below the ordinary level of humanity if it does not manifest its resentment in a very emphatic manner. For the House of Lords at present appears to consider that its special function is to mutilate almost out of recognition any and every measure of reform which it has not the courage directly to reject.

But it is in the chapter devoted to "The Democracy and Religion" that Mr. Harwood's humor to paint the Coming Democracy as an exact *replica* of himself is most amusingly exhibited. For example, Mr. Harwood is arguing against the materialistic theory of existence, and he says:

"The tide-line of truth will be receded to when the Democracy begins to consider that, even if our mental and moral phenomena be the results of development, there still must be a reason why experience thus acts. This could not happen unless men had first a potentiality for being thus affected, and for producing by development such results. So the difficulty of causation is, at best, only put a stage back, and we are still driven to find a cause for this potentiality. The necessity of finding a First Cause is not affected by the difference between a single innate faculty of development and various innate faculties. We are still where we were, so far as the elements of Religion are concerned, even if the doctrine of development be accepted in its fullest sense; for Science cannot by it adequately account for material phenomena, nor can Philosophy by it adequately account for mental and moral phenomena. This deficiency is likely to be found out by the Coming Democracy; for such a Democracy is sure to be eminently practical, and no practical mind can rest satisfied with a theory which assumes that because we understand processes, therefore these processes need not have a cause."

In other words, "the practical mind" which at present resides in the bosom of Mr. G. Harwood will be transferred, *en bloc*, to this Coming Democracy whenever that individual—for so it seems that Mr. Harwood is wont to think of the democratic future—makes his appearance upon the political stage of Great Britain. "L'état, c'est moi," said Louis XIV., on a certain memorable occasion; and Mr. Harwood has fallen into a kindred error. He has written a book in which he assumes throughout that he is the Coming Democracy.

Apart from this remarkable hallucination, there is nothing in Mr. Harwood's political speculations which calls for remark. He has that profound belief in the virtues of the Englishman and the excellence of everything British which makes the English people the most aggressive and encroaching people whom the world has ever seen. Indeed, if Mr. Harwood, in his character of "the Coming Democracy," were allowed to have his way, the present dimensions of the British Empire would be rapidly enlarged in every direction. He appears to be of opinion that any people which has the might to subdue some other people possesses, in that fact, the right also, and that the exercise of this right is an act of brotherhood. "The sense of brotherhood does not best express itself in leaving a brother alone, but rather in trying to improve him, even though this may involve much that is unpleasant to begin with." And as the Coming Democracy will share Mr. G. Harwood's "sense of brotherhood" as well as his other sentiments and convictions, the latter anticipates for the more backward and weaker races of this world a very unpleasant time when the Coming Democracy comes into power. These weaker races are then to be taught the meaning of brotherhood after the fashion practised by the Hawkinses, the Drakes and Frobishers of Queen Elizabeth's time. "Many things," says Mr. Harwood, "are more unlikely than that, under the Coming Democracy, we may see in this direction [the direction, that is, of brotherhood "druv in by bagnets"] an enthusiasm and an enterprise which have not been equalled since the days of Queen Elizabeth. . . . An active foreign policy may in such circumstances be adopted merely as a means to an end, and may be justified because that end is the promotion of the best welfare of humanity." Some of our readers will perhaps remember that the present Bishop of Gloucester expressed his warm approval of the recent invasion of Afghanistan because it afforded an opportunity of spreading among those benighted mountaineers a knowledge of the Christian religion. It was "a means to an end, and justified because that end was the promotion of the best welfare of humanity." But, curiously enough, the British Democracy, instead of taking the Bishop's and Mr. Harwood's view of that war, were so profoundly shocked by this "active foreign policy" that they expelled its authors from office. And it is not, therefore, impossible that the Coming Democracy may be of the same way of thinking, and exhibit no relish for the buccaneering exploits of Queen Elizabeth's sea captains.

Development of English Literature and Language. By Alfred H. Welsh, A.M. 2 vols. Chicago: S. C. Griggs & Co.; London: Trübner & Co. 1882.

A HISTORY of the English language and literature as an illustration of social development, such as these two volumes profess to be, would be a very desirable book. To make such a work is difficult, doubtless, and requires rare qualities of mind; for the unwary author, by the very complexity of the phenomena, is apt to lose himself, both as a thinker and as a describer, in detail. He finds it hard to limit his attention to the single aspect of literature as a record of spiritual life, and gives, too frequently, undue and perplexing prominence to the other interests of literature as art, thought, and the expression of attractive and original individualities. The method of the present writer, carefully thought out and consistently applied as it is, does not save him from his temptations. He gives an introductory account of the social and political environment of each literary group, a general description of its characteristics, and a specific biographical narrative of the personal fortunes of its leading members, with a critical estimate of their works. His aim is thus threefold: philosophical, critical, and encyclopædic. Now, the essential thing in a philosophic history is that it should give a clear and succinct state-

ment of general causes, and should insist rather on the similarities existing in the body of the literature in each epoch than on the peculiarities and divergencies of individual authors. In this portion of his work the writer is much indebted to Lecky and Green; and from the details which the former introduces to justify his conclusions, and the latter to obtain pictorial effect, he selects such as seem to him significant. But in arranging them he misses the cumulative force of the moralist, and the vividness and unity of impression of the historian.

To take, for example, the interesting period from 1660 to 1735. This epoch began, as every one knows, under Court taste, with the heroic drama modified by French and Spanish influences, and is not to be understood except in reference to them. As the drama faded out, the literature which arose was distinctively a town literature, thoroughly English, but showing clearly the influence of French formalism and the study of the Roman classics, and was marked, as it went on, by an increasing shoppiness of literary standard and phraseology; and during its course two capital changes occurred with far-reaching results—the infiltration of literature into politics, and the substitution of publishers for patrons as the overlords of Grub Street. Now, these facts are, in some cases, hardly mentioned—the work is weak throughout in its references to foreign influences, particularly; but even where such points are entered, it is as into a ledger, without any prominence or any indication, as a rule, that what is recorded is of any more consequence than the number of gallowses at the four corners or the number of witches burned. No emphasis is given to the facts; they are not brought out. Such lacunæ as have been hinted at, such lack of proportion, perspective, and relief, are fatal to the philosophical claims of the work, although the author's mind is nearly always controlled by the prevalent conception of society as within the domain of ascertainable law. His theory is right, but he seems unable to work up to it, to point out the laws and describe their operations.

He fails also in another way, by taking in too much in some departments. He has that fatuous metaphysical bent that so often diminishes the value of the work of literary men. He is, apparently, much indebted to Ueberweg, and has tried to incorporate a history of English metaphysics into his volumes. This belongs rather to the history of thought, and for it one does not go to a literary manual. Its presence here cannot but prove confusing to the student, and it seriously interferes with what should be the main aim of books of this kind—the clear presentation of the social significance of pure literature. If admitted, it must be subordinated.

In his second, or critical, aim the author cannot be regarded as more successful than in his attempt to write a chapter of sociology. Perhaps not much is to be expected from one who confesses his main obligation as due to Anderson, Bascom, and Taine, although it should be stated that he has a true Transcendentalist's contempt for Taine's trick of resolving the organism into the environment. The brightest parts of his criticism are such fine perceptions of Lowell's, Arnold's, and Ruskin's as he has woven into his own text. In general, his remarks are appreciative, usually eulogistic, drawing the decent veil over the unworthy—as when he styles Defoe "good and religious"—always adjectival. In estimating literary qualities, he exhibits the same feebleness of discriminative power as in dealing with historical details. If any one should take the trouble, after reading what he has to say of Chaucer, to compare his pages with the critical introduction to that poet in the popular 'English Poets,' it would be a lesson in criticism. The latter account is orderly, definite, and firm, whereas our author's is vague, composite, and, to use an expressive word, pasty. The chapters on the later dramatists in the reigns of James I. and his son, and on the fantastic or, as he calls them, the "brain-poets," are particularly deficient. He is most successful in his praise of the writers of our own time whose influence he has himself felt; for what he remarks has the value of a keenly-felt personal impression. But the attitude of the worshipper, although sometimes serviceable, is not the best for a critic; his uplifted eyes are too likely to see only the head of fine gold, and to neglect the less noble parts of baser material. The quotation, too, is somewhat profuse; it is hardly necessary to give extracts from Dickens. Mr. Welsh has a habit of winding up his chapters with moral exhortations to be good that seem also not required; for literature, rightly described, does not need any comment of that kind—its morality is intrinsic, not declamatory.

But if little can be said for these books as philosophy and criticism, they are a valuable repertory of encyclopædic information. The author has read much, if not always wisely, and he has embodied other men's ideas, theories, and investigations in his own work, so that it makes a very useful abstract—a sort of *omnium gatherum*—of matters pertaining to language and literature. The linguistic portion is scanty and feeble, it is true, but the literary portion is full and multifarious. Mr. Welsh gives a list of authorities which indicates the scope of his inquiries, though several volumes mentioned seem far removed from literature. We wonder what he took from Joseph Cook's work on 'Conscience,' from Gladstone's 'Juventus Mundi,' and McCosh's 'Christianity and Positivism,' and the like; and we are surprised at his dispensing with several most important volumes in criticism and literary history. But, however extraordinary are some of the sources he enumerates and the omissions he makes, he has collected the results of a long study in literature, and has made them available by an index. For the use of students, as a main work, the volumes cannot be recommended, but teachers will find them useful, particularly if well-supplied libraries are not accessible. As an instance of the variety of subjects mentioned and a sign of the times, we note that in his account of American civilization Mr. Welsh speaks of the movement toward civil-service reform—certainly the last thing to be looked for in a history of English literature.

Ancient Scottish Lake-Dwellings or Crannogs, with a Supplementary Chapter on Lake-Dwellings in England. By Robert Munro, M.A., M.D., F.S.A., Scot. Edinburgh: David Douglas. 1882. 8vo, pp. xx.-326; 264 woodcuts in the text, frontispiece, and 4 plates.

ANY one who opens this volume in the expectation of finding accounts similar to those given in Dr. Keller's reports on Swiss lake-dwellings will be disappointed; but, on the other hand, in perusing it, he will be richly rewarded by the acquisition of information concerning a curious phase of ancient Celtic life in Scotland. The Swiss lake-dwellers, it is well known, generally lived in huts erected on platforms which were supported by piles driven in the mud near the shore of a lake. In some of the smaller lakes, however, the dwellings were not built on piles, but on a kind of fascine-work, formed by layers of sticks and stems of trees, stones, and loam, raised up from the bottom of the lake, until the foundation was high enough to receive the platform. The upright piles found in these substructures only served to give them steadiness. The Swiss fascine-works bore some resemblance to the Irish crannogs, which, to use the language of Mr. W. F. Wakeman, were islands, either altogether or in part artificial, strongly staked with piles of oak, pine, etc., encompassed by rows of palisading, behind which the occupiers of the hold might defend themselves with advantage against assailants. Within the enclosure were usually log-houses, which afforded shelter to the dwellers during the night-time, or whenever the state of the weather necessitated a retreat under cover. To this definition should be added that stones were sometimes used to strengthen the structures, a few of which communicated with the land by moles or causeways, though most of them were entirely insulated, and only accessible by boats. In fact, dug-outs have usually been found in connection with these structures, both in Ireland and Scotland.

The Scottish crannogs bear in their general character a close resemblance to those of Ireland; but, of course, in both countries each structure presents peculiarities resulting from the configuration of the site on which it was erected. Yet the number of crannogs entirely composed of stone was greater in Scotland than in Ireland, stone being more easily obtained in the former country. The crannogs of Scotland extended over a large area, embracing nearly the whole of the kingdom.

The first chapter of the work is introductory; the second contains a summary of the historical and descriptive notices of Scottish lake-dwellings previous to the year 1878; the third is devoted to a full report on the discovery and examination of a crannog at Lochlee, Tarbolton, Ayrshire (1878–9). This exploration was carried on by Dr. Munro and other gentlemen, and his account is so minute that it requires close study to follow the details presented by him. The site of the Lochlee crannog was a small lake, now entirely dried up and under cultivation.

"Before it was artificially drained, some forty years ago, no one appears to have surmised that a small island, which became visible in the summer-time, and formed a safe habitation for gulls and other sea-birds during the breeding season, was formerly the residence of man; nor am I aware of any historical notices or traditions that such was the case; nor does it appear to have attracted the attention of the poet Burns, though he lived for four years on this farm in the capacity of ploughman to his father, then tenant of the place."

The stockade formed an irregular circle, twenty-five yards in diameter, and the structure consisted of brushwood, trunks of trees, thick slabs of wood, planks of oak, and large stones. The complicated arrangement of these materials cannot be noticed in this place. Traces of a gangway between the crannog and the shore of the lake were also discovered. A large number of relics came to light during the exploration, such as hammer-stones, sharpening-stones, a polished stone celt, querns, spindle-whorls, and a few objects of flint; further, bone implements of different forms, many tools and a few weapons of iron, bronze fibulæ and rings, and, finally, wooden articles—among them a canoe and a double-bladed paddle. The animal remains were those of the ox, hog, sheep, horse, red deer, roe-deer, and *reindeer*.

The fourth chapter treats of subsequent researches and discoveries at Friar's Carse (Dumfriesshire), Lochspouts (Ayrshire), Barhapple Loch (Wigtownshire), and Buston, near Kilmaurs (Ayrshire). The results were similar to those obtained at Lochlee. The fifth chapter is devoted to general observations on the classification, geographical distribution, structure, and age of Scottish crannogs. A columnar table shows the geographical distribution of the numerous lacustrine structures in Scotland, and gives short details relative to their character. This table adds much to the value of the work.

"The great and primary object of the island-builder," says Dr. Munro, "was the protection afforded by the surrounding lake or morass, the securing of which has continued to be a ruling principle in the erection of defensive works down to the Middle Ages, long after the wooden islands ceased to be constructed. The transition from an island fort to the massive mediæval castle, with its moat and drawbridge, is but another step in the progressive march of civilization."

It is rather perplexing to notice the number and character of the specimens obtained from the crannogs, for they embrace objects apparently belonging to the so-called stone age, bronze and iron articles, manufactures of glass, and relics of Roman origin. The crannogs, however, are supposed to be of purely Celtic origin, as "there is not a particle of evidence in favor of the idea that such structures originated with the Roman conquerors of Britain or its Saxon invaders." The number of querns and the great preponderance of the bones of domestic over those of wild animals lead to the inference that for subsistence the occupants of the crannogs depended more on the cultivation of the soil and the rearing of cattle, sheep, and pigs than on the produce of the chase.

"The lake dwellings in the southwest of Scotland," Dr. Munro conjectures, "were constructed by the Celtic inhabitants as a means of protecting their lives and movable property when, upon the frequent withdrawal of the Roman soldiers from the district, they were left, single-handed, to contend against the Angles on the east and the Picts and Scots on the north. Ultimately, all of them would fall into the hands of the Saxon conquerors, when, henceforward, they would be allowed to subside in mud or crumble into decay."

There is historical evidence, however, that certain lacustrine constructions in Scotland survived to the Middle Ages, and even to later times; yet many of these were castles which bore no other analogy to the crannogs proper than their insular situation. One of them, for instance, in Loch Cannor or Kinord, in Aberdeenshire, appears in history in 1335, had King James IV. for its guest in 1506, and continued to be a place of strength until 1648, when Parliament ordered its fortifications to be destroyed.

The sixth chapter, which is added as a supplement, treats of lake-dwellings in England. The information concerning them is thus far rather scanty. The work here briefly noticed ranks in external appearance with the best of its kind. It is beautifully printed, and the 264 woodcuts inserted in the text are admirably executed; but equal praise cannot be bestowed on the five plates accompanying the volume. The publication is a highly valuable contribution to archæology, and doubtless will find many readers in this country.

L'Insegnamento Pubblico ai Tempi Nostri. N. Fornelli. Rome: Forzani.

In one sense there is no contemporary literature in Europe of more interest than that of Italy. When we think of its past glories, of its collapse and practical disappearance under the disastrous political fortunes of the country, and of the sudden and brilliant revival of the latter, we cannot but watch for the signs of new intellectual movement. It does not take the form, as the popular imagination might expect, of poetry and romance. There is a hard, practical common sense, especially through the northern half of the peninsula, not unworthy of comparison with the Scotch. The work of Signor Fornelli is a model of its kind. For close logical development of a leading idea, for clearness of style and thought, and strict adherence to the subject in hand, it could not be easily surpassed. The writer starts with the position that while the revolutions of the Teutonic races have been in the direction of religious and intellectual development, in fact more or less direct results of the Protestant Reformation, those of the Latin races have been almost exclusively political, having reference to the organization of society; and therefore the nations as well as their public men have paid least attention to that which more than anything else needs attention—the preparation of the minds of the multitude for the sober use of the liberty and social equality which they have grasped at so eagerly. He then proceeds to the discussion, which is the subject of the book, whether education can be safely left to individual or municipal initiative and conduct, or whether a guiding and controlling power is the proper and necessary function of the state, making out, we think, a very strong case in favor of the latter.

Taking first the countries in which local self-government with municipal and individual freedom has prevailed most extensively, as in Great Britain and the United States, he shows that individual effort has even there proved itself utterly untrustworthy, the immediate needs and the indifference of parents quite neutralizing any ultimate prospect of advantage for themselves or their children. The next question is of municipal action, and in Europe, of course, the religious difficulty is the principal and most obvious, though by no means the only, one. The British Government has been forced, in order to secure anything like popular education, to establish an extensive centralized system of inspection and control, enforced not by penalties, but by conditional grants of public money. In the United States, Fornelli shows that the public feeling in favor of education has caused the provision of pecuniary resources both by the general Government and the States, and that the religious question has caused some of the States to take decided action; but he only hints at that which might have furnished his strongest illustration, the disastrous effects upon education of leaving it in the hands of local authorities. The failures to enforce the laws as to compulsory school attendance and the labor of children in factories, the ignorance and inefficiency of school committees, the depressed condition of teachers, the defective standards of education, and the absence of effective inspection, are marked signs of the absence of public administration. Pursuing the examination of the Belgian, French, German, and Italian school systems, the writer shows how dangerous is the influence of local and private interests, and how necessary is the firm hand of the Government to secure anything like real popular education; and that this, which is the common interest of the whole people, requires the comprehensive treatment of a central authority, however this may be guided and aided by local impulse.

Assuming that the control of education is especially a function of the state, our author examines incidentally the general position of the sphere of Government, contending against the doctrine of Herbert Spencer, now so popular, that everything should be left to individual action, and that the less Government interferes the better. He applies the maxim of the naturalists, that the more life and force any animal has, the more organization and system it needs, concluding that as the organization and system of society is the state, the intense activity of modern times requires stronger and more organized administration than that of any previous period. We agree with him in thinking that popular government, with its short experience of a century, has this discovery yet to make.

Reflecting upon the large part which religion has held in the education of the past, as the basis of human morals and conduct, the author asks, in conclusion, what is to take its place. With the demand for secular schools, the rapidly-spreading ideas of political, if not of social, equality, the breaking up of the controlling forces which have heretofore been relied upon, what is the form of education which is to hold society together? Perhaps on the principle which leads writers of serial novels to close their chapters at the points of highest interest, Signor Fornelli tells us that he proposes to discuss this question in another book, if the present is received with sufficient favor. We could wish that this work might be translated and extensively circulated, if only to impress our people with the lesson, which they so greatly need, that we are not living under a special dispensation from the political and social laws which govern the rest of mankind, but that the problems before us are just the same, the difference of circumstances being given, as those with which other nations are struggling, and that their experience is worthy of our most serious consideration.

The Burman: His Life and Notions. By Shway Yoe, Subject of the Great Queen. 2 vols. London and New York: Macmillan & Co. 1882.

The accuracy in detail and delicacy of touch observable in this book would indicate a female hand. But in any case, it is a book full of information relative to the habits and notions of the people of Burmah. These luxurious and indolent people are little known where Western civilization prevails. Our general idea of them is that they are an unwarlike and superstitious race, much given to opium and gambling. The book before us opens out another view of the case, and we find that the Burman is not, in his own country at least, so different from other happy and contented folk elsewhere. Feeling some curiosity on the question of the "Burmese Army," we turned to the chapter in the second volume of the book, to glean information on the point. The description is ludicrous and amusing. The King inspecting his troops through a field-glass, while the Army "grovels on its stomach for a matter of two minutes," is sufficient to show that the Burmese, at least, unlike the people of Japan, have not learned to profit by the hard logic of events that have recently affected their national history. The description, indeed, given by the author of the entire Army and its movements, reminds us more than anything else of "Alice," and her experience "behind the looking-glass."

Turning from military affairs to the question of education, we find matters better in this particular. Our author gives a vivid picture of the character of a "monastery school" among these people; and the conclusion drawn from evidently a complete knowledge of the subject is, that so long as the regularity and discipline of these schools continue, so long foreign missionary work will be of little avail to alter the faith or the life of the Burmese. Education, in fact, is in the hands of the priests, and it is their interest to make the lines of the nation's progress in this particular coincident with its religion. It is just the same in China, except that the doctrine of Confucius is not so distinctly religious as that of Gaudama, but there also the first smattering of letters acquired by the child is derived from the "three-letter" classic, and this embodies the teaching of Mencius, the exponent of the doctrine of Confucius. And so long as reverence of these great masters is inculcated in the youthful mind, and their doctrine impressed by "hard knocks" on the memory, so long it will be difficult to remove the foundations and make way for another faith.

The religion of Burmah is an offshoot from the Southern school of Buddhism. The religious literature is derived principally from Ceylon. But the people are more religious than their mas-

ters. There is no country in the world so covered with sacred edifices as this, and we are told the reason of it—viz., that when a pagoda falls into decay, there is no merit acquired by its repair (except in some few cases), but a new building must be erected in order to gain the desired end of advance toward the goal of Neh'ban. A singular fact in connection with this love of building for "religious merit" is that the existence of the grand stûpa at Gayâ in India is due to the frequent missions from Burmah, undertaken at the instance of the Government, for repairing and restoring it. This stûpa is erected near the spot where Buddha received enlightenment, and such a building has existed there ever since that event —some 2,300 years, perhaps. The Burmese have constantly undertaken the task of repair, and only a year or two ago were engaged in the work; the consequence being that this sacred edifice is still one of the chief Buddhist monuments of the world—a monument outliving the faith of the people who dwell round it, but a witness to the historical truth of the origin of the religion professed by their forefathers.

The selections given us from the Burman "literature" are well chosen and instructive. Perhaps there is no sermon, beyond the Christian community, so touching and true as the "chapter of blessings," known to the Buddhists as the "Mingala-Thoht." This sermon has already been translated by Bishop Bigandet and Professor Childers, but it has lost none of its attractiveness. Our author (p. 319, vol. ii.) gives us another version of it. Putting some of its sentences in another form, they would run thus: "Blessed are the patient under suffering; blessed are the humble and contented; blessed are the tender and affectionate; blessed are the fearless and the tranquil; blessed are such as these, for they shall never be overcome, and shall find happiness in all things."

Among the selections from the literature of the country, the author gives specimens of the "folk lore" common among Buddhists of all nations, and not less in Burmah. We cannot, however, quote further from this part of the book; and it would be difficult to select from these "selections," for they are all good. It is sometimes puzzling to make out the Burmese mode of spelling, but when the key has been found, the restoration of technical words becomes easy. For instance, it is difficult at first sight to recognize under the form Areemadehya, the familiar name of Ârya Mâitreya (vol. ii., p. 206); and so, again, with respect to the "Tawadehntha" feast, we should hardly have guessed that this word was the Pâli "tavatimso," had it not been for the description of the feast given in the text. But there is no fault to find here; we only suggest that if another edition of this instructive work is published, a glossary of terms might be added for the benefit of the Buddhist student not conversant with the Burman language. Beyond this we have no improvement to wish: the type is clear, the paper good, and the matter excellent.

BOOKS OF THE WEEK.

Atwood, I. M. Walks About Zion. Boston: Universalist Publishing House. 50 cents.
Black, W. An Adventure in Thule. Harper's Franklin Square Library. 20 cents.

Henry Holt & Co.

Have Ready:

Christ's Christianity.

Being the Precepts and Doctrines recorded in Matthew, Mark, Luke, and John, as taught by Jesus Christ. Analyzed and arranged according to subjects, by Albert H. Walker. 12mo, $1 25.

An attempt to furnish the public with an edition of the sayings and discourses of Jesus, separate from all other matter, and systematically classified and arranged according to their respective subjects and relations.

Cory's Guide to Modern English History.

By William Cory. Part II. MDCCCXXX-MDCCCXXXV. 8vo, cloth, $3 50.

NEW CHEAP EDITION OF

Democracy.

An American Novel. 16mo, paper, 25 cents. (Also in Leisure-Hour Series, $1.)

FANNY KEMBLE'S

Records of Later Life.

12mo (uniform with 'Records of a Girlhood'), $2 50.

ROBIN.

A New Novel. By Louisa Parr, author of 'Dorothy Fox' and 'Hero Carthew.' 16mo (Leisure-Hour Series), $1.

Roberts Brothers'

NEW BOOKS.

A NEW NO-NAME NOVEL.

HER CRIME.

This is the first novel in the third series, in a new and attractive binding. Price $1.

ART AND NATURE IN ITALY.

By Eugene Benson. 16mo, cloth, price $1.

These letters from Italy are records of delightful Italian days; better, says good authority, than anything that has appeared since Goethe's *Italianesche Reise*, and sure to win the appreciation of our best people.

The WISDOM of the BRAHMIN.

A Didactic Poem. Translated from the German of Friedrich Rückert by Charles T. Brooks. Six Cantos. 16mo, cloth, price $1 25.

Says Dr. Beyer in his Life of Rückert: "The 'Wisdom of the Brahmin' is a poetic house-treasure ot which our nation may justly be proud. So much has been said and sung of late years of 'The Light of Asia,' the 'Sympathy of Religions,' and the like, that the present seemed to be an auspicious moment to venture a volume of Rückert's greatest work."

NORSE STORIES, RETOLD

from the Eddas. By Hamilton W. Mabie. 16mo, cloth, price $1.

It has been the author's endeavor to present the leading features of the Norse mythology in such a way as to convey a clear and comprehensive idea of the system under a purely narrative form. The stories are drawn at first hand from the Elder and Younger Eddas, and are the fruit of a long and careful study of the subject. It is believed no other attempt has been made in English to present these myths in a form so direct, simple, and dramatic.

Sold by all booksellers. Mailed, postpaid, by the publishers,

ROBERTS BROTHERS, Boston.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 2, 1882.

The Week.

Bossism received a heavy blow in a new quarter last week at the hands of Mr. Bainbridge Wadleigh, ex-Senator from New Hampshire. The text of Mr. Wadleigh's speech was the corrupting influence of money in elections, and, as the illustrations which he employed were of the concrete sort—being pictures of scenes enacted repeatedly before the eyes of his listeners—it must have had a profound influence upon them. The facts, which he disclosed with the directness of a demonstrator of anatomy in a dissecting-room, have been talked about in whispers in all parts of the Union these many years. Money wrung from the lobby in Washington and Concord has become the chief factor of elections in New Hampshire. This money has been employed not to pay the ordinary expenses of campaigns—the expenses of meetings, the printing and circulation of documents, etc.—but for the purchase of votes. The natural result was that "voters lost their patriotic instincts—many men who saw their neighbors paid for voting persuaded themselves that they too ought to be paid for mercenary votes." "My friends," continued Mr. Wadleigh, "this question of purity in elections is the greatest in American politics. It must be grappled with and rightly solved, or at no distant day we shall politically perish. Political corruption is the greatest existing danger to that doctrine of equal rights which underlies our Government. It is the devouring worm at the root of the tree of liberty, the poison in the fountain of our national life. Day by day the power of money grows in this country. If votes are mercenary, the people will be deprived of all power. They will become mere tools to register the will of their corruptors." Mr. Wadleigh went on to say that the nomination of Mr. Hale, the Republican candidate for Governor, was accomplished by bribery, and that the chief of the corruptionists in New Hampshire politics had been and was William E. Chandler, the present Secretary of the Navy.

When Mr. William E. Chandler was made Secretary of the Navy no one doubted that he would treat the Department as "spoils," and consequently nobody has been disappointed. He is one of the statesmen who can hardly conceive of a branch of the public Administration having no spoils in it. Moreover, to them, although there is a difference in spoils, all spoils are good. Hubbell takes two per cent. on a salary of one hundred dollars just as readily as two per cent. on a salary of ten thousand, and so also Mr. Chandler finds a messenger's "place" often as useful as that of the head of a bureau. He has just performed an act of more than usual meanness, even for an active manager, in the dismissal of George J. Beanes, a colored man, of a race in the happiness and welfare of which Mr. Chandler, when running about the country as plain "Bill" Chandler, two or three years ago, denouncing "outrages," professed to take a great interest. Beanes served for thirteen years in the Navy, continuously afloat, and also served through the Mexican war and the late war. He was appointed to an office in the Department in 1869—his duties being the care and arrangement of charts, and the painting of lighthouses thereon. He is well known to naval officers as a careful, sober, honest, zealous man, against whom no complaint has ever been made. His thirteen years of experience in the Hydrographic Office has given him a familiarity with the records and archives which makes him almost essential to the Chart Department. Well, a few days ago, this honest, competent, experienced officer and colored man was dismissed to make way for a woman, presumably backed by some male "influence." He went to the Secretary to ask the reason, and was told that there was no other reason than that he (the Secretary) wanted the place. Every naval officer in and out of Washington sympathizes heartily with Beanes, and naturally feels humiliated at the thought that the Navy should be in the hands of a man capable of so grossly abusing his trust.

The argument in the Curtis case last week took a wide range, and the judges asked General Curtis's counsel a number of questions which seemed to show a decided leaning in favor of the anti-assessment act. He insists that the act is unconstitutional because it prohibits not merely the receiving of assessments, but the making contributions as well. It is a sufficient answer to this argument, as the Solicitor-General said in reply, that General Curtis was indicted, not for giving, but for receiving; it is, however, to be hoped that the Supreme Court, in disposing of the case, will consider the whole policy of the act. Why is an employee prohibited from "giving" to an officer of the Government? Judge Miller, in the course of the argument on Wednesday, hinted that it was to protect the subordinate from exactions. But protecting a man from doing an act by making the act a misdemeanor, does not seem a very natural way of accomplishing the object; and the view of the court below—that the intention of the act is not merely to protect the clerks, but to protect the service itself from corrupting influences—seems to cover the whole ground much better. A clerk may habitually give a portion of his salary to a political committee voluntarily, but if he does, his action is undoubtedly influenced by a desire to retain his place, and consequently his payment is a thinly disguised purchase of the favor of the Committee. It is this fact which Congress, in passing the statute forbidding such gifts, seems to have recognized, and we can see no reason why the Judges of the Supreme Court should close their eyes to it. Mr. Wheeler's brief, submitted on behalf of the Civil-Service Reform Association, deals with the act as directed against the entire practice of collecting and paying assessments, and puts the argument on broader grounds than those which the Attorney-General seems to have instructed Mr. Phillips to confine himself to.

The Supreme Court of Wisconsin has decided that it is not in all cases the duty of firemen to rescue people from burning buildings. Some time ago, when the Beckwith House at Oshkosh was in flames, one Paige offered $5,000 to any one who would save his wife. Charles Rief, a fireman on duty at the time, closed with Mr. Paige, saved Mrs. Paige, and claimed the reward. Mr. Paige refused to pay, and Rief brought a suit against him, which he lost. The Supreme Court, however, has now ordered a new trial, on the ground that the rescue involved "imminent peril" to the plaintiff's life, and that it was not his duty to expose himself to such peril. Under this decision there ought to be an active demand for positions in the Oshkosh fire department. The experience and coolness of firemen make their services in saving life at fires very desirable, and persons desiring the rescue of wives and children would generally prefer to intrust a fireman with the work rather than to put it in the hands of an ordinary bystander. By allowing the flames to get under a good headway, first-rate firemen could often command a high price for their services, and there would always be plenty of witnesses to the contract. At large fires there would probably be active bidding for the best firemen. We cannot see why the principle of the decision should be confined to services in saving life. It seems very hard, if a fireman need not imperil his life to save women and children, that he should be called upon to do so for the sake of houses and furniture. The old idea of a fireman was that his duties at fires were determined by his status as a fireman, and not by bargains he might make while engaged in putting out the flames. Sociologists maintain, however, that progress in civilization is chiefly marked by the change from status to contract, and the Wisconsin decision will therefore interest not only firemen, but all who believe in progress.

All critics of the United States seem to be agreed that there are certain valuable things or qualities which, as a people, we want, whether we know it or not. It is curious to see how they differ as to what these are, however. Mr. Herbert Spencer thinks that we need to acquire the habit of insisting on individual rights. General Booth, of the Salvation Army, thinks that what we need is a "hallelujah hurdy-gurdy in our insides, played on by the Holy Ghost." Mr. Freeman's only really serious objection to American civilization is that we do not invent some better name for ourselves than Americans. Mr. Walt Whitman, on the other hand, declares that "our fundamental want to-day in the United States, with closest, amplest reference to present conditions, and to the future, is of a class, and the clear idea of a class, of native authors, literatuses, far different, far higher in grade, than any yet known, sacerdotal, modern, fit to cope with our occasions, lands, permeating the whole mass of American men-

tality, taste, belief, breathing into it a new breath of life, giving it decision, affecting politics far more than the popular superficial suffrage, with results inside and underneath the elections of Presidents and Congresses." There is no reason why we should not have such a class, and the clear idea of such a class, too; but then the sacerdotal literatus must look out for the District Attorney. It might put back the new learning a hundred years if it had to be suppressed as unfit for publication.

The Savannah *Morning News*, after commenting with some severity on the inferences drawn by us from the late Knoxville slaughter regarding the attitude of the Southern mind toward homicide, says:

"The Mabry-O'Connor affair was most deplorable, and nowhere is it more regretted than at the South. But until the millennium comes, men will quarrel, and murder and homicides will take place everywhere. The only difference between homicides North and South is that in the North, when one man 'has a grudge' against another, he generally waits for his victim in a dark alley, or endeavors in some way to slay him unawares, so as to insure his own safety and escape detection; while, in the South, the rule is to meet and fight it out openly like men. We deprecate all such affrays, and believe that stern justice should be meted out to those who engage therein. Still, the South is not the only spot where they occur, and our Northern maligners would do well to pluck the beams out of their own eyes before they presume to pull the motes from the eyes of their fellow-citizens of this much-abused and vilified region."

It is to talk of this kind on the part of the Southern press that the perpetuation of the homicidal mania at the South must be in large part ascribed. The minds of the young men are debauched by it, and prepared for murder, almost as soon as they are able to buy and carry a pistol. They learn from it to think of killing somebody as one of the probable incidents of their career, which the friends and neighbors will look on with indulgence, and even a certain ill-disguised admiration. Out of this state of expectation of having to kill, readiness to kill on slight provocation naturally and easily grows. The horror of bloodshed—as something which has "the primal eldest curse upon it"—that most precious fruit and surest sign of a high civilization, cannot spring up in a community in which all the best portion of the male population goes armed, and thinks of having to murder a friend as one of the contingencies of peaceable existence, which any day's business or pleasure may bring forth.

Moreover, the Southern press, when representing, as in the article before us, that murder is a common mode of settling differences in the more highly civilized communities, and that the South differs from them in this matter only in doing the bloody work in a more manly and courageous way, is addressing a people more than usually isolated hitherto from the rest of the world, and still, as before the war, too much given to suppose that it has kept up with the rest of the world in the things which in our day constitute the modern state. The Southern boy, when told the ridiculous story that leading lawyers and merchants in Boston and Buffalo, when they quarrel, lie in wait for each other with shotguns, and kill each other on the sly, naturally supposes that the same custom prevails in England and on the European Continent, and that the Southern system of killing enemies openly in the street, or in offices in business hours, or in courts of law, is really a sign of greater culture and of a nobler temper. He concludes, therefore, that the South is in this matter, as in others, really in advance of other communities, and that "the street fight" between leading citizens is something which New York, London, and Paris are coming to, not leaving behind. In this way he is really protected against one of the most potent educating influences of our time—the shame of being more brutal, savage, and uncivilized than our neighbors. The true course for our Savannah contemporary, and all other Southern papers which wish to launch the South on the current of modern progress, and make it really "the heir of all the ages," is not to content themselves with "deploring" or "regretting" these tragedies, but to denounce them with all the vehemence at their command, and lash judges and juries into remembrance of the fact that the first duty of government is to remove the manslayer out of the sight of his fellow-men. Hanging or no hanging, murderers ought not to be allowed to walk the streets or fields in which they have murdered. And boys ought to be taught that going armed and in readiness for manslaughter is a sign of secret disloyalty if not of contempt for the State, as evincing total distrust of its ability to protect its citizens, and scorn for its tribunals. This consideration may affect many who have learnt neither from parents nor pastor the respect due to human life. We will add, too, that the Sixth Commandment, which, we believe, is still ostensibly respected in Georgia and Tennessee, does not say, "Thou shalt deplore or regret murder." It says, "Thou shalt not kill," and from it there flows as an imperative and inevitable inference, "Thou shalt see, as far as in thee lies, that murderers are caught, tried, and hanged, and shalt not apologize for them, or palliate their crimes in thy paper."

The walking-match which came to an end last week was less successful than was anticipated by the managers, owing no doubt in some measure to the interference of the police with bookmaking. Rowell broke down again, and there seems a great deal of doubt whether he will ever be able to enter another match. The fictitious interest given to some of the earlier walking-matches as "international" contests has pretty much died out, and probably cannot be revived. The limit of the "record" has been very nearly ascertained, and whether it can be beaten by a few miles more or less has ceased to be an interesting question. It has also been demonstrated that a walking-match is not pretty or entertaining as a spectacle, and that most of the athletes it brings to the front, instead of being well-made, fine-looking men, are, at their best, wretched-looking specimens of their kind, and after walking for a day or two become positively repulsive. Some substitute for walking-matches will probably now have to be invented, because the supply of capital seeking employment in friendly contests of all kinds cannot remain idle.

The event of the week in Wall Street and in the railroad world was the transfer of the controlling interest in the New York, Chicago and St. Louis Railroad (called the Nickel-Plate Line)—extending from Buffalo to Chicago—from the builders of the road to Mr. W. H. Vanderbilt and friends of his in other railroads who can make use of the new line. The projectors and builders of it sold out at a profit of $6,000,000 to $7,000,000 above the cost of the road. As Mr. Vanderbilt had, since the inception of the road, decried its value, and stoutly protested that he would have nothing to do with it, his purchase of the property was at first doubted. The transaction had less influence in the stock market than might have been expected. The money market during the week was amply supplied with loanable funds at low rates until the last day of the month, when preparations for November interest payments caused a shifting of loans and higher rates. Foreign exchange declined during the week, but it is no longer expected that rates will fall to the gold-importing point. At the Stock Exchange it was a dull week, the markets having been only temporarily enlivened by the large railway transfer above alluded to. General trade was moderately active, but not up to the expectations formed early in the season. Although the movement of the crops is backward, railroad earnings continue large, and promise to be larger as soon as navigation closes.

The purchase of the "Nickel-Plate Road" is taken by the public very much as a matter of course. Yet a few years ago a transaction of such magnitude would have been looked upon as a chapter out of the 'Arabian Nights,' whether considered in the light of the net profit made by the sellers, or the ease with which the buyers turned over the money to complete the trade. The rapidity and silence with which the road was built was one of the marvels of the day. Few persons except those whose journeyings brought them in the vicinity of the work, knew that such a road was building until it was actually completed from Buffalo to Cleveland. Nearly all, too, who looked on while millions upon millions of dollars were spent in its construction, esteemed it a chimerical and utterly wasteful project. Whether the acquisition will be a gain or otherwise to the Lake Shore Company, depends altogether upon the question whether the business of the country tributary to the line has grown sufficiently to require a third track. Not less singular than the celerity and secrecy with which so gigantic a work has been constructed and swapped off, is the fact that the monopoly feature of the recent trade has attracted no attention. The truth is, that the public never looked at the Nickel-Plate Road as a competing line. They knew that it would be taken into the pool, and they knew, also, that, as regards the great grain-carrying lines, the competition which centres at Liverpool—the competition of Russia, India, Egypt, and Australia—as well as that of our own lakes and canals, would be a far more powerful regulator of through-freights than the addition of one line of rails to the seven already existing between Chicago and the principal seaboard cities.

It is gratifying to learn that there is no truth in the story of Jay Gould's narrow escape from being run over by one of William H. Vanderbilt's engines at Rochester. As Gould no longer controls the Erie Railroad, there was no rational ground for Vanderbilt's desire to run him down or kill him, and had it been committed the act would have to be attributed to pure and almost insane malice. It is interesting, however, to speculate upon what might have been the consequences had the fiendish deed been really perpetrated. Had Jay Gould been killed, his family could only have recovered $5,000; had he been injured, however, to such an extent as to prevent his continuing his labors in Wall Street, he could have recovered damages based on his earning capacity. In the last twenty years he has earned $60,000,000, or $3,000,000 a year; and a verdict based on this rate for the rest of his life would net him, perhaps, some $20,000,000 to $30,000,000 more. This would sweep away a large part of Vanderbilt's earnings, and therefore ordinary prudence would obviously dictate a careful management of the latter's engines when Gould is about. It could only be in the crisis of a great railroad war between trunk lines that such means would be resorted to, and then only in sheer desperation. Gould, in his interview on the subject, says, in his good-natured way, "If I ever go into the business of supplying the public with news, as I have been informed by sundry newspapers that I intend to do, I hope I shall be a little more careful as to the news I supply than some people now occupied in that way appear to be." No good journalist can be too careful on this point, and we are glad that Gould's attention has been called to the shocking recklessness and inaccuracy so often apparent in the profession. He will, we fear, find the task of thorough-going reform a hard one, and he cannot, even with his immense resources, begin a day too soon.

The elections for the Prussian Landtag turn out to have resulted in anything but the great Liberal triumph which was at first reported. While the "Progressists" have won a few seats, the "National" or moderate Liberals have lost several, so that the union of all the Liberal factions for a common effort in the election appears to have been, if not a failure, at least not productive of great results. The relative strength of the different parties in the Landtag will not be very materially changed. Neither the Conservatives, nor the Clericals, nor the Liberals have a majority. And each one of these different parties, if they may be so called, is subdivided into several "fractions," except the Clericals, who reappear with their old strength perfectly united. The Government, in order to carry any of its favorite measures, will consequently, as heretofore, be obliged to form combinations between different parties, or fractions of different parties, and the Opposition will not be able to act upon a common plan of tactics. The situation is therefore as confused as possible. The coming session of the Landtag is likely to result, as many of those that went before it, in much wordy and fruitless wrangling and little action. And as these wrangles, even when they are followed by votes adverse to the Government, never result in any change of administration—in other words, as the stake of Parliamentary combats is not such as to awaken a strong public interest—popular indifference as to the Parliamentary branch of the Government seems to be constantly increasing. The number of voters who take part in the elections is very small in proportion to the whole number qualified; it seems to have been particularly small this last time.

As to the making up of Parliamentary combinations, Prince Bismarck has had great practice, and sometimes much success. But the task is becoming more and more difficult since he turned his face away from the Liberals. His attempt to form a reliable majority by combining the Clericals with the Conservatives has resulted in utter failure. The Clericals, who were to be won over by concessions with regard to the celebrated Falk laws, became only more exacting the more the offered concessions convinced them that the Government earnestly desired their aid. This has always been the policy of the Church. In this last campaign the leaders of the Clericals openly avowed that neither political nor economical questions were of any importance to them, and that the interests of the Church were the only things they cared for; and in this they were sustained by their constituencies. Bismarck seems to have come to the conclusion that an alliance with the Clericals would have to be purchased at too high a price, and even then would not be trustworthy. This he learned to his sorrow when they left him in the lurch with his tobacco monopoly and his state insurance for workingmen. It is now reported that he will try once more a combination between the moderate Conservatives and the moderate Liberals, although it is difficult to see how in that way he can expect to construct a majority in the Landtag, since there are not enough of them. Still, the tone of the "inspired" press seems to indicate that this is the purpose.

There appears to be no doubt that the accounts from France about the alarm caused by the Anarchists have been grossly exaggerated. The miners at Montceau-les-Mines are tranquilly and peaceably at their work, and appear to be as curious about the bombs and the bloodthirsty proclamations as the rest of the world. The trouble there seems to have been caused mainly by the religious zeal of one of the proprietors. A good deal of dynamite and many bombs are found, but nobody as yet seems to have been hurt by them, and the explosions have been confined to stone crosses and church doors. The alarm at Lyons is due apparently to placards and threatening letters, and it has been ascertained that a considerable number at least of the threatening letters are hoaxes. In short, the disturbances begin to have, when viewed in connection with the present extraordinary activity of the Legitimists, very much the air of "a put-up job." This suspicion is greatly strengthened by the appearance of articles and despatches both in the Conservative French papers and in the English ones, expressing doubts about the ability of the Republic to meet such alarming crises, and prophesying a dictatorship of Gambetta or somebody. The truth is, that as against Socialists no Government can compare for strength with a Republic. The two most formidable risings of the Socialists in France—that of June, 1848, and of the Commune—were put down by the Republic with a remorseless energy which no monarch would have dared to show. A monarch, in suppressing an insurrection, is always more or less paralyzed by the consideration that he is fighting for himself and his family, while a President represents simply the community at large; and the community which stands behind President Grévy to-day, in defence both of property and order, is a force such as the Anarchists have never confronted in France. There never was less need of a dictator, and there has not for fifty years been less likelihood of one.

The difficulties of the British Government in setting up the Khedive in Egypt have already begun, and are apparently likely to be serious enough. The theory on which the war was conducted was that it was a war to put down a military mutiny, and restore the Khedive's authority. The war is now over, and the leading mutineer is in his master's hands, who wants to try him for the offence of which the British Government by its interference acknowledged him to be guilty. The Khedive and his Ministers wish to try Arabi in their own way before native judges, and with Egyptian rules of procedure. But here the British step in and say that, although a mutineer, he is their prisoner of war, and that they need not, therefore, let him be tried at all, but that if they do let him be tried, he must have an Englishman among the judges, and must have English counsel to assist in his defence. But, say the Ministers, if he is simply your prisoner of war, there is no reason for our trying him at all. You should deal with him yourselves for whatever you have against him. If he is something more than this—viz., an Egyptian criminal—and you wish Egyptian courts to try him, how can you ask us to use our courts for the purpose if you do not trust our judges, and do not believe a trial can be fair unless the defence is conducted by foreign lawyers? These are questions clearly difficult to answer, and they have not been answered satisfactorily. English barristers have gone out to defend Arabi, but the Egyptian Ministry resent their interference, and say with great force that the British interference in the trial is calculated to weaken the Khedive's authority in the eyes of the natives at the very moment when it is of the last importance to strengthen it. Lord Dufferin has been sent to Egypt apparently to superintend the process of reconstruction, and keep things from getting into a tangle, but it will strain all his tact and perspicacity to reconcile the theory on which the armed interference has been based, with the view of the English public at home as to the shape it should now take, when the war is over.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, October 25, to TUESDAY, October 31, 1882 inclusive.]

DOMESTIC.

THE President has issued a proclamation appointing Thursday, November 30, as a day of general thanksgiving and prayer.

Arthur Payne, colored, one of the four men for whose arrest warrants were issued for attempting corruptly to influence the Star-route jurymen, was arrested in Washington on Wednesday. Juryman Brown, colored, is the man whom Payne is accused of attempting to bribe. On Thursday the report of Mr. H. H. Wells, special counsel for the Government, in charge of the bribery investigation, was made public. The report states that affidavits taken show that members of the jury were offered bribes in money for their votes, and that it is alleged that these solicitations proceeded as well from the agents of the Government as from the agents of the persons on trial. Mr. Wells then sets forth at length the affidavits taken by him, and sums up their contents by saying: "It is apparent, from the whole history of the alleged attempt upon Brown's virtue, that it was not done with the knowledge, in behalf of, or in the interest of the prosecution; that its guilty authors were neither the agents nor acted with the knowledge or approval of any officer of the Department of Justice. It was a deliberate and carefully prepared conspiracy against the administration of justice." His reasons for coming to this conclusion are as follows: The Government could have no interest in bribing the jury to convict; there was no fund in the Treasury out of which the large sums alleged to have been offered in bribes could have been taken without some record of the matter being kept; every person who pretended to have authority from the Government for the bribery transaction, admitted the falsity of the claim when charged therewith; and, finally, Brown, Taylor, Nelson, Fall, Laws, and Foote, "and indeed every one of the vile creatures who touched this infamous transaction, came forward without shame, but for what consideration I do not know, and put the proof of their guilt, in the form of affidavits, into the hands of counsel for the defendants." Mr. Wells, in conclusion, recommends that Fall, Payne, Foote, "and any other persons discovered to have aided or abetted in that transaction," be indicted and tried.

In the case of Dickson, the foreman of the Star-route jury, Mr. Wells finds that Henry A. Bowen had no authority from the Department of Justice, or any officer or subordinate thereof, to treat with Dickson on any subject relating to the Star-route trial, and that Bowen did not attempt to influence corruptly the action of Dickson as a juror; that "conversations did take place between Dickson and Bowen during the progress of the trial that were highly improper and unbecoming, but that the foreman did not believe that Bowen was acting or speaking with the knowledge or approval of the Attorney-General or any person in charge of or connected with the prosecution of the Star-route case; that he did not believe that any real attempts at bribery were made or intended, but that he did believe that Bowen's purpose was to find out 'whether the jury could be bought'"; that Dickson, "though so believing, made an unwarrantable use of his sworn statement before the Court and with the jury in the jury-room, with the purpose of securing the acquittal or preventing the conviction of some or all of the defendants"; and that Dickson sought an interview with Special Agent Cameron, of the Department of Justice, "for the purpose of obtaining from him some proposal, suggestion, or intimation, to be used before the jury, for the purpose of bringing the conduct of the Attorney-General and his subordinates into dishonor and contempt, and thereby to influence the jury to acquit the accused."

Dickson was arrested on Saturday, and will probably be bound over to await the action of the Grand Jury.

The committee appointed to investigate the conduct of the trustees of the Irish Skirmishing Fund have made a report, in which, after making specific charges of misappropriation, they offer to discontinue the investigation if the trustees will only hand over what money may yet remain in their possession.

At a meeting of the Board of Directors of the Garfield Monument Fair Association at Washington, Tuesday night, encouraging advices were reported. The whole space of the rotunda of the Capitol has been already taken, most of it by prominent New York houses, and the Secretary of the Association is in daily receipt of donations and exhibits from all parts of the country.

The jury in the Scoville insanity case unanimously declared Mrs. Scoville, sister of the assassin Guiteau, insane.

The annual report of First Assistant Postmaster-General Hatton, for the fiscal year ending June 30, shows that the number of post-offices then in operation was 46,231, an increase of 1,719 during the year; 1,951 of these offices are filled by appointment of the President, and are known as Presidential offices, and the remainder—44,280—are filled by appointment of the Postmaster-General. He recommends an extension of the free-delivery system. The report says that a Postal Commission visited the several large cities during the year, and at eight post-offices effected a reduction of $54,530, without any apparent inconvenience to the proper transaction of business of these offices.

The Chief of the Bureau of Statistics at Washington reports that in the month of September there arrived in the customs districts of Baltimore, Boston, Detroit, Huron, Minnesota, New Orleans, New York, Passamaquoddy, Philadelphia, and San Francisco 65,750 passengers, of whom 49,935 were immigrants, 11,340 citizens of the United States returned from abroad, and 4,475 aliens not intending to remain in the United States.

The issue of standard silver dollars from the mints for the week ending October 28 was $748,000, as against $406,000 for the corresponding period of last year.

The stenographic report of the statements made before the Tariff Commission is almost completed, and it is expected that within a week it will be in type. Altogether the Commission travelled about 7,000 miles, held public sessions for about seventy days, and heard the statements of between 500 and 600 persons. The printed record will fill about 2,000 pages.

In conformity with an act passed at the last session of Congress, the Secretary of the Interior, a few months ago, appointed a commission to visit the various Sioux Indian agencies in Dakota, and endeavor to secure the consent of the Indians to the surrender of a portion of their reservation. The commission have been engaged in their work for some time, and their first official communication, which was a telegram from Pine Ridge, Dakota Territory, indicates that, so far as the one agency spoken of is concerned, their mission has been successful.

A despatch from Pensacola, dated Monday, puts the total number of cases of yellow fever to date at 2,227, with 174 deaths. The small number of new cases confirms the opinion entertained that the end of the pestilence is near.

The Penn celebration in Pennsylvania was brought to an end on Friday, which was styled "Military day." The principal feature of the day was a parade by the militia of the State and military organizations from neighboring cities. Over 20,000 men were in line, and the streets were packed with spectators. The final ceremonies of the celebration took place in the evening in the Academy of Music, in which a large audience was assembled. After musical exercises participated in by 1,200 school children, District-Attorney Graham delivered an address. He was followed by Governor Hoyt, who said the deliberations and labors of those who had devised and managed the celebration could be expressed in two words—triumphant success. The Governor then formally declared the celebration closed.

The Citizens' Committee of Philadelphia has decided to offer $10,000 in rewards for the detection of fraud in the coming campaign.

The Citizens' movement in New York promises to be successful. A grand ratification meeting was held at the Cooper Union on Friday night, which was attended by an immense crowd. On the platform were 500 of the most prominent citizens of New York. Addresses were made by Carl Schurz, Joseph H. Choate, Allan Campbell, and others.

A Civil-Service Reform Association with a membership of over 200 was formed in Rochester, N. Y., on Thursday night. President Anderson, of Rochester University, presided. Mr. Willard Brown, Corresponding Secretary of the New York Association, explained the objects of the Association and the practical remedies suggested. A Civil-Service Reform Association was also organized in Oswego, N. Y., on Saturday night, with a membership of fifty of the most prominent men in the city. H. H. Stebbins was elected President.

The Brewers' Association, of Chicago, has sent circulars to the nominees for Congress and the State Legislature, propounding questions as to their opinions on the subject of prohibition, with the understanding that silence will be construed as implying disagreement with the views of the Association, and will subject the reticent candidates to opposition at the election.

The Park Theatre in New York, at which Mrs. Langtry was to appear on Monday night, was burnt on Monday afternoon. The loss is estimated at $255,000. One man was burnt, one killed, and one badly hurt.

There has been incorporated at Boston the Palestine Colonization and Christian Missionary Association, formed for the purpose of colonizing Palestine with industrious and energetic Christians, and by their prudence, labor, and perseverance restoring it to its former grandeur, so that it will be the centre of the world not only geographically, but also in art, science, and wealth.

FOREIGN.

The French Minister of Justice has applied to have the persons arrested in connection with the riots in Montceau-les-Mines brought before a Paris tribunal instead of the Court of Assizes. The Minister states in his application that the Government have in their hands clews to a vast revolutionary organization, in accordance with which France is divided into local federations, directed by a committee having its headquarters in Geneva. Placards, recommending the assassination of leading politicians, have been posted on walls in Marseilles, St.-Étienne, and Creuzot. An unsuccessful attempt was made on Monday, the 23d, to blow up the recruiting-office at Lyons. *Le Paris*, newspaper, has published the details of the Anarchist conspiracy, from which it appears that it is composed of a small number of stanch supporters in all the towns and manufacturing villages of France. All the groups in a department form a federation, and the federations form a link between the groups and the Central Committee, which is composed of delegates from the federations, and meets monthly at Geneva. The French Government is watching the matter closely, and is firmly resolved to use energetic measures to maintain public order. Private advices from Lyons on Friday represented the condition of things there as very alarming. Business was suspended and a panic had seized the population, the theatres on Thursday night being empty. On Monday the despatches stated that troops occupied the railways and all strategic points in the city of

Lyons. The forts dominating the city are prepared at the word of command to lay any portion of the city in ashes, and, if further explosions occur, the city will be placed under martial law. On Monday, proclamations were found posted on the walls in St.-Sulpice, appealing to the people to commit acts of violence against the "slave-driving bourgeosie," and ending with "Vive la Révolution Sociale." The Mayor of Marseilles has received a letter announcing that the Hôtel de Ville will be blown up on All Saints' Day, and it is reported that the Mayor and members of the Council have decided to remain at the Hôtel de Ville during Wednesday. The Central Committee of Radical Republicans has repudiated all connection with the fomenters of these disorders in Lyons and Montceau-les-Mines.

On Thursday afternoon, in the House of Commons, Mr. Gladstone, moving a vote of thanks to the commander, officers, and men of the British Army in Egypt, said he would not ask the House to commit itself to the Government's policy. It would be the duty of the Government, however, to propose suitable annuities for Admiral Seymour and General Wolseley, who, he said, had accepted peerages. He spoke for an hour, concluding with a peroration on the confidence the Government might repose in its military forces. Sir Stafford Northcote seconded the vote of thanks, but reserved his opinion in regard to the effect of the conquest of Egypt. Sir Wilfrid Lawson then moved the previous question, but his motion was rejected by a vote of 354 to 17, the Parnellites voting in the minority. The vote of thanks was then agreed to. On Friday Mr. Parnell gave notice that he would call attention to the administration of the Land and Coercion Acts, and moved a resolution in reference thereto. The closure rules were then taken up, and an amendment offered by Mr. Storey, and accepted by the Government, that a question must have been adequately discussed before closure could be pronounced, was adopted.

In the House of Lords, on Thursday, Lord Granville moved a vote of thanks to the British Army in Egypt similar to that moved by Mr. Gladstone in the House of Commons. Lord Salisbury seconded the motion, and it was carried without a division. The Duke of Cambridge, on behalf of the Army, acknowledged the vote, and in flattering terms thanked Lord Granville for proposing and supporting it. The House then adjourned until November 10.

Mr. Gladstone made an eloquent speech on the closure rules in the House of Commons on Tuesday. An amendment in favor of a two-thirds majority having been offered, Mr. Gladstone said that he had formerly offered to accept a two-thirds majority solely as a tentative measure to prevent the waste of the session, but that he was justified in withdrawing the concession offered last session, as the Opposition had shown no sign of accepting it.

At a meeting of the Irish Parliamentary party on Friday a resolution in favor of amending the Arrears of Rent Bill was passed. This amendment is for an extension of the time in which a settlement can be made with a landlord in regard to the rent for 1881. The meeting also decided to support the various amendments to the closure rules.

At the opening of the Commission Court at Dublin on Wednesday, Judge Barry, charging the Grand Jury, said that although the cases to come before the court were few, they were most serious. He could not say whether the fewness of the cases under the Crimes Act was due to the improvement of the country. Mr. Egan has been requested to send a telegram to the President of the Irish National Land League of the United States, informing him that the only money paid to Members of Parliament was for travelling expenses, and that in all only £1,600 was given for this purpose, including the expenses of the trip of Messrs. Parnell and Dillon to America. Mr. Davitt, speaking at Glasgow on Wednesday night, denied that there were splits in the Irish National party. He said there were differences of opinion between Mr. Parnell and himself, but not differences of principle. In a speech at Aberdeen on Saturday night, Mr. Davitt urged the Scotch farmers to demand a reduction of rents. He said they should claim the right to have an independent tribunal to arbitrate between them and the landlords. He thought it possible to bring about the concession to Scotland of a right which had been granted to Ireland.

Sir Garnet Wolseley reached Dover, on his return from Egypt, on Saturday afternoon, where he was enthusiastically received by a large crowd. On his arrival in London a similar reception awaited him. He was warmly welcomed at the station by Mr. Gladstone, the Duke of Cambridge, and the Duke of Teck.

The British Government has made a fresh proposal to Egypt in regard to the Indemnity Commission, according to which Egypt will have two representatives on the Commission and England and France one each. The United States and Greece will be invited to send representatives, and the minor States will have a collective representation.

A despatch from London says it is believed that the cost of the Egyptian war will amount to nearly £4,000,000, exclusive of the expense of the Indian contingent and the Army of occupation.

The English counsel in Egypt have declined to undertake the defence of Mahmud Barudi and Tulba Pasha, who are accused of incendiarism, but will defend Arabi, Ali Fehmi, Abdellal, and Osman Fanzi, the latter of whom is charged with intriguing in favor of Halim Pasha. They are to be tried separately. Arabi has delivered to Mr. Broadley, his counsel, a statement of the various indignities inflicted on him in prison, and others of the prisoners have also testified to the ill-treatment of the rebel prisoner. Mr. Broadley has instituted proceedings against the chief actors in these outrages. Arabi's family are obliged to shift their residence almost daily in order to avoid violence. In Arabi's correspondence are an important letter from the Sultan's aide-de-camp and several letters from the Sheik-ul-Islam. Mr. Broadley says that these letters will throw light upon the numerous telegrams found at Tel-el-Kebir. Among Arabi's documents now in the possession of the authorities there is also a letter from the Sultan's religious adviser, which is said to implicate seriously the Sultan in the course Arabi has pursued. There is a rumor that the Sultan has ordered the proceedings against Arabi to be stopped; but it is positively stated that the Egyptian Government has no intention of doing anything to prevent the proceedings from following their due course, whatever may be attempted by the Porte in that direction.

The British Government has decided to send Lord Dufferin to Egypt to aid Sir Edward Malet in the reorganization. This step has caused great excitement in Turkey.

The minutes of a Cabinet counsel held before the war have been found among Arabi's papers, which show that the Cabinet, at the meeting at which Dervish Pasha, the Turkish Commissioner, was present, decided to meet the British with armed resistance.

Arabi's defence is to be divided into two parts. The first will comprise the period before the war, in which he says he acted by orders of the Khedive, and the second, the time after July 10, in which he acted by command of the Sultan. The well-known Arabic scholar, Signor Santillani, of Rome, late Secretary to the Bey of Tunis, will come to Cairo to act as chief interpreter on behalf of the prisoners.

On Monday it was telegraphed that the Prosecuting Committee had finished examining witnesses for the prosecution, and that their examination before the counsel for the defence would begin in a few days. Borelli Bey, the Public Prosecutor, has expressed the opinion that the evidence proves the complicity of Arabi in the pillage and burning of Alexandria.

The state of affairs in Sudan is engrossing the attention of the Egyptian Government. The Council of Ministers decided to instruct the Governor of Sudan to hold out at Khartum until assistance arrives. It is stated that the False Prophet has reached Kordofan, and it has been decided to enlist as many black troops as possible for service against him. The command of these troops was offered to Ismaïl Pasha Eyub, who declined it.

Mohammed-Es-Sadok, Bey of Tunis, died on Friday night. He was buried on Sunday with imposing ceremonies. The foreign representatives, the French military authorities, and an escort of troops were present. The ceremony of installation of the new Bey, brother of the deceased, passed off quietly. M. Cambon, the French Minister, expressed the devotion of his Government to the new Bey, and said that France also expected the Bey's attachment. M. Cambon afterward addressed a circular to the foreign representatives notifying them of the death of Mohammed-Es-Sadok and the accession of Sidi Ali.

The London *Times* says that the British Government has informed France that it makes no objection to the establishment of French tribunals in Tunis, in the honorable conduct of which it has full confidence, but that Great Britain can permit nothing detrimental to her commercial treaty with Tunis. France has given the fullest assurances on this point, and it is understood by her that the rights of French citizens in Egypt shall be respected equally with those of the British, whatever arrangements England may make with Egypt.

A despatch from Rome says that the election for members of the new Parliament, which took place on Sunday, passed off quietly. All the members of the Cabinet were reëlected, and the Ministerialists claim a large majority in the new Chamber.

Returns from 425 Prussian election districts give 133 Conservatives, 92 of the Centre Party, and 39 Progressists. The result of the elections probably is that the Conservatives and Free Conservatives have gained twelve seats, principally at the expense of the National Liberals. The representation of the other parties is the same as it was at the last session.

The Spanish Cortes will be convoked immediately after the Queen's confinement, which is expected soon. Marshal Serrano's programme has received the signatures of twenty-one leading politicians, including, however, only two Republicans. The old Republicans held a meeting on Saturday, and offered to support Serrano, but refused to accept a monarchical programme.

The most prominent members of the Democratic party and the dissident Liberal factions of Spain have formally signed a programme agreed upon between the different groups composing the Dynastic Left. The programme includes the reëstablishment of the Constitution of 1869, with certain modifications. It was also decided to form a committee for the general direction of the party, and to instruct it to organize sub-committees in the provinces. Marshal Serrano has declared that he will endeavor to place the commercial relations of Spain with England on a better footing, without prejudice to Spanish interests.

A Cabinet council was held at Vienna on Sunday to discuss measures of relief in view of the renewed floods in the Tyrol. It is believed that the damages will reach 15,000,000 florins. The distress in the flooded districts of the Tyrol and Carinthia is said to be beyond description. The people are taking to flight in utter destitution, and the inhabitants of some of the smaller towns talk of emigrating to America.

AN INSTRUCTIVE PARALLEL.

THE rapidity with which the civil-service reform doctrine has been spreading within the last year is a very remarkable and, in some ways, a very instructive phenomenon. The agitation about it has been going on for over fifteen years, but it was, to all outward appearance, making but little impression on the classes who actively occupied themselves with politics. General Grant took it up with a certain show of earnestness when he became President, but met with so little encouragement that he was, when he left the Presidential chair, a very active perpetrator of most of the civil-service abuses. President Hayes, too, made but a very limited modification in the old system, and when he left office even those who were most friendly to the reform were free with their predictions that it would not be heard of again for many years.

During his administration, also, Gail Hamilton, the recognized mouthpiece of Mr. Blaine, who still hoped for the Presidency, thought it expedient to publish a series of twelve articles in the *Tribune*, ridiculing the movement as a mixture of humbug and hallucination, and every one prominently engaged in it as either a simpleton or a hypocrite. She even went so far as to deny the abolition of patronage in England, and all the Blaine faction chuckled over her tirade as a great clearing of the atmosphere.

About the same time many of the young men who had what are called political aspirations began to fight shy of the movement, as something connection with which would ruin their prospects, by bringing suspicions on their practical good sense. In fact, sneering at civil-service reform began with this class to be an easy way of showing freedom from illusions, and contempt for humbug. General Garfield, when elected, too, had apparently so far lost faith in the future of the idea that in his letter of acceptance he promptly avowed his willingness to maintain in his administration the leading feature of the spoils system, by continuing to divide the appointing power with Senators and Representatives. In political circles the fun of civil-service reform grew better and better: Conkling, and Smyth, and Platt, and all their kind were probably never so much amused by it as about the beginning of 1881.

All this is now changed. Not only do all the party platforms commend the reform in the very terms with which the reformers define it —this they have done for some time—but all candidates for office are now civil-service reformers, not only in the old sense of wishing to put "none but good men in office," but in the sense of wishing to select civil servants by competitive examination. We doubt if there is any candidate for high office in either party in any Northern State to-day who ventures to avow his belief in, or partiality for, the spoils system. All candidates for reëlection who have in times past sneered at or opposed the reform, are now trying to explain their action or bury it in oblivion, and trying to persuade voters by some form of words that the charge that they were ever friendly to spoils is a cruel slander. On the stump at this moment there are several Sauls who have seen a great light on their way to Damascus during the past year, and are now preaching the gospel they reviled only twelve months ago. Others are to be found in the newspapers and magazines clamoring for the abolition of the "American system" of boss appointments for party services. Even ex-Governor Rice, of Massachusetts, who not very long ago denounced the reform as distinctly "monarchical," has now got so far as to commend it, and has only to get rid of the familiar doubts about "this particular measure" to be as good a reformer as anybody. From our experience of such cases, we should judge that six months more will make a thorough and most edifying convert of him. Even Ben Butler has come over, but, as usual with persons of his impulsive nature, is too zealous, and proposes to apply the system in fields to which none of its advocates hitherto have proposed to carry it. Civil-service reform associations are being formed in every direction, and especially in this State, with extraordinary rapidity. They spring up in the night, and on the most unpromising soil; and, more wonderful still, they sometimes contain some of the most hardened sinners of the spoils system, men whom no arguments could have brought over, or anything but a sudden perception that the day of judgment was at hand.

Now, what has been the cause of this rapid growth of reform sentiment? Not certainly any new or extraordinary exertions on the part of its apostles. The agitation during the past two years has been somewhat, but not very much, more energetic than before. But its machinery has been almost insignificant in its operations. A few—very few—lectures, a few magazine articles, a few weekly fly sheets, an occasional article in a few—very few—friendly newspapers, an occasional word of encouragement in a sermon, include almost the whole activity of its friends in the field of persuasion. There has been no change in their methods sufficient, or nearly sufficient, to account for the (as we believe) swift and scathing condemnation which the vote this month will pass upon the spoils system in all its branches. The work has been done in the main by the spoilsmen themselves. It is their excesses in defending and pushing their system which have at last made reform inevitable and, as every one now acknowledges, brought it very near.

Nothing that reformers could have said or done in twenty years would have acted on the public mind with the force and directness of the deadlock in the Senate over Mahone's patronage; of Conkling-Platt's resignation and lobbying in company with the Vice-President for reëlection; of the assassination of President Garfield by a half-crazed and disappointed officeseeker; of the immediate disregard by President Arthur, in his appointments, of the principles solemnly laid down in his letter of acceptance and inaugural address; of the selection in Massachusetts of the leading enemy of civil-service reform to be Collector of the Port of Boston; of the appointment of Mike Dady to be Superintendent of Public Buildings by Mr. Folger; of the performances of Hubbell as a collector of assessments, with the connivance of a large number of Congressmen; of the attempt of Cameron to subjugate the party in Pennsylvania by the aid of patronage; of the circulation by the Congressional Committee of a defence of assessments by Senator Hale, and a vituperative defence of the whole spoils system, as a campaign document; of the gross and wholesale prostitution of the service in the departments at Washington to enable Mahone to build up a new and repudiating boss-ship in Virginia; and, finally, of the audacious elevation to the Chairmanship of the Republican Committee in this State, at a most important crisis, of one of the worst products of office-jobbing, and trading, and assessment-levying, and official blackmailing in the person of John F. Smyth. It is these things, and not anything the reformers have been able to do, which are to-day making every Machinist in the country run to ask honest men what he must do to be saved.

Now, what is most remarkable about all this is that it is the second time in the national history that a great cause has unexpectedly triumphed through the excesses of its opponents. It is throwing no discredit on the Abolitionists to say that nothing they did or could do in the way of exposing the evils of slavery, or of appeals to the humanity or sense of justice of either the North or the South, would have brought about emancipation, or even preparation for emancipation, within our time. It was the exhibitions of contempt and hatred for them on the part of the slaveholders which roused the conscience of the North, and opened its ears to abolitionist doctrine. The opposition to the reception or debate of anti-slavery petitions in Congress ; the sanction given by the Postmaster-General to the Southern interference with the transmission of anti-slavery documents through the mails ; the demand made on Northern legislatures, and the sympathetic hearing it received, for restrictive legislation toward anti-slavery publications ; the demand by Southern Governors for the surrender to them for trial of Northern anti-slavery men ; the passage and enforcement of the Fugitive Slave Law—these were the things which prepared the North for the last extremity.

Passive and silent resistance on the part of the Slave Power, abstinence from all displays of its strength, or a seeming deference to anti-slavery opinion, while pleading practical difficulties in the way of emancipation, would probably have left the institution of slavery in existence to this day. But it actually precipitated its own downfall by exhibiting in an extreme form its theory of its rights and duties. Day by day it armed the anti-slavery orators with arguments and illustrations of tremendous force. Its written defences became, like Hubbell's assessment circulars and "Campaign Text-Book," the most effective weapons its adversaries could use, and it finally rushed headlong on its ruin ; so that at the last, within two short years, millions of pro-slavery men at the North disappeared from the scene as rapidly as the friends of the spoils system are now disappearing, leaving not a rack behind. The political transformation effected by the war was, in fact, not half so wonderful as the moral transformation.

SPAIN.

Marshal Serrano is actively engaged in executing a new *coup* in the political arena of Spain. This time it is again to be a stroke in favor of liberty. The whole life of the old soldier and statesman is full of sudden transitions from policy to policy, from party to party; full of new attitudes. In 1833 he joined the ranks of Maria Christina and her infant daughter Isabella. In 1840 he supported Espartero in his revolt against the Queen Regent. In 1843 he aided Narvaez in overthrowing the regency of Espartero. He became the favorite of the young Queen, but in 1854 entered the revolutionary coalition of Espartero and O'Donnell. In 1856 he was again instrumental in driving Espartero from power and into exile. In 1866 he quelled an insurrection fomented by Prim. In 1868 he and Prim were the chief leaders in the revolution which dethroned Isabella. He was regent under the radically democratic constitution of 1869, minister-president under King Amadeo, and reactionary chief of the executive under the Republic. Sagasta was the head of his cabinet when, at the close of 1874, the armies proclaimed Isabella's son, Alfonso, King, and both statesmen had to resign. Now Sagasta is the Liberal Prime Minister of Alfonso, and Serrano is bent on forming a coalition directed more or less avowedly against him, under the sign of the constitution of 1869.

Almost the whole course, now embracing eight years, of the reign of Alfonso XII. has been marked by a gradual, though not continuous, tendency towards a liberal constitutional régime. The beginning of the reign, however, was strongly reactionary from necessity. The adherents of the republican form of government, just abolished, had to be kept down, and the clergy to be won over by concessions from Carlism, then in arms in all the north of the kingdom. Cánovas del Castillo, the President of Alfonso's first Cabinet—and subsequently again and again Premier—placated the Curia of Rome and the Spanish clergy, and gained the favor of the Moderados, by the restoration of confiscated church property, the prohibition of civil marriages, the closing of Protestant churches, and the suppression of the liberty of education. But scarcely had Carlism succumbed when the tendency of the Government underwent a considerable modification, the supporters of the Administration assuming the part, as well as the name, of Liberal Conservatives. The two attempts on the life of the King, in 1878 and 1879, were naturally followed by retrograde measures, but the then decided victory of Republicanism on the French side of the Pyrenees not only rendered a complete return to despotic ways in the Peninsula impossible, but a partial conciliation of the Progressist and Democratic elements of the Opposition imperative. Sagasta having, with the help of malcontent generals and party chiefs like Martinez Campos, and of Democrats like Martos and Castelar, overthrown the Cabinet of Cánovas del Castillo in February, 1881, easily won the assent of Alfonso to the formation of a coalition Ministry, in which his own party, the Constitutionalists, were to have the lead, and the more moderately progressive Centralists a considerable share. The general elections to the Cortes, held in August, resulted in a triumph for the Liberal elements of the coalition, and these have since ruled Spain in a way which has seemed to promise a more steady and firm advance on the path of constitutionalism than was possible at periods when triumphant reaction or revolutionary oscillations in France exercised a powerful influence upon Spanish politics.

But this advance does not satisfy the old Marshal, not because it is too much in one direction for a warrior politician accustomed to zigzag movements, but, as he asserts, because it is not consistently direct and free from deviations. He accuses Sagasta of having failed to fulfil his promises of reform, made on assuming power last year; of yielding too much to the wishes and influences of his Centralist associates in the Ministry. This wavering between two policies, one of which is out of date, the Marshal declares to be pernicious. Only a union of all the decidedly Liberal political elements is capable of securing the future of democratic institutions under the present dynasty. In such a union he endeavors to combine the various radical fractions—Dynastic Democrats, Possibilist Republicans, etc.—led by Moret, Martos, Balaguer, Castelar, and Montero Rios. A preliminary condition of a parliamentary majority created on the basis of this combination, he considers to be the reëstablishment of the popular constitution of 1869, which issued from the revolution of the preceding year, in lieu of the constitution of 1876, which was the production of reactionary Cortes. If this takes place, the Republicans, excepting perhaps the Socialistic fraction headed by Pi y Margall and the following of Zorrilla, will give up all violent attempts to subvert the monarchical order of things, and henceforward rely on peaceful and legal efforts for the attainment of their object, or abandon it altogether. These declarations of opinion and intention Marshal Serrano suddenly made public a few weeks ago, through the columns of the *Imparcial*, in a guarded yet ostentatious way, and their effect has been as great as the surprise they created. Almost all the party leaders on whose coöperation he counted have declared their concurrence in his scheme. A formal programme embodying it was signed on October 27 by the most prominent of them, and Spain is again on the verge of a momentous crisis—a crisis which appears to be less likely to result in strengthening the throne, by obviating hostile attacks, than in making it a prey to the ambitions and intrigues of its new supporters.

"PARSIFAL" AND ITS CRITICS.

There is a close and curious parallelism between the manner in which Darwin's doctrines were at first opposed, and then slowly but gradually accepted by the scientific world, and the manner in which Wagner's theories and works have been received by musical people. Just as Darwin's ideas were at once understood and embraced only by his leading scientific contemporaries—Haeckel, Huxley, Tyndall, Helmholtz—so Wagner's first and best friends were among the principal musicians of the period—Liszt, Bülow, Tausig, Hans Richter, Raff, Franz. Conservative people, led by the clergy in one case and the "classicists" in the other, have needed decades to be even partially converted; and if the victory in Wagner's case is as yet not so complete as in Darwin's, this is due solely to the fact that emotional habits of hereditary acquisition are much more deeply rooted in the mind than intellectual convictions acquired by individual experience. The "Parsifal" festival at Bayreuth marks another great step in public recognition of Wagner's genius, the importance of which can only be measured by those who have had occasion to compare the criticisms published in 1876 with those issued this year. Although there has been no lack of fault-finding with "Parsifal," the most cursory reader must have noticed that the average of critical appreciation has risen many degrees, while very few papers have ventured to publish scurrilous articles treating Wagner as a mere impostor and fool, or, like the London *Telegraph*, endeavoring to cover up the weakness of their arguments by the strength of their adjectives. To prove our statement, we shall quote a few appreciative criticisms from leading German and English journals, and, at the same time, examine some of the objections advanced against "Parsifal." No notice will be taken of French papers. Few of them were represented at the festival, although most of the leading composers were there.

Among the opponents of Wagner in Germany and Austria, the most virulent and spiteful are L. Speidel, of the Vienna *Fremdenblatt*, and Dr. Hanslick, of the *Neue Freie Presse*. Yet Speidel sums up his remarks in these words: "If we add together all that is good and significant in 'Parsifal,' we still obtain a neat sum. Since the first performance of 'Lohengrin,' we have not been in a position to bestow praise on Wagner. To-day, circumstances compel us to oppose appreciation to the hard word of condemnation." Speidel, too, was the only critic who pointed out the relations between Schopenhauer's ethical principle—pity—and the central idea of "Parsifal": "Through pity enlightened." This relation Hanslick ignored, wherefore, as usual in such cases, he accused the drama itself of being illogical and obscure in its central idea. In other respects Hanslick has made so many concessions that he might almost be claimed as a convert. Six years ago he described the abandonment of the aria and other operatic forms as the ruin of music; now he more modestly admits that Wagner's system of leading motives and constant modulation is regarded by many as the highest progress, and that it is no longer possible to quarrel about these differences of opinion. "Wagner is the greatest living opera composer, and in Germany the only one who can be seriously spoken of in an historic sense." In regard to the creative power displayed in "Parsifal" he says: "For a man of Wagner's age [69], and with his system, it seems to me in 'Parsifal' to continue to be astounding. Any one who can write pieces of the enchanting melodious charm of the flower-girl scene, and of the energy of the final scene in 'Parsifal,' still has control of a power which his youngest contemporaries may envy him." The London *Times* makes a similar statement: "It would be absurd to connect the idea of declining power with a man who, like Wagner, continues to be the youngest of the young, superintending rehearsals, conversing with innumerable friends and admirers, and haranguing the public, without ever showing a sign of fatigue." The distinguished vocal teacher, Professor Engel, of the Berlin *Vossische Zeitung*, who mingles praise and censure in about equal proportions (although years ago an uncompromising enemy), says: "A declining creative power appears to us, strictly speaking, to exist as little as a growing inclination for the obscure

and abstruse." To these testimonials, written, with the exception of that of the London *Times*, by hostile pens, it would be superfluous to add extracts from the columns of panegyrics published by old and confirmed admirers of Wagner. Attention may, however, be called to the comic manœuvres of some of the recent converts and semi-converts, who try to hide their confusion and inconsistency by distinguishing between themselves and the "fanatical Wagnerites," by which they mean those who were able to appreciate Wagner from the beginning.

Perhaps the only one of Wagner's gifts which none of his opponents have ever dared to question, because the absurdity would have been too glaring, is his genuine theatric instinct. It is Hanslick who calls him "the greatest stage manager in the world," and "Parsifal" "a highly effective stage-work. . . . A drama constructed with extraordinary cleverness, containing perfectly new and dazzling situations, is boldly erected before our eyes." And, in another place: "The born composer for the theatre is evidenced in every scene of this text-book, so sharply and vividly is the inevitable stage effect conceived and anticipated."

In regard to the instrumentation, it is Hanslick again who has, of all the critics, said the neatest thing: "'Parsifal' is scored in a surprisingly discreet manner. In the art of orchestration Wagner has not grown old; in 'Parsifal' this art has developed into pure magic, and for every change of mood conjures the most wonderful sounds in infinite shades and variety." In their statements regarding Wagner's poetry and the peculiar words used in it, the adversaries have grown more cautious since the exposure of Paul Lindau by Hans von Wolzogen, who showed that, whereas in Wagner's Nibelung poems only thirty archaic words are introduced, for the sake of local color, there are in the first sixty pages of Goethe's poems no less than 200 expressions unknown before his day. And it need not be stated that a poet-composer has much more excuse for such liberties than a literary poet, because music raises these words into a higher emotional sphere, where such peculiarities, by Lindau's own admission, are not at all noticed. Lindau has since been converted, and his letters in the *Kölnische Zeitung* have been among the most sympathetic written; but Speidel renews the old charge, and asserts that one part of the poem of "Parsifal" is half-German, and the other part un-German, the words being translated from mediæval German and used in a perverted sense; to which we might, without admitting this, reply, in the words of Hanslick, that "in all of Wagner's operas the music has succeeded in toning down the defects of the poem, and in adding to the beauty of its good points." It is only when the poems are read alone that these archaic words sound odd; and it must be said here, once for all, and emphatically, that most of the mistakes incurred by Wagnerian critics are due to the fact that they will persist in treating Wagner, first as an absolute musician, and again as a literary poet, in spite of his protestations that he must be judged only as a tone-poet and dramatist in one. The absurd modern journalistic custom which makes time the first of all considerations, even in art criticism, obliged most of the critics at Bayreuth to write a synopsis of the drama before they had seen it; and we noticed at least half-a-dozen cases in which the estimate formed from the text-book and piano-score alone was greatly modified in Wagner's favor in subsequent letters. Mr. E. Prout, writing for the London *Athenæum*, frankly confesses: "I have considerably modified my views since writing the preliminary notice of the work. . . . As my object is not to take sides either with or against Wagner, but simply to arrive at the truth, I believe it to be my only honest and straightforward course to say candidly that I was altogether mistaken in my first estimate of the general character and tendency of the work."

This confession is made with especial reference to the religious question involved in the presentation on the stage of scenes so closely parallel with events in the life of Christ. On this point it is interesting to hear the opinions of critics of different nationalities. Some very orthodox sheets characterized these scenes as "blasphemous," but all critics of note, so far as we have discovered, took an opposite view. As the English are considered an orthodox people, we may listen to them first. The *Athenæum* says: "Nobody finds any impropriety in looking at a painting of the Last Supper, nor in listening to the words of Christ as set to music by Bach in his 'Passion According to St. Matthew.' Wagner has in the first act of 'Parsifal' combined the two arts." "So deeply reverent was the spirit of all the performers, that the remark was made by many who were present that the scene was the most impressive religious service they had ever attended." "None of the many thousands who have attended the Passion Play need fear any violence being done to their religious feelings by the performances of 'Parsifal.'" Similar sentiments are expressed by the London *Times*, *Academy*, *Saturday Review* (which speaks of the Liebesmahl scene as "most reverent and earnestly impressive"), and other papers. Nevertheless, all these papers agree that "Parsifal" could not be produced on the London stage on account of religious prejudices.

Among the German papers all shades of opinion are represented. Lindau's views are similar to those expressed in the English journals. Hanslick says: "I must remark here at once that the ecclesiastic scenes in 'Parsifal' were far from giving me the objectionable impression which I and others had anticipated from a perusal of the text-book. The actions represented are of a religious kind, but, with all their earnest dignity, not at all in the style of the church, but entirely in the style of the opera." The Frankfort *Zeitung* thinks "Parsifal" cannot fail of popular success, because thousands will go to see it merely to revive old impressions of how it looks inside a church; and in this cynical view there is a grain of philosophy, for many who take a superficial view of things will join a writer in the *Musical World* in looking upon "Parsifal" as "two solemn services of the Roman Catholic Church with an Alhambra ballet . . . separating one from the other." The *Vossische Zeitung* suggests an idea which the thoughtful reader will do well to reflect on. It is not absolute orthodoxy, Professor Engel thinks, that will object to a dramatization of its religious ideals; but those who have once admitted doubt and criticism may fear that what they have accepted as reality and revelation may, by the artist's imagination, be transformed into a myth.

Many years ago Wagner expressed, in strong language, his conviction of the inferiority of Christian to Germanic myths. The partial inconsistency in the choice of such a subject as "Parsifal" may well be pardoned in view of the admirable result. Of course many of the critics have, as usual, objected to the selection of a mythological subject: "What's the Holy Grail to the modern Germans, or modern Germans to the Holy Grail?" they exclaim. What, we answer, were the legends of "Lohengrin," of "Tannhäuser," of all the Nibelung deities, before Wagner made them part of our every-day thoughts? The poet's duty is not to pander to the present interests of the populace, but to open their minds to new fields of poetic beauty. That myth is better suited for musical illustration than history is proved by the fact that of Shakspere's plays those alone have been frequently selected by musicians which contain a mythical element. The anatomical, unpoetic nature of some German critics has never been better exposed than by their objections to Wagner's revival of the beautiful national mythology. Equally absurd is the objection repeatedly urged against the characters in "Parsifal," that no "human" interest attaches to them! Will the critics please tell us whether these characters are to be designated as mineral, vegetable, ontological, or what?

Professor Ehrlich has made himself notorious by the reiterated assertion that there is nothing new in the musical form and style of "Parsifal"; and he gets so worked up over this great discovery that he can hardly talk of anything else in his *Gegenwart* articles. But what of it? It would be absurd to expect an artist at sixty-nine to make as great an advance in form as "Tannhäuser" marked over "Rienzi," or "Tristan" over "Tannhäuser." In "Tristan," Wagner reached his ideal, and thenceforth composed in that style, which he considered best suited for a music-drama. This style is a new musical logic, and a new musical grammar of modulation; and its individuality, like Chopin's, is so pronounced that any imitator is at once detected as a plagiarist. Of this individuality Dr. Hanslick has said, with his usual felicity of diction and illustration: "Just as that Babylonian ruler had his name burnt on every brick that helped to form great architectural works, to bear witness after thousands of years, so the author of 'Parsifal' has impressed an invisible R. W., as it were, on every bar. With perfect certainty, scholars will, in future times, recognize every page of this score as his." One peculiarity, it must be admitted, distinguishes "Parsifal" from its predecessors. In none of these do we find any ideas or phrases suggesting his other works, except once in the "Meistersinger," where there is a *designed* reference to "Tristan." But in "Parsifal" there are several passages recalling its author's previous works; and Ehrlich is quite right when he asserts that echoes from the "Götterdämmerung," "Lohengrin," and especially "Tristan" and the Nibelung Trilogy, are heard. But Professor Ehrlich has not sufficient acuteness to perceive that instead of disproving the artistic excellence of the system of leading motives, these instances are most admirable illustrations of its grandeur and beauty. When, in the third act, *Parsifal* comes on the stage disguised in a helmet, we hear sounds reminding us of the Nibelung's Tarnhelm, by means of which he could make himself invisible. When, in the second act, *Kundry* is conjured by *Klingsor*, and rises up from the ground in a blue light, the orchestra reminds us of a similar scene in "Götterdämmerung," where *Wotan* conjures *Erda*. The similarity in the situations here is so great that we unconsciously expect a similar musical coloring. To cite only one more case: the frequent suggestions of "Tristan" in *Amfortas's* music follow from the great resemblance between the fate of *Tristan* and *Amfortas*, both of whom are the victims of an improper passion, both wounded, and otherwise similar in character. It should be remembered, however, that these resemblances are slight, lying often in the orchestration alone, or in some peculiarity of modulation.

This is the place, too, to correct another misconception in regard to the leading motives. Hanslick and others are continually pointing out as a shortcoming the necessity of memorizing all the motives. There is no such necessity any more than in the case of a Beethoven symphony. Only, those who hear "Parsifal" for the first

time will naturally find their enjoyment much greater if they previously memorize the motives. If, however, they have opportunity to hear the work more than once, such a proceeding is entirely superfluous. Nor can it be said too often that leading motives are not stereotyped phrases occurring every time that the persons to whom they are assigned appear on the stage. It would be difficult to find a case in "Parsifal" where the same motives appear exactly alike in two places. Take the *Parsifal* motive for an example. In the case just referred to, where *Parsifal* appears in a helmet, the motive is in a subdued, mysterious minor mode; in the second act, where *Parsifal* appears in the flower-garden after having slain the knights, it has an agitated, heroic form; in the third act, where he is anointed King, it sounds broad and majestic; and at the end of the second act, where he is ignominiously thrust out of the hall by *Gurnemanz*, with the words, "Seek thyself, gander, a goose," it assumes a curiously grotesque form.

The odd inconsistency of Wagner's opponents, and their determination to find fault, happen what may, were again betrayed by what occurred at the last performance of "Parsifal," on August 29. Wagner is always exceedingly nervous and excited when one of his works is produced, and he is so opposed to appearing in public that he often leaves the theatre before the end of the last act. But occasionally the audience compel him to come forward and address them. Now, it is a matter of history that each of his speeches, delivered on prominent occasions, has been pronounced by his opponents very malapropos and full of insulting allusions to various people. He has been regularly counselled, therefore, to hold his tongue and not address the public. Probably Wagner took this advice to heart. At any rate, after the last notes of his new work had been played at Bayreuth, he addressed the artists on the stage, thanking them for what had been done, but entirely ignoring the public. In fact, the audience could not see him at all, as he was down in the "mystic abyss," where he had gone to conduct the last act. The next morning leading Vienna and Berlin papers published notes pointing out Wagner's "insulting way of ignoring the audience"! The comic history of Wagnerian criticism, if it should ever be written, would make a very entertaining volume.

THE ORATORS OF THE OPPOSITION.

LONDON, October 7, 1882.

AFTER the calm of the last seven weeks—for, since the adjournment of Parliament, public attention has been exclusively occupied by the events in Egypt—the notes of political warfare are again beginning to be heard. The autumn months when Westminster is deserted are with us the season for party demonstrations over the country at large, the time when the leading men on both sides go round addressing large gatherings of their supporters in the great towns—the richer people at dinners, the humbler sort at evening meetings. This practice, which adds greatly to the fatigue of public life in England, is comparatively recent. Formerly, a statesman of the first rank seldom spoke on politics out of Parliament, except, of course, in his own constituency, or when, now and then, after some achievement or in some special crisis, he was invited to appear in some great provincial city. The present custom seems to date from the vehement agitation against the foreign policy of Lord Beaconsfield's Government which was carried on from 1876 to 1880. Then the Liberals, finding themselves in a decided minority in Parliament, and unable to shake the steady adherence of the Conservative majority to its chief, betook themselves to the country, and discharged volley after volley of their heaviest artillery against the Tory Government on provincial platforms. The triumph which they won at the general election of 1880 was ascribed by the startled Conservatives to this assiduous stumping of the country, and when these Conservatives found themselves in Opposition, they resolved to employ the same tactics. Thus during the last three autumn recesses we have had a well-sustained fire, from the Tory leaders, of denunciations of Mr. Gladstone and his policy, both foreign and domestic. The Liberals have felt bound to answer; and thus that valuable rest which Parliamentary vacations used to give is now gone, and probably will not return till a period of political lassitude such as we had in 1875 again appears. The newspapers, however, rejoice in having their columns filled by these harangues during the slack season, and the local politicians through the country enjoy the opportunities given them of seeing and hearing the leaders of the two parties, as well as the temporary stimulus which the appearance of a Parliamentary star gives to their party organizations.

This year it is the Opposition who fire the first shot, and Sir Stafford Northcote has courageously undertaken to fire it in the very centre and stronghold of Liberalism, the West of Scotland. Glasgow, one of the largest constituencies in Britain, returns three members, who, in spite of the minority-vote system, are all Liberals, and, indeed, Liberals of an advanced type. There is, of course, a strong Conservative section among the richer people of the city; but the Scotch workingmen, who in the Scotch boroughs are omnipotent, are Radicals almost to a man, and it can hardly be with the hope of making any impression on them that Sir Stafford begins his campaign in Scotland. Apart from this—which is, after all, a small matter, because a speech made by an English political leader is made to the whole country, which reads it next morning at breakfast—the Tory orators have considerable difficulties to face this year; they have scanty materials out of which to frame an impeachment of Mr. Gladstone's Government, and they have in their own ranks few first-rate advocates who will know how to make the most of those materials. As to the former point, I need say little, for your readers know already that the end of the Parliamentary session left the Liberal Ministry stronger than it had been for several months before. The capitulation of the House of Lords on the Arrears Bill, the imprudence of Lord Salisbury in provoking a contest which his followers refused to support him in, the tact and moderation displayed by Mr. Gladstone, produced a deep impression on the country. Even those who do not like or trust the Prime Minister doubted whether any change from him would be a change for the better. Since Parliament adjourned there has been a diminution of serious crimes in Ireland; and the conviction of several murderers, with the reported discovery of others, is believed to have produced a tranquillizing effect there. If the horizon is still dark enough, there is at least more light than in the terrible time which followed the Phœnix Park murders.

Still more important in strengthening the Ministry have been the victories in Egypt. An enterprise which seemed full of perils has been carried through with a speed and completeness which reflects credit not only on the General and the troops, but on the Ministers at home who organized the expedition and chose the commanders. The applause of the German and Austrian press, the envious comments which we receive from France and Spain, even the manifest annoyance of Russia, are all taken as tributes to the energy displayed by England, as admissions that she again holds that position in Europe which it was supposed had been lost by the timidity or hesitation of Liberal Governments. Even that section, weak perhaps in Parliament, but not so weak among the working-class voters, which objected altogether to our interference in Egypt, has had its mouth stopped by the collapse of Arabi, whom it is now less easy to represent as a national leader, and by the shortness of the war, which will involve less expense than we had been led to fear. The Tory speakers will, therefore, lose the opportunity they expected of condemning the military slackness and incapacity of a Liberal Government, and must seek out some other matter for censure. It is not hard to foretell what that matter will be. But as it will soon be before you in their own words, I had better devote the rest of this letter to some remarks on the speakers themselves, whose zeal and activity deserve better fortune than recent events seem to have prepared for them.

Since the death of Sir Robert Peel and the alienation of his school from the bulk of the Conservative party, the Conservatives have always suffered from a want of popular speakers. Mr. Disraeli's rapid rise and ultimate leadership were due to his being the only first-rate man they had in the House of Commons. At present they have only four men who can be placed in the front rank of public speakers, even taking the not very high standard which we are accustomed to apply. Of these four—Lord Cairns, Lord Salisbury, Sir Stafford Northcote, and Mr. Edward Gibson—the first, although in point of intellectual power far ahead of all the others, may be almost left out of account, for he rarely addresses a popular audience, and his gifts of debate, brilliant as they are, are better fitted for Parliament than for a platform. Of the three others, Lord Salisbury is the most generally effective. His style, without the higher qualities of imaginative expression or refined and exquisite diction, has force, clearness, incisiveness. He can make a point tell, can sharpen an epigram. He has no power of touching the emotions, and indeed never attempts those emotional flights by which some of Mr. Gladstone's and Mr. Bright's chief successes have been won. But he speaks with earnestness and conviction; nor is he content to remain in the region of level commonplace. He feels the necessity of having some sort of philosophical theory, some general principles, underlying his political dogmas, and occasionally develops such a theory in an ingenious and attractive way. If mere speaking could make a statesman, he would take a very high place; not that any of his speeches have a permanent literary merit, or will ever be read by any one but politicians—he has not enough either of originality in thought or of poetical felicity in phrase to deserve such an honor—but that they are vigorous and stimulating statements of the points which are for the moment effective, shafts which find out the weak places in an opponent's armor, onslaughts so bold and eager that they put heart into followers and make them rally to the flag. Lord Salisbury's speeches are useful to his own side, both because they excite them and because they furnish materials which inferior men can use over again, while his opponents cannot afford to leave them unanswered. Their real weakness lies partly in the flimsiness of their reasonings, for they are often built on very slender premises, but still more in the distrust felt in Lord Salisbury's own wisdom and constancy of purpose.

Sir Stafford Northcote is as unlike his colleague, both in character and in oratory, as one able man can be to another. He is in reality a much sounder thinker, and on the whole an abler man, than the more showy Marquis. He has a wonderful power of mastering a subject,

and a scarcely less remarkable capacity for finding arguments on the spur of the moment with which to support his own thesis and refute his antagonist. He never vapors or talks nonsense: whether you agree with him or not, you feel that there is solid substance in his speeches, something which is worth considering and replying to. He can sketch out a programme for his party as plausibly, can detect the faults of an opponent's programme, and criticise it in detail, as acutely, as any English statesman. But he wants the *verve* and dash which Lord Salisbury possesses, and which makes him tell on an audience. There is a sort of levelness and tameness about Sir Stafford's style as well as his delivery which makes him seem commonplace even when he is not. No one in listening to him feels inclined to relieve his feelings by a cheer. Very sensible, very ingenious, very fair and candid—these are the warmest words of praise which his best performances win. His character for judgment stands much higher than Lord Salisbury's, and would make him the unquestioned chief of the party had he more of what people call "backbone." He does not want courage, but he does want decision, and, what is not less important, the air of being decided. His own followers complain that he is too fair, too considerate, and, in their want of obedience to him, commit indiscretions from which he would have saved them. He does not inspirit or excite those with whom he comes in contact; or, as you express it in America, he is not "magnetic." However, he is after all a very able man, of great experience and unsullied reputation, and the Tory leader in the House of Commons; so that provincial audiences receive him with heartiness, and even the Radical municipality of Glasgow pays him the compliment of presenting him with the freedom of their city.

Mr. Edward Gibson is a personage of much less note than the two of whom I have spoken, and has become conspicuous only during the last three years. Perhaps he would not have become conspicuous at all had not Irish questions formed the staple of debate in the House of Commons. With these, as an Irish barrister who has filled the office of Attorney-General for Ireland, he was of course familiar; and, as Ireland returns few Tory members, and only one other of any political eminence (Mr. Plunkett), the task of attacking and criticising the Irish policy of the present Ministry devolved mainly on Mr. Gibson. In discharging that task he showed a readiness, skill, and force which rapidly raised him to a leading position in his party. Success stimulated his ambition, and he has now ventured into general politics, and is welcomed by Conservative associations all over England as a vigorous assailant of the Liberal Government and Radicalism in general. Although an Irishman, his oratory has nothing distinctively Celtic about it except its facility. He is not flowery nor emotional; he is a sober, hard-headed, clear-headed lawyer, who is making the best case for his own side and dissecting that of his adversaries, yet with more fairness and a greater air of honest conviction than lawyers in Parliament usually attain. Ireland is an exciting subject, especially to Irishmen; but Mr. Gibson never loses the balance of his judgment in discussing it, and has won great authority and respect in the House of Commons by this moderation not less than by his power of fluent argument. However, he has not distinguished himself on any other topic, nor perhaps would he fill so large a place but for the oratorical poverty of his party.

The other men of mark whom it contains—Sir Richard Cross, Sir Michael Hicks Beach, Mr. W. H. Smith, and the Duke of Richmond—are all tame and uninteresting speakers, although all, and especially the two latter, are respected for their practical ability as administrators. Mr. Plunkett possesses real eloquence, but too seldom displays it to rank among the combatant members of his party. Lord Cranbrook is a fluent declaimer, who can work up into his own heat the audience that listens to him, but he produces no effect on the country. Among the others there is no one important enough to require special description. Yet the Conservative party does not greatly suffer by this deficiency in popular gifts. It rests upon instincts and interests which would make it strong if it had nobody who could put five sentences pleasantly together; and the day of its return to office would probably be nearer than is now thought if it wanted the most brilliant of its speakers—for Lord Salisbury's errors in judgment do it more harm than his orations accomplish in quickening its aggressive life. Y.

LE ROI S'AMUSE.

PARIS, October 11, 1882.

VICTOR HUGO is fast assuming the proportions of a demigod. He can witness in his lifetime his own apotheosis. Great processions passed before him on the occasion of his entering a new decade of his already long life. He receives all this homage with grace and candor: there is nothing surprising in it for him. He cannot be said to be vain or proud. Such words are not made for him: he is not made after the common pattern of mankind. The tragical fall of the Second Empire seemed to be simply the accomplishment of the prophecies of the 'Châtiments.' From his rock on the ocean he had said to Napoleon III., then at the height of his triumph:

"Ah! tu finiras bien par crier, misérable!"

Providence works for Hugo, and works with him. He has said many times: the poet is the prophet—he alone sees into the dark abyss of futurity. Kings and Emperors are his inferiors, not his equals. The Emperor of Brazil called first on him. Is he not something much greater than an earthly monarch?

"Nous portons tous les deux au front une couronne."

He represents the people; he represents Humanity. I see him occasionally in the Senate; he comes in and takes his place on the benches of the Left; he does not pay any attention to the debate; he remains quiet, smiling. With his white beard, he looks like a god of antiquity. His colleagues treat him as such; he is an idol. It has sometimes seemed strange to me that he should have become so quiet, so serene, so happy; it must be supposed that old age softens everything, for Victor Hugo has gone through terrible ordeals. He lost his children under the most painful circumstances, and he has now only two grandchildren, between whom he likes to be photographed.

The great event of our next theatrical season will be the representation of "Le Roi s'amuse." The rehearsals are taking place now. Victor Hugo is not able to give much attention to them, for his mind has completely lost the critical faculty. M. Perrin, the Director of the Français, is fortunately a critic and a scholar of much eminence, and under his direction it is to be hoped that the drama of Hugo will be well studied. Nothing can be more extraordinary than these daily rehearsals; they take place between two and five in the afternoon. Fancy the immense theatre in the dark, only four or five persons in the chairs of the pit; at the front of the stage a sort of large box, from which a little light is thrown on the stage, and which contains the Director and the prompter; on the stage itself a few accessories (it is the technical word), and the actors and actresses playing in their everyday clothes. Fancy *Hernani* in a pea-jacket, the *King of France* or *Charles V.* with felt hats; the illusion of costume is completely suppressed, and the actors are obliged to give their attention wholly to the intellectual part of their rôle. I have admired the great trouble which M. Perrin takes with his comedians: every attitude is studied, every intonation is the object of a remark. The comedians are a vain race—they are not always very willing to give in; but they all have to bow finally before the authority of the Director. M. Perrin has always been a great and even enthusiastic admirer of Victor Hugo, and he spares no trouble to give us a representation of the "Roi s'amuse" worthy to be compared to the representations of "Hernani." The drama itself is not so good, in my opinion—not so simple, so clear; but the public has been made quite familiar with the subject by the opera of "Rigoletto," which is simply the "Roi s'amuse" set to music. All over the world, it may be said, the principal characters of the drama are now well known. *Francis I.* has been in the opera transformed into the Italian *Duke*, and *Triboulet*, his jester, has become *Rigoletto;* but nothing has been changed in the situations.

Victor Hugo began the "Roi s'amuse" in June, 1832, at a time when Paris was still in a revolutionary state, when the Republicans made insurrections, when they fought at the cloister of Saint Merry. The times were not very favorable to literature: the Romantic honeymoon which had begun under the Restoration, had now come to an end. Victor Hugo had offended the monarchical party in "Marion Delorme," which he wrote before 1830; in the "Roi s'amuse" he gave an odious character to Francis I. His best friends were uneasy; the enthusiasts of the first representations of "Hernani" had now grown older, and had been sobered by the great political events; and, curiously enough, all the Liberals were then Classics, and all the Romantics, or nearly all, belonged to the party of "l'autel et le trône"—they were Legitimists. The *National*, which was edited by the men who came to power in 1830, attacked the Romantic writers with the greatest violence. Victor Hugo had made his début as a royalist; the writers of the new school all stood for Gothic ideas, Gothic churches, Gothic institutions. Victor Hugo found himself toward 1832 abandoned on both sides: by the Liberals he was abandoned as a Romantic, by the Legitimists as one who had accepted too rapidly the results of the Revolution of 1830. The Republicans as well as the men of the *juste-milieu*, the Constitutionalists, looked with contempt on the poetical and dramatic work of a man who affected to ignore the rules and beauties of classical antiquity. In the "Roi s'amuse" Victor Hugo flattered the passions of the enemies of the monarchical principle, yet he could not count upon their support.

During the rehearsals Victor Hugo was absent; he was spending the month of September with his children in the country. He came back in October. The Minister who had the theatres under his care, M. d'Argout, had heard that the new drama contained passages offensive to the friends of monarchy, and asked to see the manuscript. Victor Hugo refused to give it, but he consented to have an interview with M. d'Argout. Curiously enough, he was introduced to the Minister's rooms by M. Mérimée, the famous novelist, who was then a modest *chef du cabinet*. M. d'Argout asked Victor Hugo if it was true that there were allusions in the new drama directed against King Louis Philippe. Victor Hugo said, in answer, that he never made any allusions, that he always spoke directly; that he had painted Francis I., and only Francis I.; that really it seemed impossible to find any resemblance between him and Louis Philippe. M.

d'Argout said that Francis I. was one of the most popular kings of France, and he regretted that Victor Hugo should have found it necessary to paint him in odious colors. He, however, declared himself satisfied, and did not insist any more on the subject.

The disciples of the new school were present at the first representation; they were headed by Théophile Gautier, the poet, and by Célestin Nanteuil, the engraver and lithographer — a giant with a long beard and a very soft and kind countenance. I knew Nanteuil in later years. He was the most extraordinary enthusiast; he always expressed excessive ideas with the voice of a girl and the modesty of a child. He was kind; he had much talent; but he underrated himself, and he spent his talent in the dark—in illustrations of popular books, or even of *romances* and theatrical works. These two leaders had enlisted about one hundred and fifty young men, who took their places in the pit and in the second gallery. They spent the time in singing the "Marseillaise" and the "Carmagnole" till the curtain was lifted. A moment before, a rumor went through the theatre: the life of Louis Philippe had been again attempted. This "threw a cold," as the French say. The rumor was false, but it seemed a bad omen for the drama. Among the spectators were three Princes of Orléans. The Théâtre-Français was their theatre, and they did not seem to be afraid of the allusions which had frightened M. d'Argout. Alfred de Musset was there, with Mérimée, with Eugène Delacroix, the painter; Armand Carrel, the editor of the *National;* Alexandre Dumas, Scribe, and many stars of the second magnitude.

The part of *Francis I.* was played by an actor named Perrier, now forgotten. He had no elegance, no distinction, and he could not save the part, which is naturally odious. Mlle. Anaïs, who was an elegant *grande coquette*, had not the passion necessary for the part of *Blanche*. Beauvallet was very good in the part of the bravo *Saltabadil*. But even before the beginning of the first act, it was evident that things would not go well; the magnetism of the audience was repulsive instead of attractive. When once this kind of hostility is felt, the smallest incident becomes the occasion of a storm. Some of the verses, it must be said, are eminently ludicrous. The pleasantries of the courtiers of Francis are as heavy as the stone which the bear throws on the head of the man asleep, in La Fontaine's fable. *Triboulet*, the buffoon, is not often amusing. One of the auditors was heard to say: "Si le Roi s'amuse, je ne m'amuse pas, moi."

In this hostile state of mind of the public, how could verses like these be received?—

"Je veux mettre des ailes
A mon donjon royal!—C'est en faire un moulin."

Murmurs were heard all the time—exclamations of "Oh! oh!" The actors lost their presence of mind, and made mistakes. Hisses were heard after a while, and then the representation became a perfect storm. The public would no longer listen in patience, it would no longer be moved, even when *Triboulet* speaks to his daughter in admirable verses — even when *Saint-Vallier* makes his fine tirades, when *Blanche* arrives on the stage, with her hair dishevelled, mad with fear, with shame, with horror. The charm was broken; the passion which had kept "Hernani" afloat was no longer to be found.

The last act seemed too realistic—the famous act which has inspired Verdi with his sublime quartette, the musical page which Rossini proclaimed the finest of our time. When *Triboulet* holds his daughter in the bag which he believes contains the cadaver of *Francis I.*, a man screamed in the pit, "Out with it!" ("Vide ton sac"); and this stupid pleasantry made everybody laugh. The tumult was deafening; the actors seemed to move in a pantomime, as nobody caught what they said. The curtain fell, and when, according to an old custom, Ligier came to say: "The piece which we have had the honor of representing before you is by M. Victor Hugo," he could not even make himself heard.

The next day, M. d'Argout pronounced the interdiction of the play; so it was only played once. Victor Hugo complained, instituted a lawsuit, asked for damages, and spoke himself before the competent court. His speech ended thus: "There has been only one great man in our century, Napoleon; and only one great thing, liberty. We have no longer the great man; let us try to have the great thing." Simplicity has never been the characteristic of Victor Hugo.

It is not difficult to prophesy that the approaching representation of "Le Roi s'amuse" will be more quiet than the first. Fifty years have elapsed. Everybody feels what is due to the old age of Victor Hugo; everybody is inclined to do homage to his genius, whatever may have been his vagaries in late years. "Dormitat Homerus." He will himself assist at this first representation of his drama, somewhat as a remnant of past ages. It is a great pity that our first modern actress, Sarah Bernhardt, has left the part of *Blanche* to Mlle. Bartet. Alas! she has left the French Theatre; she leads a meteoric, a cometary life, which will land her God knows where. She will have one, two theatres of her own. She has made her son of eighteen years the manager of one. She has been married. She has asked Louise Abbema, her friend, to paint the curtain of one of her new theatres, and she is represented on it in the most dramatic circumstances of her life—in a balloon, on her way to America, etc. She has lost none of her wonderful qualities, but her oddities are growing into manias. She cannot be vulgar, though she tries in every way to vulgarize herself. Everybody will regret her when the "Roi s'amuse" is played. "Pends-toi, brave Crillon; on s'est battu sans toi."

Correspondence.

THE FLAGS OF SWEDEN AND NORWAY.

To the Editor of The Nation:

Sir: Mr. Björnstjerne Björnson sends me the enclosed circular-letter, a copy of which he begs me to forward to you with the request that you would have the kindness to answer the questions contained therein through your valuable paper. You are probably aware that there is at the present time a constitutional struggle of considerable magnitude raging throughout Norway, and that Björnson and Sverdrup are the leaders of the Liberal Opposition, which during a long series of years has had, and still has, an overwhelming majority in the national Parliament (Storthing). Among the many important questions which are at present being agitated by this party is the "purification of the flag"—*i. e.*, the removal of the "union mark" in the upper corner, which is apt to give the impression to foreign nations that Norway is a dependency of Sweden. The Liberal party has no desire to sever the union with Sweden, as has been falsely asserted in the telegrams to the Associated Press, but it merely wishes to have the flag so made that it will not misrepresent the Norse people before the world, but boldly proclaim its independence. The Government press has attempted to discourage this movement by asserting that a change in the flag would be sure to injure the commerce of Norway (which is far greater than that of Sweden), and it is in order to have this question settled that Mr. Björnson has taken the liberty to appeal to the editors of the principal papers in all the great seaports having commercial relations with Norway. Hoping that you will favor him with a reply, I remain, respectfully, Hjalmar H. Boyesen.

New York, October 25, 1882.

[We have not room to print the circular referred to by Professor Boyesen, which is embellished by colored representations of the Swedish and Norwegian flags, showing that they have only the Union jack in common. Björnson, after a statement of the nature of the peculiar union of the two countries—"exclusively a personal one," through the King of Sweden being also the King of Norway—puts the following questions:

"(1) If the Swedish and the Norwegian flags both were *without* the emblem of union, and thus what we call 'pure' flags, would they not also convey a 'purer' conception of the absolute independence of the countries?

"(2) Would it hurt the commerce or freight-carrying business of Sweden or Norway in America, if their flags were without the emblem of union?"
